In places we were obliged to go through water often up to the axles. Once the hired car stuck in a hollow and the wheels would not bite on the greasy mud, so we all had to get out and push behind, standing up to our knees in water. The hump-backed bridges over the irrigation canals—about the width of a car's wheel-base—were among the worst obstacles. The skidding cars "refused" every time, and even when pushed showed every inclination to plunge sideways into the canal. Fifteen miles from Baghdad, the Citroën gave out with engine trouble and had to be abandoned in the desert. It took us four hours to get home, covered with mud from head to foot and soaked to the skin. But the youngest sportsman kept us all cheery with his hunting horn, sounding "Gone away" as the cars negotiated the various tight places.

Adventures of this kind sometimes befall luckless passengers by the desert route. About three week later, an Englishwoman, on her way to join her husband in Baghdad, was stranded in the sea of mud, with the Overland Mail, for seven days. Her only shelter was a car, with blankets sent out by aeroplane, and such food as was carried in the cars or could be brought with the blankets! But up to that date, my letters were only twice late in arriving and then only by a few hours—a fine record for the Nairn Transport Co.!

While the Baghdad streets were rivers of greasy mud, it was impossible to walk and *arabanas* (two-horse victorias) did a thriving business at eight annas a journey. It is a considerable distance to the other end of the city, for Baghdad is a long thin town, not round and thick-set like English ones. A ride through the market gardens is a fascinating experience: the palm trunks gave the appearance of a prehistoric grove, so that one half expects to meet a mastodon lurking round a corner, or to see a plesiosaurus craning its long neck towards the tree-tops. I watched a marvellous sunset effect one evening, looking across the river from near the War Cemetery. The palm trees appeared first as if they had been cut out of silver: then they turned to gold, to copper, and last, in the white afterglow, their colour came back and they showed the peculiar green of old bronze.

I find that the Iraqi are very frank and will talk freely. Their faith in the support of England sometimes strikes one as pathetic—in contrast with the attitude of some politicians at home, and the outcry for abandonment raised by a certain section of the Press. But one does not talk politics in this country, because there is no knowing where the subject may lead. The "wind of complication" (of which Flecker wrote in "Hassan") still blows in the streets of Baghdad. A man who fought with Lawrence in Arabia told me a story which throws a sidelight on Turkish-Arabian relations.

His uncle was in a very high position in pre-War Turkey and leader of the "Keep-out-of-War" party. At a meeting of the Turkish Parliament he got up and said, "England is the richest country in the world. If you fight against her you will lose. I have information that the moment you declare war against England, she will send two million cavalrymen against you." When asked to explain, he drew a sovereign from his pocket and showed them St. George and the Dragon. "There is one cavalryman; he is a prisoner in my hands, but there are many more and they will beat you in the end." From that moment he was a marked man, and after Turkey joined Germany he was murdered. His whole family went back to Arabia, and every able-bodied man spent the rest of the time preparing for an Arab revolt.

I realised the advantage of our Arab house when the mud was replaced by the usual dust and a west wind brought the first duststorm I had experienced—for the rooms are not invaded by this plague to the same extent as in a building with windows opening on the street. Also they are comparatively fly-proof. When the mud dries, and just before it sets as hard as iron, a strange scum of salt and nitrates appears, so that the ground looks as if covered by a light fall of snow. There is no smoke in Baghdad, for coal is unknown, and heating and cooking depend on charcoal braziers and oil stoves. Per-

sonally, I much prefer the Arab food to the so-called European meals provided by the Indian cooks out here. *Liban*, the lactic food, is eaten with everything, and is both wholesome and good to the taste. So are the little oval brown loaves of the country. When I lunched at my Arabic teacher's house, he gave his guests a vegetable pottage, followed by a sort of rice rissole with spiced mutton inside; then a delicious pilau of desert mushroom —a puffball which forces its way out of the barren ground in February. It is oval, about the size of a new potato, and should be eaten fresh, as it loses its flavour and becomes leathery very quickly. As our host is a tee-totaler, we drank a decoction of pomegranate—coffee-coloured, with a flavour of black-currant tea, but sharper. For dessert we had various fruits, including large, juicy oranges of the most perfect flavour. At the same house I tasted, on another occasion, a kind of ground rice cream of which the Arabs are very fond. They call it "Mud of Paradise"!

Before lunch we listened to a selection of Arab music, very quaint and interesting. I fear no child would have slept through the rendering of a lullaby by two voices, male and female. It had a most curious haunting air—a fatalistic wail with a strange emotional undercurrent to it. I cannot describe it, and most people would not care to listen to it, much less to study the bizarre motif; but there was significance in it, all the same. While we drank our coffee, the son of the house, aged twelve months, was brought in to entertain us—a dear little chap who sat on my knee, as good as gold; and more like an English baby with his laughter than an Oriental.

I have spent a good deal of my spare time in schooling my two horses—ponies rather, for they run fourteen to fifteen hands only. They are almost thoroughbred Arabs and very promising. One is called "Howa Shemal" (the North Wind); a bay with a white star on his forehead and two white fetlocks behind. He is really a delightful mount, with no vices, but so lively after three days in stables that it took me a couple of hours to persuade him to go quietly. Once we came across a Fordson tractor ploughing, and Howa Shemal gave me to understand that these revolting innovations should not be allowed in his country. Poor dear, he was terribly frightened, and after he had been induced to walk beside it, at a respectful distance, he broke out in a lather all over. He is a perfect little gentleman, and even his "suddenneses" are in excellent taste, but he is very green and has a lot to learn; first of all, to attend to his rider instead of looking at—everything that passes.

P.S.—I find that I was mistaken in saying (in my artcle published on April 15) that the green turban is the mark of a *hajji* in Iraq. In every other country it indicates one who has made the pilgrimage to Mecca; but here it shows that the wearer is a *Said*, a descendant of the Prophet.

It is understood that the new Albanian Minister to Washington will be M. Konitza, proprietor of the Albanian newspaper in New York, *Vatra*, who was formerly identified with the party of Mgr. Fan Noli in Albanian politics.

The Egyptian Chamber of Deputies Commission appointed to inquire into the actions of Ali Maher Pasha when Minister of Education last year has reported that his policy in introducing reforms was counter to the laws of the country and involved serious disorganisation. It recommends the Chamber to censure Ali Maher Pasha, and to introduce legislation providing for the punishment of Ministers who act in a similar manner in future.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor Street, W.1.

ALL PERSIA INTER-MISSION CONFERENCE.

An Ispahan Correspondent writes:—

Dr. S. M. Zwemer, of Egypt, Editor of the *Moslem World*, has just completed a three months' tour of the Missions of Persia, and the opportunity was taken before his leaving the country, to have an Inter-Mission Conference under his inspiration and leadership, when the present missionary situation of Persia could be reviewed, and plans for the future considered.

The Conference was held in Teheran on August 1 to 8, invitations having been sent to all the Protestant Christian Missions working in Persia. Nearly 50 missionaries and Persian workers representing 15 out of 16 occupied centres of the A.P.M. and C.M.S. in Persia.

Papers were prepared and read to the Conference on the following subjects:—the Missionary Occupation of Persia; Co-operation, Christian Literature for Persia, Christian work and the Persian Government; Islam in Persia to-day; the Presentation of the Christian message to the Moslems in Persia; the Training of workers.

These papers, together with the discussion of the Findings of the Conference, were most valuable.

All those present realised more clearly that a New Persia is already in being, that conditions are changing more rapidly than is imagined, and that Missionary enterprise in Persia has probably never had a freer field than it has to-day.

NOTES OF THE WEEK.

(Continued from page 264.)

A Mid-Asian Entente.

It is not difficult to see the hand of Soviet Russia in the series of treaties by which some of the countries of western and central Asia are binding themselves to be on their best behaviour towards one another. The agreements are known as security pacts, and are quite unexceptionable in their character. Each of the two contracting parties undertakes to observe neutrality in the event of the other being attacked by a third party, not to attack the other, and not to belong to any grouping of States with hostile intent towards the other. Such treaties exist between Russia and Turkey and between Turkey and Persia, while negotiations are understood to be in progress for a similar treaty between Persia and Russia, and it is believed that the three agreements are shortly to be co-ordinated in a tripartite pact. The latest treaty of the kind is between Russia and Afghanistan, which was signed on August 31. This document is said to contain a clause by which each of the contracting parties agrees not to interfere in the domestic affairs of the other and not to allow any of its subjects to engage in hostile measures directed against the other. In Afghanistan the treaty is regarded as a great diplomatic triumph, as it marks the abandonment by the Soviet authorities of their claims to the island of Urtatagai in the Oxus River. The Moscow Government, no doubt, seeks to serve a special purpose in binding these different countries to it. None is in a position to reject the overtures, if they are urged with any degree of insistence. It is probably argued that, even if little reliance can be placed on any Soviet undertaking, the other country is not called upon to pledge itself to do more than it would inevitably do if left to itself. As between Moscow and Angora, the pact does bind the latter to acquiesce in the present Turko-Caucasian frontier. In the case of Persia, on the other hand, a pact of guarantee and good will on Russia's part becomes almost a farce in the light of Soviet interference in Persia. One day, no doubt, Russia will weary of trying to stir up strife the world over, and references from her Asian neighbours as to her good behaviour may prove a a valuable asset.

A treaty of neutrality and mutual non-aggression between the U.S.S.R., and Afghanistan is reported in Moscow to have been signed on August 31 at the King of Afghanistan's summer residence.

Book Reviews

A SKY PILOT.

"SKYWAYS." By A. J. Cobham. (London: Nisbet and Co., 15s.) "MY FLIGHT TO THE CAPE AND BACK." By A. J. Cobham. (London: A. and C. Black, 1s. 6d.)

These two books should greatly help to popularise the aeroplane as a means of travel. They will also be invaluable for future students of the beginnings of civil aviation. Further, they unconsciously give the reader a vivid picture of a resourceful, courageous and determined Englishman. The author has an unusual gift of writing good, terse, straightforward English. He is naturally chiefly interested in professional matters, which he manages to make really interesting. At the same time he has a keen eye for humorous situations, a happy way of describing scenery, and a pretty taste for connecting what he is seeing with the events of the past.

The first and longer book traces his career from his demobilisation from the flying service after the War; his discovery of a kindred spirit and their joint adventures in a "joy-flight" circuit, the first of its kind; his work on photographic and survey jobs; his meeting with that delightful American, Mr. Lucien Sharpe, whom he took on tours that read like tales from the Arabian Nights; finally his settling down into his present position as our leading civil pilot constantly in demand and entrusted with the most difficult and important tasks, having supplied himself with a charming wife, won during his airy exploits. Every page is of interest, and we shall permit ourselves to quote a small sample bearing on the Near East.

It is not often that he makes a verbal slip, but he does head his chapter recounting his secret mission from the *Daily Mirror* to the Royal wedding at Belgrade "A Hustle to Roumania." His object was to bring back pictures of that event before the rest of the Press could get them. So he sauntered off unnoticed in his aeroplane some days before, spending part of his spare time at Strassburg and Vienna in making arrangements to accellerate his return. He reached Belgrade the evening before the wedding.

"Now, in order that all the other Press representatives and photographers should not know I had arrived by aeroplane, I made a détour of the town and landed on the old manœuvre ground, where secret arrangements, with permits, had been made on my behalf. The nearest aerodrome to Belgrade was the Military Aviation School fifty to sixty miles away, and it was there that no ordinary person would land."

Seeing him at dinner in company with the *Daily Mirror* photographers, his rivals guessed his purpose but not his plans. After arranging matters with his friends, he had to start next morning for his machine, so as to be ready to fly off as soon as the pictures arrived.

"By that time all the streets had been cleared, and the crowd were well back on the side-walks behind a line of soldiers. The broad roads had just been sanded, and here and there officers were riding about on horseback giving an eye to the final preparations for the Royal march past. Cross-roads and turnings were guarded by officials. Unless I were permitted to drive straight down the cleared thoroughfare, I should never start, and therefore I instructed my driver in a bold voice to "drive on." I was dressed in a leather flying coat looking anything but a Serbian, and must have been taken for some important official. If the mounted police officer stopped me, I produced a letter in French which in reality was my permit to land on the Parade Ground; but, as it had one or two heavy seals on it and looked impressive, the officer in question would take hold of it, appear to read it through thoroughly, and, not understanding a word of French, hand it back to me with permission to pass on. This triumphal ride through the lined streets was a most embarassing affair, especially when one section of the crowd raised a cheer, and, as a rival Press photographer said afterwards, 'it was the most audacious thing he had ever seen, for Cobham was sitting back and driving through the main processional thoroughfare which not even the nobility of the land was allowed to use until the Royal carriage had gone by.'"

At 11.30 a.m. his photographer threw him the plates and off he went right into the teeth of a thunderstorm which had just burst. As he passed over the town, the others "stamped their feet and clenched their fists." They had not known that his "machine was only two miles away, and that I should be as far as Vienna on my return journey by the time they had travelled over very bad roads, to the military aerodrome." He proposed to reach Croydon by 2 a.m., but a thick fog in Northern France prevented this and led to a hairbreadth escape. But by 9 .a.m. the *Daily Mirror* had its pictures and got them out a day before any of its rivals.

Both books are very well illustrated, the second one especially so. Indeed it is frankly intended as propaganda, and we congratulate the authorities for choosing it for this purpose. It is certain to be immensely popular, and is marvellously good value for the money.

C. S.-W.

INDIA IN ENGLISH LITERATURE.

"INDIA IN ENGLISH LITERATURE." By Robert Sencourt. (London: Simpkin, Marshall. 18s. net.)

Mr. Sencourt offers, in something less than 500 pages, a survey of the position of India in English literature. The subject is a large one, and so far as we know, has not previously been treated on a similar scale; the book is thus somewhat of a pioneer, and, as such, can be recommended, subject to some reserves, to readers who are in search of a guide. The important landmarks, and most of the milestones on the road, are duly noted, and reasonably appraised, the changes in atmosphere are indicated, and, with what seems to us sound judgment, the detailed history stops about the year 1870, leaving the final verdict on the later Victorians to be passed when a better perspective is attainable. As might be expected, there are some omissions. Marvell does not appear in the index; Gibbon appears, but only as a spectator of Hastings' trial, his passages on India in the Empire period being ignored; Sleeman and Kinloch Forbes are absent from the Constellation which rightly includes Tod and Malcolm; and surely, when so much is said of the unpleasant nabobs of fact, and of fiction, room could have been found for that much more attractive character, Mr. Peter, of "Cranford," whose only real fault was that he once shot a cherubim in the higher Himalayas. It would be an easy matter to make good these, and other, omissions without increasing the bulk of the book, which indeed could be improved materially by compression. Too much space is devoted to proving that the Elizabethans were not particularly interested in India; we are told much more than is necessary of the "inexactitudes" of Burke and Moore, "those two d—d Irish liars," as they were once described by an Aberdonian; the twelve-page abstract of Southey's "Curse of Kehama" could be justified only on the plea that nobody will ever read the poem in future, but then what can be said for the seven pages devoted to reprinting such a familiar classic as Tennyson's "Defence of Lucknow"? The book has been printed in Germany, and contains many mistakes. Some of these are accounted for in two pages

BURMESE SELF-TAUGHT

(Burmese and Roman Characters). By R. F. A. St. JOHN, Hon. M.A. (Oxon.)
Sometime Lecturer on Burmese, London University.
Containing Alphabet and Pronunciation, Classified Vocabularies, Outlines of Grammar, Conversational Phrases and Sentences, Commercial, Military, Shooting and Fishing, Planting, Public Works, Terms, Travel Talk, Money with English and American Values, Weights and Measures, Postal Rates, etc.
Red Cloth. 6s. net; Blue Wrapper, 5s. net. Postage 3d. extra.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25.
London: E. MARLBOROUGH & CO., Ltd., 51, Old Bailey, E.C.4

of errata, but the list could be greatly expanded to the advantage of the reader. There are half a dozen reproductions of Indian scenes, the work of Mr. E. S. Lumsden: they do not illustrate the text in the ordinary sense of the word, and on occasion even produce a sense of incongruity, as when the chapter headed "The Youth of the Company" is faced by an impression of a mixed bathing party; but they are pleasant to look at, and help us to appreciate the author's idea of India.

AIR MAIL FROM LONDON TO MARSEILLES.

The Postmaster-General, in a circular issued to the Press, draws attention to the opportunity which the recently established Friday morning air mail from London to Marseilles offers of overtaking at Marseilles or Toulon the mails for India, Egypt, Iraq, Aden, East Africa, and, in most weeks, Australia, dispatched from this country on the previous evening by ordinary route. The new air mail has, so far, made regular connexion with the Peninsular and Oriental or Orient Packet at Marseilles or Toulon.

CURRENCY FOR PALESTINE.

The Secretary of State for the Colonies has appointed a Palestine Currency Board to introduce a local Palestinian currency based on the pound sterling, and generally to provide for and control the supply of currency in Palestine. The Board consists of the following members: Mr. P. H. Ezechiel (one of the Crown Agents for the Colonies), chairman, Mr. Leslie Couper (general manager of the Bank of British West Africa), Mr. A. J. Harding (of the Colonial Office), Mr. F. Phillips (of the Treasury; honorary member), with Mr. H. C. Ransom as secretary. The address of the Board is 4, Millbank, Westminster, London, S.W.1.

M. Nintchitch, Yugoslav Minister for Foreign Affairs, left Belgrade on August 29 for Bled in order to inform the King of the contents of the Bulgarian Note. He travelled thence to Geneva. M. Trifunovitch, the Minister of Public Worship, is taking M. Nintchitch's place during his absence.

The Greek Government has applied, through the Greek Minister in London, for the services of five British naval officers, specialists respectively in torpedoes, gunnery, aviation, signalling, and staff work. No request has been made for the return of the British Naval Mission as a body.

Helwan observatory registered an earthquake on the afternoon of August 30, at 1 hr. 40 min. 22 sec., apparently about 600 miles distant. A further strong earthquake shock was recorded on September 2 at 3 hr. 33 min. 33 sec. a.m. at a distance of 4,800 miles.

In a secret session on August 31, the Persian Mejliss passed a vote of confidence in the Prime Minister. The Commander-in-Chief of the Eastern Army, who was arrested during the Shah's visit to Khorassan recently on the ground of extortion and tyranny, has been released.

The following translation of a message recently received from His Beatitude Meletios, Greek Orthodox Patriarch of Alexandria, by the Rev. H. Beale, rector of Sutton and vicar of Shopland, Essex:—We thank you warmly for your heartfelt prayers and kindly words which you directed to us on our election, and which testify to a truly Christian heart and apostolic zeal. Being ever watchful that we may turn to good account your ready zeal for the work of the Union of the Churches which is well-pleasing God, when seasonable opportunity offers. We give you our continual and Fatherly blessing.

NEWS IN BRIEF.

Hussein Jahid Bey, a former editor of the *Tanin*, whom a former Tribunal of Independence sentenced to internment in Anatolia, has been pardoned and will shortly return to Constantinople.

The Parliamentary Finance Commissions have recommended the Egyptian Government not to pay interest, amounting to £72,000, now lodged in the National Bank, on the 1855 Tribute Loan, pending litigation.

A Belgrade message states that the first cruiser in the Yugoslav Navy, the Dalmacija, built in Germany, arrived at Port Tivat, in the Gulf of Cattaro, last Saturday afternoon.

Field-Marshal Lord Plumer left Jerusalem on September 1 on a month's leave of absence, travelling to Italy. Lieut.-Colonel G. S. Symes, the Chief Secretary, returned to Jerusalem the same day and is acting High Commissioner.

Abdul Kadir Bey, the former Vali of Angora, who was condemned to death by the Smyrna Tribunal *in contumaciam* for his share in the plot againt Mustapha Kemal Pasha, and who was captured recently while trying to escape into Bulgaria, was hanged at Angora on Aug. 31.

The earthquake in the Mediterranean area on August 30 was strongly felt throughout Greece, particularly at Sparta, where numbers of dwellings collapsed, and caused further damage to important buildings in Athens and Phaleron without loss of life.

M. Bouroff, the Bulgarian Foreign Minister, announced in Sofia on September 3 in the Sobranye that Bulgaria would refuse the Refugee Loan of £2,250,000, which is being secured through the good offices of the League of Nations, if States which are neighbours of Bulgaria are permitted to exercise control.

A decree published in Athens on September 2, fixes the Greek elections for October 24, and the opening of the session of the new Parliament for November 13. Parliament will have for a fortnight power to approve or revise the new Constitution, afterwards becoming an ordinary Chamber. The number of members is reduced to 286.

M. Antonopoulos, who was arrested in Greece on a charge of attempting to murder General Pangalos, has been released, as the inquiry which has been held into the charge has established that at the utmost he "possibly contemplated the murder of General Pangalos and then changed his mind."

It is stated from Cairo that the wife of Mehmed Vahid-Eddine Khan, the ex-Sultan of Turkey, last week attempted to commit suicide in the Nile, but was rescued by boatmen. The reason for her action was that she had not received her small pension from Angora for three months, and was left penniless.

Saad Zaghloul Pasha, the President of the Chamber of Deputies announced in the Egyptian Parliament on August 31, that the officials of the *Official Gazette* at the instigation of the Under-Secretary of Public Works, had made alterations in some passages of the Parliamentary report. He added that the matter had been referred to the judicial authorities.

The relatives of British soldiers killed during the War who have been visiting Salonika and Gallipoli under the auspices of the St. Barnabas Pilgrimages have visited the Salonika cemeteries, and a party of 70 travelled by rail to Doiran cemetery, where a memorial service was held and wreaths were placed on the cemetery cenotaph. The cemeteries of Kilkis, Lahana, and Hortiati were also visited. The pilgrimage ship left for the Dardanelles on September 2. Votes of thanks were addressed to the Greek authorities for the assistance rendered.

THE WEEK AT HOME.

London, Tuesday Morning.

"A Nos Moutons."

"Alter Ego" returns to earth and brass tacks again with a certain bewilderment. For unexpected signs of sanity have been cropping up during his absence from "The Week at Home." England, for instance, has astounded her abundant men of little faith by regaining the "Ashes"; Yorkshire have been deposed from the Cricket Championship; the new world with its League of Nations is being clearly seen, in its present scramble for seats at Geneva, to be nothing but the old; the miners have had the belated wisdom to get away from their impossible slogan and to ask for terms that they might have had in April; and so hopefully on. It may be the fine weather during August, but no doubt exists that Englishmen are seeing the world more rightly and optimistically than they were when last I wrote here. Let us get back, then, to our muttons with a lighter heart.

The Mines.

As far as one can see the one fly in the ointment is the problem of the mines. This, however, stands far from the bog in which it appeared a month ago to be indefinitely stuck. The Government, through the surprising but adequate medium of Mr. Winston Churchill, took a firmer and more central line last week: in consideration of which event the miners promptly offered to negotiate on the basis of reduced wages. No more are the miners demanding a subsidy or a return to the *status quo:* all that they seem to insist upon is that the agreement must be national. This decline in intensity of demand is presumably what the Chancellor of the Exchequer has called "a weapon of economic truth," about which he said that the Government, once it were armed with such weapons, would let nobody stand in its path. That "nobody" is, of course, the coal-owners, who have given no sign at all that their allegiance to their particular "slogan" is not ineradicable.

What will happen now it is hard even to guess. What has happened nobody could prophesy—certainly not those who imagined that the Government was tacitly supporting the stronger party in the dispute. But at least we have an atmosphere in which it is possible for something big to happen. It will be the strangest of all strange things if Mr. Churchill, unsupported by certainly a large section of his party, has to force the coal-owners to moderate their demands, but it would be the kind of battle after the Chancellor's heart.

The Nature of Liberalism.

It was in these latter dog-days that somebody thought, as a fit object of discussion, of reviving the controversy upon what is "true Liberalism." An eminent publicist, Sir Ernest Benn, really started on the undiscoverable quest by asking in print whether he was still a Liberal; and various men, big and little, have tried hard to vivify an apparently effete subject ever since.

Sir Ernest is one of the old school. He believes in the defence of peace, economy, and free trade—which etiolated terms still, seemingly, hold significance for him. Of the new school, the Manchester celebrities whose heads teem with new ideas for social reform, he will have none at all—such schemes, he says, of agrarian or industrial reconstruction are not Liberal but Socialist in character. What on earth is a poor fellow like himself to do?

It must indeed be distressing to one who has been brought up in the great traditions of Liberalism to find his fellows either deserting him for the Tory camp or else going off on trains of thought undreamed of by the old, infallible economists. Possibly the dilemma would not be so bitter if the Liberal "Reformers" were cutting any ice; as it is, to stay in the party is suicide, to follow the Manchester School is heresy, and to join the Tories is treachery. Perhaps the only consistently happy man in these puzzling times is the serene and non-party observer.

The "Daily Herald."

The *Daily Herald* has hit upon an excellent man to succeed Mr. Hamilton Fyfe as Editor, Mr. William Mellor. For Mr. Mellor has long proved his distinguished worth to the Socialist cause. He is certainly sincere, convinced, and, above all, receptive of fresh and the latest ideas. When Guild-Socialism was a thing known only to the élite who read Mr. A. R. Orage week by delightful week, Mr. Mellor was in the vanguard of the movement with a few young Oxonians; he was on the *Herald* in the better days when it was a weekly; and when once more it became a daily paper he was given charge of its labour news. The new *Herald* may want for funds, but in any case it should be readable.

Public Health.

The report on the public health for 1925 which the Chief Medical Officer of the Ministry of Health has written is an instructive document. Thence we may, as the case may fall, take hope or fear of our future; at any rate there is always the melancholy interest taken by so many people in the history of disease. We learn, for instance that the birth-rate in 1925 was (but for the War years) the lowest on record, and it is anticipated that 1926 will be lower still: this is alternatively a matter for alarm and congratulation. The death-rate remains about the same. Infant mortality is as it was in 1924—75 per 1000. The five diseases which are responsible for nearly 60 per cent. of the death-rate—cancer (increasing), tuberculosis (diminishing), and diseases of the heart, of the nervous system, and of the respiratory organs—are still the main enemies of the community, but Sir George points out that these diseases are only the "end results" of earlier conditions; it is, therefore, in their origin that these diseases must be tackled.

A B.B.C. Comedy.

There is a greater number of people than one had imagined who are prepared to take the family of Sitwells seriously. One knew already of certain literary critics and musically-inclined inhabitants of Chelsea who bowed a fulsome and affected knee to these lawless versifiers; but additional fame has come to the poets through a solemn deed of renunciation by a theatre manager, Mr. Archibald de Bear.

It appears that certain actors and actresses, now appearing in the revue "R.S.V.P.," were to take part at the Broadcasting Studio in an entertainment called "The Wheel of Time," in which the Sitwells also were taking part. Now a short time before this, Mr. Osbert Sitwell is reported to have uttered the remark (which was no more profound and perhaps a little more obvious than many of his sayings) that "Actors and actresses are so busy trying to be ladies and gentlemen and golfers that

they have no time left to pay attention to their jobs." It is precisely the kind of thing that a hundred and one pseudo-Sitwells might have made—the "smart" but witless half-truth—but it so enraged the theatre-manager that he refused his permission for "his" artists to take part in the B.B.C. show.

It is, of course, the Sitwells' fault: if they didn't take themselves so seriously, perhaps nobody else would. Oh that Max Beerbohm were here to reproduce this comedy!

The Menace of September.

The August which so plentifully spilled its glory over these islands went out with a snap; thunder and lightning and tempest were September's unusual heralds. Nor did the new month make any hurry to change the reputation so quickly and vividly gained, but lazed away its precious hours in clammy, purposeless heat.

But for those who know where and when to look, this September has already brought many of its immemorial symbols. Shadows sombrely lengthen; mists and silences fill the valleys; robins whistle in the gardens. Even more mundane than any of these sad things, and yet less natural, is the gradual conquest of the playing-field by the ubiquitous football, whose voracious devotees apparently would, if they could, restrict the reign of King Willow to June and July. To the unbiased lover of games the September rivalry of large and small ball, whose sounds can now be heard in neighbouring discord, is one of the most vivid reminders possible that Summer is over and the dark days are before us. Yet September, although it has started badly, has surely in store some of its incomparable loveliness.

Changes in the Strand.

Ou sont les neiges d'antan? So may the old Londoner mourn. For the old town that we loved is daily vanishing; it is an obstacle in the uncheckable march of "progress": which means that men with larger capital are deposing and rasing the little men and the little buildings that we all knew, and are to create the American monstrosities so near to their hearts and pockets.

Regent Street, of course, is irretrievably altered. Now is the turn of the Strand. On the north of the Strand, a tremendous change in hotels is coming. The Strand Palace Hotel has acquired Haxell's Hotel and the other properties (including the offices of the old, reckless, but regretted *Globe*), is reconstructing the site, and will, when it occupies the whole island site, be able to boast of 900 bedrooms.

Sleep be to those who repose therein! Not that this extinction of historic foundations is likely to disturb the slumbers of those who frequent London's "palace" hotels, for is not the present Strand Palace built on the site of Exeter Hall and of the Church of St. Michael?

Hardly a trace of the old Strand, along which the hansoms used to jingle, and down which in the irresistible, irresponsible days we were all invited to go and have a banana, is now to be seen. Even our memories will soon be ferro-concreted o'er with the unblushing cast of "progress."

On Jazz.

If there are any signs that Jazz is held in decreasing esteem in our national life, I have not met them. The beastly thing seems to hang on in our theatres and ball-rooms like a limpet. Now there are musicians who attempt to treat Jazz seriously, just as there are literary men who make out a case for the film scenario; but they are very foolish and rather intolerable. The bulk of cultured opinion is still offended equally by the average jazz tune and by the average cinematographic show.

It was good, for instance, to read the other day the round condemnation of Sir Hamilton Harty, conductor of the Hallé Orchestra. He had never found jazz, he said, to be anything but sensual, noisy, and incredibly stupid. It possessed only two qualities that had anything to do with music—rhythm and a certain cynical grotesqueness. The kindest thing to say about it was that it was just a noise for dancing.

That was an excellent criticism, except that this Irish musician was unjustifiably generous in calling "dancing" the movements which the cosmopolitan exponents insist shall accompany jazz.

Sir Hamilton touched the heart of the matter—the contrast between jazz and films and local creative effort—when he suggested a return in Church music to string instruments. His idea was that these instruments, with kettle drums, should supplement the organ. This is extremely stimulating, and is on a parallel line of thought with that which proffers the scheme of local theatricals as against the devouring cult of the cinema. This last movement is reviving, but the ascendancy of the cinema is as yet by no means over.

CORRESPONDENCE

***The columns of* THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.**

A LOAN FOR PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Much to my regret I have to inform Mr. Philby that he is labouring under a case of mistaken identity, as I am unable to claim house-construction among my accomplishments. My activities in former days were restricted entirely to building walls, designed to exclude pessimists and other disturbers of the peace. A Balbus who built houses would have been regarded as a blackleg by any member of the original firm. On the principle that the child is father to the man much in Mr. Philby's letter is explained by the appearance of this spirit of perversity in early youth that linked him up with a house-building Balbus.

Mr. Philby, if I understand him aright, maintains that a surplus is not a surplus, if it is spent. I should have imagined that Palestine could claim to be doing fairly well when it can show a surplus of over a million pounds on a budget of two or three million, even if it subsequently threw the balance into the sea. Not so Mr. Philby, who seems distressed that a surplus should be made in order to be spent. I admit that the setting up of ninepins for the sake of knocking them down is a better training than wall-building for understanding the intricacies of public loans; but the thing that matters is not my attitude towards funding a loan but that of the Crown Agents. If the latter make loans as distinct from advances, there might be no need to worry over repaying them in the course of a short period; but if an advance is what it claims to be, that is to say, a temporary accommodation which has to be repaid as soon as possible in full in cash, then it is difficult to see how Palestine could avoid raising a loan to repay the Crown Agents and to meet necessary capital expenditure. The position to my unsophisticated mind is that in common with all new States Palestine finds herself obliged to incur a certain amount of capital outlay. In order to carry on so far she has had advances from one quarter and has used the profits of her business as they have come in. You may challenge the uses to which she puts that money in the way of capital works; but you cannot challenge her desire to meet her obligation to repay the Crown Agents as soon as she has the funds to do so. She has already reduced the advances by several hundreds of thousands. If the Crown Agents have agreed to wait for repayment for a little longer and have been content to see the rest of the surplus devoted to other needs, then they have certainly shown themselves truer friends of Palestine than anyone who would deny her the working capital without which few businesses on a large scale can be conducted profitably and progressively. I am, etc.,

BALBUS

PERSONAL AND GENERAL

TO-DAY
September 9, 1926 (New Style).
August 27, 1926 (Old Style).
Rabia 1, 1345 A.H., of the Moslem Calendar.
Tishri 1, 5687 of the Jewish Calendar.

Princess Bibesco left London on September 5 for Geneva.

Viscount and Viscountess Bertie of Thame left London last week for Constantinople.

The Bulgarian Minister, accompanied by Mlle. Margaret Haji-Misheff, left London on August 30 for Bulgaria.

Rev. F. Carpenter, lately C.M.S. Missionary at Nazareth (Palestine), has been appointed Vicar of Holy Trinity, Guernsey.

The Marquess and Marchioness of Reading have left London for Cadenabbia, where they will remain for two or three weeks.

Rev. G. F. Packer, late chaplain of All Saints', Bulkeley, Egypt, has been appointed to the rectory of Tickenham, Somersetshire.

Field-Marshal Viscount Allenby and Viscountess Allenby have gone to Stanley, Perthshire, for the fishing, until the middle of October.

Major J. E. F. Campbell, Assistant Commissioner for the Southern District, has been appointed Commissioner for the Southern District of Palestine in succession to Sir Ronald Storrs.

Sir Chimanlal Setalvad, Vice-Chancellor of the University of Bombay, who arrived at the Hotel Metropole, London, last week has left for Galway to visit the Maharaja of Nawangar.

Sir Ronald Storrs, Governor-Elect of Cyprus, is leaving England for Palestine on October 14. He will stay in the Holy Land for three or four weeks before proceeding to take up his new post in Cyprus.

The Hon. Francis Lindley had an audience of The King on August 30, when His Majesty conferred upon him the Honour of Knighthood, and invested him with the Insignia of a Knight Commander of the Most Distinguished Order of St. Michael and St. George.

Lieut.-General Sir Charles H. Harington, G.B.E., K.C.B., D.S.O., has been appointed General Officer Commanding-in-Chief, Western Command, India, in succession to Lieut.-General Sir George M. Kirkpatrick, K.C.B., K.C.S.I., June 14, 1927.

Lieut.-General Sir Charles Harington was responsible for the handling of the Turkish impasse at Chanak in 1922-3.

Major-General Sir John Davidson, M.P., and Lady Davidson are sailing in the R.M.S. Kildonan Castle tomorrow (September 10) for Cape Town. They are visiting East Africa, the Sudan, and Egypt, and will not return to England until the beginning of January.

Among the passengers who sailed from London on August 31 in the Ranchi on a cruise to Constantinople were the Marquess and Marchioness of Ormonde, the Earl and Countess of Northbrook, Cora Countess of Strafford, Sir John Rose Bradford, Mr. Justice and Lady Horridge, and General Sir Henry and Lady Mackinnon.

Sir Stanley Fisher, Chief Justice of Trinidad, has been appointed Chief Justice of Ceylon.

He was called to the Bar in 1890, and appointed President of the District Court of Kyrenia, in Cyprus, in 1902. He was a joint commissioner for the revision of the Statute Laws of Cyprus, and was Chief Justice of the Supreme Court of Cyprus from 1919 to 1924. He was knighted in 1922.

At the French Council of Ministers held in Paris on September 3, M. Doumergue, President of the Republic, signed decrees appointing M. Ponsot to be High Commissioner of Syria, and M. Daeschner, former French Ambassador in Washington, to be Ambassador in Constantinople.

Lieutenant-General Sir George Macdonogh, Sir Frederic Kenyon, and Lord Arthur Browne, representing the Imperial War Graves Commission, arrived at Alexandria on September 5 to inspect war graves work in Palestine, where they are expected to attend the dedication of a newly erected memorial chapel on the Mount of Olives. Afterwards the Commissioners will visit Gallipoli and Macedonia, where Sir George Macdonogh, on September 25, will unveil a memorial to the fallen on the Salonika front.

OBITUARY.

The Rev. Joseph Perry Dyer, who died on August 30, after an operation, was formerly Archdeacon of Rangoon. He had also been Examining Chaplain and Commissary to the Bishop of Rangoon, and Senior Chaplain, H.M. Bengal (Rangoon) establishment. He saw service at the base with the Burma Expeditionary Force in 1886-87, after which his services were lent to the Government of the Punjab.

Mr. Somers Clarke, the ecclesiastical architect, died on August 31 at Mahamid in Upper Egypt at the age of 85. He returned thither from Cairo the previous week, believing that he had not long to live, and he expressed a wish to be buried in a tomb which he built some years ago.

The death has occurred of Sir Charles Tyser, who was closely connected with the history of Cyprus. He was Chief Justice of the Island from 1906-1919, and had much influence upon the insular Courts.

INDIAN TRADE COMMISSIONER'S REPORT.

This report, which covers the two financial years April 1924 to March 1926, has several points about it that should commend it to readers in the United Kingdom. To begin with, it is much more up to date than such reports usually are. Next, it gives a very clear account of the functions performed by the Trade Commissioner, which are not as well understood as they should be: and finally, in addition to a great deal of other information, it gives detailed statistics of Indian trade with Great Britain and the Continent which, in the words of the covering letter from the High Commissioner's office, will be of very great value and interest to Indian merchants. The Trade Commissioner explains that his office is not interested in the import trade of India, which is the concern of British and foreign trade commissioners and consular officers, and of the States which employ them: in the case of the United Kingdom, this branch of the trade with India is the concern of the Department of Overseas Trade, with which the Indian Trade Commissioner works in the closest conjunction. His primary function is to render all possible assistance to firms and individuals in India who are interested in the sale of Indian goods in foreign markets, particularly in those of the United Kingdom and the Continent: and he makes it his business to assist firms and individuals in the United Kingdom and on the Continent who are importers of goods such as those supplied by India and who are anxious, or who can be encouraged, to extend their trade in Indian goods. He adds, "It is satisfactory to be able to record that the number of British and Continental firms applying for information about Indian goods is steadily growing. This is a factor of dual importance. In the first place, it means a development of interest in Indian products and resources. In the second place, the applications themselves furnish an increasing volume of material from which I am able to supply particulars of overseas requirements, and trade introductions, in response to inquiries received from India." It is, of course, recognised that it is not enough merely to collect and pass on the names of firms which profess an interest in Indian goods. Care is necessary to ensure, so far as possible, that the inquiry is a *bona fide* one: that the firm introduced is genuinely interested in extending its business in the direction offered: and that both parties are of the right standing, resources and business experience to ensure that the ensuing contracts will be mutually profitable and honourably carried out. The Indian Trade Commissioner works in the closest possible touch with the Director-General of Commercial Intelligence in Calcutta: and, though it is manifestly impossible to guarantee the standing of every Indian firm introduced, all possible effort is made to ensure that only the names of reliable firms are passed on to the inquirer. The inadequacy of the Trade Commissioner's staff makes it impossible to go as far as would be ideally desirable in this direction; for though, as the report says, the mere forwarding of a list of importers to exporters, and vice versa, often leads to business, trade introductions would be made with a much better chance of success if it were possible, in each instance, thoroughly to investigate the business experience and practical requirements of both parties. If it should be found possible to allot more funds for the strengthening of the Commissioner's staff, the expenditure would undoubtedly justify itself in the greater opportunities afforded for extended orders and increased trade.

In the statistics given in the Report, the Trade Commissioner shows the great opportunities that offer themselves for the activities of his office: and, by inference, the improvement that might be expected to result from their extension, if more money could be found for the purpose. For, as already mentioned, his work deals particularly with Indian exports to the United Kingdom and the Continent: and, so far from being able to report progress in those markets, he has had to register a decline. During the year 1923-4, the United Kingdom took 25 per cent. of India's total exports, and the Continent 26.8 per cent.: and, for 1925-26, the figures are 20.9 and 24.3 respectively. It is interesting to compare these figures with those of the countries that are not the special care of the Trade Commissioner. In 1923-4, the percentages of the rest of the British Empire other than the United Kingdom, of Japan and of the United States were 13.9, 14.1 and 9.4 respectively: last year they were 14.8, 15.1 and 10.5. In the former year, India's total exports amounted in value to 34,883 lakhs of rupees and, in the latter, to 37,486 lakhs: and it is not only the percentage that has fallen, but the actual amounts also; for, whereas in 1923-24 the United Kingdom took goods to the value of 9040 lakhs, and the Continent 9300 lakhs, the figures for 1925-6 are 7848 and 9100 respectivelv. As the total value of India's exports expands, there will be more and more opportunity for increased sales in the United Kingdom and on the Continent: and if, as seems probable, lack of funds is making it difficult to grasp this opportunity, the position is one that calls for early remedy. The detailed figures for Contintental countries are also of interest. Germany, France, Italy, Belgium, Holland and Spain are the only countries that count: the share of others is negligible. In 1923-24 those countries, in the order named, imported Indian goods to the value of 2511, 2004, 2181, 1389, 596 and 379 lakhs of rupees, while all other Continental countries between them took 240 lakhs: in 1925-26 the figures were 2568, 2099, 1896, 1235, 718 and 485, leaving 99 lakhs only for the rest. It will be noticed that France displaced Italy for second place and that, though the value of the imports of Italy and Belgium declined, that of the other named countries increased to a greater or less extent: so that it would appear that a special field for the activities of Indian merchants should be found in Italy, Belgium and the "other countries."

The Report goes on to draw attention to the fact that, while Indian imports to the Continent are almost confined to raw materials, the British market, apart from cotton textiles which England produces herself, is the best market for Indian manufactures. For instance, though the United Kingdom is not the best market for Indian raw

Digitized by Google

silk, it is the best single market for Indian silk piece-goods. It is true that Liverpool takes the bulk of India's raw wool, but most of it is re-exported in the raw state: but Indian woollen manufactures find a better market in the United Kingdom than elsewhere and, during 1924-25, five Indian carpets were bought by the United Kingdom for every one exported from India to any other single market. The Continent takes the bulk of India's export of raw hides and skins, but the United Kingdom is by far her best customer for tanned hides and skins and leather goods. The case of oil seeds and of vegetable oils and oil-cake is similar. The Trade Commissioner gives a list of other industries that are of growing importance in India and that will doubtless expand as their products become better known in foreign countries. Among these are cotton handkerchiefs and shawls, wrought brassware, lacquerware, furniture and cabinetware, sports goods, and pickles and condiments. As regards raw materials, most countries of the world have so adjusted their tariffs as to discourage imports of manufactured goods, while encouraging, by light duties or none at all, the import of raw materials. It is not surprising, therefore, that India's chief exports to Continental countries consist of raw materials, or that her trade in them should follow clearly defined lines. Four groups of commodities account for between 80 and 90 per cent. of India's exports to the Continent: raw cotton, raw jute, oil seeds and food grains. Next in order, but of much less importance, come raw hides and skins, raw hemp, lac and manganese. Italy is by far the best customer for cotton, as is Germany for jute and rice, and France for oil seeds. The cotton figures are of special interest. In 1925-26 India produced 6,038,000 bales of 400 lb. each, of which she exported 4,173,000. Of these, Japan took 2,084,000 bales, China 545,000, the United Kingdom 225,000, and the Continent 1,232,000 (Italy 456,000, Belgium 243,000, Germany 218,000, France 193,000 and Spain 73,000). The Trade Commissioner thinks that conditions on the Continent are favourable to an increase in imports of Indian raw materials; he remarks that the flight from a depreciating currency may take the form not merely of the purchase of foreign currency and bonds but also of foreign produce. It is specially for this reason that he considers that Indian merchants would do well to study carefully the conditions of trade on the Continent and the particular classes of goods in demand there. For example, Argentine and Indian linseed have always competed for the French market, but there are indications that the former is gaining, and the latter losing, ground; though Indian linseed still holds its own in Italy. Before the War, France imported almost the whole of her requirements of sesamum seed from India and comparatively little from China; now the two varieties are competing on practically level terms and, in Italy, the advantage is with China. South America is a keen competitor with India for the hide and skin trade of the Continent. These instances show how essential it is that Indian goods should be represented at important exhibitions and fairs on the Continent. The example of Wembley shows how much it is possible to expect from this kind of advertisement, if it is followed up in the manner suggested by the Commissioner for India at the British Empire Exhibition, when he said, "The establishment of permanent markets abroad depends on the existence of organisations in India which will ensure the steady supply of goods of uniform quality, the prompt execution of orders, and the study of the changing tastes of foreign customers."

CURRENT TOPICS.

The Monsoon.

The progress of the monsoon continues generally favourable. The rainfall in Bombay has been considerably in excess of the average, and some damage to crops has occurred in the district of Gujerat. There has also been excessive rain in parts of the United Provinces, with a similar result; but the damage is not considered to be of a very serious nature. The telegraphic report for the week ending September 1, says that the monsoon has been vigorous in North-West India and the Central parts of the country: fair in the east of the United Provinces and normal in the west: fair in Malabar and the Deccan, in Kashmir and the south of Hyderabad: normal in lower Burma, Assam, Berar and the south-east of Madras: scanty in the North West Frontier Province, Baluchistan and Mysore: and in excess elsewhere. On the whole, it seems that the prospects of a sixth successive favourable monsoon are well assured.

The Jute Crop.

A cable from Calcutta says that this year's jute crop is expected to beat all records with an output of 11½ million bales. It is believed that the whole amount will be well up to the average in quality, with about one-fifth markedly above it. It is announced that the final official jute forecast will be published on September 29.

Iron in Burma.

It is stated that one of the richest deposits of iron ore in the world has been discovered in Burma, at a distance of only about 65 miles from Rangoon. One report says that, on analysis, the iron has proved to be pure, that Japan has offered to take all the iron that Burma can produce, and that the discovery, if substantiated, should result in Burma becoming one of the richest iron-producing countries in the world.

One of the chief difficulties of Burma in the matter of the exploitation of her minerals has always been that of communications and consequently of transport. The report does not indicate the locality of the find; but, as it is stated to be so near Rangoon, the transport problem should not present difficulty. The value of iron increases enormously, of course, when coal exists in its vicinity. The *Indian Year Book* makes no mention of the existence of coal in Burma; but there certainly is a good deal, though none has so far been found anywhere near Rangoon. The absence of any mention of coal in the *Year Book* means, one must assume, that it is not so much coal that does not exist, but the coal getting industry. Only a few years ago, one was told by an enthusiastic friend that he expected to make his fortune out of coal mines in Burma, somewhere north-east of Mandalay—probably in the Shan States; but the silence of the *Year Book* on the subject makes one fear that he has not succeeded. The existence of coal is known in a number of other parts of Burma, few of them very accessible—in the Chindwin and Shwebo districts, west and north-west of Mandalay, in the Mergui district in the extreme south, and near Thayetmyu, on the Irrawaddy about half-way between Rangoon and Mandalay, which looks the most promising locality in the matter of communication. In the future development of her iron, assuming that it really exists, Burma will perhaps rely on her oil rather than on coal. But, on the same assumption, it may be expected that the discovery of iron will give an impetus to the exploitation of the deposits of coal that undoubtedly do exist in considerable quantities in Burma.

The Cotton Trade.

The latest reports on the position of the British cotton trade in India are by no means encouraging. Figures given in that of the Indian Trade Commissioner show that, during the financial year 1925-26, India's production of cotton piece-goods in her own mills was approximately 1880 million yards, while her total import was 1540 million, of which 1275 million came from the United Kingdom and nearly 217 million from Japan. These figures show a very striking alteration from the pre-War averages, which were—Indian production 1105 million yards, total import 2617 million, of which 2549 million came from the United Kingdom and 3¼ million from Japan. The report of H.M. Trade Commissioner at Calcutta says that the total imports of cotton twist and yarn in 1925-26 amounted to 51½ million yards, compared with 56 million in 1924-25: and that, while Japan ap-

Digitized by Google

preciably increased her share, which stood at 33½ million yards, that of the United Kingdom fell from 21 million to 16 million last year. The only really encouraging feature in the latter report is the expansion of the imports of artificial silk yarn, which more than doubled in 1925-26, rising to 2,671,000 lb. from 1,171,000 in 1924-25; but the United Kingdom's share in this trade is considerably less than that of Italy, amounting to 761,000 lb. valued at 24 lakhs of rupees, while that of Italy was 1,309,000 lb. valued at 33¾ lakhs. In woollen piece-goods, the total imports showed a large increase, from 11¾ million yards in 1924-25 to 14½ million last year; but, though the British share was much the largest, amounting to 5¼ million yards valued at 150 lakhs of rupees, it was less than that of the preceding year, when it amounted to 6 million yards valued at 156½ lakhs. Imports from Belgium, France, Italy and Japan all showed considerable increases, and were made at lower prices that are responsible for a fall in the average value per yard, which was 2 1-5 rupees in 1924-25, to 2 rupees last year. The imports of woollen piece-goods into India, in spite of the increase recorded, are still far below the pre-War figure, which was about 22½ million yards.

The figures given for imported cotton piece-goods show how serious is Japanese competition with Lancashire: and a statement, sent by the Indian mill owners to the Tariff Board which is now engaged in investigating the condition of the Indian cotton trade, gives details regarding Japanese competition with Indian mills. This statement dwells on what the memorialists declare to be the unfair competition of Japan: it says that India, with over 8 million spindles, produces 1½ million bales of yarn annually while Japan, with less than 5 million spindles, produces more than two million bales: and that, in piece-goods, Japan, with 60,000 looms, produces over 1000 million yards against India's production of 1700 million from 150,000 looms. The effect of this result, produced by long hours of work and double shifts, on Japanese costs of production will, they say, be at once apparent: and they declare that Japan, besides ousting Indian yarn and piece-goods from China, sold in India 32 times the quantity of yarn, and 14 times the quantity of piece-goods, that she sold there ten years ago.

Slavery in Nepal.

The cabled report of the completion of the scheme for the liberation of slaves in Nepal contains some remarkable figures. It is stated that the total slave population fell just short of 60,000: and that compensation, amounting to more than £275,000, was paid for the liberation of approximately 52,000 of these: the remainder being liberated without compensation. Out of nearly 16,000 slave owners, less than 500 desired the retention of slavery, and nearly 1300 voluntarily released their slaves without compensation. The Prime Minister of Nepal has, it is said, paid a large proportion of the indemnity out of his own pocket: and has now brought to a successful conclusion a scheme that he started six years ago. The actual figures of the amounts paid in compensation show that the cash value of a female slave, compared with that of a male, was as four is to three throughout their lives: the minimum, 20 and 15 rupees, being for slaves under the age of three, and the maximum, for slaves between the ages of 13 and 40, being 100 and 75 rupees. Thereafter it gradually dropped to 40 and 30 rupees for those over 60 years old.

Female Legislators.

The cabled announcement, that the Legislative Assembly has unanimously accepted a resolution asking that "immediate steps should be taken to remove the disqualifications on the admission of women as members of the Assembly," is apparently the complement of the decision, made in May last, that, in any Legislature, a resolution might be moved permitting the election or nomination of any woman as a member. The wording of the earlier announcement seemed to suggest that the permission would, in each case, be individual and personal only; but that of the present one makes it out to be of general application. One has not been able to discover whether women are now entitled to vote for the Central Legislatures, though it must be assumed that they are: otherwise the greater privilege would precede the lesser. They certainly are so entitled in the case of most, if not all, of the Provincial Councils: and female franchise has, for some years past, been in existence in some of the Indian States, notably Travancore and Mysore. The Indian electoral qualifications are based on the payment of a prescribed amount of revenue or income tax; and it is not to be supposed that many Indian women will prove to be eligible for the vote on this basis. Incidentally, it is of interest to note that the number of qualified electors, which was 5,355,000 in 1920, rose to 5,810,000 in 1923, an increase of 18 per cent.: figures which may reasonably be held to indicate a rise in material prosperity, since they show nearly half a million persons above the "property line" in 1923 who were below it three years earlier. It will be interesting to see whether the increase continues in 1926; though the total will now include the female voters who were previously disqualified. Some estimates put their probable number as high as a million, though one would think that they cannot really be anything like so many as that. The interesting point is that the decision has been taken in time for a test of its efficacy to be made at the General Election; though one cannot help thinking that the results are likely to be almost, if not entirely, negative.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 19.

The Communal Situation.

There is no change visible in regard to the communal situation. Sir B. N. Mitter came to Calcutta from Simla in order to endeavour to bring the leaders together: and, in spite of Press discouragement, he succeeded in forming a Conciliation Board of a representative character. The Board has now met with due notice, and the only leaders who attended were some non-Swarajist Hindus. They could, of course, do nothing else but adjourn *sine die;* which appears to dispose of the Conciliation Board, at least until after the coming elections.

Vote-Catching.

The various political organisations are obsessed by the task of getting votes, and everything that is now being done in public or in private must be considered in the light of this fact. Although the number of parties only compares with that of the candidates, there still remain certain definite groupings, although there is a good deal of overlapping everywhere. The old main division into Swarajists and The Others has gone, although Mr. J. M. Sen Gupta still hangs on to the hope that he may yet achieve a majority if he can attract some Muslim extremists; hence his frantic endeavours to prevent any discussions of the still-born and dead-again Hindu-Muslim Pact. The main line of cleavage is the religious one, and popular opinion at present is that no other ticket matters.

The Party Lines.

So we have what is apparently an almost completely united Moslem Party on the one hand, openly organised on religious lines; the strength of this may be imagined when it is remembered that there are thousands of mosques in Calcutta, and every Moslem goes to pray there at least twice daily and comes under the influence of his Moulvi or priest. On the Hindu side the position is less definitely outlined; the previous main division was between Moderates and Extremists, and the former party consisted, at least in so far as it was visible, of leaders only. Now desertions from the Swarajists for the "Hindu Party" have been wholesale, and the rush is becoming a rout. The religious cry has swept in almost the whole of

Digitized by Google

the old Moderates and, as a result, the tone of the new Hindu organisation is much more rational than that of its predecessor. There are many sub-divisions in the Party which are largely matters of rivalry between leaders who are connected primarily by an intention to keep out the Muslim, and the next election will be a test of whether the religious enthusiasm of the Hindu will overcome the naughty-boy, anti-authority temperament, the national failing of the Bengali. That is the real issue between the Hindu Party and the Swaraj Party to-day in Bengal.

Politics.

This is a week of Council meetings. The Viceroy has opened the Assembly with a speech the sincerity of which is obvious even in circles where it is felt that recent Simla salads contain more dressing than lobster; *Forward* is infuriated by these "Viceregal Platitudes."

The Bengal Council has enlarged the Port Trust by an increase in commercial representation, but it refused to add more Corporation members; a Government feeler in favour of the Grand Trunk Canal scheme was turned down, as the opinion of public bodies had not been previously obtained; and yesterday a Bill was passed again excluding from the Calcutta Municipal area two of the suburbs which have recently been added to it. Altogether a mixed record; the Swarajists again put in a short appearance and saved their travelling expenses.

"The brilliant Swarajist victory in the Council of State by-election for East Bengal," says *Forward*. This was the case where six candidates stood, one Swarajist and five others, all anti-Swaraj. The extremist polled less than one-third of the votes, but gets the seat; and *Forward* thinks this promises well for the coming Council elections.

Forward is now satisfied that the report of the Currency Commission is the result of a deep plot on the part of Government to save the "Help-the-British-Interests." It fully expects the Legislative Assembly to reject the resultant Currency Bill, but this is not to save the country from currency manipulation; thanks to the "outrageous action" of Sir Basil Blackett, the "premeditated fraud" of the constitution of the Council of State, and "the new religious and conscientious Governor-General—the new farmer friend of our people," the conspiracy will succeed. It is a black outlook.

Men and Things.

Alan Cobham has done a great performance in reaching Melbourne; we shall give him another cheery evening as he passes through on his way home!

All the branches of the Iron and Steel Trade are on overtime before the Tariff Board, and Mr. G. S. Hardy, I.C.S., the local *douanier*, has had to be asked in how many ways he can impose duties. Meanwhile the consumers have not been consulted.

The Legislative Council have passed the vote to enable the construction of the Council Chamber to be begun. They have also thrown out a proposal to impose further local taxes on motor cars, but have recommended the appointment of a special committee to consider the formation of a Road Board to be financed from a provincial motor tax.

Mr. Loftus Tottenham, I.C.S., and Mr. Alan Lloyd, I.C.S, the Revenue Board from Simla, are in Calcutta this week. Does this mean more tariff proposals?

Would-be Indian locomotive manufacturers are asking for protection. Heath Robinson will be able to get on with some designs if they succeed.

Mr. J. R. Coats, the City Engineer, told the Rotary Club on Tuesday about Calcutta's water supply. One of the two mains on which it all depends burst sixteen times when it was tested on its construction some sixty years ago. It still keeps up the practice.

Statistics as to communal riots were reported to the Legislative Assembly yesterday: in three years there have been outbreaks in 71 places with about 260 deaths and 3,000 injured.

Galvanising the Sport of Kings.

A correspondent of the *Englishman* has created a sensation in sporting circles. Inspired by pictures of the Manchester mechanical hare, which is electrically propelled down the track in front of the whippets, he suggests that horse-racing in Calcutta should be carried out on these lines. He is a true lover of animals, and he congratulates the Trafford Park management, where "there are no jockeys riders to beat on with cruel whips unwilling dogs, nor do I suppose that trainers of dogs are allowed inside starting boxes to give dogs sound slap when door is opened for start, and of course there is no shedding of blood which is so objectionable to us Indians. Of course I do not suggest that horse is a carnivorous animal, but I know from friends of mine who have been to England that in fox hunting fields restive horses which have thrown riders will follow hunting dogs acting on their own inclinations and will keep on running for many miles." This being so, of course the rest is obvious.

The Double Event.

"To be brief I suggest that R.C.T.C. should provide toy fox propelled mechanically and small pack of hunting dogs. These dogs will chase fox with much glad noise and horses excited and restless from clamour will join in pursuit. It need not be said that horses will not have jockeys on their backs so all cruelty will be avoided. A very pleasing and sporting spectacle will be result. Added to this those of us who enjoy what I may term a little 'flutter' will have pleasure of wagering on first three dogs as well as first three horses past the post and combination on dog and horse will give added zest to casual punter." After which it only remained for another genius this morning to suggest the adoption of direct action by an electrical carrot.

The Trivial Round.

Good for Chapman and gratters all round. Calcutta has lived at the Oval for a week, and now nothing matters. We have still to hear who did the damage in that fourth innings, but it must have been a great show to watch, not to mention being in it!

The rain stopped racing on Saturday; we had ten inches in three days, and the course was impossible. The golf courses were crowded in consequence, and quite a crowd watched a friendly game of mud-polo with a rugger ball between Calcutta and the B. N. Rly.

Rugger goes stronger than ever, in spite of appalling grounds. At the moment, it is forwards all the time and everybody black with liquid glue. The 82nd Regiment (Prince of Wales' Volunteers) are still unbeaten, and will be an easy first on the season; but Calcutta's senior team is improving every match, and the meeting between them to-night should be worth seeing, especially if the rain holds off.

The School of Music has given another Chamber Concert at the Saturday Club, which was comfortably full to hear a much improved performance. Even a few of the Firpo crowd were there. The changing East!

The A.D.C. have produced "The Dover Road," and put on the best all-round performance seen here for years. The setting is perfect, a subdued harmony in mahogany, orange and purple; the cast is really good; and the production could not be bettered. It is a triumph for Mrs. "Pat" Deane.

Markets.

The past week in both the jute and gunny markets has been featureless; there was a slightly harder tendency at first; but, with mills holding off, the tone closes easier. Gunnies and heavy goods are being dealt in on a small scale, but generally the market is dull. Piece-goods, too, have been no exception, as, apart from one encouraging factor—the cessation of communal disturbances—there is little of interest to report so far as the actual amount of business that has been transacted is concerned. At the moment, dealers are purchasing on a

Digitized by Google

"hand to mouth" basis in the hope of a further reduction in rates.

The tea market continues to go stronger. At the sale here, the prices bid were a cause of surprise to most of the brokers. A steady market was expected; but, as it turned out, prices showed a rise of between three and nine pies for almost all descriptions.

On the Stock Exchange, general business has fallen off during the week. Government Securities have been less in demand; but holders have shown no disposition to sell, owing to the difficulty of finding other channels for their money. On the other hand, a number of investors have not yet regained their confidence in the market as a result of the wild speculation on the issue of the New Loan. There are fears in some quarters that Government Securities have been made a speculative counter. Jute shares generally have been easier; but, on the other hand, coals, in a limited way, continue to find purchasers. Teas have displayed strength on the improvement in the commodity market, and the demand shows signs of broadening considerably. Rubbers are a shade better after their recent relapse: and in tin shares there has been a heavy turnover at increasing prices.

The Exchange Market is steady, with ready T.T. quoted 1s. 6d.; there has been little inquiry for remittance. Money continues very easy, and is being placed at ¾ per cent.

THE "ULTIMATUM" TO THE NIZAM.

It has been left to the Hyderabad correspondent of a leading extremist newspaper to discover the real truth about the recent story of a Simla ultimatum to the Nizam. This is, that the British Resident in Hyderabad State is kept there—at great expense to the Indian taxpayer—for the purpose of giving advice to the Nizam. For some time past, the latter has successfully carried on the government of his State without any desire to receive advice; so the Resident, feeling that he was not earning his pay, asked and obtained an interview, in the course of which he found opportunity to perform his official function. As he could not think of any other point on which it was possible to offer advice, he suggested that it would be a good thing if the Nizam were to strengthen the superior ranks of his officials by the introduction of a few Europeans.

With this statement as its text, the correspondent's newspaper explains that the procedure adopted is in strict accordance with what has been the policy of the Government of India for many years past. In its determination to deny freedom to India, the bureaucracy has set itself to substantiate its stock argument that the Indian States constitute a formidable obstacle to the realisation of Indian self-government. In order to do this it is necessary to strengthen its hold over the Indian States: and the surest way of doing so is to introduce European officials. Otherwise, it is to be expected that the people of the Indian States might find it possible to influence their Indian rulers towards the grant of representative institutions, and so obtain control over the administration of their own affairs and be in a position to "adjust their relations with their fellow countrymen in British India." The inhabitants of Indian States have many grievances—in Hyderabad, for instance, though the ruling class is Mohammedan, nearly 90 per cent. of the population is Hindu—all of which are due to one cause, autocratic rule. The remedy is the introduction of responsible government: and this the people, if left to themselves, would surely be able to bring about. It is the Government policy of strengthening the autocrat against his subjects, while at the same time taking every opportunity of encroaching on the rights of Indian States in their relations with the British Government, that is the most powerful influence in preventing them from doing so.

It is no doubt always salutary to see ourselves as others see us, even when their view seems deliberately distorted and unfair. It is some consolation to think that if, to complete the picture, we could be favoured with the views of the Indian State subjects themselves, they would be of a widely different complexion. As for their rulers, while it is pretty certain that a considerable number would agree with the premise, this would only be because they would expect it to lead to exactly the opposite conclusion. On the whole, then, we may take heart: and, while not denying the serious character of the obstacle presented by the existence of the Indian States to any feasible scheme for a self-governing India, continue to do what we can to work for its ultimate removal in pursuance of the aim which, whatever extremist preachers of our "bad faith" may say, we have deliberately set before us in India, and are conscientiously trying to do our best to achieve.

THE CURRENCY BILL.

Criticism of the Indian Currency Bill by the Bombay faction is not confined to root and branch denunciation, but now condescends to examination of details. The Bill is discovered to contain sins of omission as well as of commission; it is, for instance, asked why, when bringing forward a Bill laying statutory obligation on the Government to buy or sell gold at fixed rates but in prescribed quantities as a minimum, there is no provision in the Bill for the demonetisation of the sovereign and half-sovereign. It is suggested that the omission means that Government intends to provide simultaneously for this and for the inconvertibility of currency notes into silver, in a separate Bill. If so, says the *Bombay Chronicle*, Government "will be incurring the charge of embarking upon piecemeal and illogical legislation. 'Whom God hath joined let not man part asunder'; but it seems the Financial Bible of our Olympians at Simla lays it down that to cut apart whatever has been welded by ordinary natural causes into a common consistent whole is the best type of currency reform." The last sentence contains a remarkable admission which is, of course, not intended to be taken literally; but it certainly looks as if the opposition is weakening if it has to fall back upon arguments of this sort. This impression is strengthened when one reads the next objection—also to a sin of omission, but apparently only that of the word "of." A clause of the Bill lays down that, among the places where the obligation to purchase gold will rest upon Government, are "the office of the Master of the Mint, Calcutta, or the Master of the Mint, Bombay. Is there intended to be an invidious discrimination between requiring, in the case of Calcutta, 'the office' of the Master of the Mint to assume this obligation, while in Bombay it is simply 'the Master of the Mint' *tout court*?"

After this excursion into the fantastic, the critic returns to comparative sobriety when he objects to the size of the prescribed minimum of 400 oz. of gold, which he calls "this huge standard unit of currency, costlier than the ancient coin the talent": and declares that, if Government retains the option to sell gold or gold exchange, "it is a mere impertinence to add that they will not sell either except in prescribed minimum quantities." It is bad enough that this should be so; but it is much worse that they should also refuse to buy any lesser quantity. "The Bill says not a word, and we fear intends to do nothing about that extreme case of need, when the famine-stricken peasant, shorn of all his other resources, starved out of house and home, brings to the Mint or the Treasury his poor miserable stock of ornaments. The modern Englishman is, by training and temperament, simply incapable of realising what such a contingency means in an Indian peasant's life when he demands to convert his wife's most cherished ornaments into cash. But, under the new dispensation, what does the Finance Member care for the needs of the peasant, so long as he can secure the credit and solvency of his Government?"

Since one of the main objects of the new policy is the discouragement of hoarding, particularly of gold, the principle underlying this highly coloured description is

Digitized by Google

sure to receive full attention. It is, of course, perfectly well understood that one of the stock methods of hoarding is conversion of bullion, or coin, into family jewellery, with the deliberate intention of reconverting it into money if necessary; nor is the Indian peasant singular in this respect. One may venture the belief that even the modern Englishman sometimes throws a speculative eye over his wife's most cherished ornaments, and considers the possibility of their conversion into cash. The decision to postpone consideration of the Bill until January will give time and opportunity for the examination of a number of its details, including at any rate some of those mentioned by the *Bombay Chronicle*.

THE COMING OF THE WOMEN OF INDIA.

(By LIEUT.-GENERAL SIR GEORGE MACMUNN, K.C.B., K.C.S.I., D.S.O.)

A good deal has been written of late of the growing education of India and of its effect on Indian women, as well as of the errors which have arisen from the ill-laid edifice of Macaulay. The coming into the limelight of the Indian women is such a portent for good, and withal so pregnant with anxiety, that much might be written of it. It is to be remembered that India has a population of close on 320 millions, with the women in due proportion. Let it be also remembered that it is a country of many races and religions and great physiological and ethnological differences, and that grades of society work on two entirely different and uncorrelated bases. There is the great Hindu system of caste, and there is the normal world system based on status and possessions. Across the second system runs the great bar sinister of the untouchable, whereby those born to a menial and outcaste life can obtain no status in the eyes of the world, be their wealth and worth never so great.

The Honourable Women.

It is a curious milieu in which to study the woman problem: and there is room for anxiety lest the universal admirable qualities and innate happiness of the female character should be impaired.

The women of India, Hindu or Moslem, twice-born or outcaste, are women of family life and assured position. No spinsters serve as maiden aunts, no unmarried women mourn an incomplete life, no woman but is or has been mistress or co-mistress of a house rich or humble, of a castle or a dab-and-wattle hut. Every woman who counts is a woman of honourable position, be it never so humble. It is true that there are in city life the inevitable house on the wall, the dancing girl and the latticed windows, but then such are drawn from those outcaste tribes to whom the world need turn no thought. They are not, in the East, any part of the woman problem.

The honourable woman of the East is the most intensely domestic character in the world. Religion demands that her man shall be her care in the world. Custom and inclination but confirm it. The bearing of children and all that it stands for is her most sacred duty. To it and the care of her husband she devotes the whole of her existence, and finds therein supreme content. This applies to the humblest as to the highest. The Hindu wife is also the guardian of the daily religious life, more intent than most in Christendom. Hers is the duty of the daily uplifting of hands, while the male is about his worldly business.

The Origins of Seclusion.

The seclusion of women as practised by the wealthier classes, for it is practically impossible among the humbler folk however lofty their religious and caste status, is to a great extent but a modern custom. It derives largely from Moslem habit, and is partly due to the day of the break-up of the Mogul Empire, when hordes of mosstroopers harried the land. It was their wont to seize a good-looking village lass and gallop off with her screaming at the saddle bow, often running the gauntlet of the village matchlock-men. As a protection, women would assume the heavy Mohammedan *burqa* or body veil. A trooper would hesitate to run the gauntlet for what might prove on unveiling to be a beldame of seventy summers. Then again, to go into *purdah* or take the veil is to this day to assume the sign of the "quality." As only the well-to-do can afford the veil, the pedlar's wife whose husband has made money retires to its dignity.

The Escape from the Veil.

Thus however it generally means that the relaxing of the veil is a sign of the Pax Britannica. In Bombay many Indian ladies left the *purdah* years ago, and the custom is growing rapidly, to the great scandal of the older folk, to the content of the educated women, and to the wondering acquiescence of their men-folk. It is now the fashion for the *purdah-nishin* lady to come up to Simla in *purdah*, there to emerge among the many emancipated on the hilltop and, having made the plunge and acquired the necessary *aplomb*, to return to her own surroundings. To the shy, retiring, gently-nurtured lady that plunge is a considerable one. It is noticeable that they are more at home among Englishmen than among their own men. The latter, unused to women in social intercourse other than those of the dancing saloon, are apt to stare embarrassingly. The well-bred Indian ladies, who are now to be met in considerable numbers in Simla and Delhi during the sessions of the Legislative Assembly, are remarkable for their beauty, pose and charm; in fact, they are far more dignified and more worthy of note than their fathers and husbands of the Assembly—which might perhaps be said of all parliamentarians.

The younger married women who have come out of *purdah* are quite prepared to play games and dance. In fact, it has been said that, in ten years, you won't "see their heels for the dust." But matters are not always moving rightly. Now and again some educated Indian girl from a school in Europe can only find her allotted marriage with the son of some old-fashioned high-born family, and must return to the *purdah* which she has not seen since a child. That is a tragedy to which for the moment there is no remedy, but which is but an incident that change cannot avoid. The coming of the women of the more educated classes of India is full of hope for the better regulation of life and progress, and the broadening of the human outlook of the peoples of India: and there is no doubt that the intuition of the women inclines to all that the British instinct makes for. But there remains the danger of what may come from pouring new wine into old bottles: and there are many who fear with Mr. Gandhi that the materialism of the West may destroy the spiritualism inherent in the East and, in the case of the women, diminish that domestic content which is such a feature of their lives.

INDIA OFFICE COMMUNIQUE.

The Rupee Exchange.

The following communiqué has been issued by the Government of India:—

Doubts have been expressed in certain quarters as to the Government's intention in the matter of maintaining exchange at 1s. 6d. per rupee, in view of the postponement of consideration of the Currency Bill in the Legislature. The Government of India desire to make it clear that, in accordance with the announcement made in the press communiqué of the 4th August, 1926, they will continue to take such steps as may be necessary to prevent any undue fluctuation in the exchange value of the rupee, in order to confine the movement of exchange within the approximate upper and lower gold points as calculated on the basis of a 1s. 6d. gold rupee, namely 1s. 6 3-16d. and 1s. 5¾d. respectively.

THE INDIAN MAIL.

The Bengal Prohibition Order.

For once, all newspapers in India, of whatever shade, seem to take the same view of an official action—the proceedings of the Government of Bengal in the matter of the prohibited visit of Pandit Malaviya to Calcutta. The *Pioneer* describes them as "a blunder, colossal and almost unprecedented": the *Englishman* speaks of "ineptitude and inaction wholly wrong and unjustifiable": the *Times of India* condemns Government's "far from masterly inactivity, which shows a lamentable disregard for the prestige of the executive," and adds "The function of a Government is, after all, to govern. If it is unable to make its writ run within its own borders, then it ceases to be a Government in the true sense of the word." The *Bombay Chronicle* pillories the "meddling and muddling officials of a blundering and obstinate bureaucracy" and proceeds, "Now that the Pandit has, by his Civil Disobedience, vindicated his own and his country's self-respect in open disregard of official high handedness, the officials have only to eat the humble pie." A rather remarkable publication of Southern India, the *Navayuga*—apparently a Communist organ, since it is printed under the motto "Workers of the World unite" surrounding a device which seems meant to represent the northern half of the world's sphere encumbered as to its temperate regions by a hammer and a plough, with a spinning wheel at the North Pole and a pen and ink-pot just north of the Equator, the latter presumably indicating its Editor's position—also does its bit, in the following sentence: "Evidently farsighiedness is Cenoticuons by its absence in the mental world of the Bengal Governmect. The Magistrate's order substantiates Lord Clivier's contention in London *Times*. What aru Lord Bikenheed say?"

Lord Irwin's Visit to Poona.

The latest mail brings an excellently got up souvenir of the Viceroy's visit to Poona, produced by the *Indian Daily Mail*. It consists of a series of photographs, all of them quite good and some of them excellent, and a Foreword. From the latter, one realises the great importance attached to the visit by the inhabitants of the Bombay Presidency; for it is mentioned that, though Poona is the summer—more exactly, monsoon—Capital of the Presidency, this is the first time for thirty years that it has had the honour of welcoming a Viceroy: and the hope is expressed that the visit "may be taken as a sign that the Western Presidency will receive greater consideration at the hands of the Central Government than it has been doing." From one of the photographs one learns the interesting fact that the Viceroy is ex-officio Chief Scout for India, since Lord Irwin now holds that position, and Lord Reading held it before him. It would, perhaps, not be consonant with Viceregal dignity for the Viceroy to appear in Scout garb—though Sir Robert Baden Powell would probably not agree. It was one of one's unsatisfied longings, after learning that Lord Reading was Chief Scout for India, to see him take the salute at a Jamboree in the uniform appropriate to the occasion.

Presentation of a Purse.

A case that has just come up in the High Court of Bombay throws an illuminating side-light on some of the nationalist political manœuvres of the last few years. The plaintiff's case was that he and the defendant were placed in charge of a fund started with the object of presenting a purse to the well-known Swarajist politician who is now President of the Legislative Assembly, Mr. V. J. Patel, prior to his departure for England in 1918. Only about three thousand rupees were actually collected: and, to make a decent show, the treasurers borrowed Rs. 20,000 from the Bank of Baroda on a joint promissory note, and added this amount to the purse. In 1923 the plaintiff paid back the whole sum to the Bank; and it was only after repeated failures to persuade the defendant to pay up his share that he took action in the Courts to obtain it. The defendant's plea was a denial of liability: and the case is still undecided.

INDIAN EXCHANGE.

London, September 6.

Markets both here and in India have remained so very quiet during the past week that there are very few changes to record.

Calcutta has remained steady at 1s. 5 31-32d. T.T. with very few buyers under even money.

In Bombay, however, rates have been marked down to 1s. 5 15-16d. with occasional sellers at 1-32d. higher. So far as we are able to ascertain, business has been very dull.

Rates for commercial bills have remained steady in both places at 1s. 6 9-32d.; but, during the past day or two, merchants have been able to place first-class bills in Bombay at 1s. 6¼d. for delivery within a couple of mails. Reports have reached London from Calcutta that an active business has been going on in jute for shipments this and next month, and prices have shown a tendency to rise. This should tend to keep exchange steady.

As regards forward rates, the tendency is slightly easier, but there does not seem to be any inclination to allow quotations to fall. December and January T.T. is quoted 1s. 6⅛d., and November has been done at 1s. 6 3-32d.

In this market some inquiry has been going on for forward business, but very little has been settled. Ready T.T. has been available at 1s. 6 1-32d., but remitters have been able to obtain 1-64d. lower, and others are on the look out for 1s. 6d.; but, so far as we are able to gather, even money has not up to the present been available.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
London, Tuesday Morning.

Oil in Albania.

I would call attention to the map of Albania appearing on page 267 of this issue, which indicates some of the concessions recently granted in Albania. Of particular interest is the chart of the main area of the oil concessions, which shows the place where oil has already been discovered by the Anglo-Persian Oil Company. Appended are details of the areas of the different concessions.

The Position in Yugoslavia.

Readers of the last Yugoslav Supplement, published in our issue of August 26, will have been struck by the straightforward and emphatic appeal made by the Prime Minister to all Departments of State to reduce expenditure. It is significant of the sound financial policy on which the country is embarked that it faces its economic position candidly and with determination. Satsfactory Budget and trade surpluses have been recorded for the last two years; but although the financial year 1925-26 shows a surplus of revenue over expenditure of 815 million dinars, the total revenue amounted to 11,728 million dinars instead of to the 12,321 million estimated in the Budget. Most of this surplus, moreover, will be required to meet arrears and floating debt. Yugoslavia in common with other countries is passing through a time of economic stringency; but it is noticeable that production steadily increases. The measures adopted by the Government to meet the situation include a ten per cent. reduction on the expenditure of each Ministry, and for a period of three months all salaries of the Civil Service have been reduced by ten per cent. Much more confidence would be felt by business circles in England in the future of the Balkan States, if the political friction could be eliminated. One of the questions that it would be well worth the while of each Government to investigate is whether it stands to gain more in the long run by turning a blind eye to frontier episodes, instead of enlarging upon them, until the impression is created abroad that the Balkans are the last place in the world for the investment of capital. Those who have first-hand knowledge of the Peninsula appreciate its potentialities, but confidence in the future of the several countries will never become general in financial circles until the quarrels in which they now indulge are eliminated, or at least relegated to the background.

Cotton Growing in Iraq.

So much has been heard since the War of the potentialities of Iraq in regard to cotton growing that the failure of the results obtained up to the present to accord with anticipations has occasioned not a little surprise. It has been claimed for Iraq that it can become a second Sudan, but if this is so, the critics ask, why instead of encouraging reports do we have disappointments? As an instance is cited the unfortunate experience last season of the Diala Cotton Company, which had a low yield as a result of water difficulties. The relatively small area of cotton grown by the Company last year served the purpose intended, which was the training of a nucleus of inexperienced cultivators in preparation for the larger programme of development in contemplation. The handicap under which the company laboured in regard to water applied to all lands under flow irrigation; but heavy yields of cotton continued to be harvested on lands irrigated by pumps where an adequate and regular supply of water could be assured. Future developments depend entirely on the outcome of the negotiations in progress between the Government of Iraq and the Company in regard to the supply of water. As it happened, there was an unprecedentedly low water supply in the Diala River in 1925, and this caused the Government to doubt their capacity to carry out their obligations under the concession so far as the supply of water is concerned, and judging from the native Press in Baghdad the question has unfortunately developed into a political issue. It is maintained in competent quarters that the river can afford adequate water, although it will mean rationing the independent landowners who have previously taken what water they wanted from the river. This rationing of the available water supply, it is emphasised, will not matter to existing landowners; on the contrary, cultivators will be better off by having regular irrigation and an assured supply by instituting an adequate system of water control. But the difficulty is, of course, to make the cultivator see things in this light. Given that a satisfactory arrangement of the water supply is reached, there is no reason why progress should not be rapid; but it must be remembered that even in the Sudan the land was not whitened with cotton in a day. It has been clearly and definitely proved by the Department of Agriculture that with suitable cultivation and an assured supply of water Iraq soils and climate are well suited to the cultivation of American types of cotton. The critical factor which determines the productivity of all crops in Iraq is undoubtedly water; and the rate of development of the country's potential agricultural resources will be measured by the control of its immense water supply.

Egyptian Cotton in Iraq.

Nothing could better illustrate the fact that everything possible is being done to further cotton growing in Iraq than the reference in the recent report to renewed experiments with Egyptian cotton. As a matter of fact, Egyptian types had previously been experimented with for five years, and the result of the renewed experiment serves only to confirm the earlier discovery that Egyptian cottons are unsuitable for cultivation in the extreme temperatures obtaining in Iraq the effect of which is accentuated by the irregular and uncontrolled water supply. It has been found in short that under the severe conditions obtaining in the country American types do better than Egyptian. A consideration which has contributed to the

elimination of Egyptian cotton is the fact that Egyptian and American cottons cross fertilise readily, giving a hybrid type which does not lend itself to commercial cultivation, and contaminates the supply of pure stock of long stapled American cotton now distributed by the Government to landowners.

Sudan Trade Progress.

I have already referred briefly to the satisfactory figures for the trade of the Sudan for the first five months of this year, but the detailed statistics which are now available call for some further reference. For the period the value of the imports was £E2,637,404 as compared with £E2,176,588, there being thus an increase of £E460,816, while the value of the exports was £E3,548,903 as against £E2,302,073, an increase of £E1,246,830. The total volume of trade was £E6,391,124 as against £E4,654,629, an increase of £E1,736,495. These figures are very significant of the rapid progress that the Sudan is now making, and it is most satisfactory that the country should now have so large a balance of trade in its favour. The result illustrates very forcibly the value to a country of a product which is in world-wide demand, and it will be noted that the great expansion of the value of the exports has been achieved with cotton at a relatively low figure. Thus for the same period in 1925 the approximate unit value of the exports of Egyptian and American combined was £E9.8 per kantar, while this year it is £E6.1 for Egyptian and £E3.6 for American. The exports of Egyptian and American totalled 419,515 kantars as against 121,438 kantars, while the value was £E2,457,787 as against £E1,198,309. In other words, while the exports were about three and a half times those of the corresponding period of 1925 the value was little more than double.

A Restricted Prosperity.

It must be borne in mind, however, that the increasing prosperity of the Sudan as reflected in the trade returns indicates the position in parts of the country only. Regions like the Gezira are benefiting greatly by the development of cotton growing, but districts that have not been directly affected by cotton have not participated in the improved economic position, which explains the seeming anomaly that while trade returns have been so good business in general has been restricted. Incidentally the current issue of the report of the Central Economic Board of the Sudan Government contains a somewhat significant passage with regard to cotton growing. In the paragraph which refers to Berber Province it is stated that "a stage has been reached where not only is the cultivation of foodstuffs a more paying proposition than the growing of cotton, but the natives are so anxious about their necessities of life that dura is likely to be grown at the expense of cotton, at any rate on the sagias." That is, of course, the natural sequel to the fall in the price of cotton, and I refer to it only because it points the moral that it would be well not to have too great hopes on the rapid development of rain grown cotton. As long as the price of cotton is low the main development of cotton growing in the Sudan is likely to be in areas such as the Gezira and the Kassala province, but an upward move in the price of cotton will naturally lead to an extension of cotton cultivation elsewhere.

New International Bank.

Details were forthcoming during the past week of an arrangement whereby the business of the Anglo-Austrian Bank and the British Trade Corporation are to be united in a new undertaking which will have the title of the Anglo-International Bank. The new institution will have a nominal capital of £2,000,000 in ordinary shares of £1 each, and the paid-up capital will be £1,960,000 of which £1,360,000 will represent the consideration to the vendor companies while the balance of £600,000 will consist of entirely fresh capital. By virtue of a provisional agreement between the principal Preference shareholders and the holders of the Preferred Ordinary shares and Certificates of Indebtedness, the Ordinary shareholders of the Anglo-Austrian Bank will receive one share in the new bank for every four shares of their present holdings. The British Trade Corporation will receive 750,000 shares in the new bank. Holders of "A" shares will receive nine shares for every ten now held, together with a dividend in cash to September 30, but they may elect to have payment in cash of the nominal value of their "A" shares together with the dividend up to September 30. The remainder of the shares will be distributed among the holders of the Ordinary shares in the Corporation, giving them three shares of £1 each for each two Ordinary shares of £2 10s. each now held. On September 8 a meeting of the Corporation will be held to sanction the scheme. The board of the new company will be a very strong one. It will include General Sir Herbert Lawrence, Lord Faringdon, Mr. P. Bark, Mr. Julian Day, Sir Harry Goschen, Sir Gordon Nairne, and Mr. M. S. Spencer-Smith. Both the institutions which are now to be joined together—in particular the British Trade Corporation—have taken an important part in post-War financial developments in Europe. The British Trade Corporation has been particularly concerned in the Near East, while the Anglo-Austrian Bank has had Central Europe as its main sphere of operations. The two institutions lend themselves specially readily to welding, and with the gradual improvement of economic conditions it may be anticipated that the new bank will find a greatly increased scope for its operations, and that from its position of greater advantage as a result of the amalgamation it will be able to play a very useful rôle in future developments in Central and South-Eastern Europe.

A Palestine Currency.

The announcement of the appointment of a Palestine Currency Board to establish a currency for Palestine based on the pound sterling is not viewed with unmixed favour in City circles. Those who criticise the step do so on the ground that countries in an early stage of their development like Palestine are better off with the responsibility of a currency of their own, as its support depends on a country's credit. It is felt, in short, that a country should be well established before embarking on an enterprise such as a native currency. But of course this argument leaves out of count the sentimental point of view, the strength of which is undoubted. Incidentally, Palestine is not the only country in regard to which the idea of a new currency has been mooted. A similar suggestion has been forthcoming in regard to Iraq which has hitherto had the Indian rupee. COMMENTATOR.

MOTORING IN THE YUGOSLAV ALPS.

The Vrsitch and Liubelye Roads.

By J. MANTUANI.

Yugoslavia possesses an Alpine region which is equal in beauty to anything that Switzerland or Austria has to show. It is a fairly populous region too—a land of pretty villages and threaded by good roads. Two most beautiful Alpine highroads are the one which leads from Kraniska Gora over the Vrsitch Pass into Italy, and its pendant, the Liubelye Pass road into Austria. The Vrsitch road is the only highway pass over the great mountain chain which stretches from the Jalovetz to the Triglav, the monarch of the Julian Alps.

The valley which leads up to this pass on the Italian side is known as the Trenta; that on the Yugoslav side is called the Pishnitsa. For a long time past Vrsitch has been a favourite Alpine resort. There is a well-appointed Alpine hut there—the goal of the easy-going rambler, the starting-point of the more energetic mountaineers who are out to scale the precipitous crags of Prisoynik or the Moystrovka. During the War a highroad for wheeled traffic was built over the pass, and was used for the Austrian transport service. After the War it was neglected and allowed to deteriorate. This year it is being put into repair again, and will shortly be thrown open once more to motor traffic. It is a steep Alpine road which winds in thirty-eight zigzags from under a shoulder of the Moystrovka to the pass, 5,282 ft. above the level of the sea. It is a stiff pull even for a pedestrian. For a motorist it is necessary to be an experienced chauffeur with a particularly hard-wearing car. But the traveller is richly repaid for all trouble and exertion by the beauty of the view as it opens up before him on his way up from the valley.

Very early in the morning, by the light of my electric torch, I gave one last good look at my machine—cooling bath, petrol, oil, tyres and all—and then started mountainward from Kraniska Gora, accompanied on the right by the torrential Pishnitza. The ascent is normal, the surface smooth. Presently the valley narrows, the road passes over a concrete bridge, and on my left rose the grey gaunt peaks which separate the Pishnitza from the neighbouring Martulek valley—dark, sullen precipices, rarely shone upon by the sun, but dear to the mountaineer's heart, because they speak to him of their loneliness and vastness, of the beauty of lofty ridges and summits bathing in the dawn light. Here the path to the Floors of Mount Cross (Krizki Podi) turns off into the Krnitza valley.

My car sped forward, steadily and easily. You must understand your motor as you would a live creature. Nay, better. An engine is a thing endowed with life by man, ruled exclusively by him, an emanation of himself. It is not all one whether you have twenty-four horses harnessed, or a twenty-four h.p. car. The car requires more attention, more care. If it falls sick, it is for you to know it; and if the effort demanded of it be beyond its power, it does not protest, but does its duty to the end, and dies mute and modest.

The road now begins to ascend in earnest. To the right you have a great forest, to the left the screes heaped up by the Pishnitza throughout the centuries in her headlong course from under the snows and ice at the uttermost head of the valley. Suddenly the road takes a turn to the right. In wide zigzags it winds round a rocky shoulder, and before it spreads out the massif of the Prisoynik, one of the great among the Julian Alps. Clouds drifted about its flanks, the pale screes at its foot looked like giant fingers, its brows were crowned with a glorious golden diadem bestowed on it by the new-risen sun.

This mountain world is mute and yet speaks of time and eternity, and its teaching is of the finest and wisest on earth, though not many of us understand it. I have roamed those mountains and conversed with them, spent wakeful nights upon their naked crags and overheard their secret whisperings. And whenever I returned from thence, the longing and love for their realm remained with me. There is no living thing that can tell you what the dead rock has to say. He is happy to whom the mountains whisper their secrets. None can interpret them to him, nor rob him of them.

And now I came to a point where the engine is put to a severe test. The gradient is steep and worst at the turns. The forest and the lower screes are left behind, and already the snow slopes stretch cold and greedy fingers towards the road. Here and there I passed workmen engaged in repairing the road, or a lorry with a load of concrete and tools.

Upward, and still upward. The turns grow sharper and shorter; at last they become acute, and it was no longer possible to drive on the inside of the road. The engine gasped on the first gear. The lower of the two Alpine huts—the House in the Wood, as it is called—was already far below. And now a little dip opens out before me and on the spur above it to my left I saw the Vrsitch Hut which used to be our starting point for climbing expeditions up the Moystrovka, the mountain which raises its lofty head to the north of the pass, and whose eastern face I have scaled in those days.

Stop. The engine was hot, although the water was not boiling. This was due to the four compartment ventilator and the low first gear, perhaps also to the lubricating oil. The hut was full of life. The engineers and workmen employed upon the road were at breakfast, and with

Kraniska Gora with Prisoynik in the background.

them a few mountaineers with picks and ropes. In the corner by the stove sat two customs officials, busied with their books. I showed them my pass, entered my name in the hut book like a good traveller, and pressed the hut stamp bearing the word Vrsitch on the inside of the cover of my car.

Then I restarted my good engine and drove on to the frontier. The frontier guard wished me good morning, and asked me whether I was going further. I asked him to get into the car with me, and drove him across to his Italian colleagues. Hearty welcomes from the little swarthy "revenuers" on the other side. Followed the usual exchange of news and frontier gossip. And it would never have done to forget those Yugoslav cigarettes.

All around me was the Alpine world at its finest. Morning mists hung about the mountain tops. The young green in the forests below gleamed in the sunlight. To left and right vast crags. Below me the green Trenta valley. Behind me the lovely Pishnitza. In the midst of this the presence of armed men struck me as quaintly out of place. Did God give man reason solely that we might invent weapons to slay one another in regions where Nature is a thousand times stronger and more truculent than we?

The second notable Alpine road which links Yugoslavia with lands across the frontier is the Liubelye road. The highest point of this road lies 4,300 ft. above sea-

Digitized by Google

left, and is only 54.5 km. from Liubliana, the chief town in Slovenia. It is one of the most dangerous of the Alpine roads. Before the War, not many cars were able to negotiate it successfully. And therefore greater and more careful preparation is necessary here for both chauffeur and car. Everything must be thoroughly overhauled—not just the usual examination. Brakes, sparking plug, and especially the lubrication, all must be looked to. As far as Kranye, the mediaeval fortress town, which the modern use of water power is fast girdling with a straggling and unbeautiful suburb of factories, the highroad winds through villages and up and down fairly steep inclines, so that one has to drive cautiously. At Kranye both road and railroad turn off to Trzitch, a tiny industrial town centred about a much older and very picturesque hamlet buried in wooded depths among the Karavanke mountains. Nowadays Trzitch is known for its cotton mills, its nail, comb, and boot factories. I want to put in a word here for its lovely old houses and cheap country inns where I have put in comfortable nights on my way to and from the mountains.

Two kilometres beyond Trzitch, near the little power house, was the appointed start for the Liubelye motor trial races on August 8. For a full week beforehand the spot was the rendezvous of numerous car and motor bicycles training for the course. Autoclub officials were in evidence everywhere. Our car went off like a rocket, and then started up the winding road through the forest. I had surrendered the wheel to our experienced old chauffeur. The stop-watch I held in my hand. Past us flew the bridge, telegraph office, customs office, and then the road makes a wide loop round a low-lying meadow and towards the lovely Alpine village of St. Anne. The car grumbled. At St. Anne's the gradient is already 18 per cent. Beyond the village follow dangerous and sharp zigzags at an incline of 28½ per cent. It was no longer a drive but a race between the stop-watch and the car, a struggle between mountain and motor sport. I felt as if I could sense the labour and effort of the engine in my own nerves; the chauffeur beside me crouched over the wheel—eyes hard, teeth set. On went the car.

At last we reached the last of the zigzags. Their radius is four and a half metres, the rise 27 per cent. The differential complained, the wheels skidded on the sand. One more serpentine, and we were at the top, on the Austrian frontier. The chauffeur and club officials opened the engine and had a good look at it. The Liubelye Pass was conquered.

At the head of the pass are two stone pillars with an inscription to the effect that this road was built at the time of the Hapsburg emperors. As a matter of fact it dates back to the old Roman days, although it followed a slightly different course then and was narrower. From the height there is a splendid view over the Trzitch valley on the one side and across into Austria on the other. Like giant sentinels two mountains guard the pass—the Baba (6,450 ft.) and Begunschitza (6,770 ft.) famous for its Alpine flora. The valley is luxuriantly wooded and rich in streams.

In view of the races the Yugoslav authorities had relaxed the usual passport regulations in the case of motor vehicles from beyond the frontier. So traffic was lively on the road. Many photographers, too, availed themselves of the opportunity, and "snapped" the cars at their training, or the views. Cars thronged the height of the pass; the telephone at the goal was in constant use. The drive down is much more dangerous than the pull up, but also a good deal quicker. Within an hour and a half we were back in Liubliana.

The beauty of these Yugoslav Alpine roads must be seen to be appreciated, and whoever has seen them once will be drawn back to them again. But he must be a true mountain lover, a friend of the wilderness and of the plain blunt people of the hills.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

Head Office: 41 Lothbury, London, E.C.2

NIZAM'S RAILWAYS DIVIDEND.

The announcement of the final dividend and bonus on the capital stock of the Nizam's Guaranteed State Railways came as a surprise to the market for so substantial an increase on the previous year's declaration had not been anticipated. A final dividend is proposed of 6 per cent., plus a bonus of 5 per cent., making 15 per cent. for the year ended March 31 last, which compares with 11½ per cent. for the previous year, 10 per cent. for 1923-24 and 1922-23, and 7 per cent. for the three preceding years. Stock-holders will await the meeting with special interest to learn whether there is a prospect of the maintenance of this increased distribution.

The prohibition on the import of certain "luxury" articles into Greece has been extended until December 31.

Cotton and Cotton Goods.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended September 1:—

Egyptian Futures.—Sakel Contract.—Following the initial rise of fifty points, which occurred as a result of the Bureau report issued 23-8-26, and which carried November Sakel to 14.98, a short period of comparative calm ensued. Towards the end of the week, however, the market was subjected to a further flood of crop damage cables, and prices commenced to move upwards again. Buying orders from Egypt and the Continent were partially offset by straddle selling against American, and profit-taking by local professionals. Speculation in Egypt appears to have run riot during the last ten days, and the continued strength of the Alexandria market has amazed everyone on this side. That the crop has sustained a certain amount of damage in some districts appears very probable; that the damage is so severe as to justify a rise in values of over 4 dollars in a little over a week is not believed by those who regard the situation as a whole. For example, one might well ask if the damage reported to the new Sakel crop is not amply covered by the large carry-over (probably some 50,000 bales) which is still held by the Egyptian Government? Lancashire at all events need be in no panic regarding the supply of Sakellaridis cotton. Year by year experience has taught the spinners of fine counts in this country that they can do with less and less Sakel, and with the wonderfully fine cotton now produced in the Sudan in plentiful supply they need have, in our opinion, no cause for alarm.

The unlooked for rise disclosed a large short interest in our market, and covering on a fair scale has been indulged in, but a considerable interest still remains open in all probability. The difference between January American and January Sakel has widened from 526 points last Wednesday to 635 points at to-night's close, and it would appear that sales of Egyptian against purchases of American at round about this difference should yield a very profitable return later on when the crop commences to move. So far, the trade has shown but little inclination to follow the advance, and to-day markets, both here and in Alexandria, showed distinct signs of uneasiness. On the whole, and taking a broad view, we can only say that, in our opinion, current values have more than discounted all probable crop damage, and that sales put out at to-day's level (by those prepared to see the transaction through) will probably reap a good reward later on.

Upper Contract.—Comparatively quiet markets have been the rule, a little buying on unfavourable crop news has been seen, but most of the trading has been on straddle account, either purchases of November against sale of November Sakel, or sales of October against purchases of October American. The difference in the latter case has widened out from 222 points last week to 294 points at to-night's close.

Egyptian Spot.—The soaring values which have been witnessed in the futures market have of course been reflected in the offering of actual during the past week. Nevertheless, the rise has been of a more reluctant character, and holders of spot cotton have shown themselves undeniably eager to obtain bids and have been unusually accommodating to buyers. The trade, as a whole, has shown no disposition to follow the advance. Spot purchases have been made with obvious reluctance, and only under the necessity of piecing up between arrivals of forward cotton. On several occasions, spinners have bluntly intimated that they would buy outsiders, or American cotton even, rather than pay the (to them entirely unwarranted) advance. It is significant that the big consumers have, so far, stood aloof from the market. A feature of the week has been the purchase of, approximately, 500 bales of Good Upper for export to Russia. Prices all round have been extraordinarily irregular and are slightly reminiscent, in this respect, of the boom year of 1921.

Sakel cotton has been in fair request for qualities between Good Fair and Fully Good Fair, of which the selection is an extremely indifferent one. A small but steady improvement has continued in the better grade cotton, and over 19d. was paid to-day for Fine Sakel. Uppers have been quieter, apart from the 500 bales mentioned above. Anything below Good Fair in grade is now obtainable here. Sudan cotton has been in very moderate request, either for the Sakel or the White variety, but there are indications that the basis for the Sakel growth is inclined to ease, and in this case it should speedily find its way into favour again. C.i.f. business has continued on quiet lines. Forwardings to spinners for the week ending 27th ult. were returned as 7,281 bales. Estimated sales, 2,300 bales Egyptian and 300 bales Sudan. Quotations of Sakel have been advanced 115 to 130 points; Extra Fine exceptionally 65 points. Quotations of Upper have been advanced 35 to 75 points. F.G.F. Sakel to-day 17.35d. F.G.F. Upper to-day 13.15d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report dated August 26, state:—

The market during the past week has been fairly active, and the tone at the close to-day was firm. The week's summary of price movements is as follows:—Sakellaridis: November, 29.73 dollars, 1.05 dollars up; January, 29.33 dollars, 1.08 dollars up; March, 29.13 dollars, 1.08 dollars up. Ashmouni: October, 21.98 dollars, 1.59 dollars up; December, 22.05 dollars, 1.52 dollars up; February, 22.13 dollars, 1.40 dollars up.

Digitized by Google

At the commencement of the week there was not much apparent confidence in the market, and on Monday there was some liquidation prior to the issue of the American Bureau Report. This report came as a surprise, as very few people in the market had expected it to show such a low figure. The less favourable position of the American crop has inspired a certain amount of confidence, and this has been further increased by reports of "Nadua" and worm damage to the Upper Egypt crop.

Most of the operations during the week have been on speculative account; the trade having had recourse to the futures market only to a very limited extent. There has been some Sakel-Ashmouni straddle liquidation, and the difference between November Sakel and October Ashmouni is now only 775 points. Buying October and selling December has also been in favour, so that the premium of December has narrowed very appreciably. The demand from abroad continues to be very poor and practically limited to immediate requirements. Very little new crop business has been actually concluded, although the report of crop deterioration has, during the last two days, brought some inquiry for Uppers into the market.

At the third August tender, 15,250 kantars dockets were issued and quickly taken up; Zagora constituted a large part of the tender. The week's receipts amount to 6,532 kantars against exports 81,067 kantars; the stock in Alexandria stands at 1,267,829 kantars.

Spot: In spite of a fairly good demand the turnover is slightly lower than last week. Total sales amount to about 5,400 bales, of which we estimate 3,500 bales Sakellaridis, 1,100 bales Ashmouni, 600 bales Zagora, 100 bales Pilion and 100 bales White. So far, about 80 bales of New Crop Ashmouni have arrived on the market from south of Deirut, grading from Good to Extra, but as yet it is too early to form any definite opinion on the quality of the crop.

Sakellaridis: Business has been centred on Fully Fair-Good Fair up to Fully Good Fair-Good, and there is much competition amongst buyers to obtain such desirable lots as are known to be for sale. Spot differences for all grades above Good Fair are somewhat dearer.

Ashmouni and Zagora: There is still a very active demand for Fully Good Fair-Good and below and spot differences become daily dearer. Very little business has been done in the Good grades.

Pilion: There has been a small inquiry for Good Fair and Good Fair-Fully Good Fair, but very little cotton of these grades is left on the market.

Brown: No transactions have been recorded.

White: A few lots have changed hands at about last week's differences.

Crop, 1926. Crop news is scarcely so good this week, as it appears that some damage has been caused in Upper Egypt by "nadua" and worm: the reports of the damage are vague and we are not yet able to determine the extent of the damage. The crop is not maturing as rapidly as until recently anticipated, and the arrivals of new cotton in Alexandria are small. The Delta crop news is more consistent and satisfactory. The plants are healthy and the maturity of the bolls is progressing normally. As we mentioned last week, the picking has been delayed by the cool weather early in the month, but in the South Delta and Zagora fields will be ready during the early days of next month and Sakel picking should start about September 15. Pink boll worm attack does not show much increase on the week, except in some of the Northern sections of Dakahlieh. Temperature has been higher and favourable, but has been accompanied by excessive dampness and heavy morning fogs in some sections; these fogs have been rather too frequent this year, and should they continue as frequent, the crop will suffer.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 7.

One economic effect of the prolongation of the coal stoppage has been to rob us of a summer period of low Bank Rate. As early as April the Chancellor of the Exchequer stated in his Budget speech that a reduction in Bank Rate might already have been made had the industrial outlook been less threatening. Actual financial conditions have warranted such a reduction all through the summer. But now all possibility has passed, and, instead, the time has come to try to gauge the probable extent to the autumn strain on sterling exchange. This has already shown signs of rather early and somewhat intense development—a phenomenon that causes no surprise. There are indeed many reasons for thinking that the exchange tension will be more than usually severe this autumn. Coal exports have ceased; coal imports have taken their place. The trade returns suggest that arrears of raw material imports will have to be made up. Moreover some European countries which last year had harvests which yielded surpluses for export, will this year be faced with import necessities. Finally the trend in Wall Street, upon which so much depends, seems to be towards dearer money. Nevertheless this country's gold stocks are satisfactorily large, and although monetary anxieties are the chief topic of the day in financial circles, exaggerated fears would be premature and indeed are not freely entertaind, and the gilt-edged market, assisted no doubt by the continued absence of new capital issues, maintains a fairly firm front.

Two Important Announcements.

An otherwise dull and uneventful week in the City has been marked by two important announcements. The first is that of an agreement between the Grand Trunk Pacific Debenture holders and the Canadian National Railways. The settlement of this long-drawn-out dispute, on terms which the holders should eagerly accept, has a more extensive importance than might appear on the surface. It is hardly too much to say that the settlement rehabilitates Canadian credit in the City of London, where the treatment of the debenture holders had been seriously resented, and that it also opens the London market to Canadian borrowers on reasonable terms. The settlement is as welcome as it is sensible. The other announcement to which we refer is that of the amalgamation of the British Trade Corporation and the Anglo-Austrian Bank. A War creation, the British Trade Corporation had in its early days to weather the great boom and the great slump. Its rather grandiose plans failed and losses accrued. But the new amalgamation starts under good auspices and should be a useful cog in the credit wheel of the country.

Russian Securities—A Warning.

A recent feature of the Stock Exchange has been the inquiry for Russian securities. Particularly has this been noticeable in the mining section where quite a fair number of inquiries have been received. Doubtless this is inspired, as it has been in the past, by the belief that sooner or later Russia, whatever Government is in power, will have to restart the various mining enterprises, upon which so much of her prosperity depends. In order to do that she will, of course, need the co-operation of foreign capital. She must be prepared to hand back the numerous concessions to their former owners and to effect an acceptable compromise respecting her defaulted obligations in the past. It may, perhaps, occasion some little surprise to mention that in all there are about 30 Russian securities still officially quoted on the London Stock Exchange in sterling. The greater part of them are Government issues, the prices for which range between £4 and £7 per cent.

In any event, it is no use for investors to blind themselves to the fact that it is likely to be some considerable time before any settlement is arrived at. Moreover, the terms of any ultimate agreement are not likely to be unduly generous, so that the possibility of present prices having largely discounted the future has seriously to be considered. On no account do we advise investors to gamble in Russian securities, whether they be Government bonds or Mining shares.

Siamese Loans.

Some investors on being recommended to take up the securities of the Kingdom of Siam might perhaps be hard put to it to restrain a smile. Siam, like Wigan, is often made the butt of innocent quip and jest. But, facetiousness apart, Siam occupies an important position in the list of foreign borrowers in London and her credit is higher than that of some other nearer and more powerful nations. There are four Siamese Government loans officially quoted on the London Stock Exchange, for a total outstanding amount of about £8 millions, the largest issue being the Six per Cent. Loan. The lowest yield is shown on the 4½ per cent. Sterling Bonds, 1951; namely £5 4s. 6d. per cent. while the highest return £6 10s. per cent is obtainable on the Seven per Cents. A feature of all the securities is that they move only within narrow limits. While this is an advantage to the holder, it also indicates that dealings in the stocks are restricted. In the report of the Financial Advisor on the 1926-7 Siamese Budget, published last week, a notable improvement in the position is recorded. A succession of budgetary deficits led the Siamese Government actually to budget for a deficiency and as a result of the concern which this practice aroused, a new Financial Adviser was last year appointed to facilitate the work of reform. For the financial year ended 31st March last, a deficit was again anticipated, but it is expected that for the current year there will be a small surplus owing to a reduction in estimated expenditure. In order to fortify the programme of financial reform the Government have constituted a Financial Council under the presidency of the late Minister of Finance for the better co-ordination of the country's expenditure. Moreover the balancing of the Budget has been effected on conservative lines. No fresh taxation has been imposed, while it is claimed that provision has been made in the expenditure for all contingencies. For instance, a full year's interest on a suggested new foreign loan has been allowed for. This, however, may not be required, as the Government's cash balances have been strengthened by the enforced economies. On the whole the outlook is not unsatisfactory.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated August 31, state:—

Currants.—The market has shown a sagging tendency throughout the month, and business has been extremely difficult, with very little enterprise on the part of buyers. Owing to the very small stocks values show very slight alteration. S.s. Algerian and s.s. Sea Glory arrived with 530 tons, part of the Zante in the latter steamer having been disposed of before shipment. Sales comprised the following:—Pyrgos and Amalias, 27s. 6d. to 30s.; Patras, Gulf and Zante, 30s. to 32s. 6d.; Vostizza, 35s. to 47s.; Smalls, 33s. to 38s. There have been reports of damage to the crop in Calamata and Amalias districts owing to excessive rains. Shipments of the new crop are expected to leave in the early days of September. Quotations:—Pyrgos, 27s. 6d. to 28s. 6d.; Amalias and Patras, 29s. to 32s.; Zante, 30s. to 32s.; Gulf and Panariti, 31s. to 34s.: Vostizza, 35s. to 47s.

Australian Currants.—It was hoped that with the reduction of appraisement values, bringing them more into line with the Greek fruit, a larger volume of trade would be possible, but unfortunately this fruit is also feeling the paralysing effect on trade in general. Business has proved extremely difficult, sales ranging between 30s. and 44s.

Sultanas have shown a drooping tendency throughout the month, owing to the desire of holders to realise the small stock remaining, and a disappointing general demand. Sentiment was also adversely influenced by satisfactory reports of the growing Smyrna crop, some estimates giving the yield as high as 45,000 tons. Good average were offered at 43s. c.i.f., but have since recovered to 49s. c.i.f., notwithstanding attractive offers of Californian Soda Bleached at 37s. c.i.f. Sales on the spot were, good qualities 60s. to 66s., and fine 68s. to 74s. Greeks, 59s. to 60s. S.s. Esneh and s.s. Gerano are on the way with new crop.

Figs.—Genuine Naturals have been persistently offered for shipment, as low as 23s. c.i.f. for September being quoted without attracting buyers.

The quantity of gold extracted from the mines in India during June was 31,797 ounces, valued at Rs. 18,12,429.

Holders of the India Government Seven per Cent. Loan of 1926-31 are informed that bearer bonds of the loan bearing coupons from April 5, 1927, to October 5, 1931, inclusive should be lodged at the Bank of England, Loans Office, 5-6, Lombard Street, E.C.3, on September 6 for redemption on October 5 at 102 per cent.

Motors and Motoring.

By G. B. B.

Most road users will have noticed an increase of late in the number of six-wheeled vehicles in operation. Six-wheelers are of two types, the rigid and the non-rigid, and the great increase has been in connexion with the former class. In fact, the developments in rigid six-wheelers have of late indicated, as *Motor Transport* noted recently, that British makers are anticipating a considerable future for this particular class of transport. That expectations will be realised seems beyond doubt, and already makers are keenly competing to produce the most suitable machines for passenger and goods carriage. As that paper says, the increasing attention given to the rigid six wheeler is due to War Office encouragement, a fact which was new to me and one which is, I think, not generally known. It appears that, though at present offering no inducement in the way of a subsidy to manufacturers and users, our military authorities have endeavoured to encourage the commercial use of three-axle machines in this country and have made known their views as to the lines on which they should be built to meet both civil and military requirements. The paper says that the designs they put forward for consideration represent a very fair compromise to meet both cross-country and hard road conditions and appear to have been accepted by some makers as a constructional basis for vehicles now on the market. For obvious reasons, the road transport owner does not require, as a primary necessity, a machine capable of crossing very uneven, marshy, sandy or other yielding ground; for military work, on the other hand, such a qualification is more than desirable. Between these respective needs a certain degree of incompatibility must exist and it may be considered great enough to render out of the question any scheme for subsidising a six-wheeler in this country. I am entirely in agreement with the authority quoted, that the suggestion which follows merits serious and even favourable consideration. Apart from the important question of national interest, the system now in force for subsidising 30-cwt. chassis though perhaps open to criticism in some respects, has undeniably encouraged the production of pneumatic-tyred, medium-load machines well suited for transport service under overseas as well as home conditions. The very strenuous tests that are made and have been made since the inception of the idea, on subsidy chassis, have had the anticipated good result; they have brought to light from time to time certain unsuspected defects and have consequently played a great part in development. A six-wheeler subsidy would probably—nay, almost certainly—have the same effect.

Tyres.

In informing a correspondent that in my opinion, for all-round excellence there was no tyre on the market so suitable to the needs of the everyday motorist as that made by the Dunlop Co. I had to mention that the factors determining the suitability of a tyre did not only depend on the resistance of the tread to abrasion, but that the question of what I might call the fatigue of the cotton foundation must be considered. Every engineer knows that the fibres of any metal part subjected to repeated and peculiar strains become "tired" and are more likely to give way under some sudden strain than are the fibres of new and unstrained metal. So it is with the fibres of cotton in the canvas of a cover. We have also to take into account first cost, liability to accidental damage and ability to resist the cutting actions of loose road metals, comfort capacity, weight and appearance, power consumption, liability to develop high temperatures whilst in intensive use and the resistance to skidding and general stability. Every motorist is aware of the fact that front covers last longer than back covers; indeed most light car owners change over their covers from front to back as soon as wear on the back tyres becomes pronounced. That is simply due to the cover on the back wheel being dragged more or less violently across the rough surface of the road, and not only every time the clutch is let in or the brakes applied but during the whole time of the run. Further, it must not be forgotten that the cover has to stand all sorts of variations in pressure from the almost constant stress of slow running to the ever-varying pressures met with at high speeds and on indifferent surfaces. And against all strains and road stresses of every kind I have found Dunlops answer admirably.

A One-Man Bus.

I have been able, by the courtesy of the makers, to go through a complete description of a new Vulcan 20-seater omnibus that seems to me likely to meet with considerable favour overseas. The bus is fitted with a 17.9 h.p. Vulcan engine, with detachable cylinder-head, and the valves are of the side by side pattern operated directly. The designers have underslung the springs of the chassis and swept up the frame in arches over the rear axle with the result that the top of the chassis frame is only about 24 inches from the ground. It should be practically impossible, therefore, for this bus to overturn. I notice that a four-speed gear-box is fitted and that behind the engine is a completely enclosed bell housing for the clutch, this housing being actually a part of the gear box casting. The gear box lid and the extension tube which carries the right hand side gate and operating mechanism also form another complete casting. The clutch is of the direct cone pattern faced with Ferodo and behind the gear box is a flexible fabric coupling which conveys the drive to the first tubular propellor shaft which terminates at a self-aligning bearing on the second cross member of the chassis. Another flexible disc coupling is to the rear of this, and this engages a spider which is mounted on the shaft which, through a third disc coupling, drives the overhead worm type back axle. This bus is not a converted commercial vehicle chassis but the whole thing has been specially designed for passenger work.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The League Assembly.

With the appointment of M. Nintchitch, Foreign Minister of Yugoslavia, as President of the Assembly of the League of Nations the Balkan States may well feel that they are beginning to come into their own, and the League of Nations has the satisfaction of knowing that it is fulfilling its purpose of establishing the reign of reason over force. Yugoslavia is to be congratulated that her representative should have commended himself to the delegates of the assembled nations to such an extent as to secure nomination by forty-two votes out of forty-eight. In the Balkans, particularly in Yugoslavia, it will be noted that, by accepting the honour conferred upon it, the Yugoslav Government definitely steps out into the open as a champion of the spirit embodied in the League. There cannot be one policy for Geneva and a totally different policy for the Balkan Peninsula. Much water, it is thus seen, has flowed under the Save bridges since the Council of the League had to remind a Yugoslav Government that League principles could not sanction an unprovoked invasion of Albania. The League spirit was better exemplified in the Note recently addressed to Bulgaria by her three neighbours, although it is to be imagined that, if the question had come up for consideration in Geneva itself, no Note would have been sent at all. Rome, however, is still not to be built in a day. Few people can have been present at Geneva last week on the occasion of the admission of Germany without being inspired by Dr. Stresemann's remark: "After all, the League is something," and it will be strange indeed if the President of the Assembly does return to Yugoslavia resolved that, between the League's sessions, nowhere shall the true Geneva atmosphere prevail to a more marked degree than in Belgrade.

The Trials of Greece.

General Kondylis is not finding the task of abolishing the dictatorship as simple as General Pangalos found that of establishing it. The arrest of the Dictator added considerably to the Navy's coal bill, and now much ammunition has had to be expended on the suppression of its chief prop, the Republican Guard, apart from the cost of replacing destroyed buildings and tanks. Where action is the determining factor, however, the new Prime Minister proves himself as efficient as General Pangalos. His main difficulty is one which the Dictator was careful to avoid—argument; above all argument with politicians. Realising that he had no chance with them on their own ground, General Pangalos abolished professional politicians in the persons of the leaders, or at least removed them from the political stage. General Kondylis has not only brought them back, but virtually invited them to remount the pedestals off which General Pangalos had unceremoniously knocked them. He has also begun to argue with them. The subject chosen is Proportional Representation. No doubt the Prime Minister will have his own way in the end; he is not a soldier for nothing; but Greece is likely to remember him more for his military capacity than for his logic.

P. R.

In his advocacy of Proportional Representation General Kondylis has on his side one political leader, M. Papanastassiou. They favour it for different reasons. The Prime Minister holds that the morass into which Greece floundered under the old electoral methods could not possibly be worse, and that it is, therefore, a sound move to introduce an innovation in the hope that the situation may be improved. M. Papanastassiou is a convert of six years' standing to proportional representation. After the election of 1920, he took pencil and paper, analysed the voting, and proved to his own satisfacton that, if that election had been conducted on the principle of proportional representation, instead of three-quarters of the seats in the Chamber going to Royalists and one-quarter to Venizelists, the two parties would have been equally divided in Parliament. When, therefore, the Constitution came to be revised, it was M. Papanastassiou who insisted upon the introduction of proportional representation. General Pangalos struck it out of the Constitution that he promulgated over the signatures of Admiral Condouriotis and himself, but it has now been reinstated in the Constitution promulgated over the signatures of Admiral Condouriotis and General Kondylis. Public

Digitized by Google

opinion on this particular subject undoubtedly sides with the ex-Dictator. Both parties to the controversy urge that they want a clear-cut result from the elections and maintain that it can be secured only by the course they uphold. The Proportionists declare that according to their way of thinking the parties that count will secure the great bulk of the voting and the rest will be nowhere; their opponents insist that proportional representation encourages the multiplicity of parties, which is the evil from which Greek politics mainly suffer. In the end Greece will buy her experience, for no one dare advocate the Pangalos method of restricting the number of parties by restricting the number of party-mongering politicians.

A New Plot in Bulgaria.

It is typical of the difficulties under which Bulgaria labours in trying to rid herself of revolutionary tendencies that each fresh attempt to purge the country should call into being a counter-conspiracy. The Liaptcheff Government has appreciated the necessity of dealing with the different organisations responsible, to a greater or minor extent, for unrest on the frontiers, and no time has been lost in an attempt to check its activities. If this last plot can be clearly traced to Bolshevist prompting, it will be a strong argument in support of the Bulgarian contention that the country has exceptional difficulties to contend with and for this reason deserves help from its neighbours rather than the placing of further obstacles in its way. But for the sanguinary repression of the Stamboulisky régime there was nothing in Bulgarian conditions to foster the growth of communism in the country. It owed its conception to Soviet intrigue and made some headway under Stamboulisky's encouragement or connivance, until he realised its menace. The Bulgarian people as a whole could also have been persuaded that it was unwise to dally with communism, if the mistake of identifying the Agrarians with Communists had not been made. Enough mischief was done in this direction to give the Bolshevists their chance, and it would seem as if they would not lightly surrender the hold they have been able to establish in Bulgaria. A fresh conspiracy at this stage suggests financial support from outside, as it is difficult to believe that the more patriotic element of the Macedonian Organisation would ally itself with the Communists, or that the extremists would go outside their own disciplined ranks if it were a case of a straightforward murder campaign. The contention of the Bulgarian Government is that it is matched against the subtle force of Soviet propaganda, and that in fighting this it is acting as an advance guard for the whole of the Balkans. No ready credence is given to the contention by Bulgaria's neighbours: but every argument that she can produce in support of her case must help to overcome the suspicion entertained of her.

False Moves in Turkey.

The change of attitude on the part of the Turkish authorities in regard to the foreign Chambers of Commerce established in Constantinople is to be welcomed as a sign that, after all, Angora is not wholly inaccessible to reasonableness and the dictates of common sense. Chambers of Commerce bear no relation to Capitulations; they toil, but without making much money, and they exist solely to promote trade between the country that they represent and the land in which they are domiciled. What possessed the Turks to credit them with some sinister influence will for ever remain a mystery. The hostility towards them may have been prompted solely by the jealousy of the Turkish Chamber of Commerce, whose energy and achievements may suffer by comparison. The fact remains that someone secured the ear of the Turkish Government, and the fiat went forth that the foreign Chambers were to be suppressed. The protests of the intended victims appear to have taken the Turks by surprise; contradictory orders were issued, and the authorities were clearly at loggerheads among themselves. Then came the face-saving suggestion of requiring the Chambers to change their names instead of closing their doors. Ultimately even this demand was abandoned, and for the time being the foreign Chambers of Commerce are to be left in peace. Another false move on the part of the Turkish Government—too serious to leave any room for the ridiculous that is so often to be found in Angora's acts—was the detention in prison pending trial of an officer of a French steamer that sank a Turkish steamer as the result of a collision. The mere fact of the foreign nationality of the surviving vessel ought to have prompted the Turks to avoid anything in the nature of high-handed action. As the question of jurisdiction was in dispute, there was an additional reason for taking only such formal steps as would safeguard Turkish rights, and thereafter leaving the matter to be settled by arbitration or before an independent tribunal. What Turkey has actually done once more emphasises the great gulf between the methods of Angora and European civilisation. Yet these mistakes are liable to be indefinitely repeated, until the Turkish Government retains a European adviser to whom any act contemplated that involves foreign relations can be submitted for his opinion as to the possible effect abroad.

CORRESPONDENCE

A LOAN FOR PALESTINE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I am glad to see that Balbus now understands me perfectly. I do maintain that when you have spent the whole of your income, whatever you have spent it on, it is sheer nonsense to pretend you have a surplus. It is sheer dishonesty to point to that surplus as an argument to induce other people to lend you money. And Palestine knows that no one will lend her money unless the British Government guarantees repayment of the loan in the event of her default. That surely shows that others than myself contemplate the possibility of her defaulting.

In one form or another Palestine has been lucky enough to secure plenty of working capital without resort to a loan. The capital provided by the Zionist Organisation alone must be very considerable, though I have no reliable figures before me. My main point is, therefore, that Palestine should begin paying off her existing debt before incurring a new one. And, in any case, I have no objection to Palestine borrowing if she can. I object strongly to her doing so at the risk of the British taxpayer.—I am, etc.,

H. St. J. B. PHILBY.

18, Acol Road, N.W.6.

P.S.—I am glad to know that Balbus has no connexion with the old house-building firm. I should hate to think of him as financially interested in the suburbisation of Tel Aviv.

DIFFICULT DAYS FOR GREECE.

Events in Greece during the past week have in some respects complicated General Kondylis's problem; on the other hand, they ought to have served to make the one sound line of action clearer. A week ago the outstanding question was the extent to which reprisals should or should not be indulged in against the Pangalos régime, and a plea was entered in these pages for a broad-minded attitude, which, while satisfying the requirements of justice, would avoid a fresh accession of personal embitterment for Greece. After the incidents of September 9, when street fighting on a scale comparable with the civil war of December 1916 took place, the need for statesmanlike forbearance is all the greater. It will not be easy for anyone in Athens to analyse with any degree of accuracy the many cross-currents that were responsible for the tragic events of that day. The early stages of the fighting explain themselves. The Republican Guard—the ominous title by which the Greek people were reminded of the country's divisions—had been encouraged by General Pangalos to regard itself as a privileged organization in the direction of State affairs, and while acquiescing in the Dictator's overthrow, was by no means minded to surrender its prerogatives at General Kondylis's bidding. The new Government rightly decided that this anomaly could not be tolerated. Steps were, accordingly, taken to disband the Republican Guard, the famous companies of Evzones, picked men of the Greek Army, who have been the particular pride of their countrymen and an object of interest of the foreign visitor to Greece. Early on Thursday morning the barracks of the Evzones, situated a mile from the centre of Athens, on the finest of the city's residential thoroughfares, were to be surrounded by other troops; but before the movement could be completed, the Evzones appear to have discovered it and to have deployed with a view to offering resistance. Fighting ensued, but the Republican Guard, being hopelessly outnumbered, surrendered after suffering a certain number of casualties.

If the day's proceedings had ended at that point, the Government would have had reason to congratulate itself. The complications that followed were of a more serious nature. It is in regard to these that uncertainty attaches to any attempt to analyse the situation, for accounts of the different stages by which the events of the afternoon developed are contradictory. Ultimately, however, the streets were occupied by a large crowd, which seemed at first to be actuated by hostility towards the military, but in the end showed signs of becoming a mere rabble bent on promiscuous damage. The Government troops, having disposed of the Republican Guard, turned their attention to the demonstrators, and there was further bloodshed before the streets were cleared. According to the official account the rioters were egged on by Royalist elements and by Communists. Among those arrested are many of the former, and once more Greece is confronted with a whole series of trials that must keep political passions inflamed for an indefinite period. The Government has now, awaiting trial, General Pangalos, and his Ministers, the officers and possibly many of the rank and file of the Republican Guard, and all those who were arrested or marked down for arrest in connexion with the street demonstrations of September 9. In such circumstances outside advice can be of little use, as it has not sufficient data on which to base its recommendations. It will be noted with satisfaction that already some of those arrested have been released, as if the authorities had begun to realise that mistakes had been made in the wholesale arrest of politicians. All that can be hoped for in the interest of the distracted country, is that those in authority will resolutely refuse to allow their actions to be prompted by anything save the single-minded desire to promote the good of Greece. It is difficult to believe that responsible Royalists imagined that they could serve any useful purpose by countenancing mere aimless rioting. On the other hand, if the popular exuberance of spirits that may have started the demonstrations had anything to do with satisfaction over the end of the Praetorian régime of the Republican Guard, then General Kondylis will be well advised to enlist on his side the sound instinct underlying the regrettable excesses.

In practical politics it may be doubted whether there is any middle way for the new régime to adopt between the Pangalos principle of trusting nobody, while relying solely on force, and the true democratic method of allowing the genius of the people to assert itself through its politicians. The latter, it has to be inferred, are *personæ gratæ* to General Kondylis no more than they were to General Pangalos; he has refused to work with them in a Coalition Cabinet, and he has implied, if he has not actually said so, that they are not to be trusted by themselves. This attitude may seem to him very necessary under the conditions that prevail, but it is already a move on the steep descent to a dictatorship. General Kondylis, therefore, having most of the leading politicians against him, can hardly wish to run the risk of antagonising as well a large section of the population by the wholesale infliction of extreme penalties on those who now crowd the State prisons, unless he is prepared to act the Dictator himself. He has to his credit the ending of the Dictatorship and of the praetorianism of the Republican Guard. The instinct that prompted him to insist upon elections was a sound one; but he cannot hope to ride two mounts at once. He must choose between the attitude of the Dictator, which is "I know best what is good for you," and the theory of democracy, which is that the people know best or, at least, must have what they want. Already he has been on thin ice in his championship of proportional representation; he is likely to be skating on ice that is still thinner between now and the date of the General Election, unless he or his advisers keep their ears very close to the ground.

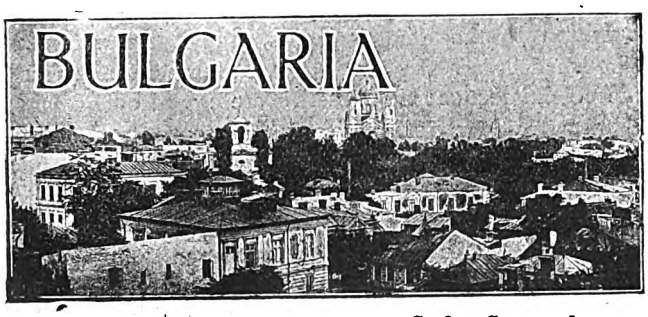
The Near and Middle East*

From Our Own Correspondents.



Sofia, September 3.

The Refugee Loan.

The preliminary negotiations regarding this loan have been concluded, and the following details which were raised during the negotiations have been confirmed by the Finance Committee as well as by the Council of the League of Nations:—

1. The raising of a mortgage on the revenues from the monopoly on salt and matches and from the excise on spirits, to be appropriated for the use of the Loan.

2. The assent given by the Reparations Commission to guarantee the present value of the Bulgarian lev to postpone or reduce payments due by way of reparations. The demands for adjournment or reduction formulated by the Bulgarian Government will be examined by a Commission, comprising a representative of the Reparations Commission, a representative of the Committee of Bulgarian bondholders and a representative selected by the Hague International Court, who will take the necessary decisions.

3. Reorganisation of the National Bank of Bulgaria, which will in future concern itself neither with long-term loans to departments and communes nor with loans on landed property.

4. Settlement formulated for the payment of Bulgarian pre-War loans. This settlement, which the Government will be empowered to revise should the country's financial situation render it necessary, establishes a progressive increase in the fraction of the gold franc adopted for the repayment of these loans which, increasing by 7 points for each period of three years, will reach parity of 100 per cent. at the end of a period of 22 years, i.e., by April 1, 1948. The present régime, in force until March 31, 1927, allows for the payment of 37 gold centimes for each gold franc, these payments only concerning interest; there is at present a moratorium in the redemption of annuities, the duration of which has now been prolonged for a further period of 6 years, i.e., to April 1, 1933.

5. The repayment of advances made to Bulgaria by the Banque de Paris and des Pays Bas, against the remission of Bulgarian treasury bonds in 1912 and 1913, by means of a conversion which will depend upon the amount of the loan to be concluded.

These five points being settled, the Bank of England has agreed to grant to the Bulgarian Government, for the immediate agricultural needs of the refugees, the promised advance of £400,000 sterling, without awaiting the effective issuing of the loan, which will not be made until next November. The loan will be issued by the same financial house. It is announced, however, that, despite all these advantages, the Government has decided to renounce the loan rather than accept the humiliating control of the neighbouring States.

Bulgaria and the Collective Note.

The text of Bulgaria's reply to the Collective Note of the Balkan Allies of August 11 is now known.

The Bulgarian Government begins by noting therein, with lively satisfaction, the desire of the three Governments to maintain good relations with Bulgaria, and declares that she shares that desire. But while appreciating the moderate tone of the Note, the Bulgarian Government can see in it only a manifestation of mistrust towards her and an unmerited denial of her loyal will and of her constant efforts to remedy a state of affairs which is harmful, above all, to Bulgaria. It must also remark that the Governments of the three neighbouring countries seem to wish to attribute to Bulgaria exclusive responsibility for the existence of the activity of revolutionary organisations. And without intending in any way to engage in "futile controversy," the Bulgarian Government contests the statement of the Note that the activity of the revolutionary organisations has shown a very serious recrudescence during these last months, giving statistical proof that, on the contrary, events are progressing rather towards appeasement. It also contests the assertion that "the attacks of bands, isolated assassinations, robberies, and so on, in the regions bordering the S.H.S. Kingdom and Roumania are the work of agents affiliated to Bulgarian revolutionary organisations crossing the frontier under the protection or the tolerance of the Bulgarian frontier guards," and it cites, in corroboration, the numerous condemnations in the three countries, of inhabitants of these countries for participation in revolution organisations which have large ramifications there, and also the fact that the frontier guards of these countries, much more numerous and whose vigilance no one has contested, have not succeeded in preventing the incursion of bands into their territory. It adds that there have been many more incursions of bands from the territories of the neighbouring States into Bulgaria without seeking to make the respective Governments responsible for these facts.

"Conscious of its duty," the Note continues, "the Bulgarian Government has not ceased to realise the ill effect that such incidents have on the good relations which ought to exist between the neighbouring countries. It has taken and continues to take every possible measure to check the evil activity of these illegal organisations.

"If the results have not been completely satisfactory and definitive, the cause must not be sought in the lack of good will on the part of the Bulgarian Government, which has always been convinced that such conditions of affairs are specially harmful to Bulgaria, but in the fact that the roots of the evil are in great measure beyond the power and authority of the Royal Government. It can provide, for the vigilance of a frontier of 2,200 kms. only 3,000 frontier guards. Besides, the illegal acts on Bulgarian soil have a long history: their causes are deep, and their vast ramifications extend beyond the limits of Bulgaria. Such a complex historical phenomenon, which has existed more than 100 years in the Balkans, cannot be uprooted at a single blow, and the efforts of the Bulgarian Government, of itself alone, are not sufficient to destroy the sources of the evil. To be successful, the united efforts of the four respective Governments would be necessary, each acting in its particular territory by enforcing measures appropriate to the conditions of each country. The Bulgarian Government would be happy to collaborate with the greatest energy and the most constant perseverance in this work, which is so important to the pacification and consolidation of good relations between Bulgaria and her neighbours.

"Independently of any measures that the neighbouring States might judge well to take in their territories with a view to sweeping away the deep causes of the illegal acts of komitajis and others, the Bulgarian Government, being the most interested in the safeguarding of peace and tranquillity in the Balkans, and in order to eliminate anything likely to embarrass good neighbourly relations, has decided to continue, with redoubled energy, her efforts to hinder the activity of every kind of organisation working in her territory in the organisation there of incursions

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Digitized by Google

of armed bands or isolated crimes in territory of the neighbouring countries.

"To succeed in this aim the Bulgarian Government lays great store on the salutary effects of the Loan for the establishment of refugees authorised by the League of Nations. This Loan will enable her to establish definitely a large portion of the mass of emigrants, transforming them into a productive and peaceful element, thus removing from their number many to whom, for reasons easy to understand, illegal activity made a strong appeal, as well as creating an atmosphere of stability. Nevertheless, the heavy sacrifices imposed on the Bulgarian Government by this loan will be justified only if an end is put to the arrival *en masse* of new emigrants from the territories of neighbouring States.

"The Bulgarian Government continues to give strict orders to frontier authorities to accomplish their duties. It reiterates its orders and in particular will carry into effect all the measures already planned for the pursuit of the bands.

"The Government will pursue with every severity of the law the illegal acts of the different organisations, with aims on neighbouring territory, as well as the organisations themselves compromised in similar activity.

"The Bulgarian Government hopes that these categorical declarations will be well received by the Governments of the three neighbouring States, and that they will create an atmosphere of confidence and collaboration, so necessary to the peaceful development of the Balkan peoples. It is convinced that, in such an atmosphere, it will be easy to smooth over the incidents, always possible, which happen accidentally, and its most lively desire is that such incidents be dealt with directly between the Governments interested in a spirit of mutual confidence.

"If its firm decision to use every means in its power to maintain good neighbourly relations with the Governments of the neighbouring States does not succeed in persuading them of its correct attitude and in gaining their confidence, the Royal Government declares, from now onwards, that it is ready to submit to the League of Nations for examination all the questions connected with the Note of August 11, agreeing in advance to put into execution all the measures which may be recommended by this high authority."

Macedonia's Reply.

This reply produced an excellent effect both in Bulgarian and foreign circles in Sofia, and was unanimously approved by all political elements, those belonging to the Government as much as by the members of the Opposition.

It had the merit of not confining itself to foolish denials, but recognised, on the contrary, the whole extent of the evil, for the treatment of which it called for the collaboration of all the four Balkan States. Better proof of conciliation Bulgaria could not wish for. Revolutionary activity certainly does exist in the Balkans, but this is because conditions favourable to the development of such activity abound in the Peninsula. There, in short, is the whole Balkan question fully set out. That is what neither Yugoslavia, nor Roumania, nor Greece will or can accept, seeing in it the nightmare of the Bulgarian minorities in their States. Besides, Greece and Roumania are ready to let the matter drop, fearing to engage in a controversy which, pursued to a finish, would end fatally in a general inquiry into the Balkans in favour of Bulgarian nationality; while Yugoslavia, which has never been willing to admit the existence of Bulgarian nationality in Macedonia (the Serbs hoping rapidly to assimilate the Bulgarian population), is wondering how it can justify itself in refusing the Bulgarian offer of collaboration—for this offer in reality provides for an essential modification in the régime in vogue both in Macedonia and in the Dobruja, especially after the very severe measures taken by the Bulgarian Government to assure the strictest and most vigilant supervision of the Bulgarian frontiers, thereby effectively preventing to the best of its power any crossing of bands of komitajis.

But there is a political factor, which has not been sufficiently taken into account, and which has not failed to make itself heard, namely, the Macedonian Revolutionary Organisation, whose Central Committee has just addressed to the Council of the League of Nations a very significant declaration, which has appeared in the Bulgarian Press and in several foreign papers. In this declaration, which constitutes Macedonia's reply to the Allied Balkan Note, "the Central Committee declares that the situation in the Balkans after the Wars (since 1913) is less settled than before these wars. There was then in the Balkans at least a certain equilibrium, which is now lacking. There was also more equality; in the territories belonging to Turkey the Macedonian population enjoyed academic and ecclesiastical autonomy, and cultural autonomy. To-day such conditions do not exist; in the regions annexed by Greece and Yugoslavia a forced assimilation and displacement of entire populations are taking place, such as the world has not witnessed since Assyrian times. A terrible hate is cultivated between the Balkan peoples by the Governments of the conquering countries." The Central Committee of the Macedonian Revolutionary Organisation declares that "there will be true peace, a lasting peace in the Balkans, when no one Balkan people will violate the fragments of another people, when each historic country, Macedonia included, governs itself. It is thus that a path can be cleared for the constitution of a United States of Europe. Now the biggest injustice sanctioned by the peace treaties was committed in regard to Macedonia. This country is one and indivisible both by the laws of nature and by the wish of its inhabitants; nevertheless it is divided into three parts. And the constant crisis in the Balkans is due to foreign rule established in Macedonia. This crisis has existed for half a century—ever since the Macedonians engaged in the struggle for their national rights, for their liberty and their political autonomy. That proves that every political combination in the Balkans prepared without Macedonia's inclusion, or against Macedonia, will be unstable and harmful. The Central Committee of the Macedonian Revolutionary Organisation, bearing in mind the interests of Macedonia and the interests, of course, of all the Balkan peoples, therefore declares that it will continue the struggle until it achieves Macedonia's autonomy, which has continued to be the aim of every activity of the Macedonian Organisation from its institution to this day. The means by which this struggle will be pursued, whether legal or subversive, depend on those who govern Macedonia."

ALBANIA.

Tirana, September 4.

The Cabinet.

M. Sif Kedhi, an old member of the National Assembly, has just been given the portfolio of Justice, thus making the number of Albanian Ministers up to four. The Albanian Constitution makes no specification for the actual numbers of Ministries. It is widely thought, however, that there should be five, namely, Justice, Foreign Affairs, Interior, Finance, and Public Works. Education has been reduced to a Department and War has been suppressed as a separate Ministry since the advent of the present Government.

But since the beginning of 1925 there have never been more than three Ministries, two portfolios having been held by one man. The Minister of Foreign Affairs was thus at the same time the Minister of Justice, and to-day the Minister of Public Works holds also the portfolio of the Interior.

The fact of the smallness of the Cabinet has made its work extremely difficult; often, indeed, decisions have had to be taken without a quorum.

Constitutional Reforms.

In virtue of Article 83 of the Constitution, the President of the Republic presides over the Council of

Digitized by Google

Ministers, while Article 74 stipulates that the President of the Republic is irresponsible. That means, in practice, that all Ministers, however contrary to the interests of the country their actions might be, are also above responsibility. It was in this way, for example, that Mufid Lipohova, accused by the Chamber of Deputies of malversation and treason alleged to have been committed when he was Minister of Finance and of Foreign Affairs, escaped trial.

To remedy this inconvenient state of things and to provide greater guarantee of justice, the suggestion has long been mooted of modifying the Constitution and of creating a responsible Government, not under the presidency of the President of the Republic, who is irresponsible, but under a president who would, as Prime Minister, be a part of the Government. This idea is largely entertained by those who wish to give more stability and legality to the conduct of Albanian Governments.

Army Reform.

Another project which inspires hope concerns military reform in Albania. At present, in accordance with Article 75, "The President of the Republic has the general command of the armed forces." These forces are composed of recruits, gendarmes, and militia.

After the advent of the present Government, the Albanian Army, composed of 9,000 men, was disbanded, and nearly all the officers were retired or went abroad. A gendarmerie was then created, under the charge of the mountain chiefs (who came for the most part from Dibra), and also a militia, recruited from the people of Dibra and of Mati, and similarly placed under the mountaineers, who were graded and appointed as if they belonged to a Regular Army. In addition to these two forces there are the recruits, chosen by lot. They are young men, constituting the real army of Albania. Their service is of six months' duration, and the country is divided into nine battalions.

This system appears to be defective from several points of view. For example, the gendarmerie and the militia lack the necessary discipline and technical knowledge. Moreover, they necessitate an enormous expense (9,000,000 gold francs out of a Budget of 23,000,000). And thirdly, they offer little prospect of the establishment of a disciplined armed force on which the country might count in time of need.

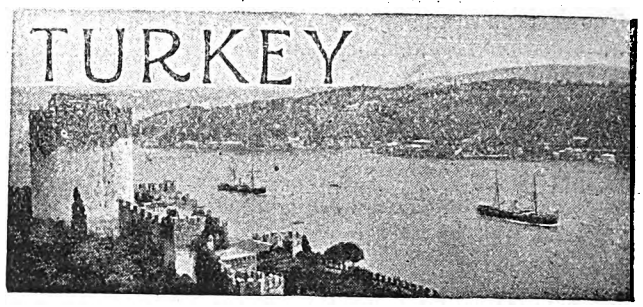
There has, consequently, been talk of increasing the number of recruits and suppressing the militia, and disbanding their chiefs; and at the same time of replacing the irregular gendarmerie by gendarmes who had received some instruction in a special school created for this purpose at Scutari, but which, unfortunately, has not yet begun to operate.

It ought to be added that this talk shows no sign yet of being anything more than talk. However, the projected reforms are such as to gain support of public opinion, especially as they permit of considerable economies in the nation's finances.

A Financial Difficulty.

In my letter of June 10 I said that the budgetary expenditure of the financial year was 23 million gold francs, but that actually the revenue could not exceed 16 or 17 million gold francs, in spite of official optimism. My prognostication has just been confirmed, for the first quarter of the financial year shows a deficit of one and a half million gold francs. The civil employees of the Government are two or three months in arrears of pay; only the militia and the irregular gendarmes have been paid regularly, for their chiefs themselves get the money from the Ministry of Finance.

No economies being possible in the middle of the year to balance the Budget, it is generally thought that the Government will have recourse to an Italian loan. It may be remarked, in this connexion, that Italy and her Bank are showing themselves more conciliatory since the "incident" of which I wrote in THE NEAR EAST AND INDIA of July 29.



Constantinople, September 7.

Return of the Kara Deniz.

The Kara Deniz, in which the Turkish Floating Exhibition was organised, returned to Constantinople yesterday. According to statements made by Reoufi Bev, director of the exhibition, the trip has been a complete success. Before the departure of the Kara Deniz from Constantinople much extremely adverse criticism was levelled at the effort which had been made to organise something of which the Turks could be really satisfied and proud, and disappointment at the poor show actually effected was very keenly manifested by the Press and numerous officials. Nevertheless, despite the fact that the exhibition was nothing to what it really could have been had Turkish growers and manufacturers had more faith in the ultimate results of the trip, it has certainly been responsible for the obtaining of considerable orders, and has proved an effective medium for advertising the country's wares. Apart from the commercial success of the exhibition, it has, to judge from further declarations of Reoufi Bey, done something to enlighten many an ignorant European's conception of the present-day Turk. He was surprised to be asked why the officials and attendants had adopted European dress for the trip, instead of coming in their own picturesque costumes.

In view of the material advantages which exhibitors have derived from this first praiseworthy effort, the second exhibition will doubtless receive far more serious consideration from those who have been content to sit back and scorn the possibility of success of such a venture.

Turkey and Russia.

Despite the fact that it is being continually reiterated here and in Russia that Turco-Russian relations are of the most cordial nature and, in mutual friendship and neighbourly feeling, leave nothing whatsoever to be desired, the present manner in which Turkish commercial houses dealing with the Soviet are being treated certainly appears to demonstrate that the advantages derived from this impeccable international amity are unquestionably a one-sided affair. That the Press, knowing full well that almost every commercial transaction with these more-than-brothers is attended by the greatest difficulties, can still pour out columns of encomiums on the existing conditions between the two countries either displays incomparable patience or the most complete apprehension of treading on this powerful ally's toes. Recent reports prove beyond doubt that Turkish merchants who have braved the risks of having their exports refused admittance into Russia—even after having procured documentary sanction—have on arrival at Batoum been constrained to accept payment in kind or suffer the loss of transport and insurance or the rotting of their goods on the quays. It is not difficult to imagine what would have been the outcry had these business principles been practised by England: it would have been intimated in no uncertain tones that producers and exporters could not be expected to relv on the sales of goods of questionable demand in order to be able to "realise" and prepare for next year's harvest.

The Lotus Affair.

The manner in which the question of the arrest and trial of the second officer of the Lotus has been taken up

Digitized by Google

by the French Press and the important publicity which has been attributed to the affair have been responsible for the expression of extreme indignation here. The Turkish Press has adopted its usual bristlingness and has devoted wonderful energy to the task of proving the complete competence of the Turkish Courts to deal with the question and in refuting the assertions of its French contemporaries that the Turkish Authorities are trespassing on International Law. The decision of the Government to refer the matter to The Hague has, however, somewhat shaken the first indignant publications, which declared that the Turks would tolerate no interference in their administration of justice. It is fortunate, therefore, that the Press in Turkey does not wield any power with the Government, as persistence in the attitude manifested at the outset would have no other result than to aggravate the question and render it increasingly complicated.

Chambers of Commerce.

The next move in the question of foreign Chambers of Commerce now rests with the Turkish Commercial Department, as during the last week the above institutions have signified their inability to conform to the Turkish demands, since the changing of their names would be prejudicial to their interests and activities. In view of the fact that the British Chamber has, apart from enumerating other ample justifications for its continuance as before, invoked Article 5 of the Residents' Convention of the Treaty of Lausanne, it is impossible to see how the Turks can persist in this demand. In the event of their deciding not to modify this utterly unprecedented attitude, which is indubitably contrary to the spirit of reciprocity on which the Treaty of Lausanne is based, it is extremely probable that the Americans will show their complete indifference for commercial relations with Turkey and close down their Chamber here. The delay of fifteen days allowed the foreign Chambers of Commerce in which to take steps to conform to this new order will lapse next week, and unless the project is completely renounced by the Turks the question will doubtless develop into one of serious proportions.

Mr. Vinnicombe.

The death, after a long illness, of Mr. Charles Vinnicombe bereaves the British community of Constantinople of one of its oldest and most highly esteemed members. Mr. Vinnicombe, who was 78 years of age, served for 52 years under the Ottoman Imperial Government. He is, however, one of those whose valuable services to this country have been completely ignored by the present Government.

ROUMANIA.

Bucharest, September 9.

Roumania's Defensive Alliances.

Roumania has now defensive alliances with Poland and with France, besides that of the Little Entente, by which she is assured of the support of Czecho-Slovakia and Yugoslavia, in the case of aggression. It is now reported that negotiations with Italy for a friendly alliance have also reached an advanced stage. This is the more significant in view of the attitude adopted by Italy in regard to the annexation to Roumania of the Province of Bessarabia, and high hopes are being expressed in the Bucharest Press that some friendly understanding with the Soviet Government may be brought about as a result of the recent visit of Italian delegates to Moscow.

Bessarabia.

It appears to be indisputable that the Bessarabians, as a whole, prefer the Roumanian to the Bolshevist régime, but to say that they are satisfied with it, is hardly in accordance with the facts. Indeed, the minorities problem altogether is a complicated one, and is not likely to be solved until a completely impartial government can be established in this country.

Roumania and Bulgaria.

The reply of Bulgaria to the Collective Notes of her neighbours, though very moderate and conciliatory in tone, has not given satisfaction in Roumania. It is no doubt felt that it contains several veiled reproaches, the justice of which does not make them any more palatable. Bulgaria appears to show that the violations of her neighbours' frontiers by armed Bulgarian bands, have in the past year been much less numerous than those of her own frontiers by armed bands of her neighbour's nationalities.

Without wishing to take up the cudgels in defence of ex-enemies, it seems only just to admit that there would appear to be a good deal of "kicking the down dog" in the recent agitation against Bulgaria, more especially because it is felt to be a strong and progressive dog. Is not too much importance being given to these occasional raids which are no doubt due on the one hand, to the internal disorders caused by the War, and on the other to causes closely connected with the vexed question of the minorities, as they occur mostly on the new frontiers?

Need of International Reform.

Now that Roumania has established friendly pacts with most of her neighbours and at least one of her great allies, and thus assured her position as regards foreign relations, she will no doubt have time to turn her attention to domestic reforms, to the suppression, for instance, of the arbitrary cruelty of her police force, of which flagrant examples are occasionally brought to public notice; and no suppression of corruption in her administrative bodies generally, which is a thorn in the side of many of her own best patriots. The treatment of animals also calls for attention, and strong undercurrents of public opinion are noticeable in favour of some radical reform in this direction.

Union of Roumanian Women.

An interesting congress was opened at Brashov of the Union of Roumanian Women, a body which was founded in Ardeal (then a Hungarian province) in 1849 by Maria Nicolau with the immediate object of collecting funds for the assistance of the sufferers from the effects of the Hungarian War of Independence of 1848. The Union later extended its activities and founded professional schools at four towns in Transylvania including Brashov and Sibiu, the funds being provided by subscription and by the proceeds of lectures on literature and science given by some of its members. Later an orphanage also was founded for which the Union was able to purchase a large house in 1906. The present President of the Union Dr. Maria Baiulescu, was elected in 1908. After the Great War many members from the Old Kingdom were inscribed on the rolls of the Union, whose philanthropic activities are continued with laudable energy.

At the present Congress the 75th Anniversary of the Union will be celebrated. More than 200 members have assembled at Brashov, and Her Majesty the Queen was present at the opening ceremony.

The Harvest.

This year Roumanian agriculturists can find little to complain of. The general crops have been good, if not extraordinary, and the maize crop is the best that has been seen in this country for 30 years, each root bearing two or even three stalks and each stalk several cobs. Thus most agriculturists have more than covered the difficulties of the last two or three years, and some of the more provident are buying machines, while others are purchasing motor cars.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor Street, W.1.

THE IRAQ RAILWAYS.

(From Our Baghdad Correspondent.)

Baghdad, September 2.

The following article has been written, not for such as have an intimate knowledge of present-day Iraq, for it will add nothing to their knowledge; but the wider public who know something and would know more may gain from it a general idea of the present railway problem.

Railway circles for some time past have been fluttered by the approaching visit, as the representative simultaneously of H.B.M.G. and of the Iraq Government, of Colonel Hammond, a senior Sapper officer and now an admitted expert in the railway world. The printed record of his previous tours of inspection in our African colonies has made somewhat gruesome reading to the railway officers here. If he found much to criticise (and not a few officers to repatriate) in colonial railways which are at least prosperous and traffic-ridden, what will he make of the Iraq railway, which is neither?

The problem is full of difficulties. The railways are the property of H.B.M.G., which laid down the greater part of them before the existence of the Iraq Government—and laid them down, moreover, by no means always with an eye to commercial traffic but rather to the through-movement of troops and stores. For obvious reasons the Colonial Office now finds it inconvenient to run the railway, and can, at the same time, neither sell it nor abandon it. The Iraq Government cannot afford to purchase it, even if a valuation could be agreed upon. Consequently the existing arrangement, which has now held the field for some two years past, is that the Iraq authorities manage the railway, which purports to be self-supporting, but do not own it. They lend it money for extension and capital works, and have, therefore, now become owners of a certain portion of it. The Railway Administration itself floats in mid-air, its officers owing a dubious allegiance to two Governments with obligations to both and under contract to neither.

Three features of this dubious and unclassified (but to Iraq indispensable) amphibian may be distinguished—the aspects of engineering, of finance, and of traffic As an engineering proposition it presents difficulties considerable but neither insuperable nor unique. Some six hundred miles of its total length lie on the flat alluvial plains of Iraq, upon a light and silty soil entirely without natural ballast, too flat for any form of natural drainage, liable at any point to sudden inundation and wash-out, difficult to protect; laid, in fact, upon the now arid, now sodden, surface of a largely uninhabited wilderness. The caprice of military engineering caused it to cross the Euphrates several times; it once spans the Diyalah and must, if extended from Kirkuk to Mosul, surmount the Greater and Lesser Zabs; a Tigris bridge has not yet been attempted, rolling stock being carried across at Baghdad on a primitive waggon-ferry. In the gravelly and undulating country of the Samarra-Shergat, Qaraghan-Khaniqin, and Qaraghan-Kirkuk lines the difficulties of drainage and ballasting are less, the danger of wash-out greater—and this more particularly in the last hundred miles below Kirkuk, where it must cross wide shingly river-beds capable of producing, at an hour's notice, the most terrifying heads of water.

The well-provided engineers of an American or European line would smile at these difficulties: but they are formidable indeed to a railway which has not, and has never had, anything like the capital to consolidate its hastily-constructed war-time permanent-way, to replace any but a fraction of its crumbling rolling-stock, or to embark upon the extensions and readjustments demanded by the needs of traffic and a progressive policy with funds enough to complete them with a fair margin of safety. Expedient must follow expedient, risk after risk be run, speed, efficiency, and even safety be sacrificed, for sheer lack of money which neither of the Government concerned will or can sink in this investment.

It is not surprising. Difficulties of ownership and engineering apart, the investment is scarcely attractive. The traffic carried, or which is at all likely to be carried for years to come, could in no circumstances turn the Iraq Railway into a gold-mine. Numerous realignments, new stations, new facilities, abandonment of uneconomic sections, overcoming of road and river competition, are necessary before even the maximum existing volume of traffic could be attracted and handled. And will the volume increase? Not if Persia provides an alternative road for her own imports, from some Gulf port into the hinterland: not if Syrian troubles still keep the tourist and eastward-travelling public at bay: not if Imperial forces become less and less profitable passengers because less and less numerous as our policy of evacuation proceeds: and not if the Persian pilgrim traffic visiting the Shiah Holy Cities remain as little as at present.

These are among the phenomena which await the expert eye of Colonel Hammond and have long perplexed those of Mr. Tainsh and his staff. The situation is full of things which cannot be done but must, which are impossible but are *faits accomplis*, intolerable but lightly borne, not to be hoped for but inevitable. Among this last category, no doubt, is the extension of the metre-gauge from Kirkuk to Mosul, and the scrapping of the standard-gauge from Baghdad to Shergat.

THE NEW GREEK MINISTRY.

General Kondylis has decided to restore the Ministries of Health and National Economy which had been abolished by General Pangalos. Accordingly the new Cabinet as at present constituted is as follows:—General Kondylis, Prime Minister, Minister of War and of Marine. M. Argyropoulos, Minister for Foreign Affairs. M. J. Drossopoulos, Minister of Finance. Dr. A. Papas, Minister of Education and Religion and (*ad interim*) for Refugees. M. Loukas Nakos, Minister of Commerce and Agriculture. Prof. M. Petmezas, Minister of the Interior, and (*ad interim*) of Communications. Prof. Triantaphyllopoulos, Minister of Justice. M. Aposkitis, Minister of Health.

UNDER ESCORT IN MIRDITA.

By ARTHUR E. E. READE.

"*Monsieur le Prefet!*"

Monsieur Mischitch, proprietor of the "Hotel d'Europe," stiffened suddenly, flung open the front door to admit the visitor, and then, bowing low, introduced us to the Prefect of Scutari.

The Prefect had called to express his regret at having been out when we called upon him. We had not called upon him. And he also came to offer a military escort to my companion and myself for our journey into the mountains of North Albania. We did not desire an escort, but it is not so easy to evade the honour customarily paid to travellers in this wild land, where every stranger is still as suspect as ever he was in the old Turkish days of only fourteen years ago.

Well, well, the Prefect's only wish was to be of service, and perhaps we would accept a letter recommending us to the hospitality of the Roman Catholic priest of Latchi where we should stop after the first half day's journey from Scutari.

Why I had thought to equip myself with so antiquated a commodity as a money-belt—routed out from the dustiest depths of a shop in the Strand, before leaving London, I hardly know. But without it one would have been in a sorry plight to leave Scutari laden with several hundred pieces of gold and silver obtained from a merchant in the bazaar, for in Albania, hitherto bereft of the mixed blessings of a banking system, the currency has consisted of the pre-War metal coins of all nations passing at their intrinsic—that is half their face-value.

After being perilously paddled across the rapid stream of the River Drin in a heavily overloaded boat—a snorting horse swimming beside added a thrill—we reached Latchi just before evening service. But the inconvenient time of our arrival accounted for only a part of the four hours' delay before anything more sustaining than coffee was placed before us. For it is the noble, if trying custom in Albania, as one learns after a first night of hospitality in the country, not to provide the hungry traveller with food until a meal can be prepared adequate to the generosity invariably extended to strangers in the house of peasant or parson. While my companion and I were in our ignorance gloomily resigning ourselves to the prospect of a supperless night, gendarmerie arrived, and then only did it transpire that in the very letter we carried Reynard the Prefect had stated that a military escort was to be attached to us thenceonward, and this had been confirmed by telegraphic instructions to the gendarmerie of the neighbourhood. Protests being unavailing, at seven o'clock next morning we found a saluting gendarme at the door.

At first it was only one gendarme who changed as we were relayed from block-house to block house. At one point escorts were exchanged with a prisoner who was being conducted in the opposite direction, and we realised that we were more or less prisoners too. Before noon we met a mounted gendarme carrying mails; he made us a present of his pony and continued his own journey on foot by the way we had come.

The next encounter was a long cavalcade headed by a priest in his cassock with pistols stuck in the girdle; he dismounted from his white pony to greet us. Followed peasants each with a rifle over his shoulder, one leading a sheep by his sash (one end wound round his own waist, the other tied to the animal's neck), an old woman smoking a cigarette and leading a boar by a string, a herd of kids and several heavily laden donkeys bringing up the rear.

Now high in the hilly woodland the escort was reinforced by two sections of mountain gendarmerie, who wore but the slightest scraps of uniform added to the national peasant dress. Then as we descended in the afternoon from the more thickly wooded heights, one section shook hands and retired while the other pressed forward to announce our advent to the Sub-Prefecture of Puka. An hour out from this destination the Puka patrol paid the honours, and as we approached the few buildings of the Sub-Prefecture we saw such a crowd assembled as can hardly have been composed of less than the inhabitants for miles around.

First the Sub-Prefect and the local Commandant come forward to receive us. Then at a signal from the Sub-Prefect, the Mullah and other notabilities advance. At the door of the Sub-Prefecture a guard of honour is drawn up. Politely hesitant I turned to the Sub-Prefect; he bowed me forward and I walked past taking the salute and leaving my less blatant companion behind—wherefore for the rest of our stay in Puka he was (to his great indignation) treated as a personage of lesser social importance.

Instructions had come from Scutari that we were now to have an escort under the personal command of the Puka Commandant. Never have I seen a man who, by his appearance, might so well make battalions tremble as Captain Hassan Bey. Tightly stretched over a bony skull and aquiline features his lined and dried-up skin was tanned black, with tinges of purple, and perforated by a week's growth of beard; eyebrows as bushy as his moustache overshadowed little chocolate-centred eyes bloodshot about the whites; his dark grey hair was cropped close as a convict's. He wore a uniform of English khaki complete to the puttees, but below an anti-climax—for footgear Albanian sandals over brightly coloured knitted slippers! His patent leather cartridge belt worn on top of a Sam Browne was rendered awry by the bulk and weight of an enormous muzzle-loading five- or six-chamber revolver of 80 years' old English make. From his left wrist there always dangled a venomous looking black whip. Such was the Commandant of Puka, but beyond giving his rifle to a gendarme to carry he made no attempt to display whatever disciplinarian ferocity might be possible with troops whose pay is generally three to six months in arrear. On the contrary he kept his favourite mountaineer, a very attractive youth, in ceaseless fits of laughter by jokes very obviously made at the English travellers' evpense and apparently of a Rabelaisian nature.

After a night's hospitality with a peasant it had been necessary to repeat the previous evening's ceremony of compliments and Fernet Branca in the Sub-Prefecture—and Fernet Branca at 7.45 a.m. is one of the less fascinating vices. We left with the postman's pony as before and the entire squadron of Puka gendarmerie added to our previous escort—wherein Captain Hassan Bey had, so we learned later, somewhat exceeded his instructions, but he had a personal predilection for travelling with an escort of impressive dimensions. There came as interpreter a young official who volunteered the information that he was eventually bound for Scutari to plead for a brother imprisoned on a murder charge. Dressed in a coat of soft green corduroy and a shirt open at the neck, with a bandolier of cartridges round his waist, a rifle slung across his shoulder and a coloured kerchief bound round his black curls, he was a living testimony of the realism of light opera.

Hassan was rendered so cheerful by the hospitality received at midday with the priest of Korthpula that he lost his way, and by evening we were still far from our destination, the bishopric of Nanshati. But by the tolling of a church bell we were able to locate the abode of the present Abbot of the Mirdites, and pending the conclusion

of a funeral the Abbot's household served coffee on the lawn. I hardly dare to imagine how an English Rector would receive an unexpected visit of a captain with eight men at arms, two travellers, an interpreter and a dragoman, but the Abbot seemed quite unperturbed when he arrived back from the burial on horseback. It was, however, a bit steep even for Albania, and after craving our leave the Captain took his troops off to sleep elsewhere while the Abbot showed us his parish, whose extent had, he said, been greatly increased by the exile of the nearest neighbouring priest for political reasons. We looked over the expanse of mountains, woodland and streams—not another habitation was visible in miles of view!

At half past seven next morning Hassan was sitting on the grass more than the best part of the way through a bottle of rakia. He invited us to join him. My companion turned pale at the mere idea and frowned at my greater good fellowship, for we had our stiffest climb immediately before us—too stiff even for the ponies, and Albanian ponies climb like chamois. However, I found rakia much nicer for breakfast than Fernet Branca. But it was a climb to do on a more substantial meal. And Hassan was so wise and considerate as to attach the most lithe-limbed of his ruddy young mountaineers to catch us as we stumbled. Fortunately the Albanian mountaineer has no amateur sportsman's prejurices against stopping for a drink before getting to the top, and there is seldom a climb without a rest after half an hour or so by one of the coldest springs on God's earth. So even in the worst of training, thirst need never be suffered; nor is the terrible doom said to await those who behave so naturally as to drink when hot ever fulfilled.

The stiffest of climbs led at last to the shadiest of hill-tops, where lush green grass and every colour of wild flower grew amid the tree-trunks and the blue-grey boulders. There is no well-sung beauty of Greece to equal the unsung loveliness of Illyria in spring.

We came down to the Bishop of Namshati's palace, and it were the garden of King Alcinoüs himself. And not less Homeric than the magnificence of the Bishop's garden was the magnificence of his hospitality. During such a lunch as the kings might have set before Ulysses, much fun was made of the Moslem Hassan, whose religious principles forbade the ham but not the wine in more than one colour.

We still had a march of some twenty kilometres before us over plain-land to join the traffic road from Scutari to the capital at Alessio. Out of the wild country our escort was reduced to one again, and we bade adieu to Hassan, asking the Bishop to thank him for the careful watch kept over us, to which he replied, according to the Bishop's smiling interpretation: "I did but do my duty."

A Ford sent by the authorities from Scutari had been waiting for four hours at Alessio. We left at break-neck speed over the remains of the Austrian military road, for there was an estuary which had to be crossed before dark—by raft, the bridge being, like most Albanian bridges, broken down. And then on through the dusk and the darkness, lit only by the fire-flies in the woods, we drove for three hours, challenged from time to time by the outposts, to the capital of Ahmed Bey Zogu, who rules over the last European State where no daily newspapers are yet published! And the first man who spoke to us in Tirana was, apparently a fellow-countryman; he came up to the car and begun: "Excuse me, I am not a common adventurer, but . . . ." I then realised why strangers might be suspect in Albania, and that the guard provided for us in Mirdita was not merely a tribute to my personal distinction, great as I had come to feel that to be.

A number of prominent India politicians recently sent a open letter to Mr. Gandhi urging him to return and take the helm of affairs in the country, and to call a representative conference to secure unity. A message from Ahmedabad states that Mr. Gandhi has replied that he is unable to respond in the manner suggested.

THE WEEK AT HOME.

London, Tuesday Morning.

Germany in tne League.

If contemporary recorders of history are to be trusted, the greatest event since 1918 is the entry, which occurred last Friday, of Germany into the League of Nations. The winning-over and admittance of the ex-enemy of Europe by and into the great brotherhood of mankind was, through the agency of Dr. Stresemann and of M. Briand, achieved so superbly as to cause hard-headed diplomats (it is said) to burst into tears of joy. It must have been a remarkable scene. Perhaps it means in truth the reconciliation of Germany and of France: perhaps only in appearance—that is not for me to guess. What should be commented upon here is the fact that it was mainly British diplomacy, which reached its climax at Locarno (and of which the last scene at Geneva is the direct result), that brought about this striking addition to the League.

That is one remark on last week's events at Geneva. The other is that, also largely owing to British diplomacy, Spain has definitely seceded from the League. This secession was one of the foreseen effects of the discovery of a "formula" whereby the granting of a semi-permanent seat to Poland was inextricably tied up with the admitting, as a "Great Power," of Germany. There are those who imagine that Great Britain, which has not, perhaps, shown a conspicuous desire at Geneva to regard the susceptibilities of the Latin nations, may on balance be the gainer. Certainly there would not have been such a hullaballoo if it had been thought that Britain stood to lose by Germany's entry. In other words, we are not wholly international yet. But in the art of what is called "constructive compromise" (by which is meant, though not always achieved, the attaining of one's own ends under the camouflage of sacrifice) we have, I think, shown ourselves to be no whit behind our great Whig ancestors.

Coal.

At the moment of writing the thaw in the coal crisis which seemed so steadily to be setting in consequent upon the changed attitude of the miners and of the Government has been checked, and, owing to the mineowners' apparent insistence upon district as opposed to national agreements, it is again freezing hard. The owners seem to argue that a national agreement is absurd if only because it makes so much easier a national fracture; their aim, though stated in purely economic terms, also has a political side—the weakening of the Miners' Federation.

To the ordinary man in the street it would seem that the time is now demonstrably ripe for the Government to put its foot down and discountenance altogether any political elements in the arguments of either side. If the Miners' Federation is not to remain as a national organisation, why, it is being said, should the owners' Association so remain? There are signs, however, that the Government is preparing to impose a settlement, which assuredly will displease both sides. But firm talk has been indulged in so often in this dispute that no one now builds very much upon it.

In the meantime, it is melancholy to note that during August over seven and a half million pounds' worth of foreign coal were imported. The figures for the same time last year were under £2,000.

Anglo-Russian Pleasantries.

At the time of the Home Secretary's banning of Mr. Tomsky's visit to the Trade Union Congress at Bournemouth it was commonly said that such untraditional action on the part of the Conservatives would benefit only the Trade Unionists here. For it was known that, however the Russian agitator might fume at his being shut out from these tolerant shores, it was as nothing compared with what he would have said about British Labour had he been allowed to land.

Digitized by Google

As it is, he vented his considerable spleen in an expensive telegram, in which his would-be hosts were told that they were "loyal to capital and disloyal to the working class." Such nonsense as this was treated in the only way possible, and the General Council, assuming the uneasy hat of dignity, told the Russians what they thought of such discourtesy. For the British working-man, call him Bolshevist as often as you like, is as touchy of his honour as the next man: and what appeared in the papers was a very bowlderised version of what he really said about Tomsky. One imagines that talk of a Moscow-London entente in the war against Capital will die down considerably now. There is, after all, something to be said for the people who argue that the best way to keep Englishmen from becoming Communists is to let them hear Russian Communist propaganda. In any case, the British Trade Union policy will not countenance any further attempts at interference.

Labour and a University.

Despite all that is from time to time said by the "bourgeois" upon the Trade Unionist, he is at least like all the rest of us. His similarity to the rest of h. kind came out at Bournemouth when the scheme for a Labour College at Easton Lodge (which, it will be remembered, was offered to the Labour movement by the Countess of Warwick) came up for ratification. The proposal was turned down for two reasons:—(1) that the Trade Union movement in its present condition had no money to spend upon it; and (2) that a quasi-university education was all part of that snobbery which should be banished from a Labour Party.

Upon the first objection it is not for an outsider to speak, but on the second several things might be said. Reactionary Labour's voting on this head has made the Progressives (except those belonging to Ruskin College, Oxford, and to the Central Labour College in London!) despair; it is being represented by those who wish to "uplift" the working classes that this aversion from education is really a turning of their backs upon the light. One is not quite so sure of this, however. Generally speaking, the product of the existing "Labour" colleges is hardly a desirable product from the strictly Labour point of view, and one felt considerable sympathy with the statement of the delegate who declared that he had seen at Oxford future leaders of the Labour Party sporting pink socks and eating strawberry ices. Education, after all, cannot be made a class affair—if so, it ceases to be education.

The Fishing Industry.

But coal was not the only product in which a falling off in export and an increase in import are to be recorded. In 1925, according to the annual report of the Ministry of Agriculture and Fisheries, the total landings of wet fish, exclusive of foreign landings, was 19¾ million cwts., a decline of 1¼ million cwts.—representing a loss of over £1,000,000. Notably, mackerel, herrings, and oysters fell off.

It is interesting to see who were the importers. In fresh herrings a great increase came from Norway. Of the landings by foreign vessels direct from the grounds, the Germans were responsible for over two-thirds, and next to them, significantly, came Italian vessels, which appeared for the first time in 1924.

The East Anglian herring fishery was a failure. The combined landings at Yarmouth and Lowestoft represented a falling off of over half a million pounds. Disappointment was great, for the largest fleet since the War had been assembled.

The ups and downs of this most valuable industry are seldom realised by the consumer.

H. G. Wells and Dean Inge.

Two books that have just been published are likely to make a considerable stir—Mr. H. G. Wells' first volume of his "three-decker" novel, and Dean Inge's "England." I have read neither of them, and so am completely qualified (in the reviewer's sense) to write dogmatically upon them.

It appears that both are intensely personal, not in that vitalising; intense way that betokens immortality, but in the narrower, prejudicial way. Of Dean Inge, in particular, prejudices seem to have got the better. His anger at any sign of leisure among the middle or lower classes is a remarkable phenomenon in these post-War days; and his emphasis, in writing of industrial unrest, upon the agitator and conspirator, in naive in the extreme. The trouble with these two publicists seems to be, in fact, that whereas the layman is too pliable, the cleric is too rigid. But they are both extremely readable, and do probably represent a large group of men of the loose-thinking and narrow-reflecting type.

English Village Life.

One of the most fascinating of the less known publications is the quarterly issued by the Rural Industries Bureau. The decline of rural industries is at last being recognised for the serious matter that it undoubtedly is; practically everyone who knows the country knows of trades that are now almost extinct. The trouble is: how to provide work for the men whose callings as, say, village blacksmith or village saddler, were worthy and full-time jobs?

Take the case of the village saddler, whose decline began, it is said, when the manufacturer of leather equipment began to be concentrated in Walsall and London. Two-thirds of England's saddlers are in towns. Lincolnshire, for example, has fewer than ninety saddlers' shops, Surrey fewer than twenty. One way of salvation for the small saddler (in my own locality it has already been adopted) that the Bureau suggests is for the saddler of to-day (just as the old-time saddler stocked carriage lamps, rugs, cushions, and so on) should stock tyres, petrol, motor-car cushions, cricket bats, balls, and so on

The organ of the Bureau notes the industry of horse-hair weaving in Castle Cary, Somerset. At this old place, I believe, a few hundred people are employed in the weaving of horse hair cloth, which of course is now much used again in the upholstery trade. To allow such picturesque and manifestly useful industries as this to perish would be such an act of vandalism as few genuine Englishmen could wittingly commit.

THE STORY OF THE JEWS.

"THE STORY OF THE JEWS FROM THE EARLIEST TIMES TO THE PRESENT DAY." By Lewis Browne (London: Jonathan Cape. 7s. 6d. net.)

Mr. Browne in this "history" takes us on a journey through five continents in the fastest American Express, halting at seventy-one stations. Starting from the desert of Arabia, via Assyria, Egypt, Palestine, Babylonia, Greece, Rome, Egypt, Spain, France, Germany, Italy, the United States, we arrive with the Haluzim in the "national home" of Palestine, under the British Mandate. We meet Moses, the "robber chieftain," David, the "brilliant fool" Solomon, the narrow-minded patriot Isaiah, the "no end of a gay blade" young Judah Halevy, one of the greatest prophetic geniuses of modern times, Karl Marx and a few others. The ship of Jewish evolution passed through a few harbours, e.g. crudest idolatry, national deity, attempts of universalistic religion, reactionary Talmudism, mediaeval Jewish philosophy, Spinoza, Mendelssohn, liberal Judaism, and Zionism.

One can easily detect H. G. Wells' influence on this Story of the Jews, which is not free from the most irritating blunders in details. The lack of knowledge is truly amazing. How can a serious writer state, as on p. 140, "Wealth and parentage made no difference among them" (i.e. the scribes)? It did. Read the life story of Rabbi Akiba, or of Beadyah Gaon, to mention only two instances.. On p. 143 we are told "It (the Mishna) served as a direct rebuke to those Christian preachers." Is the Mishna in its greater part not older than Christianity? There is no dispute about this. P. 144 "how the tithes should be paid to the long deposed priests." The priests are not deposed up to this day, and tithes were given to them up to the tenth century. P. 178: The peculiar custom still observed among Jewish housewives can have nothing to do with the Persian persecutions! P. 140, the Talmud, "with its 63 wild and shapeless heaps," appears so to those who have never studied them. There are order and arrangement. P. 150, these rabbis did not set out as heroic Protestants against the priests, since many of them were priests and others emphasized the exalted state of priests and priesthood. Instead of ridiculing the old rabbis, our author would have done much better had he acquired more Biblical and Talmudic knowledge. What can be said of a sentence like "The priestly law declares that in sacrificing a kid on the altar, it may not be boiled in its own mother's milk"? (p. 155). Where does the Talmud say "Charity saves one from death?" (p. 158). Is it not rather a sentence in Proverbs, x. 2? These are only a few of our objections. To enumerate all of them, including inaccuracies and exaggerations, would require more space than is available. But one very important omission must be pointed out. Our writer is fond of the "troublers," and he sides with them. Why does he not mention the unsuccessful "troublers," like Hiwi of Balkh in Persia, the "Liberals" in Spain and in the Provence after Maimonides, the Alexandrian radicals and minim and others, who disappeared from the community of Israel? What safeguard is there that present day "troublers" will not fall into the same pit?

THREE ADVENTURE STORIES.

"THE WAR MAKER." By Allan Hillgarth. (London and Edinburgh: Nelson. 7s. 6d. net.) "A MAN WITH HIS BACK TO THE EAST." By Helen Halyburton Ross. (London: Thornton Butterworth. 7s. 6d. net.) "A FRONTIER ROMANCE." By W. G. Curtis Morgan. (London: Nash and Grayson. 7s. 6d net.)

The Irish hero of Mr. Hillgarth's story is an adventurer in the wider, more romantic sense of the word—the same as is more often used in a "costume" than a modern novel. His name is O'Donoghue, and he tells briskly and with humour his thrilling experiences when he was hired by a wicked financier to smuggle guns to the Rifis. There is plenty of well arranged incident, and the author makes us feel that he knows his country well. The description of Tangier is extremely vivid, and makes such a definite impression on the reader that it could have been written only by someone who knows it well. We feel that we should like to hear more of O'Donoghue's adventures. We wish that Mr. Hillgarth could have prevented the death of the delightful American, Carlyon.

In "A Man With His Back to the East," as in all novels about Egypt, there is a great deal of moonlight in the desert. But after all it is for the sake of the "atmosphere" that most stories about this part of the world are written and read. There is also a good plot, and an ingenious mystery. The intrigues and misunderstandings are pleasantly sustained until the very end.

"A Frontier Romance" has a rather mechanical plot, and the characters are not very convincing. We found this particularly so with the heroine, and could not decide whether she was really a "weak young girl" of a clinging disposition or a practical American young woman. However, the exciting scenes follow one another fast, in a way, in fact, which is suggestive of the cinema. The background of the mountains of the North-West Frontier is described with feeling.

PERSONAL AND GENERAL

TO-DAY

September 16, 1926 (New Style).
September 3, 1926 (Old Style).
Rabia 8, 1345 A.H., of the Moslem Calendar.
Tishri 8, 5687 of the Jewish Calendar.

The Earl of Lytton left London last week for Scotland.

The Gaekwar of Baroda returned to London on September 10 from Scotland.

Prince and Princess Andrew, of Greece, arrived last week at the Hotel Royal, Dieppe.

Sir Henry and Lady Bax-Ironside returned to 23, Grosvenor Place on September 9, from Dieppe.

Lord Linlithgow will leave Marseilles on September 24 in the Ranpura on a visit to India. Lady Linlithgow will join him later.

Mr. Stewart Johnson, American Chargé d'Affaires at Alexandria, died there on September 11 as the result of a motor-accident.

Mrs. Eckstein and Miss Eckstein have left England to travel in Yugoslavia. They anticipate returning to town at the end of October.

The Emir Faisal, second son of Ibn Saoud, the Wahhabi King, left Jeddah last week on an unofficial visit to Great Britain and the Continent.

Sir Grimwood Mears, the Chairman of the Back Bay Reclamation Scheme Committee of Inquiry, left Bombay on September 11 for England.

Ex-King George of Greece and Queen Elizabeth left London on September 10 for Paris, *en route* for Bucharest, on a visit to the King and Queen of Roumania.

Prince and Princess Nicholas, of Greece, with their daughters, Princess Marina and Princess Elizabeth, have arrived at Stain-Raphael, on the Riviera.

Lord Lloyd, who recently underwent an operation on his throat, is making satisfactory progress. He expects to be back in Egypt about the second week in October.

Captain George Peter Cumming (Bengal Staff Corps, retired), of East Brighton Crescent, Portobello, Edinburgh (in addition to real estate, unsettled personal estate in Great Britain) left £1,882.

The following Foreign Office appointments have been approved by H.M. the King:—Consuls:— Mr. G. H. Bullock, for the departments of Liubliana, Maribor, Primorsko-Kraia, Zagreb and Osijek, to reside at Zagreb; Mr. C. A. Greig to reside at Sarajevo; Vice-Consuls:— Mr. R. H. T. Smith to reside at Gruz (Gravosa), Mr. D. J. Footman to reside at Skoplye (Uskub) and Mr. C. L. Blakeney to reside at Belgrade (July 1).

Mr. G. P. Jacomb-Hood, the well-known artist, says the *Morning Post*, has been commissioned by Sir Prodyat Tagore to paint a State portrait of the Earl of Lytton for the Victoria Hall, Calcutta. After completing this work he goes to India to paint portraits of Sir Prodyat Tagore and his wife and son, as well as of the Maharaja of Burdwan. Mr. Jacomb-Hood acted as official artist at the Durbar, in 1911, travelling, at the King's command, in the Royal Suite. His picture of the Investiture was painted for the Maharaja of Bikanir.

The Anglo-Palestinian Club has arranged to hold a farewell party next Sunday (September 19) at the Casino de Danse, Finchley Road, N.W.6, in honour of their fellow members and colleagues who are leaving England shortly for Palestine in connexion with the transfer of the Keren Hayesod Headquarters from London to Jerusalem.

NEWS IN BRIEF.

A telephone service with an automatic exchange was opened on September 11 in Angora.

Lieutenant Challe and Captain Weiser, the French airmen, who flew from Paris to Bandar Abbas at the beginning of September, arrived in Baghdad from Teheran on September 9, and left for Paris the following day.

It is reported from Cairo that the Egyptian Government is buying the existing opium crop for £200,000, hoping to find a purchaser for the whole crop. Poppy-growing in Egypt will be prohibited in future.

Sir Edwin Grant Burls, C.S.I., died on September 10, in his 83rd year at his home at Shortlands, Kent. He was made a C.S.I. in 1902, and was knighted on retirement in 1909 after 13 years' tenure of the Director-Generalship of the Stores Department of India.

August 30 being the fourth anniversay of the Kemalist victory over the Greeks in Asia Minor, the day was observed as a national holiday in Turkey. A military procession was held at Pera, the whole town was beflagged, and collections were made on behalf of the Aviation League.

The Times Basra correspondent recently reported that a raid was carried out on tribes dwelling at Halfaya by Sheikh Faleh Albeniya, in the course of which some policemen were wounded. The Sheikh had been in trouble owing to his refusal to pay taxes, and since then had been living in Persia.

The death has occurred in Bombay of Mr. George Wittet, consulting architect to the Government of Bombay. Mr. Wittet designed many notable buildings in Bombay City and Presidency, including the Gateway of India, the Prince of Wales Museum, the Royal Institute of Science, and the King Edward Memorial Hospital.

It is officially announced that the Queen of Roumania will leave early in October on an unofficial visit to the United States. Her Majesty will open the Roumanian section of the Mary Hill Museum of Fine Arts, Philadelphia, afterwards visiting the Philadelphia Exhibition and various other places of interest, including the Roumanian colony at Detroit. M. Laptew, of the Roumanian Consulate, London, will accompany the Queen.

INDIA'S IMPORTS.

As the report of the Indian Trade Commissioner, noticed in last week's issue, deals with the export trade of India, so that of H.M. Trade Commissioner at Calcutta deals with India's imports. The latter's survey of the import trade of India during the quarter ended June 30, 1926, is not encouraging reading; but it must be remembered that the dislocation caused by the general strike and the coal strike must have gravely affected the figures during the latter part of the period under review. The total value of India's import trade improved, during the three months April, May and June, to 5600 lakhs of rupees, from 5300 in the corresponding quarter of 1925; but the share of the United Kingdom fell from 2895 to 2819 lakhs. Her most formidable competitors were Germany and the United States, whose shares rose from 321 to 478 lakhs, and from 356 to 437 lakhs respectively. Belgium also recorded a small increase and Japan a small decrease: the German share overtaking the Japanese, which was only slightly ahead of that of the United States. The figures of the textile trade were referred to last week: apart from that trade, the Calcutta report shows that, under ten of the main heads, India's imports totalled 1390 lakhs, against 1318 lakhs in the corresponding quarter of 1925, and that the share of the United Kingdom fell from 886 to 788 lakhs.

The greatest rise in total imports occurred in iron and steel, from 361½ to 435 lakhs. The United Kingdom's share in this increased trade was negligible, her figures rising from 281½ to 284½ lakhs. All her chief competitors did much betetr than this, the figures given showing large increases in the shares of Germany and Belgium in particular, who were responsible between them for about three-fifths of the total increase. The total imports of hardware also rose from 134½ to 148½ lakhs, but the share of the United Kingdom fell from 50 to 45½ lakhs, while that of Germany rose from 36½ to 53⅛ lakhs. Imports of provisions rose from 95¾ to 113½ lakhs: but here, though the increase in the share of the United Kingdom was not striking—from 38 to 41 lakhs—Australia and the Straits Settlements both showed notable advances, the only foreign competitor that did the same being the United States, whose share increased from 5 to 12⅛ lakhs. The imports of electrical instruments and apparatus rose from 50½ to 65 lakhs, but the share of the United Kingdom fell from 40½ to 38¾ lakhs, while that of the United States rose from 4½ to 10 lakhs. Paper and paste-board also rose, from 45¾ to 56½ lakhs: here again the share of the United Kingdom fell, from 16½ to 14⅜ lakhs, Germany, Austria, Sweden and Norway all recording increases. Coal-tar dyestuffs showed an increase from 25 to 40 lakhs: and, though the increase in the share of the United Kingdom was but small—from 2½ to 2⅞ lakhs—it is matter for encouragement that she should have been able to hold her own in this important industry. The figures for the import of liquors show a small decrease—from 22 to 21¼ lakhs: the United Kingdom's share was unaltered at 12 lakhs. Notable decreases in total imports occurred in machinery and millwork, and in railway plant and rolling stock: in the former, from 361 to 330 lakhs, in the latter from 153 to 108 lakhs: and, in each case, the falling off in the share of the United Kingdom accounted for more than the total decrease, being from 298 to 260 lakhs in the former (where the United States and Germany increased their shares from 2 to 36 and from 2 to 20 lakhs respectively) and from 136½ to 77 lakhs in the latter. The report on the import of motor cars is of special interest. The total number of cars imported rose from 2291, valued at 50 lakhs, to 3330 valued at 69 lakhs. By far the greatest advance was made by Canada, whose imports amounted to 1360 cars valued at 20½ lakhs, against 831 cars valued at 13 lakhs: American and Italian cars also showed notable increases, and that of the United Kingdom, from 285 cars valued at 10¼ lakhs to 329 valued at 12 lakhs was, though quite encouraging, considerably less than that of either. The average value of imported cars was, United Kingdom Rs.3675, Italy 2565, United States 2125, Canada 1500.

Of imports not included under the ten heads given, that of motor vehicles other than motor cars is equally important, though the figures given in the summary of the report do not allow of exact comparison with those of the corresponding quarter of 1925. The United Kingdom retains a practical monopoly in motor cycles and "push" cycles; but takes a very small share in the rapidly growing trade in motor omnibuses, vans and lorries, the demand for which shows a large increase due in the main to the rapid growth of motor omnibus services in India. Imports under this last head show an increase from 718 vehicles valued at 14½ lakhs to 1582 valued at 28 lakhs: of which latter total the United Kingdom only supplied 83 vehicles valued at 3¾ lakhs. Canada increased her share from 264 vehicles valued at 3¼ lakhs to 807 valued at 10½ lakhs, and the United States from 383 (7¼ lakhs) to 628 (12½ lakhs). The average value of the imported vehicles was, United Kingdom Rs.4600, United States 2000, Canada 1290. The imports of coal are also of interest, and tend to show that there is but little substance in the demand recently put forward by some—though by no means all—of the coalowners in India for the imposition of a special duty on imported coal. The total imports fell from 149,223 to 43,658 tons: those from South Africa from 40,472 to 31,443 tons and those from Portuguese East Africa from 62,599 to 6147 tons. Those from the United Kingdom fell from 42,854 tons to 5510 tons; but, as the three months covered by the report included two months of the coal strike, this is not surprising. Other figures of special interest are those concerning the trade in artificial silk. The imports of yarn rose from 478,000 to 1,058,000 yards, the chief beneficiaries being Italy and Holland, whose figures rose from 196,500 and 12,800 yards to 552,500 and 144,000 yards. It is disappointing to find that the United Kingdom, so far from sharing in this increase, lost a great deal of ground, her share declining from 206,500 to 125,500 yards. In artificial silk piece-goods, however, the outlook is much more encouraging. Of the total increase, from 3,111,000 to 7,873,000 yards, that of the United Kingdom was from 1,398,000 to 3,552,000 yards.

Digitized by Google

though other countries have done very much better, notably Germany and Switzerland, whose shares increased from 89,000 and 577,000 to 419,000 and 1,761,000 yards respectively. Italy has also done better than the United Kingdom, though not by much; her share rose from 893,000 to 1,796,000 yards. The total value of India's imports of artificial silk piece-goods in the three months covered by the report was 64½ lakhs, against 29 lakhs in the same quarter of 1925. One of the most encouraging features of the report is, indeed, the great expansion of this new form of trade, which obviously has a great future before it—one to which it behoves British manufacturers to devote the keenest attention.

CURRENT TOPICS.

Trade Possibilities.

Lord Winterton made two specially good points in his speech at the Chamber of Commerce luncheon at Sheffield on September 2. He said that industrial development in "backward" countries would force manufacturers in highly industrialised countries to concentrate on more highly skilled production and on more specialised products: and he emphasised the great importance of British firms providing themselves with the best possible representation in India.

As regards the former of these two points, Lord Winterton naturally mentioned the Sheffield steel trade: and suggested that an enormous potential market in stainless steel existed in the Empire in general and in India in particular. He also spoke of the tendency to expansion in India's imports of textile, mining and agricultural machinery: one that opens up great possibilities for British trade of which, at present, her foreign competitors seem to be taking greater advantage than she is doing herself. India's indigenous steel industry, highly protected though it is, is not at present a serious competitor in machinery, and is unlikely to become so for a long time. In this connexion, it is of interest to notice the lecture delivered by Mr. W. S. Thatcher at the Cambridge Local Lectures Summer Meeting at the end of August: when, referring to the same subject, he spoke of the obstacles in the way of the introduction into India of industries demanding highly skilled production. He instanced the indigenous manufacture of cotton yarn and piece-goods, which is still almost confined to the coarser counts: and suggested that the cause was to be found in the difficulty of training the workpeople to finer standards of work, in the quality of the Indian supply of raw cotton, and in the nature of the market, which is too poor to buy much of the fine production.

Though this last cause very obviously exists, there is yet a very great market in India for "specialised products": and it is with the development of this market that Lord Winterton's second point has to do. The day has gone by, he said, when all that had to be done was to dump down goods in the country, say "these are British goods," and expect them to sell. The common practice of appointing a local firm as agents and waiting for orders is also a mistaken one. The agents have their own interests, often conflicting with those of the firm that employs them: and in no country in the world does the personal touch count for more than in India. Lord Winterton said that "the man who is going to sell your goods for you must possess two kinds of knowledge—knowledge of the merits of your goods and knowledge of the special tastes and needs of the local population." He added that, if the required qualifications are not to be found combined in one individual, two or more should work together: and, if they really know their job and carry it out properly, they would much more than repay the cost of employing them. This is very sound advice—it amounts to saying, study your market on the spot: a proposition to which every British merchant will agree in theory, though there are many who do not carry it out in practice. Lord Winterton declared that he thought the British share of India's imports, though ten per cent. less than it had been before the War, was still marvellously high. Here it is not so easy to agree with him; though one believes that, if British manufacturers would follow his advice—as their foreign competitors have been and are doing—the improvement in the British share that would follow would really be a marvellous one. In spite of the politicians who, in Lord Winterton's words, seem to hold the view that Britain is inflicting some sort of injury on India by sending her the goods she requires, the Indian customer does want and does prefer British goods: and all that is necessary is a resolute and sustained effort to present them to him in the most attractive form, and in careful agreement with his individual wishes.

India House.

The remarks by the Indian Trade Commissioner and the High Commissioner for India, included in the former's report for the years 1924-26, regarding the growing complexity of the developments of Indian trade and the inconvenient location of the High Commissioner's present office, have led to a report that the creation of an "India House" has been decided on. Reports have gone so far as to indicate the site chosen, and the sum of money that is to be expended on the building. It is officially announced that these reports are premature and unauthorised: and that, though it is true that the possibility of such a departure is being considered, neither the Government of India nor the Indian Legislature has yet been consulted.

As India will have to foot the bill, it is obvious that her formal consent will have to be obtained before anything is done in the matter; but it may reasonably be expected that, in spite of the large sum that will necessarily be involved, Indian political opinion is likely to be favourable, at any rate at first sight. All the Dominions have their own "shop windows" in London: and India, who aspires to the status of a self-governing Dominion, which she is anxious to enter upon as soon as possible, will probably welcome the suggestion, at any rate in principle; though it is not unlikely that the expense will prove an obstacle. To the particular brand of extremist that demands the boycott of British goods in India, the project will not appeal; though even they have not gone so far as to demand the cessation of Indian exports to the United Kingdom. But this clique never had much of a following at any time, and is practically negligible now. The desire for the continuance of makeshift arrangements is vocal enough in some of the Provinces, notably in Bengal; but, when it is the Government of India that has to pay, they are not so much enamoured of the cheap and nasty as they are when they themselves have to find the money. If, then, the matter were merely one for the consideration of the Government of India, one might reasonably expect that the project, so obviously desirable as to be almost necessary, would materialise soon. But, in the case of Australia, each Colony has a separate show window of its own: and Provincial pride would probably demand a similar arrangement for India. Here it is that difficulty will be found: for the demand would almost certainly be accompanied by a refusal to pay. In the circumstances the outlook is not too hopeful: and it seems more than likely that the High Commissioner will have to take several bites at the cherry. The first, which certainly should be an early one, will doubtless take the form of a move to more central, even if not more commodious, premises than his present ones in Grosvenor Gardens.

To India by Air.

It was announced in our issue of August 26 that the passenger aeroplane service from Egypt to Karachi would begin in January next. Later information shows that this statement, though still technically correct, requires considerable modification. The first aeroplane is to leave Cairo on January 12, and is timed to reach Karachi in the afternoon of January 15. But it appears that, for three months to follow the service will cease at Basra: and that the Basra-Karachi section will not be operated again, after the initial experimental flight, until the first week

Digitized by Google

in April. It is explained that the delay in opening the full route is due to the necessity for gaining experience in the operation of the latter part of it: and it is mentioned that a large amount of preliminary organisation has been carried out by Imperial Airways and the Air Ministry, since the agreement between the two was signed at the end of 1925. No mention is made of the part played by the Government of India in this preliminary organisation; which, indeed, appears to have been confined to making it necessary to delay the advertised date for the operation of the full service for a further three months. If present experience is any guide, one may confidently expect that it will, in the end, be found necessary to put that date considerably later. It is stated that arrangements for opening the airship route are going on favourably: that the work, in this respect, is already virtually complete in England and Egypt, and is "progressing satisfactorily" in India; so that it is expected that the inauguration of the service will take place "in the first half of 1928." One would be prepared to take a shade of odds that the full aeroplane service will not be established much before the date now set down for the opening of the airship service.

The Times of September 10 contains a letter from Sir Montagu Webb, which draws attention to the unsuitability of Karachi as the final Indian terminus of the air service, since it is 500 miles from Bombay by sea, more than twice that distance by rail, and has no fast direct railway connexion with Delhi and Calcutta. Sir Montagu writes: "It is of the utmost importance, therefore, that the Government of India should establish, by January next, regular air services from Karachi to Bombay on the one hand and to Delhi and Calcutta on the other. Otherwise a large part of the advantage gained by a three-days' air service between Egypt and Karachi will be lost." As the saying is, "he has a hope." We said the same thing ourselves, in December last; and, three weeks ago, we quoted the gist of our remarks on the point. Included in the "preliminary organisation" carried out by the Air Ministry, it is safe to assume that there has been a sustained effort to goad the Government of India into activity: and, when one surveys the result achieved, it is not difficult to guess what has been the amount of the Government of India's activity in the matter of the internal problem, where no such spur can have been applied. The service is to be fortnightly—when it does start: and the number of passengers carried from Basra to Karachi is limited to eight. When regular air connexion with Bombay, Delhi and Calcutta is established, this number ought to fill easily, and the extension of the service to a weekly, or even more frequent, one should follow quickly. Until that time, even eight passengers a fortnight is likely to be an unattainable maximum for Karachi alone: and it is possibly this contingency that the Government of India is really playing for. It is everywhere easier to follow the line of least resistance, and specially so in India: and it would not only be an easy method of following that line to pronounce the scheme a failure and to scrap the temporary civil aerodrome at Karachi, but one that would be fully in keeping with the traditions of Indian procedure.

The Bombay Waterworks.

The completion of the scheme for providing Bombay with an adequate supply of water is described in the issue of *Engineering* of September 10, where a series of photographs is given of an undertaking said to involve what is probably the longest pipe line of its kind and the longest masonry dam in the world. The scheme, which included the creation of an artificial lake, was planned over 50 years ago: and the works, as at first carried out, were opened in 1892. The daily supply provided from Lake Tansa was then 21 million gallons: and, twenty years later, the demand having outgrown the supply, the dam was raised ten feet and the pipe line duplicated, increasing the daily supply to 49 million gallons. Ten years later still, this large increase proved insufficient, and the dam was raised another six feet, making possible a daily supply of 90 million gallons. The duplicated pipe line was unable to cope with this increase, and it is for this reason that the new one has now been installed. The present daily consumption of water by Bombay, with a population of a million, is 78 million gallons: it is estimated that, in another twenty years, the population will have grown to 1¾ millions: so that, on the basis of the present figures, a still further heightening of the dam will be required before very long. In such a case, however, no alteration will be needed in the new pipe line, which has been designed for a daily capacity of 160 million gallons: an amount which is likely to be in excess of any foreseeable demand in the future, since the possible expansion of Bombay is limited by the fact that it is an island.

Information about India.

In our comments on the *Round Table* article on "The Inwardness of the Indian Problem," we quoted the writer's remarks about "the misleading nature of the chronicles of Indian events served up by the daily Press in England." A good example of this kind of thing—though not exactly of the sort that the *Round Table* writer had in mind—is to be found in a telegram purporting to emanate from Calcutta, that has recently found publication in England. The message declares that the threat of fresh communal riots "has made such an impression on European residents in and around Calcutta that, fearing looting, they are sending their valuables from the city." The amount of reliance that can be placed on this news may be judged when one reads, in the same message, the equally absurd statement, which can only have been made by one totally ignorant of the facts, that trouble is apprehended because a Hindu procession will have to pass by some mosques, in which "the Moslems insist on playing music while the procession is passing. To this the Hindus are strenuously objecting, but the Moslems refuse to stop a custom that has obtained for the past 150 years."

A different kind of "chronicle" is to be found in the titbits of information about India in general, that are sometimes gravely served up by British newspapers for the instruction of their readers. Of such is a recent paragraph headed, "How pigs are regarded in India," which states that, in that country, the pig is of little account, being considered an unclean feeder, ranking even lower than the ignoble pariah dog. The lowest caste native declines to eat pork: and so poor is the Indian's opinion of the pig that "Oh, pig!" is their favourite epithet, sometimes varied by "son of a pig"—which latter expression is also used by "hasty Europeans, rendered irascible by the excessively trying hot weather months and by the no less detestable mugginess that follows each shower of rain, the words 'soor ka butcha' often rising to their lips."

The remarks about the unclean feeding of the Indian pig would be wholly, and those about its flesh partly, justified if it were explained that they refer to the domestic variety; but hardly at all in the case of the wild pig. Those about the "favourite epithet" remind one of the case of the Indian Civilian about whose work in India an adoring female relative contributed an appreciative note to an English newspaper, some years ago. She wrote that he was so universally beloved in his district that he was habitually addressed as *gharib parwar*—"protector of the poor." This particular phrase would, in fact be better translated as "Sir": being, with the possible exception of *Huzur*—literally "the Presence"—the ordinary term of politeness most commonly used in addressing a European.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 26.

Government Climbs Down.

The curtain has fallen on the harlequinade of the recent Order excluding the two extremists from Calcutta. It will be remembered that both announced their intention of defying it, came to Calcutta, addressed meetings, were served with summonses, and left Calcutta without taking any notice of them. Now Government lamely states that,

Digitized by Google

as no communal disorder followed their visits, the summonses are to be withdrawn. The whole Indian Press gloats, while the English papers are discreetly silent. A sorry bungle, it is of little importance in itself; but it will be a brave, or reckless, official who dares to take similar action in future, no matter how great the necessity.

A Fair Hearing for the Currency Bill.

The Currency Bill has been postponed. The Swarajists therefore walked in and out of the Assembly, and so kept their faces and preserved their travelling expenses, no small matter when first-class fares are allowed for travel over half a continent. Sir Basil Blackett admitted the complexity of the matter, and one advanced Indian politician had the courage to say that he did not at all understand the five or six volumes which the Commission have issued, and that he will require months before he will do so. No other member was so frank; but most of them will not even attempt to master the subject, but will vote just as their leaders tell 'em to; which is perhaps by far the safest thing. The idea of hereditary legislators thinking scared W. S. Gilbert; but, if the Indian extremist begins to think for himself, there will indeed be the father and mother of a rumpus. Meantime, *Forward* and the others are as usual "abusing the plaintiff's attorney," in spite of a disarming appeal from Sir Basil Blackett that every one should play the game in regard to the report. His reputation, by the way, waxes daily, and the mere fact that he made such a request has been sufficient to introduce a steadier tone into the comments of the less extreme organs.

The Dead Council.

The last session of the Bengal Legislative Council before the coming election is finished, and the European Press say, we think correctly, that its life has been wasted. The extremists will have it, however, that such comments are in bad taste and that, so far from having done nothing useful, the Council has conclusively proved that Dyarchy is not wanted and that it has been killed beyond resuscitation. So far as Bengal is concerned, this is true: and, as the late leader, C. R. Das, set out with this object, he has succeeded. There are other things, however, which are equally obvious from the records of these past Councils; the whole electoral system is wrong, and indeed it is doubtful whether any such system is suited to this country. Politics have become the plaything of the lawyers, and everyone else is being pushed out of Indian political life. There are hardly any men of wealth and position who find politics sufficiently amusing to take a serious interest in them; and, when the time comes to guess again, it is to be hoped that a close examination will be made of indigenous systems of local government before any attempt is made to patch up a scheme which is foreign to the whole history and civilisation of the country.

Prosecutions for Assault.

Comments of many kinds appear in the Press this week in regard to a European Assistant in a Jute Mill who was alleged to have hit a coolie so hard as to have fractured his skull and caused his death; this was the case in which the defence counsel suggested that the body upon which the post-mortem was held was not that of the man who had been assaulted. The local Magistrate, a European, discharged the accused, but a superior official ordered his rearrest; the case has now been reviewed by a higher tribunal, which has again ordered his discharge and has approved the proceedings and the judgment of the lower court. The alleged assault took place at the time of the riots: and, the judicial opinions being accepted, it appears probable that there was a conspiracy in this case, probably not so much to get a European into trouble as to escape the consequence of a communal assault. In a recent and somewhat similar case arising out of a tea garden assault, the accused European was less fortunate: for, though he was discharged by the local Judge, on his case being reviewed by the High Court he was convicted and sentenced to imprisonment. Much greater publicity is given to this type of case now that political capital can be made out of such assaults, and the Extremist Press keeps a sharp look out for news items of this kind. The fact that physical punishment as a means of maintaining discipline was not introduced by the Europeans is no excuse for the continuation of such traditions, and few right-thinking people will see any cause for regret if it becomes increasingly dangerous for anybody to commit such assaults; they are out of date. On the other hand, it cannot be denied that false cases can be far too easily manufactured in this country, and to find the truth is no easy matter. The more reason for keeping clear of the possibility of any such accusation.

Politics Generally.

Lala Lajpat Rai has resigned the Vice-Presidentship of the Congress, and urges responsive co-operation as the only rational policy for India if she is to progress towards self-government. This is more than a straw; it is a whole stack which has moved, and its effect will be most serious for the Congress; common sense is getting through.

Forward has opened a fund in aid of the British miners on strike against "mill-owners, backed as they are by a powerful capitalist Government." Anything, so long as it is against Government, is the motto of *Forward*, but the miners should not build any hopes on the results of this appeal. It will be dropped in a few days and never heard of again.

The Corporation yesterday debated the action of the Bengal Legislative Council in rushing through the amendment of the Municipal Act which would result in cutting out two of the recently added suburbs to the Municipal area. The Mayor's action was especially the subject of comment, and he must find it increasingly difficult to separate his incarnations, especially when his election prospects for the Legislative Council clash with his duties as Mayor. The new Bill has already been shown to be unworkable, and nothing will come of it; but, in the meantime, a certain number of votes may be influenced.

The last accused in the recent jail murder case has now been condemned to death. Nothing shows the unbalanced mentality of the Extremist Press more than the sentimental rubbish which is poured over this "misguided youth" who, whilst serving a sentence for conspiracy, committed a brutal murder.

The Trivial Round.

Racing continued at Headquarters on Saturday last after the break due to the floods of the week before. There were good fields, and it was an enjoyable afternoon, especially as most of the winners had been well backed. The breeze was very pleasant, and helped to clear off some of the steam that a hot sun brought out from a heavy shower at the beginning of proceedings. Incidentally the Maidan looked delightful—fresh green in brilliant sunshine, with the sky full of "April" clouds.

The M.C.C. team for the cold weather has been announced, and we breathe again; five Test players will probably be sufficient to make a game of it.

The Bengal Olympic Association has been asked to send an Indian soccer team to Australia next year, where they would play against all the leading teams; probably our own Mohun Bagan will not care to miss the season here, but no doubt a sufficiently strong team can be built up outside to show what can be done by bare feet. Soccer, by the way, is now the only footer here for Indians; they have completely dropped out of rugger.

This has not affected the popularity of the game of games: and, on the Club side of the ground, the crowds this year have almost filled the large stands, while there are almost as many cars outside as during the soccer season. The games are very good on the whole; Calcutta broke the 82nd's unbeaten record last week, and the latter again went down narrowly to the Bengal Nagpur Railway, a very sporting side. Since then the "Griffins" have beaten the senior Club side, and there are good games on every evening.

Digitized by Google

There was a first-class official military boxing show at the Empire on Saturday, and it was a refreshing change from the usual gin-and-water shows put up by "promoters." It is a good thing for the Anglo-Indian youth to see earnest boxing, and we could do with more of these soldier bouts.

The A.D.C. finished their week of "The Dover Road" even better than they began, and were rewarded by packed houses on mail night and Friday. This week a bright, if small, Comedy Company is playing to thin houses. Firpo's seems fuller than ever, and every night is the same, in spite of the moisture; but no one seems to mind the perpetual mopping.

Markets.

The jute and gunny markets are both inclined to ease off to-day. Prices had been steady and, in fact, had tended to harden earlier in the week; but, with Mills holding off and operators generally taking up a "wait and see" policy, business closes considerably quieter. For some time past, the market has been kept up by speculators by persistent rumours of a short crop, due to pests and other causes; but it now appears that such is not the case, and, on the contrary, a bumper season is anticipated. One authority predicts the largest crop ever known in the history of the trade; but that will be known within the next month, when official figures of the Department of Agriculture should be issued. The piece-goods market shows little change from the previous week, and concern is being expressed that the Poojah buying has not yet commenced in any seriousness. The position of the tea market continues to be satisfactory; at the sale here last week's prices were in most cases maintained, although at the opening an easier tone prevailed, especially for common kinds. Crop prospects for the latter part of this month are about normal, with a tendency towards a slight increase over the outturn for the same period last year.

In the stock markets, there are few signs of an expansion of business. There has been a certain amount of buying of short-dated Government bonds for temporary investment; but, in the new loan, sellers have again preponderated; the price however remains at just above the issue figures of Rs. 88. Jutes have been inactive, even the speculative counters fluctuating within very narrow limits. Interest in coal shares has been well maintained so far as the first-class Companies are concerned, but the inquiry is far from being general. A somewhat similar comment may be made as regards tea shares, where the improvement in the position of the commodity has brought about a small revival in a number of shares; but here again the issues in demand are strictly limited. There has been no improvement in rubbers, in spite of the fact that one or two Companies have declared satisfactory dividends; tins, on the other hand, continue to forge ahead and look like going better.

Bullion operations in Bombay influenced the Exchange market early in the week; but, with steadier advices from that quarter, the tone at the close is very steady, with ready T.T. at 1s. 6d. Money is still practically unlendable.

THE GRAND TRUNK CANAL.

One of the most important systems of river canals in the world is that which connects Calcutta with Eastern Bengal. The Imperial Gazetteer of 1908 says that the volume of traffic then averaged a million tons per annum, valued at four millions sterling, so that it is probably now even greater; though the Indian Year Book, so far as one can discover, makes no mention of the system at all, after the fashion of that rather irritating publication, which confines itself to tabulating a mass of information all of which is easily accessible elsewhere. The situation of Calcutta makes it the natural outlet of the Ganges Valley, but the canal system was devised in order to enable it to tap the trade of the Brahmaputra Valley and to focus the rich traffic of Eastern Bengal. The navigable channels, 47 miles of which are artificial and 1080 miles natural, enable country boats to pass between Calcutta and Eastern Bengal by an inland route, protected from the strong winds that make the great estuaries near the sea dangerous to navigation, especially during the monsoon. They cross the great tract of forest and swamp known as the Sunderbunds, which is a maze of tidal creeks, for the most part running north and south, but connected here and there by cross channels all of which are constantly shifting as the deposit of silt raises their beds: and the problem has been to keep the natural cross-channels free from silt and to connect them with each other and with Calcutta by means of artificial canals. The attempt to deal with this problem began 150 years ago and continues up to the present day, though there now seems a reasonable chance of its discontinuance. As in the case of the Hoogly Bridge, the politicians of Calcutta are agreed that the matter is urgent and that something must be done about it at once; the trouble is that it will cost money, and this they find objectionable. A project was elaborated, some years ago, for a Grand Trunk Canal that would allow river steamers to use a route that is at present only passable by small country boats: the route that the former use at present has only been kept open by constant dredging, silting is increasing so fast that attempts to improve it by the cutting of small artificial channels have failed, and it is the considered opinion of expert engineers that the rivers of the western Sunderbunds are doomed as navigable waterways.

In commenting on the situation, the *Statesman* says, "The present highway between Calcutta and the Brahmaputra has a very few years of life remaining. Bengal has taken little care of the water communications that nature has so lavishly given: and the postponement or rejection of a scheme that promises great utility would be a final blunder." In spite of this, the Bengal Council —to which the Swarajists returned for the occasion— refused to agree to the grant of a sum of Rs. 25,000 as a preliminary demand for the inception of a work that is estimated to cost about 280 lakhs when completed. This result was achieved by a unanimous non-official vote, including that of the European members, whose ground of objection was that the Chamber of Commerce had not been formally consulted. Presumably this was due to the evidence given before the Bombay Reclamation Committee by a representative of the Bombay Chamber of Commerce, who expressed the opinion that the Chamber ought to have been consulted before the reclamation scheme was undertaken, and appears to have suggested that, if this had been done, the scheme would either not have been started at all, or would have stood a much better chance of avoiding costly failure. In the case of the Grand Trunk Canal the spokesman of the European members of the Bengal Council was careful to explain that what they objected to was not the scheme itself, but "the method by which the Government sought to foist it on the House." One of the Indian members elaborated this objection by criticising the hurry with which the demand had been brought forward, and thought that there was no urgency in carrying it through the present Council. Another protested against "a scheme of this magnitude being rushed through a dying Council." A third is reported to have "quoted many examples of canal schemes in Europe and America which had become financial failures." Most of the Indian speakers dragged in the case of the Bombay reclamation scheme: it was declared that, in this case also, the estimate was sure to be greatly exceeded and the financial results would certainly not be nearly so favourable as those estimated by the experts who desired "to support a pet fad of their own." It was also represented that the finances of Bengal were in an unsatisfactory state, which prevented other urgent measures from being carried out owing to lack of money. It was even argued that there was reason to fear that the cutting of the Canal would "prejudicially affect the health of the area."

The Government argument was that, first and foremost, it was urgently necessary that something should

Digitized by Google

be done. Secondly, that no alternative scheme was in existence, except the continuance of the hand-to-mouth method of continuing to dredge rapidly dying channels. Thirdly, that the Grand Trunk Canal scheme is no new departure, but one that has been before the public for a number of years: and that it had received the most thorough examination from a host of experts, by whom, up to and including the Inspector General of Irrigation, it had been fully approved. Fourtnly, that it was proposed to finance it by borrowing money for the purpose, and that it was expected that it would prove profitable ten years from now and highly remunerative later on, with an estimated net return of over 13 per cent. on the capital outlay. Lastly, that the best expert opinion had been called in to advise on the sanitary aspect, and that it was certain that there could be no valid objection to the scheme on that score. It might have been added that the idea of any canal scheme, of whatever kind, prejudicially affecting the health of an area of swamp and morass like the Sunderbunds, is fairly obviously absurd. But none of these arguments carried weight, and the non-official opinion of Calcutta remains what it has already shown itself to be in the case of the Howrah Bridge—we admit an absolute and crying necessity, but we won't pay: if this attitude ends in disaster, so much the worse for Calcutta: in the meantime, we are content to chance it: and, in any case, we are saving ourselves from the chance of approving a scheme which may conceivably turn out a failure, and from the certainty that, in such an event, we should incur the same sort of obloquy that is now being heaped on those who, in Bombay, pushed forward a great scheme the result of which, whether it proves a financially paying proposition or not in the end, will manifestly be of the greatest possible value to the community.

COMMUNAL POLITICS.

Lord Irwin's speech at the opening of the autumn session of the Central Legislatures was cabled home almost in extenso: and the full text, received by the mail, adds little to the cabled version. Contemporary political happenings, however, provide some apt illustrations of what was in his mind when he spoke of his inability to discern any signs of the responsible members of the Hindu and Mohammedan communities approaching the Communal question "in that spirit of mutual tolerance which alone can put an end to discord."

Negotiations between Messrs. Malaviya and Motilal Nehru, for the formation of a "united Congress party" in the legislatures, are being pressed on in anticipation of the general election. They do not seem to be progressing any too favourably, owing to the difficulty in reconciling the disputants in a matter that is less one of policy than of individual "face-saving." Should such a party be formed, however, it would be entirely Hindu: a fact which, according to the Simla correspondent of *The Times*, "would probably force the Moslems to form a party of their own." The Hindu view is the opposite of this: they maintain that the Moslems have already formed a party of their own, and that this has forced a similar necessity on the Hindus. The well-known Hindu contributor to the *Englishman*, Bepin Chandra Pal, dilates on what he describes as the "intrigue" set on foot in Bengal for the formation of a coalition Ministry led by Sir Abdur Rahim and supported by European, Anglo-Indian and official votes: and declares that "what people want above all things just now is to save the country from a Mohammedan administration under Sir Abdur Rahim." In this sentence one must, of course, read "Hindus" for "people"; for Mr. Pal speaks of "the birth of a new party in Bengal politics pledged to support Hindu communalism in order successfully to counter the intrigues of Moslem communalism in the Province." The repetition of the word "intrigue" as applicable to one party, but not to the other, is characteristic. The Swarajist Party, says Mr. Pal, has broken up on the question of the late Mr. Das' Hindu-Moslem Pact. "Lord Lytton's offer of the Ministry to Mr. Das added immensely to his prestige and, though he refused it at the time, it was generally believed that the Government could not possibly stand out against him for long and would soon be driven to surrender to him on his own terms. Mr. Das used his new prestige to the fullest extent in inducing Mohammedan legislators to join him in the hope of getting their rightful share of the loot when he became the ruler of Bengal's destiny." With the passing of Mr. Das, the pact passed also, and its continued existence on paper will prove a serious handicap to the Swaraj Party at the polls. If they want to win the coming election they will have to face what Mr. Pal calls the "fundamental fact" that their only chance is to join with the other Hindu candidates in order to "form one consolidated and disciplined party ready to allow the resurrection of Diarchy in the Province and to accept office," to scrap the pact and openly to label themselves as anti-Moslem, first last and all the time.

The fresh outbreak of communal rioting that occurred in Calcutta on September 5 adds point to Mr. Pal's arguments: and it may be supposed that the appeal to Mr. Gandhi, the one man who might possibly be able to give further life to the pretence of Hindu-Moslem unity, was a last despairing attempt to avoid the obvious. Mr. Gandhi's refusal to "return and take the helm of affairs" has put an end to any hope that Indian political parties will, after the general election, be constituted or anything anything but strictly communal lines. Meanwhile, the politicians of both communities will do well to bear in mind Lord Irwin's reminder that the events of the next three years cannot but have a great effect on the decision of the Royal Commission of 1929: and to lay to heart his warning that "India has abundance of ability, but some of it has in the past been directed along lines that could, at the best, lead to no useful or durable result."

THE INDIAN MAIL.

Steel Protection.

The mail papers report a remarkable incident disclosed in a memorandum submitted to the Standing Finance Committee by the Railway Financial Commissioner. The Railway Board wished to purchase 100,000 tons of steel sleepers, for which they had received a favourable quotation from the United Kingdom; but, before accepting it, they asked the Tata Iron and Steel Company if they would accept the order and, if so, at what price. Tata's replied that, though their capacity was equal to supplying the sleepers, they were not prepared to quote a price until the receipt of the Tariff Board's report on further protection to the Indian steel industry, which will not be published before next winter. The order, the value of which amounts to nearly a million pounds sterling, was therefore placed in the United Kingdom, for the purchase of a commodity available in India. The Simla Correspondent of the *Pioneer* observes that, if large orders are to be refused pending the receipt of recommendations which cannot be known for about a year, the prospect of increasing the internal trade of India is remote.

Most Indian politicians are fervid supporters of the protection of Indian industries against competition from outside, and of the policy of giving preference to indigenous sources of supply, wherever possible, in the filling of Government orders. If the attitude of Tata's in this particular case is typical, it would seem that these two demands tend to become mutually destructive. If a protected firm is content to use its privileged position in order

Digitized by Google

to keep itself comfortably alive, and refuses to take any action that would seem likely to lead to the result that the policy of protection professedly sets itself to achieve —its progressive reduction and ultimate extinction when the industry has been firmly established—India is likely to be a heavy loser in the process.

House Collapses in Bombay.

Our Calcutta correspondent referred, about a month ago, to the dangerous condition of many of the Indian-built houses in Calcutta and Bombay: declaring that, in the former city, "there are hundreds of instances where columns and piers are carrying from three to eight times the permissible load." Though there has so far been no report of any serious house collapses this year in Calcutta, Bombay has been responsible for quite a number; the last mail reports the occurrence of three in a single day. One of these had only been standing for six years: and it is stated that the collapse of another is imminent, though this is evidently an older building, as the report says that its outer walls "are covered with moss and numbers of small trees are growing near the windows," and adds that "the walls are bulging out and a few cracks are noticeable on the southern wall which has turned green." This change of colour has justifiably spread to the inhabitants, who are said to have been terror-stricken and to have left, abandoning all their belongings. No loss of life seems to have occurred in any of these latest collapses, as there was some warning of what was impending and the occupants left in consequence, except in one instance where the Municipality had served the landlord with a notice to carry out repairs, in consequence of which "he had the tenants vacated." The serious results likely to follow when no such warning occurs are demonstrated by the fact that one of the fallen buildings had previously accommodated "nearly 200 tenants." The position is further complicated by the fatalistic courage of occupants—doubtless hard pressed to find accommodation elsewhere. The report, for instance, mentions that, in the case of a four-storey building part of the first floor of which collapsed, one of the inhabitants "did not vacate but occupies the fourth floor."

Strange Beliefs.

Great interest has been aroused in India by the result of the trial, before the Lahore High Court, of a man who had killed a fellow villager in the belief that he was a ghost. The facts were undisputed: and the decision of the Court was that the slayer "acted in good faith," believing that the object of his attack was not a human being but a ghost: that the object of homicide can be a living human being only: and that the accused was entitled to acquittal.

A different form of credulity is instanced by the following account of an occurrence in a small village in the Noakhali district of Bengal, communicated by a correspondent to the Calcutta newspaper *Bengalee*. "Authentic report has been received here about a strange freak of nature occurring in village Karatkhil in this District. On Friday the 16th instant a young woman aged about 18 was delivered of a creature exactly similar in appearance to a tiger cub, measuring 1½ feet in length and with four legs, tail, scanty furs on the shoulder, prominent eves, etc. The creature, which was alive at birth, was it is said, thrown out of the lying-in room by the midwife in fear, when it died and had one of its ears eaten up by a dog or a cat.

"A doctor of Sahapur village has preserved it in spirit and people are flocking there daily to have a look at it. Some gentlemen from the town, having had occasion to go to the locality on business, also saw it and the news, having been confirmed by them, is being sent to the Press for publication. Arrangements are being made for its removal to town.

"The woman since she came to know of the strange creature she gave birth to, has been getting violent fits and is lying in a precarious condition."

INDIAN EXCHANGE.

London, September 13.

There is very little change to record in Rupee rates: and the announcement now made by the Government of India, which was forecasted in this column three weeks ago, that such steps as may be necessary would be taken to prevent any undue fluctuations in Exchange, practically stabilizes the Rupee round about 1s. 6d.

The higher gold point of 1s. 6 3-16d. may be reached when exports from India should be most active, in January and February: and the lower point of 1s. 5¾d. is only likely to be touched during the monsoon months, when business is very dull and money becomes unlendable. Cable advices from Calcutta indicate that it continues to be the better Exchange market, and T.T. has been on offer there during the past week off and on at 1s. 6d. In Bombay even money has not been freely available, but importers have been able to secure it from one or two banks to a moderate extent.

Three months sight commercial bills have been quoted 1s. 6 9-32d. in both places, but a few lots of gilt-edged paper are reported to have changed hands in Bombay at 1s. 6¼d. for last mail.

Forward rates are quite steady at 1s. 6d. T.T. October, 1s. 6 1-16d. November, 1s. 6 3-32d. December, and 1s. 6⅛d. for January and February. In this market the ruling quotation for T.T. has been 1s. 6 1-32d. ready and near, but some remittances have been settled at 1-64d. lower. From last week's Imperial Bank return, it may be noted that a considerable reduction has taken place in the cash balances of the Treasury.

Now that the American cotton crop seems certain to exceed 15 million bales, it is unlikely that there will be any advance in the price of the Bombay staple unless later reports from the cotton districts turn out to be of an unfavourable nature.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday, Morning.

Progress in the Sudan.

A Report of more than usual interest has been published this year by the Director, Commercial Intelligence Branch, of the Central Economic Board of the Sudan, and a part of it is reproduced elsewhere in this issue. The year under review, 1925-1926, was the second year in succession with an inadequate rainfall. It was, consequently, a period of test for the country. Until this year, with the opening of the Sennar Dam, almost the whole of the Sudan's exportable produce, with the exception of "pump-grown" cotton, has been dependent in one way or another on a variable and scanty rainfall, and owing mainly to physical and geographical conditions less than half the country contributes to or is influenced by external trade. It is now realised that crises in the grain trade and food supply have to be expected every six or seven years. Accordingly, it becomes the duty of the Government to take what measures it can to mitigate the consequences of these visitations and to secure the people against widespread distress. To this end fresh sources of supply are to be opened up, and the railway construction contemplated will enable the products of the southern areas, where rains are more copious and crops more reliable, to be readily transplanted to less favoured districts.

The Burden of Responsibility.

The main inference to be drawn from this Report on economic conditions in the Sudan is that a grave burden of responsibility still rests on Great Britain in the discharge of the obligaions of her guardianship. The total population of the country is now put at "some six million," a sure sign that settled conditions and the security afforded by British administration are resulting in a rapid increase in the number of the inhabitants. If the country is not to look back, it must continue to have the same measure of expert supervision as it has experienced in the past. The development of cotton-growing in the Sudan undoubtedly stands to benefit Great Britain, and it has become a facile taunt that cotton is the sole preoccupation of the authorities. A perusal of these Reports, however, quickly tends to place the complex task of government in its proper perspective, and a thoughtful reader will realise that under any Administration that allowed its attention to be fixed exclusively on Lancashire or on Egypt the country would rapidly come to grief again. It would be well if some of the Members of the Egyptian Parliament who make a point of introducing a reference to the Sudan at every turn would study these Reports and try to understand how far more important to Egvpt the progressive good government of the Sudan is than the academic question of the degree of ownership attaching to Egypt and to Britain.

The Bulgarian Debt Settlement.

Elsewhere in this issue is published the statement issued by the Council of Foreign Bondholders regarding the agreement reached in Geneva for the settlement of Bulgaria's External Debt. In June 1925 was concluded an Arrangement between the Committees representing the French, Dutch and British holders of Bulgarian Bonds and the Bulgarian Government, which covered the period from April 1, 1924, until March 31, 1927. When the question of a League of Nations loan to Bulgaria was raised it was pointed out to the Bulgarian Government that a fresh agreement on the subject of her foreign Debt would be regarded as an essential preliminary. The justice of the contention was appreciated in Sofia, and it is testimony to the atmosphere of good faith in which League negotiations of this kind are conducted that the decision to grant the Loan was taken and an advance of £400,000 was actually handed over before the settlement of the Debt question was affected. What has now been drawn up is an agreement that has been signed by the Bulgarian Minister of Finance and representatives of the Bondholders. This document will have to be formally ratified in Bulgaria and by the respective Bondholders' Committees; but no doubt is entertained as to its endorsement by all parties.

Terms of the Agreement.

The arrangement concluded last year provided for payment of interest for three years, in the most appreciated money in which the Bonds are expressed, at the rate of 42 per cent. in the case of the Loans of 1902, 1904 and 1907; 32 per cent. as to the Loans of 1892 and 1896; and 30 per cent. in the case of the 1909 Loan. The new agreement, which takes effect next April, after the termination of the present agreement, provides for a graduated scale of interest in the case of the Loans of 1902, 1904, and 1907, starting at 49 per cent. and rising seven per cent. at the end of every three-yearly period, until the period beginning April 1945 when the proportion of interest to be met will be 91 per cent. After April 1, 1948, the full service of interest on these Loans will be resumed. In regard to the other Loans it is stated that the rates of payment are "to be in proportion," presumably a reference to the relation in the payments (42 to 32) established in the 1925 agreement. A notable feature of the new Arrangement—again a testimony to the reasonableness of all parties—is that provision is made for revision of the terms by mutual agreement in the event of financial conditions in Bulgaria materially improving or deteriorating. Bulgaria, on her side, stipulates that the Agreement is conditional on the Reconstruction Loan of £2,250,000 being granted to her, but agrees that this loan shall in no way interfere with or affect the rights and securities enjoyed by the holders of the existing loans.

Turkey's Experiments.

Hapless Turkey continues to sink deeper and deeper into her quagmire. She seems to be suffering from a

multiplicity of masters, none of whom knows his business properly. The story of the policemen and the foreign Chambers of Commerce in Constantinople reflects the confusion prevailing everywhere. A policeman arrives with a letter ordering the Chamber to close; another follows a little later to ask for the letter back, as it was sent by mistake. A third message confirms the first; a fourth authorises the Chamber to carry on. If ridicule could kill a Government, Angora would have had the spectacle of the Cabinet taking its place in line with the victims of the Tribunal of Independence. While no stone is left unturned to antagonise foreigners in Turkey, the Turkish Government sends out feelers for admission into the League of Nations. It is easy to see what Turkey's rulers are aiming at, and in many quarters a considerable amount of sympathy is felt with the objects in view; but as to the methods adopted for reaching them, they would for the most part disgrace the intelligence of a child in any other country. Take the shipping regulations; the idea evidently is to build up a Turkish shipping industry that will keep money in the country. Owing to the methods adopted, however, far more money than is likely to be gained in a score of years is lost in two or three by the dislocation of trade, to say nothing of the inconvenience and suffering caused to the Turkish population as a whole. It becomes increasingly difficult to believe that the policy of Turkey as a whole is directed by the united genius of a Cabinet of Ministers in consultation. Turkish policy presents to the outside world the appearance of being the sport of half a dozen or more individuals who know nothing of team-work and have only hazy ideas of the rules of the game.

BULGARIA'S DEBTS.

The Council of Foreign Bondholders has received information that the Bulgarian Minister of Finance has signed, at Geneva, the bases of an agreement in respect of the External Debt of Bulgaria, which he will recommend his Government to authorise, and the acceptance of which the British, Dutch and French representatives are prepared to recommend to their respective bondholders' committees or certificate holders.

After acceptance by the Bulgarian Government and the committees it is proposed that a new arrangement be made, to come into force after the termination of the present one in April, 1927, and to embody the following conditions:—

(1) The rates of interest payable on the loans of 1902, 1904 and 1907 for 21 years from April, 1927, to April, 1948, shall be as follows:—

April,	1927	to	1930	...	49 per cent.
April,	1930	to	1933	...	56 per cent.
April,	1933	to	1936	...	63 per cent.
April,	1936	to	1939	...	70 per cent.
April,	1939	to	1942	...	77 per cent.
April,	1942	to	1945	...	84 per cent.
April,	1945	to	1948	...	91 per cent.

(2) After 1st April, 1948, the full service of interest on the above-named loans to be resumed. All payments to be in the most appreciated currency specified on the bonds.

The rates of payment on the loans of 1892, 1896 and 1909 to be in proportion, but full payments in the case of these loans to be deferred until April, 1951.

(3) The sinking funds to be suspended for six years from 1st April, 1927, but the Bulgarian Government can at any time purchase bonds on the market for amortisation.

(4) From 1933 to 1948 half the full amount of the sinking funds on all the loans, as fixed by new amortisation tables on the basis of the outstanding bonds of each loan, to be applied by the Bulgarian Government to purchases of the bonds on the market, or by drawings at the same percentages as those fixed for the payment of interest at the time when such drawings take place.

(5) From 1st April, 1948, the full sinking funds to be resumed and applied in the manner provided by the loan contracts as modified by the amortisation tables.

(6) The new loan, to be issued under the auspices of the League of Nations, shall not in any way interfere with or affect the rights and securities enjoyed by the holders of the existing loans: and such holders shall be in all respects entitled to the same treatment as the holders of the new loan in regard to any transfer arrangements that may be established in connexion therewith.

Should financial conditions in Bulgaria materially improve or deteriorate during the period of this agreement, the Bulgarian Government and the bondholders respectively shall be entitled to negotiate for its revision by mutual agreement.

(7) The Finance Minister of Bulgaria to notify the representatives of the French, Dutch and British bondholders in writing that he approves the foregoing bases of settlement and will recommend them to the Bulgarian Chamber for ratification and the said representatives of the bondholders agree to recommend their acceptance to their respective committees.

(8) This agreement is subject to the issue of the above-mentioned new loan.

The arrangement, concluded in June, 1925, that holds good until April, 1927, provided for payment of the interest on Bulgaria's Debt for the three years in the following proportions: On the 1892 Loan, 32 per cent.; 1896 Loan, 32 per cent.; 1902 Loan, 42 per cent.; 1904 Loan, 42 per cent.; 1907 Loan, 42 per cent.; 1909 Loan, 30 per cent.

THE SUDAN IN 1925-26.

The following extract is taken from the Annual Report for 1925-26 of the Director, Commercial Intelligence Branch, of the Central Economic Board of the Sudan:—

General Economic Condition.

The statistics of foreign trade in 1925 quoted in this report do not in themselves suggest that any marked change has taken place in economic conditions in the Sudan during the last twelve months. The output in quantity of most of the chief products of the country is much the same as in 1924, itself a good year. Certain of the principal public imports have increased, and give proof of the continuance of the gradual rise in native standards of living, of which there are many signs to be seen by people living in the Sudan. The impression, however, that the period under review has been uneventful, or that the course of trade and production has been free from disturbing factors, is very far from being a true one. Wide publicity has been given to the completion of the Sennar Dam on the Blue Nile and the successful inauguration of the Gezira Irrigation Scheme, potentially one of the largest cotton growing enterprises in the world. Towards the end of last summer eighty thousand acres had been put under cotton and a highly successful crop worth over £E2,000,000 is already assured. On the other side of the account is the heavy fall which has meantime occurred in the price of cotton, and the adverse effect on all other crops, including rain-grown cotton, of the insufficiency of last season's rainfall.

The benefits of the cotton-growing scheme in the Gezira will appear in the trade records of 1926, and their full effect will not be seen till still later. Except for small increases in imports, due to the money spent in wages on labour employed on construction work, the scheme does not enter into the picture of trade in 1925, nor will the full consequence of the insufficient rainfall of last summer be seen until stock is taken of the exports and imports of the following year.

Dependence on Rainfall.

It is not generally realised by those who are not directly acquainted with the Sudan that until this year almost the whole of its exportable produce, with the exception of pump-grown cotton, has been dependent one way or another on a variable and scanty rainfall, and that owing mainly to physical and geographical conditions, less than half the country contributes to or is influenced by external trade. The northern part of the country is barren, rainless, and unproductive. The vast southern districts of the Upper Nile and its tributaries are almost entirely cut off from foreign interests, and are only associated to a very small degree, as yet, in the economic life of the rest of the Sudan. These and other undeveloped districts, nevertheless, contain about two thirds of the total population of some 6,000,000. Practically the whole weight of the foreign trade of the country, and a great deal of the production necessary for internal consumption, have therefore to be carried by the central districts, which are, themselves, sparsely inhabited, except in certain areas, and, as already stated, are not blessed with a regular and sufficient annual rainfall. In such circumstances, as the Sudan is wholly agricultural and pastoral, it will be readily understood that its trade and commerce are subject to sudden vicissitudes, and must always be liable to fluctuations, though the violence of these crises can be gradually reduced by broadening the basis of production and spreading the risks.

Rise in Prices.

The trade of the first nine months of last year was the outcome of the rains in 1924, which were fairly good. Since then the horizon has become overcast by the knowledge that the current season's crops, apart from Gezira cotton, are bound to be below average, while the bulk of the population have had to face the rise in price of food grains, which invariably follows a poor harvest. Fortunately, there are considerable stocks of grain in the country retained from previous harvests, so that at present there is no danger of any general shortage of food supplies for the people.

The rise in the price of grain is partly due also to a feeling of nervousness as to prospects next year, should the coming rains fail to give an adequate crop, and, as is usual at such times, existing difficulties have been greatly exaggerated by rumour. The local grain merchant has not been slow to take advantage of the position but steps have been taken to keep prices within reasonable bounds.

In anticipation of an approaching shortage of supplies the export of grain was stopped in September last, without, as it happened, any hardship at the time to shippers, though it was the lack of grain export later on, at the beginning of the 1925-26 export season, which was mostly responsible for the feeling of depression amongst merchants as to trade prospects. For some years past there has been a thriving trade in the export of dura to England and the Continent, which has helped to fill a gap at a time of the year when other export produce is not obtainable in any quantity. Throughout the year but specially during this "dead" season, dura has been of great service in providing freight for steamers calling at Port Sudan and facilitating the shipment of other exports. Incidentally, it may be noted that the substantial quantity of dura shown in the statistics of trade as exported in 1925 was all from previous harvests, and comprises none of that year's crop.

Recurrent Crises.

So far as present experience can serve as a guide, it would appear that these crises in the grain trade and food supply may be expected every six or seven years. Their effect is very far-reaching in many directions. The health, well-being and contentment of the population in general are obviously involved, and the whole economic fabric of the country is directly affected by the influence of these sudden fluctuations on labour, wages, and the cost of living. A sudden rise in the price of grain is a serious matter for all wage earners, but it is most acutely felt by the large aggregations of people in the towns.

The Government can and does do a great deal at these times to prevent the situation getting out of hand, and, so far, has stepped in in time to secure the people against any widespread distress, but it is quite another matter to bring about conditions which will insure a more or less regular and sufficient annual supply of dura at a comparatively steady price, and put an end to these violent oscillations.

So long as the chief source of supply of dura is from semi-arid districts or irregular rainfall this problem will remain insoluble, and the most that can be done is to take such measures as are within the Government's power to mitigate as far as possible the hardships of the bad years as they come along. In the meantime, progress can gradually be made in the direction of the only effective solution, which is by one means or another to develop production in southern areas where rains are more copious and crops more reliable.

Plans for improving transport facilities, so as to enable dura and other crops from Upper Nile Province to be put on the northern markets, are being made. Already some thousands of tons of dura have found their way out of this Province and have proved a most useful addition to the general supply in time of need. The Sobat District shows promise of development if transport difficulties can be overcome and they do not appear to be insuperable.

Railway Extension.

Another agency which should bring further areas into play will be the extension of the railway from Kassala through Gedaref and Mafaza to Makwar. This railway, when it comes to be made, will pass through districts which in pre-Dervish days were some of the most fertile and populous in the Sudan, producing both cotton and grain. A further region which will one day be linked up to the central system by means of a railway is Nuba Mountains Province, which is already showing promising signs of development in the shape of cotton growing. Considerable quantities of grain are exported from the

Digitized by Google

north of this Province into Kordofan, which has lately been exporting large quantities of grain to the north, viz., 19,869 tons in 1925 and some 7,704 tons in the first quarter of 1926.

Nuba Mountains Province and Upper Nile Province contain large populations, but progress must necessarily be slow owing to the primitive conditions of most of these people. Nevertheless the problem of food supply, though difficult at the moment, should be capable of solution in a few years' time. An additional and reliable supply of 100,000 tons of dura per annum would remove any possibility of shortage and a much less quantity would act as a brake on prices.

Cotton and Food Crops.

Much consideration has been given to the question of the influence of cotton growing, whether on irrigated land or on rainland, on grain production. Up to the present there is no reason to think that grain crops as a whole have suffered from expansion of cotton cultivation.

In many parts the cultivation of rain-grown cotton, owing to the indifferent rains of last season and the recent fall in prices, has received a check, which should bring the relative advantages of cotton as compared with other crops into proper perspective. Conditions vary so greatly in different parts of the country that it is impossible to generalise on a subject of this kind. So long as the Government retains control of the seed supply, cotton cultivation can be regulated so as to conduce to the ultimate benefit of the native, and can be developed at such a pace and in such a manner as will best conform to the interest of the community.

Though cotton growing is unlikely, at any rate at present, to reduce the quantity of dura grown, it tends to keep dura off the market, as people can pay taxes out of cotton receipts and need not sell their dura for that purpose. The natural result of this process should be that those parts of the country which are obliged to import dura will have to look for their supplies in new dura producing districts where cotton is not a competing crop. In this way the Gezira Scheme may prove to have had a double reaction on the more southerly parts of the Sudan. On the one hand, the great advertisement given to cotton in the Gezira led to the experimental growing of cotton as a rain crop in the south, with such satisfactory results that additional transport facilities in these districts have already had to be provided, and the time may not be far ahead when railways or mechanical transport will bring these provinces into much closer touch with the north. On the other hand, the additional transport primarily introduced to deal with increased cotton cultivation in the south will open the road for the export of dura, and, of course, of other commodities also, to northern districts, and furnish the extra dura which these areas are unable or unwilling to produce themselves.

All these developments will take time, and events are unlikely to follow a smooth and even course, though there can be little doubt as to their ultimate trend.

Condition of the People.

The question arises as to how the native population has fared amongst the ups and downs of foreign and domestic trade, both recently and during the last few years. It is impossible to give a comprehensive answer to any such question, as conditions vary so greatly. The urban population stands in a category of its own, and a strong line of division has also to be made between the nomad and sedentary peoples. It is a far cry also from the rich, irrigated areas of the Gezira to the primitive negroid tribes in the southern Sudan. Statistical standards of measurement are apt to be fallacious in such circumstances, as they apply only to a limited section of the community in the more accessible and sophisticated parts of the country. Subject to these qualifications the following table of the value of imports of articles in common use amongst the people are of interest. They show a large increase in purchasing power during the last ten years, though but little change in the course of the last two years.

IMPORTS.
Value in 1,000's of £E.

Article.	1913.	Average 1913—1923.	1924.	1925.
Cotton fabrics ...	504	880	1,004	1,180
Coffee	68	170	326	318
Soap	29	50	62	70
Tea	39	71	153	159

It is to be noted that the import of cotton piece-goods, a purely native import, has been well maintained. The large increase in value of imports in recent years of tea and coffee is mainly due to native demand, and is a sign of a distinct rise in the standard of living. A still better gauge of native prosperity is the consumption of sugar, which increased from 11,600 tons in 1924 to more than 15,300 tons in 1925. The money spent by the public on sugar in the latter year was approximately £E1,000,000, as compared with a pre-War expenditure of some £E300,000 per annum.

Another indication of increased prosperity is the large increase in the number of fourth class passengers on the Railways, viz., an increase of 68,182 over the number in 1924. There seems to be no doubt also that the gradual substitution of poll tax and tribute for the ordinary tax on agricultural produce of one-tenth of the value of the crop (ushur) in the southern districts has been a benefit to the taxpayer, and has led to an increase in cultivation in those areas, while rain-grown cotton in those districts, as elsewhere, though the crop is still a small one, has provided many people with a new way of obtaining money and made it easier for them to pay their taxes.

The traffic returns of the new Kassala Railway in the Eastern Sudan also show that trade in general as well as cotton production has benefited from these additional transport facilities. The constructional work on the Gezira Irrigation Scheme, and the demand for labour for the preparation of the land and cultivation of the crop, have also afforded large numbers of people an opportunity to earn money.

In view of these facts it may safely be said that during the greater part of the year the material welfare of the people has shown progression.

NATIONAL RADIO EXHIBITION.

Promoted by the Radio Manufacturers of Great Britain, this exhibition, which is being held at Olympia from September 4 to 18, is a highly creditable illustration of what a young British industry can accomplish in spite of adverse circumstances. The various labour troubles with which industry has been beset during the past few months have seemingly left little impression on the manufacturing side of the wireless industry and both trade buyers and the general public have been profoundly impressed by the comprehensive array of exhibits. To the uninitiated the exhibition is indeed a thing of wonders, and the various technical contrivances with which the modern young man or woman is expected to be *au fait* are apt to leave those who are not somewhat aghast. Trade seemed brisk during the period of our representative's visit and it is pleasing to note that overseas buyers were much in evidence. This is as it should be, and there is little doubt that with the growth of wireless development in different parts of the world buyers from abroad will be found in increasing numbers. In this connexion the markets of the Near and Middle East well merit the attention of British wireless manufacturers. In the Balkans and in India in particular "wireless" is on the eve of great developments. The reference in our issue of last week to the addition of four more broadcasting stations for Yugoslavia and the recent reference in the Press to India's new stations at Calcutta and Bombay give one food for thought. Good business is to be done in these countries by the firms who will but take the initiative and bring their products to the notice of potential buyers by means of advertising and representation. Unless some effort is made to capture this trade it will assuredly go to our competitors, who are carefully making their plans to cater for these markets.

Cotton and Cotton Goods.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended September 8:—

Egyptian Futures.—Sakel Contract.—Further alarmist crop cables from Egypt and strong speculative buying, from practically all quarters, forced prices to fresh high levels at the commencement of the week, and further covering by belated shorts was also in evidence. As a result, November Sakel touched 17.40d. on the 3rd inst., after very active trading had been witnessed on that and on the previous day. Reports of financial difficulties in Alexandria did not tend to allay the general excitement, but these reports, happily, proved to have but little foundation.

On Saturday last, hedge, and straddle, selling, and profit taking, kept prices more or less in check, but the following Monday further hedge selling against the November position was at first met by buying orders from all directions. Later in the day, the off-take weakened and hedge selling of November being continued, the premium of November over January, which a few days previously had been forced up to 60 points, dwindled rapidly, and at the close it stood at only ten points. It was generally believed that this check to the near positions would have a salutary effect on speculation, particularly as the flood of alarmist crop cables had temporarily ceased and the Egyptian Government had published an official report giving the whole crop condition percentage figure as 98 per cent. ,against 99 per cent. a year ago.

However, the strength of the Alexandria market was again shown to-day when November opened at 34.80 dollars and further speculative buying was induced. Hedge selling again appeared, and, as on the previous day, after the first rush of buying orders had been executed, the off-take weakened and the selling pressure slowly began to take effect. As we write, the market has the appearance of being over-bought and is inclined to sag on the appearance of selling orders. The American Bureau Report is expected this evening, and its effect, one way or the other, is likely to be marked.

The January Egyptian/January American straddle has again widened considerably and looks very attractive at the current difference of 745 points .

At noon to-day (September 8) values showed an advance of 86 to 133 points since last Wednesday's close.

Upper Contract.—A series of quiet, featureless markets have been the rule and transactions, which have been few in number, have been chiefly influenced by the course of Sakel contracts. Selling against "call" cotton has been witnessed and some buying of November against sales of November Sakel.

The difference between October American and October Upper now stands at 320, against 294 a week ago.

At noon to-day values showed an advance of 55 to 50 points since last Wednesday's close.

Egyptian Spot.—Following the rise in futures, a further substantial advance has again been registered in spot prices, and rather more business has resulted, chiefly in the Good Fair qualities of both Sakel and Upper. The trade generally are still strong in their disbelief of the present level, but machinery has to be kept going and cotton has to be bought to feed it. Undoubtedly, a small section of the trade have been frightened in, and one or two lines of c.i.f. cotton were placed towards the end of last week, but as the futures market showed signs of steadiness the eager buyers disappeared, and, when a distinct set-back was suffered by the near positions last Monday, the spot demand practically disappeared for the time being. Since then, "bullish" crop estimates from America, followed by further strength in the Alexandria market, have brought buyers in again with something rather like a rush, and to-day we witnessed the largest spot inquiry for Egyptian cotton which has been seen in Liverpool for a long time. Sales were officially recorded as 1,000 bales. The bulk of the inquiry has been for odd lots, of small quantities, and buyers have shown an unusual readiness in submitting bids to cable, a policy which has proved very satisfactory, as holders of spot cotton have shown themselves keen to take advantge of current prices. Rumours are current that further sales, for export to Russia, have taken place to-day.

The better grades of Sakel and Upper have been for the most part neglected. A better business has been done this week in Sudan cotton, the best quality Sakel variety selling at about 375 on November contracts. Pilion has been in fair request at from 14½d. to 15⅞d.

Brown and White have also met with slightly more attention.

Forwardings to spinners for the week ending 3rd inst. were returned at 3,197 bales, a low figure accounted for by the seasonal holidays which are now taking place at many mills.

Estimated sales, 3,000 bales Egyptian and 1,150 bales Sudan.

Quotations of Sakel are advanced 70 to 100 points and those of Upper 90 points.

Fully Good Fair Sakel to-day, 18.05d.

Fully Good Fair Upper to-day, 14.05d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report dated September 2, state:—

The market in futures during the past week has been very active and the tone is very firm. The week's summary of price movements is as follows:—

Sakellaridis: November, 33.12 dollars, 3.39 dollars up; January, 32.50 dollars, 3.17 dollars up; March, 32.25 dollars, 3.12 dollars up. Ashmouni: October, 23.43 dollars, 1.45 dollars up; December, 23.33 dollars, 1.28 dollars up; February 23.43 dollars, 1.30 dollars up.

The rise of over 3 dollars for Sakel and 1.50 dollars for Uppers is the result of a new crop scare. No further unfavourable reports have come from Upper Egypt, and the rise in that market is more or less out of sympathy with the advance in the price of Sakel. Bad reports concerning the crop in Lower Egypt are heard on every hand; that the crop has suffered damage during the past week is true, but many of the reports are grossly exaggerated—indeed, if they were true, the crop of Lower Egypt would sink to very small proportions. The market is wholly in the hands of the local speculative clique and prices have been advanced ¼ dollar at a time; Liverpool interests have been sellers. A large speculative long interest has been created, the later part of which is weak, and, failing serious confirmation of the current bad crop reports, we do not think it will be long before we see a large part of the more recent purchases being liquidated.

The difference between Sakel and Ashmouni has widened to nearly 1,000 points, whilst November stands at 50 points over January. Sakel is 15 dollars and Ashmouni nearly 6 dollars over American New York, and we consider that the rise has carried prices to a dangerous level and one calculated to still further curtail the use of Egyptian cotton.

The demand from abroad is as poor as ever. A few spinners were apparently alarmed at the rise and rushed to buy, but the majority maintain their hand-to-mouth policy and very little forward business has been actually put through.

The week's receipts amount to 14,697 kantars against

TEXTILES.

IF you are dealing in Textile goods, you will be well advised to try K. JEBARA, 52, Princess Street, Manchester (Established 1887).

Digitized by Google

exports 125,331 kantars; the stock in Alexandria stands at 1,157,195 kantars.

Spot: Sales amount this week to about 6,600 bales, of which we estimate 3,500 bales Sakellaridis, 2,500 bales Ashmouni, 300 bales Zagora, 250 bales Pilion, and 50 bales White. We have had this week about 300 bales of new crop Uppers from the Southern districts.

Sakellaridis: The demand still continues on the same qualities as last week, but with the rise in contracts there has been a small decline in the spot differences. A little more cotton in all grades has made its appearance on the market, sellers being attracted by the rise in prices.

Ashmouni and Zagora: The medium grades are still much sought after and are difficult to find. Cotton round about Fully Fair to Good Fair is very scarce and high prices have to be paid to obtain any lots showing. A certain amount of new crop cotton has come down from the Southern districts, but buyers do not show much interest. Spot differences remain about unchanged.

Pilion: All grades have been dealt in at about last week's differences.

Brown: No transactions have been recorded.

White: A few small lots have been sold without change in the spot differences.

Crop, 1926: The crop news during the past week has been unfavourable, but not as unfavourable as many would have the world believe. The crop in the Southern districts of Upper Egypt is showing the result of the very hot July weather, by which the crop was prematurely forced to maturity; the yield in Ghirgha and the southern parts of Assiout province will show a considerably reduced figure by reason of the forced maturity. The rest of Upper Egypt and Middle Egypt do not show any deterioration, and apart from being a little late, may be considered about normal.

In Lower Egypt, the crop has been damaged to varying degrees by "nadua" and pink boll worm, which latter pest has increased considerably during the last few days. The temperature has been low—a condition favouring the worm. The South and Central Delta districts have been the chief sufferers from the worm attack. The percentage of bolls attacked varies enormously, and it is impossible to give a truly representative figure. As a result of this worm damage to so many of the bolls, the quality of top grades of Sakel will be reduced, but to what extent it is as yet impossible to say.

The crop now largely depends on the weather during the current month and October. What is required is warm weather, and it is to be hoped that the slight improvement of to-day will be maintained.

ELECTRIC WIRING IN IRAQ.

Wiring practice in Iraq, reports the American Consul at Baghdad, as quoted in *Commerce Reports*, is based on the rules of the British Institute of Electrical Engineers. In Baghdad all wiring materials, devices, and meters are tested by inspectors of the Baghdad Electricity Supply Authority, which is the organisation operating the central power station of the British Air Force. Meters must be within a 5 per cent. range. In Basra the testing is done by the inspectors of the Basra Electricity Supply Authority. About 80 per cent. of the installation is wire in cleats carried on the surface of walls and ceilings, the remainder being in wooden casing. Flexible twisted pair is used only for lamp extensions. Knob and tube wiring is not used, but a porcelain tube is employed to lead wire through walls. Bergmann tubing is only used on a surface where installations would be exposed to rain. No armoured cable is installed, and rigid iron conduit is seldom employed, because it rusts rapidly. Lead-covered wire is unsatisfactory owing to the presence of much saltpetre, which reacts on the lead.

For outside work hard-drawn bare copper wire is used in the following gauges: Numbers 4, 6, 8, 10, and 12, the greater part being No. 10. Rubber-covered wire is required for wiring buildings, the minimum size being 1/18. The types of switches most in use are the tumbler and snap. The bayonet-type socket is the only kind in use.

Electric energy is sold both on flat rates and by meter, 90 per cent. being metered. No device is installed to limit the consumption of electric energy where no meter is in use. Meters are of British manufacture for 220 volts direct current. Sizes of most of them are 2½ or 5 amperes. Wiring is done by duly authorised contractors, of which there are one large British firm and two large local firms.

The Iraq Railways, the report adds, will undertake further extensions and developments within the next few years, and important economic developments, resulting in an increase in the use of electric energy and in the demand for electrical equipment, are anticipated.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT.
Indian Government Vouchers accepted.

Passenger sailing dates :—

*BRITANNIA	Oct. 1	*ASSYRIA	Nov. 9
*ELYSIA	Oct. 14	*CIRCASSIA	Dec. 2

*First class passengers only. Specially low fares.

† Carries 1st, 2nd and 3rd class passengers, and calls Marseilles Nov. 1.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, September 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Stockwell for Port Said, Colombo, Madras, and Calcutta (London, September 25).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, September 22).

British India Line.—S.s. Mandala for Bombay and Karachi (London, October 8); s.s. Merkara for Colombo, Madras, and Calcutta (London, September 25).

Cunard Line.—S.s. Sea Glory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Venice Trieste, Fiume, also Corfu, and Ancona if inducement (Liverpool, September 18, Swansea September 21; s.s. Brescia for Gibraltar, Algiers, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Volo if inducement (Glasgow, Liverpool, Swansea, September 18).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza; Sulina, Galatz, and Braila (Liverpool, September 18); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 2).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, October 1); s.s. Nagoya for Colombo, Madras, and Calcutta (London, October 2).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Tripoli (Manchester, September 21); s.s. Soldier Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, September 29).

Ellerman and Papayanni Lines—S.s. Egyptian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 2); s.s. Algerian for Aligiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 16); s.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 25); s.s. Bavarian for Gibraltar, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 25); s.s. Gerano for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona (if inducement), Venice, Trieste, and Fiume (Liverpool October 2, Swansea October 6). * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 14.

The entry of Germany into the League, and with its effect of bringing the Locarno Treaties into force almost at once, is an event which should produce favourable economic results in Europe and a better atmosphere for the development of international trade, which would mean much to Great Britain. But the event had little effect upon markets in London, for the simple reason that, after the failure of last March it came as an anti-climax, and that since June it has been regarded as a practical certainty. More attention has been paid to the progress of Mr. Churchill's efforts to obtain a settlement of the coal stoppage, but early hopes entertained in the City gave way later to pessimism, and what one may term "coal stoppage stocks"—i.e. Home Rails and others intimately concerned—moved irregularly within narrow limits. It is the opinion of many shrewd Stock Exchange experts that, were a coal settlement to be reached quickly, the effect on stock and share prices would not be very pronounced, for in the prices of many securities a tolerably early settlement appears to have been discounted already. There has been in the market lately much evidence that sections of the public are engaged in hunting for "bargains," or in other words securities that are depressed because of the coal dispute and may be expected to recover sharply on a settlement. Such "bargain-hunting," unless done by someone with close inside knowledge of the affairs of the company whose shares he favours, should be discouraged. For more than usual discrimination would be required on the part of the ordinary investor to pick out the right security.

The money market has been steady and the week has been without excitement in the foreign exchanges. Some interest has been aroused by the presence in London, of Mr. Mellon, Secretary of the United States Treasury, and of Governor Strong of the Federal Reserve Board, and the fact that they have seen the Chancellor of the Exchequer and the Governor of the Bank of England. But the visit is not believed to have any great significance, political or financial. The only other matter to attract much active notice in financial circles is the strong movement in Malayan tin shares. This has been aroused by the rise in the price of the commodity, and in general may be said to be justified by the outlook. But those who wish to participate in a tin gamble, should take great care in selecting a share.

Coming Events—A Caution.

When the coal strike has been definitely settled, it is almost certain that the many capital issues which have been held in abeyance during its continuance will make their appearance. In these circumstances, it is opportune to utter a warning concerning prospectuses. One of the first points which investors should note is to make sure that it is a prospectus and not an offer for sale. The prospectus, it is true, is often less informative than it might be, but the offer for sale rarely gives sufficient information on which to base a reasoned judgment. A prospectus is distinguished by having the words "A copy of this prospectus has been filed with the Registrar of joint stock companies," printed at the top of the document. The standing of the directors should next be investigated. A prospectus containing the names of directors mostly associated with unsuccessful companies should be read in a particularly critical manner. Particulars as to directors and the fortunes of their companies may be obtained from "The Directory of Directors" and "The Stock Exchange Official Intelligence," which are generally available at a public library. If the offer for sale is made by an existing company, details of profits—certified by an accountant for each of several preceding years should be given. Goodwill should appear separately from other assets. An independent valuation of assets is particularly necessary when the issue is made by a new company taking over certain assets. The foregoing is, of course, a by no means exhaustive list of all which a prospectus should contain, but where less is given the offer should be regarded with extreme caution.

Dealing with your Banker.

A Martian, visiting our islands, would probably remark upon the prominence of banks in our cities and towns. And banks are by no means unknown in the villages, while branch offices continue to be opened all over the country. This may be taken as the visible sign of the bank's readiness to be of service. If this interpretation has so far been doubtful, it is confirmed by the publication of a pamphlet entitled "How to Use a Bank" (Lloyds Bank, 6d.). Running to nearly 50 pages, the pamphlet sets out in simple language details of the bank's many services and of how the public can take advantage of them.

To the great majority, whether or not they have an account, the list of duties undertaken by banks will come as a revelation. In days when travel is so common, not the least popular service is that by which passports are obtained, foreign currencies made available and letters forwarded. Again, the busy or forgetful will welcome the bank's willingness to make regular periodical payments such as rent, insurance premiums and school fees, while it will also undertake to pay calls on shares, present coupons and receive dividends. Income tax and super-tax returns are prepared and refunds of tax obtained. But perhaps the most helpful section deals with cheques and cheque books. It is here that the average customer is most frequently in difficulties. With this pamphlet in front of him, however, he need never be in doubt as to how to endorse, cross or fill in a cheque. To those for whom it is written the pamphlet will prove exceedingly valuable.

At a meeting of the Court of Directors of the Chartered Bank of India, Australia and China, held on September 8, it was decided to declare an interim dividend for the half-year ended June 30 last, at the rate of 14 per cent. per annum, free of income tax, payable on and after September 15

The Egyptian Parliament is to be asked by the Government to sanction a law restricting for three years the cultivation of cotton to one-third of the total cultivable area.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ending August 28:—

The estimated arrivals of sultanas on the market since the opening of the season amounted to 3,950 tons, and sales to date are estimated at 3,880 tons, as compared with 2,000 and 1,930 tons respectively for the corresponding period in 1925.

Closing prices, Smyrna, per cwt. c.i.f. London/Liverpool:—Type 12, 48s.; type 13, 50s.; type 14, 52s.; type 15. 54s.; type 16, 56s.; type 17, 60s.

The demand for sultanas is increasing in relation to arrivals and has been active all through the week. Many shippers have been caught with short sales at below market prices, and there is visible nervousness to cover in. Prices have advanced about 2s. (fls. 2) over the week. The close cannot be regarded as other than very firm. All arrivals reaching market are daily being absorbed, and no stock so far has been allowed to accumulate. The information coming in about the poor return of the vineyards in the main centres of production is causing apprehension, and the impression is gaining ground that the crop has been over-estimated. It is now believed that the yield will prove under 40,000 tons.

The estimated arrivals of figs on the market since the opening of the season amount to 1,960 tons, and the estimated sales to date are estimated at 1,540 tons, as compared with 685 and 640 tons respectively at the corresponding date last year.

The arrival of figs from the interior are plentiful, and the market is quiet. Prices have shown an easy tendency since the opening; but there is not much decline in values to record.

Quality of first arrivals was disappointing, inasmuch as unripe and insufficiently dried fruit was in excess of expectation; but the sorting out and retention at interior stations of blighted fruit has proved effective and satisfactory.

The London Irish Trust, Ltd., is the title of a new company in process of formation under influential auspices with a capital of one million sterling. The Chairman is Mr. F. R. A. Shortis, Vice-President of the Guaranty Trust Co., of New York, and among the directors is Mr. H. Ernest Garle, formerly of Constantinople, who was until last year British representative on the Inter-Allied Commission for the Payment of Reparations to Allied Nationals in Turkey. Other directors are Sir Henry Forde, Director of the Great Southern Railway of Ireland, Sir Alan Burgoyne, M.P., Sir Robert Lynn, Sir Edmund B. Turton and Mr. M. C. Harman (Managing Director), Chairman of the Rock Investment Company.

Motors and Motoring.

By G. B. B.

There are signs that the British motor industry, at any rate so far as the light car branch is concerned, is awakening to the fact that not only is there a large and profitable market awaiting it overseas, but that it will be necessary to cultivate that market, if the industry is to escape a lisastrous term of trade stagnation. That is all to the good; times without numbers, the importance of our overseas markets, especially those of India and to a steady increasing extent the Near and Middle East have been emphasised in these columns.

But large and profitable as the overseas business in light cars would certainly prove, its importance is almost overshadowed by that of another business opportunity, which is the supplying of motor coaches and omnibuses in the same districts. Transport has long been one of the most neglected, although, at the same time, one of the most desired things in the East, and a point seems now to have been reached when it is being realised that the best means of opening up the various countries is by the big passanger carrying and big goods carrying vehicles. Fortunately, this realisation synchronises with the time when British manufacturers of these vehicles are able to show an extremely wide range of models. The choice of motor chassis for coach service has never been more extensive, and practically any requirements of the Eastern market can be filled. No longer is the chassis merely a replica of an ex-War service lorry; no longer is the motor coach a large and cumbrous affair on solid tyres, with high body liable to overturn at the least opportunity, with under-powered engine and few gears. It is, on the contrary, a thoroughly dependable vehicle and one that is well fitted to maintain a high prestige of British manufactures.

The modern motor coach, suitable, in my opinion, for work in the East, is a pneumatic-tyred vehicle of smaller capacity than the road giants of a few years ago, and its speed is very largely in excess of that which was thought possible for motor coach work. At the same time, although it is capable of higher speeds, it is more controllable and more easily steered than earlier types and no buyer need feel any apprehension as to whether the drivers, with a little training, will or will not be able to handle it easily. It is of a size that permits it to go anywhere and it is light enough, sufficiently well sprung and robust to go anywhere in safety. The design and the springing make it light on tyres and comfortable for passengers and the finish is all that could be desired. Now that the vehicle is so suitable and as Eastern buyers are becoming alive to the possibilities of lucrative transport business by their use, it seems a pity that the old time reluctance of British manufacturers to make their products known to prospective buyers should be standing in the way.

New Models.

Nothing further has been allowed as yet to transpire regarding the new light car which I mentioned some time ago would most likely be placed on the market this season, but although I have heard nothing of a definite nature, I have a very shrewd idea that it will materialise at the Olympia show. If so, and provided it is all that I understand the makers will claim it to be, I can foresee its rapid leap into popularity. But there are others, amongst them being a new Wolseley, with a 16 h.p. engine, giving out 45 h.p. on the brake. The engine, which is six cylindered, has a bore and stroke of 65 by 101 m.m. and is consequently of just over two litres capacity. The crankshaft is supported in seven bearings, the valve gear is robust and well designed, every detail has evidently been carefully thought out and an inspection shows that nothing has been omitted which would add to the strength and durability of the parts. Yet the price is remarkably low for both the saloon and the touring five-seater models and an inquiry from the Wolseley people will bring other details which would be of interest to the prospective buyer.

Another new six-cylinder model is to appear this season, from the works of the Astor Engineering Company, in which the sleeve valve patents of Burt and McCullum will be incorporated. This is a type of sleeve valve which has been tried many times, in the old Argyll car and in the Barr and Stroud motor cycle, and as developments have progressed the scientific character of the valve design has become more and more apparent. The new engine is of 80 x 115 m.m., with a nominal h.p. of 24, but giving about 70 in actual practice. With a wheel base of 12 ft. 3 in., the chassis will carry any desired type of body. A new Bean car, and here I would like to mention that the Bean has always been one of my favourite little cars, will also make its appearance. Like the others, it will be of the six-cylinder type, the engine being of 69 x 120 m.m., giving a nominal 18 h.p., but actually being capable of 50 h.p.. Fitted with overhead valves and a detachable cylinder head, the car is all that the owner-driver of moderate means could desire, and as it is of handsome appearance and beautifully finished it has not that "cheap" look which characterises so many low-priced cars.

TRADE CONDITIONS IN THE SUDAN.

In their Monthly Review for September Barclays Bank Limited publish the following report from Khartoum, dated August 25:—

The general slackness usually experienced at this time of the year is reported from all markets and the demand for imported goods is poor.

Arrivals of gum during the first twenty days of August amounted to 580 tons, compared with 395 tons for the corresponding period of last year. The price is about 45s. per cwt., with a small demand.

Rains, up to the present, have been favourable and good crops of durra are expected, with the consequence that there has been a fall in the price of the old crop.

In response to a demand from Egypt, a rise in the price of sesame is reported.

NEWS FROM ALL SOURCES.

Sir Alexander Kay Muir has resigned his posts as Chairman of the Consolidated Tea and Lands Company, the Amalgamated Tea Estates Company, the Kanan Devan Hills Produce Company, and the Anglo-American Direct Tea Trading Company as well as the chairmanship of James Finlay and Co., and is succeeded in each case by his brother, Mr. J. F. Muir.

The directors of the Sudan Plantations announce an interim dividend of 10 per cent., payable on September 30. This dividend is the same as the interim dividend of last year, but in the interval the capital has been doubled by a bonus issue of 100 per cent. from the share premium account.

Ex-King George of the Hellenes, on the occasion of his visit to the National Radio Exhibition at Olympia accepted a high-power wireless receiver from the Exhibition authorities. It has long been a matter of regret to him that on the set that he has hitherto used in Bucharest he could hear only Vienna and Budapest. The new set will enable him to listen-in to English stations.

Among the visitors to England at the present time is Mr. John Murray Gibbon, General Publicity Agent of the Canadian Pacific Railway. Mr. Gibbon was associated with the foundation of a mountaineering association in Canada known as Trial Riders of the Rockies, and has written several books, including "Scots in Canada" and three novels.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Abyssinian Claims in Jerusalem.

The question of the ownership of the Holy Places has yet to be regulated by a Commission appointed under the Palestine Mandate. Among the claims that will have to be considered are those of the Abyssinians, whose connexion with the Church of the Holy Sepulchre forms one of the romances of history. The story in its later phases, more particularly with reference to the part that Great Britain has had to play in its developments, is set out in a series of articles by Mr. Alex Devine that we are publishing in this and subsequent issues. The articles are very fully documented and will be found to be of considerable interest both to the student of history and to the general reader.

Greece and the Mutiny.

A necessary, but, it is to be feared, only temporary, peace has fallen upon Greece after the grim experiences of the capital a fortnight ago. This week should see the result of the trial of the commanding officers of the Republican Guard, Colonels Zervas and Dertilis, who were the responsible leaders of the mutiny. It will be strange indeed if any defence of their action can be offered; yet their refusal to obey orders and to acquiesce in the disbandment of their troops was in keeping with the conditions under which Greece has been living for more than a year. There can be no doubt that the country has been profoundly stirred by the events of September 9. The latest returns of the casualties give nearly fifty killed and 150 wounded, and such a list must prove a formidable adjunct to the indictment of the two Colonels. It is too early, however, to gauge the ultimate effect of the incident on General Kondylis' position. The latter may quite genuinely share the nation's desire to put an end once and for all to military domination in the country; but the action of the Republican Guard shows the difficulty of accomplishing this without force, and so long as the Prime Minister has to rely upon force he exposes himself to the charge of the politicians that he is not a real constitutionalist. The best that can be hoped for is that the tragic results of the mutiny will silence the voice of criticism until the elections have been held on October 24, when it will be possible to determine the sincerity of General Kondylis's devotion to a strict constitutional régime.

General Pangalos's War Scheme.

While awaiting his trial, General Pangalos, ex-Dictator of Greece, has been unburdening himself to a Greek newspaper correspondent, and has stated that, if he had not been overthrown on August 22, he had intended to provoke war with Turkey and occupy Eastern Thrace. He had arranged, so he alleged, to sign a military offensive agreement with a certain Power who would have assisted Greece in her attack on Turkey. This particular disclosure, we must presume, is calculated in General Pangalos's opinion to help him when he is placed on trial. Unless we are mistaken, it is calculated to have the contrary effect; for Greece is certainly in no mood to be committed without her consent to a fresh war. The only possibility of General Pangalos's remarks having to be taken seriously lies in the fact that he was experiencing difficulty with the Army, and may have persuaded himself that the only way to keep the Army identified with him was to give them the prospect of a war. The "certain Power" to which reference was made is variously interpreted as Bulgaria and Yugoslavia, neither of which is to be credited for a moment with being likely to lend itself as a cat's-paw to the Greek Dictator's wild schemes. There is at least as much ground for supposing that General Pangalos had Persia in view, if the scheme, indeed, ever entered his mind at all. That he should think that Bulgaria or Yugoslavia would help him is to insult his political intelligence; that he should imagine that an alliance with Persia would assist his designs condemns his military intelligence. Until this disclosure the verdict of most of his countrymen seemed to be that he was a patriot, even if he did act foolishly; the announcement that he was prepared to declare war on Turkey will convince them that his folly was capable of outstripping his patriotism.

Towards Balkan Peace.

The suggestion made in these pages last week that the election of Dr. Nintchitch, the able Foreign Minister of Yugoslavia, as President of the Assembly of the League of Nations was likely to react on the relations between the Balkan States has not had long to wait for some measure of confirmation. According to a Geneva message a series of meetings took place in that town between Dr. Nintchitch and M. Buroff, Bulgaria's Foreign Minister, with a view to promoting a better understanding between their two countries. As a result of the conversations a much more cordial atmosphere has been created, and it has been arranged that an attempt shall be made to bring about closer economic relations between Yugoslavia and Bulgaria as a preliminary to the settlement of their political differences. It is to be hoped that the two Foreign Ministers on their return to their respective capitals will not find that local conditions detract in any way from the welcome harmony established in the atmosphere of Geneva.

France and Turkey.

The Turks have not a "good Press" at the present moment in M. Franklin-Bouillon's country. As the result of a collision in waters that may or may not have been Turkish a Turkish vessel was sunk and some lives lost. The Turkish authorities seized the first mate of the French steamer, who was on the bridge at the time of the collision, and kept him in prison until they could collect enough evidence to stage a trial. In regard to few conflicts of opinion can it be more difficult to determine the exact degree of responsibility than in the case of collisions at sea; but the Angora authorities, bent on convincing the world that they are experts in everything, seem to have been particularly anxious to impress the foreigner with the efficacy of their marine courts. In spite of the fact that the case has been referred to The Hague Tribunal, the Turkish Court continued its hearing of it, keeping the unfortunate French officer forty-one days in gaol. In the end the judgment was to the effect that both vessels were to blame, and fines and imprisonment were distributed all round. The only definite thing that emerges from the trial and the incident is further damage to the reputation of the Turkish Government. Such a result is most unfortunate, as the world in general does want to see Turkey make good. In the present instance it would have been so easy for the Turkish Government to state that the case was a complicated one, that it should be submitted to arbitration and that in the meantime they would ask the French Government to carry out separate investigations. Such an attitude would have redounded to the verdict of Turkey and visibly advanced the day of her admission to the League of Nations. As things are, the Angora Government has outraged public opinion in France, has given support to the contention of those who have urged that the Turks were not sufficiently advanced in civilisation to justify foreign States in dispensing with the Capitulations, and in general has added to the hesitation and suspicion with which all Western peoples will have dealings with Turkey.

The Egyptian Parliament

The Egyptian *Official Gazette* of August 30 publishes as a supplement a report of the proceedings in the Chamber of Deputies on July 13. On that date the Chamber was occupied with the report of the Finance Committee which dealt with, amongst other matters, a proposal to annul the decision to deposit with the National Bank instead of with the Banque Misr funds belonging to Municipalities and local authorities. The Committee gave its support to the proposal, but the Reporter of the Committee explained to the Chamber that there were technical difficulties in the way, as the funds of the Municipalities and local authorities were handed over to the Government, which paid them into the National Bank with its other funds without making any distinction between the different categories of funds. Consequently these funds came under the provisions governing the State funds held by the National Bank and could not be removed without a year's notice. The matter was sufficiently complicated to occupy the Chamber for some time in an attempt to get round, over or under the particular provision, until the Reporter insisted that this executive act was really outside its province, and that all the Chamber was called upon to do was to approve or reject the Finance Committee's recommendation in favour of the proposal, and to leave it to the Government to take the requisite steps. Then followed another long debate on the wording of the Finance Committee's report on the Budget. Some deputies took exception to certain sentences on the ground that they were too impartial to the actions or policy of the previous Government, and the Reporter of the Committee found himself engaged in an acrimonious dispute over the Chamber's right to modify the report. He contended that the Committee had reported what it had reported and that the Chamber could accept or reject the report, as it saw fit; but that it was in no way responsible for what the report contained and that it had not the right by altering the report to make the Committee say what it had not said. In the end the Chamber decided to strike out the words to which exception had been taken, but withheld a vote in favour of the words that it was proposed to substitute. The matter was left at that point and the debate wandered off to other subjects.

Government and the Fellaheen.

Although the two points at issue between the Reporter of the Finance Committee and the Chamber occupy ten out of twelve pages of the official report, the proceedings on that particular day merit more attention by reason of a spirited appeal by one speaker on behalf of the fellaheen. He pointed out that the revenue of the State, now amounting to thirty-eight million pounds, was derived mainly from the thirteen million fellaheen; but, he continued, "the fellah continues to live miserably in the same room as his beasts, just as he lived in ancient times. The conditions of life have in no way been improved for him. He has remained what he has always been, poor, weak, sickly, living and eating like beasts, often the object of persecution on the part of despotic Governments; yet when he asks Government to devote a sum to safeguard his health—the most important element in the country's wealth—Government adopts a miser's attitude towards him." At this stage the speaker was interrupted by Zaghloul Pasha, President of the Chamber, who men-

ITALY AND THE BALKANS.

That mass production tends to cheapen an article is as true in the political as it is in the industrial world. Time was when a treaty between two countries was an event of some importance to the world at large, as it entailed for each definite and generally serious obligations. To-day, when there is a tendency towards the mass production of international agreements, the majority of the treaties commit the contracting parties to little more than to the general good behaviour which, it was hoped, after the Great War would always characterize international relations. The latest treaty of the kind now popular in Europe is between Italy and Roumania. Relations between the two countries have within recent years left much to be desired, as when on the eve of a contemplated visit to Rome on the part of the King and Queen of Roumania their Majesties were given to understand that their presence in Italy would not be welcome. In the Pact signed last week by Signor Mussolini and General Averescu the High Contracting Parties promise each other, in effect, that this kind of behaviour shall not recur. Their present desire is to strengthen further their friendly relations and to ensure the maintenance of general peace and the safety of their respective nations—all worthy aims to which they are severally and individually pledged by their signatures to the Covenant of the League of Nations. For the rest, they bind themselves to consult one another on the measures to be taken in common to safeguard their common interests when they are of opinion that these are or may be threatened; and, in the event of the safety or the interests of either being menaced by violent incursions from outside, to give, together with benevolent collaboration, political and diplomatic support with the object of contributing to the removal of the external cause of the threat. There is also an arbitration clause for the settlement of disputes which cannot be settled by ordinary diplomatic means—a course which comes naturally to most countries and which is specifically provided for in the Covenant of the League of Nations. It is only in regard to this clause, which does not appear in the earlier treaty, that Italy's Pact with Roumania differs from that concluded with Yugoslavia.

As a reflexion of the present frame of mind of the two Governments the Italo-Roumanian Treaty is of interest; any importance that may attach to it would seem to lie in what the agreement has studiously avoided—the attitude of Italy towards the subject of Bessarabia. On this matter an exchange of letters has taken place between the two signatories, in one of which Signor Mussolini records that the question of the Treaty concerning Bessarabia signed in Paris on October 28, 1920, has been examined, and adds: "For the reasons which I have had the honour to submit to you no mention is made in the Pact of the above-mentioned Treaty, the ratification of which on the part of the Italian Government will take place only when this can be done without prejudicing the general interest of Italy." As the crux of the relations between Roumania and Italy, as far as the former is concerned, has been the Italian attitude on the subject of Bessarabia, the perfunctory nature of the Agreement, from the Roumanian point of view, is obvious. On the other hand the Treaty is significant of Italian interest in the Balkan Peninsula. In the post-War *Drang nach Osten* it is Italy and not Germany or Austria-Hungary that is now blazing the trail, and with this difference, that the sinister motives that accompanied the movement until 1918 are now lacking. Italy, confronted with the problem of over-population, may abhor any territorial vacuum, but with the possible exception of Albania she cannot plead that the Balkans contain one. On the other hand Fascism contemplates a thriving State, and the Italian Government is, therefore, compelled to have a care for the material development of the country. Such care in these days implies the building-up of industry and the provision of raw materials and of markets. Across her Eastern frontier Italy has a group of peoples for whom geography and self-interest have marked out a future of economic co-operation, welding them, to all intents and purposes, into a single unit with a population of forty million inhabitants. It would be surprising if those responsible for the foreign and economic policy of Italy could remain indifferent to the potentialities of this important market. After several false moves Italian policy appears to have settled down to a genuine attempt to win the confidence and good will of the Balkan peoples.

The Treaty with Roumania follows on the Italian Pact of January 1924, with Yugoslavia, and, if indications are not deceptive, will not long precede a similar agreement between Italy and Bulgaria. Relations between the Fascist Government and Greece were put on a satisfactory footing by General Pangalos; but in spite of the relief with which the Greek people appeared to receive a good understanding with Italy, the attitude of the new régime to the Dictator's foreign policy, which is accused of subservience both to Yugoslavia and to Italy, will not make succeeding Governments eager to show good will to Greece's neighbours, if politics in the country come into their own again. On this point, however, Greece could have no object in lagging behind the avowed policy of Yugoslavia, Roumania and Bulgaria, and it can be only a matter of time before the four countries find themselves linked by some form of understanding with Italy, which will tend to smooth the path for Italian economic penetration. This, without doubt, is the aspect of the Treaty which makes the strongest appeal to the Italians. It is perhaps more than a coincidence that the signature of the Italo-Roumanian Pact should take place at a time when the Italian and French peoples are indulging in abuse of one another. The logical sequence of Italy's policy must inevitably be the elimination of French influence from the Balkans, a process to which neither the French people nor the French Government will take kindly after the disillusionment that both have suffered in Turkey and Syria. Any resultant friction between France and Italy, however, is their own affair. The Balkan States are well advised to accept all the help that is offered them for their material development, provided that in so doing they do not commit themselves to any political or military ventures. It would be a misfortune if, when the time comes for the Peninsula (Roumania included) to face the world as a united community, the equivalent of a Great Power, it was found to be chained to the chariot wheel of one of the other Great Powers as a result of treaties separately made by the component units.

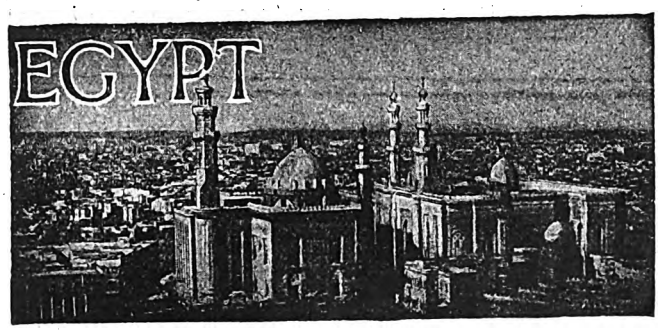
The Near and Middle East*

From Our Own Correspondents.



Cairo, September 12.

The Wakfs' Administration.

It is rather curious that the only Ministry whose administration has been declared in the Chamber of Deputies to be hopelessly inefficient and chaotic is also the sole Ministry over which the British authorities have never exercised any control and in which there have never been any British or other foreign officials. The Ministry of Wakfs, during Thursday evening's debate on its Budget, was declared by several deputies, including the Reporter of the Chamber's Wakfs Commission, who was formerly a senior official of the Ministry, to be in pressing need of overhaul and reorganisation. The Wakfs Commission urged the appointment of a committee of inquiry, but this was strenuously opposed by the Minister of Wakfs and, being put to the vote, was defeated.

Recent scandals in the Wakfs administration were the immediate cause of the demand for an inquiry. It was latterly discovered that, for some years past, officials in the Ministry, in collusion with beneficiaries of private Wakfs administered by the Ministry, had been carrying on a most successful system of fraud. When an order for the payment of money to a beneficiary had been signed by the senior official responsible, one of the junior officials would insert an additional figure on whichever side was more convenient of the correct total. Thus £E50 might become £E500 or £E150, £E250, or any other sum into which the original figures could be converted. It was typical of the carelessness prevailing in the Ministry that orders for payment expressed the amounts in figures only, without the usual recital of the sum in words. The beneficiary cashed the order and, presumably, shared the spoils with the dishonest official or officials who had organised the swindle. Owing to the absence of any proper control of the accounting in the Ministry of Wakfs, this fraud continued for years without discovery and very large sums were involved. When discovery was eventually made the official principally involved committed suicide.

This was not the only remarkable story about the Ministry of Wakfs which the Chamber heard on Thursday evening. The Ministry, in addition to administering wakfs for public objects—schools, hospitals, etc.—undertakes, when requested to do so, the management of private wakfs (i.e., wakfs of which the beneficiaries are private individuals) and charges 10 per cent. of the revenue as fees for the work done. The total annual income of all the private wakfs now under the Ministry's control is £E120,000. It was stated in the Chamber that the Ministry has been officially notified of attachments of income from those private wakfs amounting to over £E1,000,000. That is to say, that the whole income from private wakfs has been mortgaged for more than the next eight years. The position is actually worse than those figures indicate, because many debts contracted by private wakfs' beneficiaries on the strength of payments to be made by the Ministry have not yet come before the Courts and been the subject of attachments. The Ministry pays practically no revenues from private wakfs to the nominal beneficiaries, nearly the whole of the incomes being collected by creditors, who in almost every case are moneylenders, charging high rates of interest and running no risk. The Ministry is now, so far as private wakfs are concerned, practically only a debt-collecting agency for usurers.

No wonder the Chamber decided that there was something very much wrong with the Wakfs Administration. And this in spite of the fact that really big scandals of the Ministry were not referred to. There were approving references to the abolition of the wakfs system in Turkey. Although the Chamber as a whole did not show itself ready at present for so drastic a measure, there is every likelihood that within the next decade Egypt will follow Turkey's example.

Editing the "Journal Officiel."

There is yet another "scandal" occupying public attention. Saleh Pasha Enan, Under-Secretary of State in the Ministry of Public Works, who recently gave the Chamber explanations regarding the building of a new lock at el Ayat, the original plans for which were found to be faulty and had to be abandoned, after a large sum of money had been spent, made the remark during his speech that "in doing so (i.e., taking certain action) the Government laid itself open to a claim for damages of £E10,000 by the contractor." This may have been a slip of the tongue, or Saleh Pasha may have been advised that this statement might be subsequently used by the contractor. Saleh Pasha therefore sought the permission of the President of the Chamber to amend the report of his speech which would appear in the *Journal Officiel*. The request was sent through the Minister of Public Works, but apparently never reached the President who, immediately the *Journal Officiel* appeared, had his attention drawn to the difference between the actual speech (as recorded by the Chamber's secretariat) and the report in the *Journal Officiel* and undertook a private inquiry, from which it appeared that Saleh Pasha had gone to the Government Printing Office and, with the full knowledge and consent of the Director, had caused the statement about the £E10,000 damages to be amended. Saleh Pasha throughout the affair had made no secret of his actions. Receiving no reply to his letter to the Chamber's President, he had consulted the Secretary-General and had been told that "it would probably be all right." Yet, in the Chamber, Zaghloul Pasha, in his initial reference to the matter, termed it a "criminal tampering with official documents," and said that he had asked the Parquet to hold an inquiry. Since then, Saleh Pasha, recalled from a seaside holiday, has been subjected to daily examination.

There appears to be no suggestion that Saleh Pasha was at any time animated by personal motives or, indeed, that the change in the report of his speech could have been dictated by anything but concern for the public interest.

The ugly side of the business consists in the fact that Saleh Pasha is notoriously detested by the Zaghloulists for the reason that he has consistently refused, being a Government official, to take any part in politics. During the strikes by Government officials in 1919 Saleh Pasha (then a Bey) refused to join in and told the officials of his Ministry (then Finance) that they were putting themselves in the wrong by striking. The consistent maintenance of this attitude towards politics has naturally not made Saleh Pasha popular with the type of man of which the present majority in the Chamber is mainly composed. He is

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Digitized by Google

notoriously bad terms with the present Minister of Public Works, Osman Moharrem Bey, and relations between the two were, perhaps, not improved by Saleh Pasha's informing the Chamber that the original plans, since proved faulty and now abandoned, for the construction of el Ayat lock, were approved by Osman Bey, when occupying the Under-Secretaryship which Saleh Pasha now fills.

The whole business is very reminiscent of the recent campaign of defamation of Ziwar Pasha and Maher Pasha. Both these, undoubtedly, like Saleh Pasha, shared the universal human falling short of perfection. But, also like Saleh Pasha, their principal failing in the eyes of the Chambers' majority has been their refusal to bow the knee to Egypt's political deity.

Liubliana, September 15.

The Eve of the Political Season.

The veteran statesman, M. Pashitch, has returned to Yugoslavia. He stayed at Karlovo Vari (Karlsbad) in Czecho-Slovakia and afterwards at Monte Carlo. He comes home hale and hearty, in the best of health, as his entourage assures us, and he hopes to take a hand in active politics once more. His return, it is stated, presages the beginning of important events in the Radical Party, which is torn by dissensions, as never before. But to what extent the aged leader will be able to control the issue is as yet very uncertain, because it is too early to say what his influence, which was until quite recently all-powerful, now stands for in the party. Since he had to resign the premiership last spring—against his will—his power in the party has waned a good deal; his former position in the Ministry he cannot hope to occupy until the *affaire* of his son Rade Pashitch, which was used in the spring to bring about his fall, is completely cleared up. Whether Pashitch can exert unlimited power in the party though lacking the advantage of a prominent position in the Government, is a problem which the coming weeks will solve. Unquestionably, his absence has once more brought home to all parties a realisation of his exceptional ability, which can be dispensed with only with difficulty.

The second important piece of news in Yugoslav political life is that of the alliance between the Davidovitch Democrats and the Moslem Parliamentary Club, whereby the two have constituted the new joint club of the Democrat Association. This alliance has long been in preparation: it was foreshadowed by the close co-operation of the Clubs of both parties in the Skupshtina in Belgrade. Several months ago, when the Prime Minister, Mr. Uzunovitch invited the Davidovitch leaders to negotiate with a view to their co-operation in the Government, M. Davidovitch replied that negotiations would be considered only if the invitations were extended to the Moslems as well. The understanding between the two parties has now reached the stage of amalgamation of the parliamentary groups by which they are represented in the Skupshtina. The parties have, for the moment, not amalgamated, each still keeping to its own organisation. But the final amalgamation is all part of the plan.

This event is noteworthy, because it means the constitution of a party in the Skupshtina which has pretty well as many votes at its disposal as the Raditch Peasant Party, and therefore might in eventual political re-groupings come into consideration as an equivalent for the Raditch Party. But even greater than the parliamentary, is the national-political significance of this alliance. The Moslem Party is the last relict of the old order. It represents the political organisation of the Moslem element in Bosnia-Herzegovina, and therefore bears the character of a regional religious party. Moreover, the Bosnian Moslems although Serbo-Croats in speech and blood, have always kept aloof from Orthodox Serb as well as from Catholic Croat and considered themselves an element apart, not only as regards faith, but also as regards nationality, however absurd this standpoint may appear. By the Democrat-Moslem alliance, the Moslems cannot help coming into touch with the Democrat community, which contains Orthodox Serbs, Catholic Croats, and Slovenes. This means cutting the ground from under the isolated position of the Moslems and replacing it by the inevitable nationalisation of the Moslem element. And this means one more important step forward in the internal unification and consolidation of young Yugoslavia.

PERSIA.

Teheran, August 28.

The Mejliss.

The Parliament which adjourned after being opened by the Shah over a month ago, began its sessions about a fortnight ago, and has since been busy examining the credentials of the Deputies, of whom two or three have been rejected.

The Prime Minister, Mustaufi el Mamalek, finding that he had not a majority in the Mejliss, tendered his resignation to the Shah, who did not accept it, and instructed the Premier to carry on and introduce his Cabinet to the Parliament as soon as possible. The papers again, however, report that Mustaufi has tendered his resignation, although the report is not yet confirmed. The names of Moshir ed Dowleh and Moshar ul Mulk are mentioned as probable candidates for the Premiership, but it is pointed out that as neither of these has yet obtained a majority

in the House, which has hardly settled down to its labours, there is likely to be some delay in the formation of a Cabinet should Mustaufi's Ministry really resign.

Another name I have heard mentioned in connexion with the Premiership is that of Teymoor Tash, the Minister of the Court, who was Minister of Public Instruction at the time of the Shah's Coronation. He is at present in Russia, having been sent by the Shah, whom he accompanied on his recent trip to Khorassan, as envoy extraordinary on a special mission to Moscow. The object of his mission is not disclosed, but it is understood to be in connexion with several outstanding questions between Persia and Russia, which the Shah is anxious to clear up, notably the question of the Russian embargo on Persian imports, and the all-important Caspian Sea Fisheries, which caused such a stir just before the dissolution of the last Mejliss, who refused to give their consent to the granting of the concession to the Soviet Government, who were extremely anxious to obtain it.

The Shah's Return.

A few days ago the Shah returned from his trip to Khorassan, where he was received in the various towns which he visited with much enthusiasm. It is a long time since a Shah has paid a visit to any of his outlying provinces, and this step on His Majesty's part is only another instance of his interest in the direction of State affairs, in which he means to take a part. As a result of his visit to Meshed, the Commander-in-Chief of the Eastern Army, General Djan Mohamed Khan, has been arrested on a charge of embezzling public funds, degraded from his rank in the Army and brought to Teheran under escort to be tried by court martial. Apparently he has helped himself during the two years he has been in command in Khorassan to a goodly proportion of the money remitted to him from Teheran for the troops, and it was this misappropriation of Army funds which was no doubt largely responsible for the recent mutiny by certain troops in that district, actuated by natural discontent consequent on account of non-receipt of their pay.

The Salar ed Dowleh's Rising.

On the occasion of the above trouble in Khorassan all motor transport was commandeered by the Government in Teheran, and troops were rushed to the spot, with the result that the rising was nipped in the bud. Last week a similar commandeering of motor transport took place, in consequence of the report that Salar ed Dowleh had made his appearance in Kurdistan. This Qajar Prince upon whose head a price of 25,000 tomans was placed in 1912 when he raised the tribes in Kurdistan on behalf of his brother, the then ex-Shah Mohamed Ali Mirza, has since been living abroad, enjoying a pension from the Persian Government, and it is indeed difficult to know what hopes he entertains of being able to defy successfully the present Shah and Government. Things have changed very considerably since he last made a bold bid for power fourteen years ago, and he cannot be so blind as to be unaware of the fact. It is, therefore, all the more difficult to understand his motive, as he would seem to stand no earthly chance of success, unless it be to embarass the new Government as much as possible. Anyhow, one does not expect to see His Royal Highness in the neighbourhood of Teheran yet awhile! The troops which have been despatched by the Government to the spot should be well able to cope with any opposition, and there seems no doubt that Salar ed Dowleh will again have to seek safety in flight. It is unknown what following he has, but it is not considered that it is of much importance.

A National Bank.

A great deal has been written in the papers lately with regard to the foundation of a National Bank for which Dr. Millspaugh, Administrator-General of the Finances, is said to be elaborating plans. The funds for starting the said Bank are, it is said, to be provided by the Tea and Sugar Monopoly Tax, and the sale of superfluous Crown jewels, for which the Government is said to be negotiating. Of course the receipts from the Tea and Sugar Monopoly have been ear-marked for the construction of railways, but as this seems to be all in the air at the moment, and not likely to become less ethereal for at least a year or two, the amount of the credit balance is mentioned as likely to be devoted to the opening of a National Bank until the way is seriously open for railway construction. The proposed Bank is to have branches in the provinces, and is intended to help landowners and merchants generally.

General News.

The Prime Minister, with whom were the Ministers of Public Works and of Public Instruction, opened, a short time ago, the new road to Mazanderan, on which the Government has recently spent a good deal of money. The Shah was to have performed the opening ceremony, but, being in Khorassan, was unable to do so.

General Amanollah Mirza, late Chief of the Staff, has been appointed Commander-in-Chief of the Eastern Army, in place of Djan Mohamed Khan, now awaiting trial by court martial.

Mirza Davood Khan Meftah, who was Persian Minister for some years in London, has been re-appointed to his former post, after having acted as Minister for Foreign Affairs in the last Cabinet.

Owing to a shortage in low value stamps of the current issue a new stamp bearing the portrait of Reza Shah has just been issued here. It has no great merit as a work of art, but is interesting as being the first serious attempt on the part of the Government printing press at the Parliament at producing its own stamps, the present stamp having been designed, engraved and printed here.

We have this week had to part with the greatest regret with one of our oldest friends, and probably the member of the British community who has been longest in Persia, Mr. B. Messervy, of the Imperial Bank, whose service in this country extends over 33 years. His cheery face, and his friendly help to all and sundry during the past three decades have been a recognised fact to all Englishmen here, who will feel a real sense of loss at his departure and will all wish him the best of luck in his retirement.

Sofia, September 10.

Agreements with Turkey and Greece.

A provisional commercial agreement has just been concluded with Turkey on the basis of the most favoured nation clause as regards Bulgaria and of the Treaty of Lausanne as regards Turkey—which gives to Turkey the same customs privileges as have already been accorded to Great Britain. This agreement, which has just come into operation, is to last for six months, which, it is thought, is an adequate period for the negotiating and concluding of a definitive commercial treaty between the two countries.

Similar negotiations will be opened very soon with Greece, who, ever since September 1, has been enforcing a customs tariff extremely unfavourable to the products of the countries with which she has no definitive commercial treaty. Moreover, Bulgarian importations into Greece have since the War increased enormously, so that it is of the utmost importance for Bulgaria to maintain and develop her Greek market, even though she do all in

Digitized by Google

her power to re-establish her diminished position on the Turkish market.

Since the Bulgarian Government still, in the matter of foreign commerce, has only provisional agreements, it has appointed a special commission, composed of competent persons, representing the Ministers of Commerce Finance, Railways, and Foreign Affairs, under the presidency of the Director-General of Bulgarian Statistics, M. Cyril Popoff, to establish the basis and general lines on which future definitive treaties are to be drawn up.

The Foreign Affairs Commission.

M. Bouroff, Minister for Foreign Affairs, has just left for Geneva, where, with his colleague, M. Moloff, Finance Minister, he will represent Bulgaria at the League of Nations.

On the eve of his departure M. Bouroff met the Parliamentary Commission for Foreign Affairs to give them a long *exposé* of the position concerning the Loan and the Notes exchanged between Bulgaria and her neighbours. The Minister confirmed what he had already declared in his Note to Yugoslavia, Roumania, and Greece, namely, that the Sofia Government had decided by all necessary measures to avoid anything that might appear like a violation of the peace, and that it hoped that, as a consequence, the neighbours of Bulgaria would appreciate this courageous attitude, which implied a difficult struggle with the revolutionary organisations, and that they would facilitate the task by taking corresponding measures on their side of the frontier to alleviate the condition of the Bulgarians resident therein. The Commission was unanimous in approving of this policy of firmness at home and abroad, and it once more emphasised the fact of the connexion between the revolutionary incidents of which Yugoslavia, Roumania, and Greece complain and the ill-treatment of Bulgarian minorities in these States. In agreeing to eliminate these revolutionary organisations as a political factor, the Sofia Government also undertakes to defend the cause of these minorities whose lot leave so much to be desired.

When the problem of the minorities in the Balkans is solved, the way will be wider to the realisation of a Balkan Locarno.

THE ST. BARNABAS PILGRIMAGE.

Time, like an ever-rolling stream,
Bears all its sons away.

Returning a few days ago from the pilgrimage arranged to enable relatives, ex-soldiers and others to visit the British cemeteries in Salonika and Gallipoli, I have been asked to give some impressions of the journey and of the places visited.

A party of 274, convoyed by the Rev. M. Mullineux, M.C., and his colleagues, left Victoria by special train on Wednesday, August 25, reaching Marseilles the next day, where we found the Stella d'Italia, a fine vessel of the Cossulich Line ready for us. We left Marseilles about 4 p.m. on August 26. The sea being calm all the way, we dropped anchor at Salonika in about five days. A large number went by car to the Struma over a very rough and hilly road for about 74 kilometres—a journey responsible for many tyre troubles. At the cemetery here a service was held, and later most of us went to the Struma Bridge to obtain a view across the wide valley, looking right over to the Bulgarian frontier. Salonika itself is not a well kept town; in view of the influx of refugees it would have been a matter for surprise if the authorities had been able to keep pace with the town's requirements. On the following day a number of "pilgrims" went by rail to Doiran, visiting the cemeteries there and placing wreaths on the graves. From Salonika the Stella d'Italia sailed for Mudros, a familiar spot to all who served on this front, and on the evening of September 1 entered the Dardenelles. It was with mixed feelings that the numerous party on board passed through these waters, remembering the ineffectual efforts of our war vessels.

Chanak we reached before dusk, and arrived off Constantinople early the following morning.

To see the Golden Horn at sunrise is a sight no one can ever forget, and we were specially fortunate, for a wonderful double rainbow arched the hill as we steamed past Stamboul, showing all the mosques and other buildings to perfection. Sightseeing is always fatiguing; but to those who have never been East before the various mosques and museums were like a veritable wonderland. The Blue Mosque was the most admired, not only for its beautiful tiles and architecture, but also owing to its position. St. Sophia, so celebrated, was not so effective; but the carpets were perfect, many having been there for over 400 years, we were told. In the war museum there is a marvellous collection of arms of all ages from the time of the Crusaders to our own day, and the setting in an old mosque added to the attraction. There was a little gem near the old wall of Constantinople, called the Mosaic Mosque, which was almost perfect.

Some of us took a trip across the waters to Skutari, visiting the site of Florence Nightingale's hospital and several graves of those who fought in the Crimea. A run up the Bosphorus, to the opening into the Black Sea, gave us the opportunity of seeing some of the palaces and houses that line its shores. As it was a Turkish holiday a very large number of the population of Constantinople were enjoying themselves in various resorts along the coast.

On the return journey we reached Cape Helles early on the 4th, landing at Sedd-el-Bahr, V. Beach, where the River Clyde was grounded. The whole company went ashore, and it was a sad time for the majority. To be actually on the spot where so many fell, when landing, and to mount the hill to the conspicuous monument erected to all who fought in the Peninsula, brought forcibly before us the object of our mission. A most impressive service was held here, rendered the more memorable by the presence of 150 bluejackets and marines who had joined us from a British destroyer. After the last Post, all turned to the East, and the strains of the Reveille rang out. The party then dispersed, some going to W. Beach, the Lancashire Landing, and along the cliffs to see the Turkish trenches, many to various cemeteries to visit the graves of those they had lost. It was a moving sight to be in the presence of the personal sorrow which came over parents and widows as they reached these sacred places. To walk on the ground where such terrible fighting occurred and to know how many valuable lives were lost only to be unsuccessful was a sad experience. For many months our men struggled and died; yet the ground gained was but three miles inland, if as much. Memories of those days crowded in upon one, the tragic loss of so many fine lives, the ineffectiveness of it all, and pride and wonder that they ever got ashore at all.

Owing to some misunderstanding the local Turkish authorities refused to allow us to land at Anzac Cove or

Suvla Bay in spite of the fact that permission had been given by the higher authorities before we left London. So there was nothing for it but to go back to Chanak, to land at Kelia and to see what we could by road. Some cars fortunately were available, and a number went up to Lone Pine, walking from there to Chunuk Bahr and farther. Here again many went to the various cemeteries round about to search for their own particular grave. Those who had been here in the fighting revisited their own special places and examined the ground beyond, which they had been never able to take. The fortitude and determination shown by women of the party was extraordinary. One mother went several hundred feet down a very difficult incline to visit the Farm, a small cemetery where her boy was laid, refusing even the help of a hand either going down or coming up and many other women seemed to find strength for these special missions. Looking down from Chunuk Bahr towards Anzac Cove, we realised what a terrible task had been given to the Australians, and it will always be a marvel that they were able to accomplish so much in such broken steep country with the Turks above pouring shots into them. The whole country is now covered with scrub, but at the time of the fighting, we were told, it was almost bare. From a spot some 800 feet up looking across to Suvla Bay, we could make out Chocolate Hill, Anafurta and the terrain so full of glorious efforts and marvellous bravery. It was a day never to be forgotten; full of events and of wonder at what our men attempted and succeeded in, only eventually to retreat. The cemeteries, some 30 or so all over this battlefield, are kept in perfect order, walled round and planted with small trees, the stones all in line, everything showing neatness and care. We slid and stumbled down to the beach, passing several cemeteries on the way, thus getting some insight into the difficulties our men had to overcome in the obstacles that we found on our way. It was with sad hearts that we returned to the ship and the following morning steamed along the shore from Cape Helles to Suvla and back. Then bidding farewell to this land we set our course for Athens, dropping a wreath near Skyros in memory of Rupert Brooke.

We had only one day at Athens, but the arrangements made enabled us to visit many of its famed sites. Leaving Athens in the evening we kept to the coast of Greece, passing through the Ionian Islands up to the Dalmatian Coast, where the ship kept close to the shore. The run was varied by a deviation into the Bay of Cattaro, a fiord miles long with steep hills rising out of the water. It is from Cattaro that Cetigne is reached by a zig-zag road cut in the face of the overhanging mountains. We continued our course northwards, stopping at Brioni to pick up letters and arrived at Trieste about 4 p.m. on Friday September 10.

The whole voyage was a great success and all expressed their gratitude to the organisers for the care and trouble that they had taken for our comfort, congratulating them on the result. Every one did all that was possible to assist, from the Captain and his officers downwards, not omitting the very obliging stewards and others of the ship's company. The train left Trieste at 5.30 on Saturday and Victoria was reached on Sunday evening. So ended a deeply impressive tour for all who had taken part in the pilgrimage.

Eight persons were killed and 30 injured in a collision between the Timishoara (Temesvar) express and a local train in Contesci station, near Bucharest, on September 13.

The Times Jerusalem correspondent states that fresh accounts have reached Zionist circles there of a series of arrests and other forms of persecution of Zionists in Soviet Russia. During August the Soviet authorities imprisoned Zionists at Odessa, Kieff, and Ekaterinoslav, and later deported them to Siberia. Twenty only were given the choice of "exile" to Palestine in lieu of servitude in Siberia. Lack of funds prevents the exiles from taking advantage of this offer.

NOTES OF THE WEEK.

(Continued from page 324.)

tioned that the subject before the Chamber was the Revenue section of the Budget, and the speaker's remarks more properly belonged to the Expenditure section. The fellaheen's champion, however, was able to make his point that what was necessary was a definite financial policy, which would include provision for the promotion of hygiene and education for the benefit of the fellaheen. No specific vote on the subject was taken, but the Chamber agreed that the resolutions should be embodied in the report of the proceedings. The Chamber's deliberations on that day go far to explain why the session has been so protracted. Had it not been for the authority and experience of the President, probably even less work would have been done. The couching of a lance on behalf of the fellaheen is significant in view of the fact that they will be the first to feel any departure from the strict impartiality of the administration for the introduction of which in the affairs of everyday life British officials were responsible. It would be strange indeed if the Egyptians did not begin to realise that the fallaheen are the backbone of the country and that Egyptian prosperity after a certain stage has been reached can advance only with the improvement in the lot of the individual fellah.

The 1st Batt. the Somerset Light Infantry left Raglan Barracks, Devonport, on September 17 by train for Southampton, to join the Neuralia for passage to Port Said. The battalion, which had an enthusiastic send off, is to be stationed at Ismalia, and will be relieved at Devonport next January by the Second Somersets, now at Khartoum.

Signor Mussolini and General Averescu, Roumanian Prime Minister, signed in Rome on September 16 a Treaty of Friendship and Conciliation between Italy and Roumania. After the signature Signor Mussolini gave a luncheon in honour of General Averescu at the Villa Torlonia and the latter entertained Signor Mussolini at dinner at the Roumanian Legation the same evening. General Averescu was subsequently received by the King of Italy at San Rossore.

ABYSSINIA AND THE HOLY PLACES.

By Alex Devine.

According to Abyssinian tradition, the Queen of Sheba, who made that memorable visit to King Solomon at Jerusalem, was monarch of Ethiopia, and it is from Menelik, the son whom the Queen is said to have borne to the Jewish King, that the rulers of Abyssinia claim descent. Certainly the Jews settled there during the Captivity, bringing with them a knowledge of their native monotheism. Christianity was introduced into the country by Frumentius, who was consecrated first Bishop of Ethiopia by St. Athanasius about 330 A.D. In the sixth century the Abyssinians under their famous leader Caled or Ellisthaeus conquered the Yemen and made an alliance with the Emperor Justinian. But they were driven out of Arabia by the Persians in the seventh century, a circumstance which provokes from Gibbon one of his most suggestive pieces of moralising. "If a Christian power," says the historian of the Roman Empire, "had been maintained in Arabia, Mahomet must have been crushed in his cradle, and Abyssinia would have prevented a revolution which has changed the civil and religious state of the world." From this time right down to the end of the 15th century, when the Portuguese missionaries commenced their efforts to bring Ethiopia under the spiritual authority of the Pope, its history is practically a blank. "Encompassed," says Gibbon, "by the enemies of their religion the Ethiopians slept for near a thousand years, forgetful of the world, by whom they were forgotten." In England, indeed, no particular interest seems to have been taken in Abyssinia till the second and third quarters of the 18th century.

Dr. Johnson and Abyssinia.

In 1735 Dr. Johnson brought out an abridged translation of a work of one of the Portuguese missionaries. This was the "Voyage to Abyssinia," written by the Jesuit, Father Jerome Lobo (born 1593, died 1678), and translated into French by the Abbé le Guard in 1728. Johnson, who made his translation from the French version, departed so far from his general distrust of explorers' tales as to compliment the author on his veracity. "The Portuguese traveller," he says in his Preface, "contrary to the general vein of his countrymen, has amused his reader with no romantic absurdity or incredible actions. Whatever he relates, whether true or not, is at least probable. And he who tells nothing exceeding the bounds of probability has a right to demand that they should believe him who cannot contradict him." Twenty-four years later, in April, 1759, Johnson published his philosophical romance, "Rasselas, Prince of Abyssinia," with the proceeds of which he defrayed the expenses of his mother's funeral and paid some small debts she owed. "It is reasonable to suppose," says Boswell, "that his having been accidentally led to a particular study of the history and manners of Abyssinia was the remote cause of his writing many years afterwards his admirable tale, the scene of which is laid in that country."

James Bruce the Explorer.

Some ten years later, to be exact, on September 19, 1769, James Bruce landed at Massawa, reaching his destination, Gondar, then the capital of Abyssinia, on February 15, 1770. It was nearly 150 years since any European had visited that country (save Poncet, the French surgeon, who went there towards the end of the 17th century, and three Franciscan monks who arrived about 1750 and probably never returned home). Bruce, who brought with him introductory letters from Ali Bey, the Mameluke ruler of Egypt, to the Naib of Massawa and to Ras Michael, the venerable Prime Minister of Abyssinia, quickly found that the country fully deserved its name, Abyssinia being derived from an Arabic word signifying "confusion." The occupant of the throne still claimed to be descended from Solomon; but the country was really divided among a number of provincial governors, whose revolts among the Negus and quarrels among themselves kept it in a perpetual state of anarchy. Included among these governors was the Vizier Michael, Ras of Tigre, who, having assassinated one Negus and poisoned another, was at the age of seventy-two ruling Abyssinia in the name of a third, called Tecla Haimanout. In the spring of the same year Bruce accompanied the Negus and Michael on a military expedition to Maitsha, having obtained from the former the governorship of Geesh, the district in which the fountains of the Blue Nile are situated. This expedition having failed, the Negus and Michael sought refuge in Tigre and Bruce returned to Gondar. On October 28, however, he set out for Geesh and reached the sources of the Blue Nile, which he found "not 4 yards over and not four inches deep." Bruce, however, had discovered, not, as he thought, the sources of the Nile, but those of its most considerable tributary. And even in this discovery he seems to have been anticipated by an early seventeenth century Jesuit explorer. Bruce finally quitted Gondar (where his height —he stood 6 ft. 4 in.—dauntless courage, tremendous physical strength, and great skill in medicine were long remembered) in December 26, 1771. For many years subsequently he was a "lion" in London society, where his accounts of his explorations in Algiers, Barbary, Svria and Abyssinia met with a rather sceptical reception, whether related *viva voce* in fashionable drawing-rooms or published finally as they were as books of travel (5 volumes) in 1790. For a good deal of this incredulity Bruce had only himself to blame; for his manners were arrogant and aggressive. Moreover, when he actually brought out the narrative of his travels (which were undertaken, it must be remembered, with the semi-official support of Lord Halifax, Secretary of State for the Southern Department), nearly twenty years had elapsed since he left Abyssinia, an interval in which memory is apt to play a man strange tricks. Recent research, however, while convicting him of inaccuracy on certain points, has in the main established the authenticity of his discoveries.

Bruce and Johnson Dine Together.

On Saturday, April 1, 1775, Dr. Johnson and James Bruce met at the dinner table of Gerard Hamilton, a politician who twenty years before had won fame and the sobriquet of "Single Speech" Hamilton by his oration on the German subsidies. But the two great men do not seem to have hit it off. Here is the extract from Boswell's "Life of Johnson."

> "I visited him by appointment in the evening, and we drank tea with Mrs. Williams. He told me that he had been in the company of a gentleman whose extraordinary travels had been much the subject of conversation. But I found he had not listened to him with that full confidence, without which there is little satisfaction in the society of travellers. I was curious to hear what opinion so able a judge as Johnson had formed of his abilities, and I asked if he was not a man of sense. Johnson: 'Why, sir, he is not a distinct relater; and I should say he is neither abounding nor deficient in sense. I did not perceive any superiority of understanding.' Boswell: 'But will you not allow him a nobleness of resolution in penetrating into distant regions?' Johnson: 'That, sir, is not to the present purpose; we are talking of sense. A fighting cock has a nobleness of resolution.'"

First British Mission: 1805.

It was not, however, until the time of the Napoleonic Wars that official relations were established between Great Britain and Abyssinia. In 1805 a British Mission, headed by Lord Valentia and Mr. Henry Salt, was sent to conclude an alliance with the Negus and to obtain a port on the Red Sea in case France secured Egypt by dividing up the Turkish Empire with Russia. In the wake of this mission many travellers, merchants, and

Digitized by Google

missionaries of all nations flocked into the country, and the stream of Europeans continued until well into the reign of the ill-fated King Theodore.

But before we come to the question to which all that has so far been written serves but as a prelude—the question of the Abyssinian claims to some of the Holy Places at Jerusalem—we must turn back a few years and note that in 1799 the Evangelical leaders in the Church of England founded the Church Missionary Society for the promotion of the evangelisation of Africa and the Far East. Among the missionaries whom the C.M.S. sent out in 1830 was a clergyman called the Rev. Samuel Gobat, who will be found to play no inconsiderable part in the question of the Abyssinian claims.

The Chevalier Bunsen and the Jerusalem Bishopric.

Here, too, we may introduce the Chevalier Bunsen, who also figures in the diplomatic "Correspondence respecting Abyssinians at Jerusalem, 1850-1867." Baron von Christian Charles Josias Bunsen (grandfather of the Right Honourable Sir Maurice de Bunsen) was for several years Secretary to Niebuhr, when the famous German historian occupied the position of Prussian Minister to the Vatican. As successor to Niebuhr at Rome Newman met him in 1833, as he recalls in his "Apologia," and found him "most hospitable and kind." From 1839 to 1841 Bunsen was Prussian Ambassador to Switzerland. The accession to the Prussian throne of Frederick William IV. on June 7, 1840, had a most decisive influence on Bunsen's career. Ever since 1828 the Prussian Crown Prince and Bunsen had been close friends and correspondents; and both were enthusiastic supporters of Evangelical Protestantism and fervent admirers of the Anglican Church. The new King had from early youth cherished the idea of amending the conditions of Christians in the Holy Land. Accordingly in June, 1841, he dispatched his friend Bunsen as Envoy Extraordinary to this country to seek the co-operation of the British Government in endeavouring to obtain for the Protestant Christians in the Turkish dominions privileges similar to those enjoyed by Latin, Greek, and Armenian Christians and by the Jewish community. The result of this mission was a fantastic scheme, more in keeping with the 16th than the 19th century, for reviving at Jerusalem the ancient see of St. James. The period during which these negotiations took place was that of the closing months of Viscount Melbourne's Second Ministry and of the early months of Sir Robert Peel's 1841-1846 Administration. It is easy to realise how ready that staunch Anti-Popery Whig, Lord John Russell, must have been to support an attack on Latin claims in the Holy Land; but how Bunsen succeeded in persuading Latitudinarians like Lord Melbourne, Lord Palmerston, and Macaulay on the one hand, and Conservative High Churchmen like Sir Robert Peel and Mr. Gladstone on the other to approve of, or even to take seriously, a project more appropriate to Disraelian fiction than to responsible politics, does not appear. But succeed he did; for a "Bishop of the United Church of England and Ireland in Jerusalem" was actually appointed and was consecrated on Sunday, November 7, 1841, with the full benediction of the Archbishop of Canterbury and the Bishop of London and amid the anathemas of the Tractarians. Newman regarding the event as "the third blow which finally shattered his faith in the Church of England and brought him on to the beginning of the end." The King of Prussia, with whom and the British Government lay the right of alternate presentation to the see, contributed £15,000 towards its endowment, and the London Society for Promoting Christianity among the Jews gave £3,000, leaving the balance of £12,000 to be made up from voluntary subscriptions. The duty of the new Bishop was defined to be "the superintendence of the English clergy and congregations in Syria, Chaldaea, Egypt and Abyssinia, and of such other Protestant bodies as might wish to place themselves under his episcopal care and to be admitted into communion with his church." The generosity of the L.S.P.C.J. in disbursing £3,000 in aid of this scheme will perhaps not be considered completely disinterested when we add that the first Protestant Bishop of Jerusalem was Dr. Michael Solomon Alexander, a converted German Jew, who came to England in 1820, renounced Judaism in 1825, took successively deacon's and priest's orders in the Irish Church in 1827, and from 1830 to 1841 acted in England as home missionary of the L.S.P.C.J., during most of which last-mentioned period he held the appointment of Professor of Hebrew and Rabbinical Literature at King's College, London. The episcopal progress from England to Jerusalem of this "Bishop of the Circumcision," as Newman styles him, seems to have been rather a spectacular affair.

The British Government placed the steamship Devastation as the disposal of the Bishop and his suite, who, we are told, made their state entry into Jerusalem on January 21, 1842, with considerable pomp and circumstance. Alexander died of heart disease near Cairo in November, 1845, and was succeeded by the Rev. Samuel Gobat, a German-Swiss. Gobat, who was appointed by the Prussian King, died in 1879, and his successor Barclay, nominated by the British Government, died in 1883. In 1886 the Prussian, or rather the Imperial German Government, realising the absurdity of supporting a bishopric which was a standing offence to the Catholic population of the Reich, denounced the agreement with the British Government; with the result that since 1887 (when it was reconstituted by Archbishop Benson) the Jerusalem Bishopric has been reduced to the position of a mere missionary see of the Church of England, the Church of Ireland having been disestablished and disendowed by Mr. Gladstone's Administration in 1869. A rather tame ending to so blatant a manifesto of the unity and aggressive energy of European Protestantism!

The Jerusalem Bishopric "Made in Germany."

The whole business, however, proved a feather in the cap of M. Chevalier or Baron von Bunsen. The success he met with in persuading the British Government to inaugurate the Jerusalem Bishopric gained him the Prussian Legation to the Court of St. James's, a position which he held from 1841 to 1853. But, while we may fairly assume that the German Bishops, Alexander and Gobat, had both become naturalised British subjects, we may as confidently take it for granted that, just as their bishopric owed its origin to the suggestion of a German monarch Frederick William IV. of Prussia, so it would never actually have come into being save for the extra-official influence which two distinguished Germans were able to bring to bear upon the British Government. We allude, of course, to Prince Albert, who had married Queen Victoria in 1840, and to Baron Stockmar, the Prince's confidant and adviser. The Jerusalem Bishopric was most decidedly an instance of a project "made in Germany." When we add that from July 3, 1846, to December 19, 1851, at which latter date he was dismissed from office for expressing in an unofficial conversation with Count Walewski, the French Ambassador, his approval of the Prince-President's, Louis Napoleon's *coup d'état*, Viscount Palmerston held the office of Secretary of State for Foreign Affairs in Lord John Russell's first Ministry, which, by the way, he destroyed nine weeks after his dismissal, we have cleared the stage for the introduction of the Abyssinian claims. But not completely; for just a paragraph must be devoted to a brief account of the Abyssinian Religion.

The Religion of Abyssinia.

In spiritual matters the Ethiopian Church constitutes a colony of the Coptic Church, the Mother-Church of Alexandria and now of Cairo. From the time of Frumentius right down to the present day, with one remarkable break, the Ethiopian Metropolitan has always been appointed from Egypt and, by a strange fatality, he is always a foreigner. "Seven bishops," says Gibbon, "once composed the Æthiopic synod. Had their number amounted to ten, they might have elected an independent

Digitized by Google

primate; and one of their kings was ambitious of promoting his brother to the ecclesiastical throne. But the event was foreseen, the increase was denied. The episcopal throne had been gradually confined to the *abuna*, the head and author of the Abyssinian priesthood. The (Alexandrian) Patriarch supplied each vacancy with an Egyptian monk; and the character of a stranger appears more venerable in the eyes of the people, less dangerous in those of the monarch." Little is known of Abyssinian ecclesiastical history down to the period of Jesuit rule, which severed the connexion of the Ethiopian with the Coptic Church from about 1500 to 1633. But three circumstances we do know, that the Abyssinians rejected the Council of Chalcedon, which declared that Christ existed in two natures, that they still embrace what Newman calls "the Oriental heresy," that is the Monophysite doctrine, and that their union and submission to the Coptic Church survived the Arab conquest of Egypt. Abu Saleh records in the 12th century that the Patriarch of Alexandria always used to send epistles twice a year to the Kings of Abyssinia and Nubia until Al Hakim, the mad Fatimite Caliph of Egypt, stopped the practice. We know too that Cyril, the 67th Patriarch, sent Severas as Bishop of Ethiopia, with orders to put down polygamy and to enforce observance of canonical consecration for all churches. Such examples demonstrate the close association of the two churches in the Middle Ages. Early in the 16th century, however, the Ethiopian Church was brought under the influence of a Portuguese mission. In 1439, in the reign of Zara Yakub, a religious discussion between an Abyssinian, Abba Giergis, and a Frank led to the dispatch of an Embassy from Abyssinia to the Vatican. But the initiative in sending Roman Catholic missions to Abyssinia was taken not by Rome but by Portugal, as an incident in the struggle with the Mussalmans for the command of the trade route to India by the Red Sea. In 1507 Matthew, or Matheus, an Armenian, had been sent as Abyssinian envoy to Portugal to implore Portuguese aid against the Mussalmans. In 1520 an embassy under Don Rodrigo de Lama landed in Abyssinia and remained there several years. Then the Pope sent out Joao Nunez Barreto as Patriarch of the East Indies, with Andre de Oviedo as Bishop of Ethiopia. But Abyssinian opposition to Latin influence proved formidable, and it was not till 1604 that the Negus made his formal submission to the Holy Father. But this submission cost him his life: for a rebellion broke out, in which he was killed. Subsequently the Latin party enjoyed some intermittent successes; but in 1633 the Jesuits were finally driven out and the Ethiopian Church resumed its allegiance to Alexandria. The Abyssinians agree generally with the Copts in religious ritual and practice; but they have their own translation of the Septuagint. They highly revere, if they do not actually adore, saints and angels; but they forbid the use or worship of graven images. Like that kindred sect the Jacobites, they submit to long and rigid fasts. Among them confession and absolution are strictly enforced. This, of course, gives great authority to the clergy, who must marry, but may marry once only. The Abyssinians regard it as a religious duty to make the pilgrimage to Jerusalem.

(To be continued.)

The Suez Canal was impassable for ships for some time on September 17 owing to the grounding of the British steamer Orvieto, bound from London to Brisbane.

A communal riot occurred on September 19 at Najibabad, in the Bijnaur district, United Provinces, which resulted in four persons being killed and 40 injured.

Commander F. O. Champness, who has taken over the command of the Wistaria, one of the two sloops attached to the North American Squadron, recently returned from Athens, where he was gunnery officer with the British Naval Mission to the Greek Navy.

THE WEEK AT HOME.

East Anglia, Saturday.

On Holiday.

Not being one of your modern journalists, I cannot pretend to have been in London, where I am not. These notes then, shall not, as is usual, be about the affairs or talk of London, but from East Anglia, which to me at least is of all places "the pleasantest under the sun." There are here peace, and dignity, and strength. No prettiness, certainly, such as your devotees of the West and the South prate of, exists in East Anglia; nor such undulation as is the delight of wealthy motorists; but, for those who understand, there is a silent beauty here (Constable knew something about it), and there is at times a quickening loveliness in the landscape, which artists of our own generation such as Talmage or Ackermann have memorably seized on.

It is, I think, a fact that those who know East Anglia best also love it best. Consider what such knowledge means. You must know something of agriculture, of geology, or ornithology; of history and of geography; most notably of all, you must if you are to enter into the life of the place, know something of sailing and of the tides. Your true East Anglian can talk of beet-crops with as much fullness as he can talk of Scandinavian birds, of quanting and of brewing; he knows his history, and will explain where existed or were to have landed the Iceni, the Saxons. "Boney," or the Germans! In short his mind is of a piece multi-coloured but whole and sound.

Is there such well-ordered compositeness elsewhere in England? Even visitors to other parts seem to take on their particularities and narrownesses. I know men who, for instance, will talk of what their cars did on Porlock or Counterberry Hills, yet never heard of such proximate places as Lynch or Bossington; you may hear people talk of Worthing but are unaware of Salvington or Cissbury; but what Lowestoft man who does not know Dunwich, or Yarmouth man who does not know Eccles, or Wells man who does not know Stiffkey? It is, therefore, because East Anglia and its inhabitants are well stored, quiet, and slow that those whose duties keep them in the "brazen prison" that is London flee hither as often as they can.

A Lively Rest.

That there are undesirable places along this coast, as along any other, is freely granted: but for the most part they are reached by the railway and are consequently easy to avoid. It is rather to the places along this diminishing shore which six or seven hundred years ago were flourishing that the daily observer of London's "progress" eagerly turns. To sit as I sit now, watching white-sailed boats (though for me I love the brown the better) tack down to Orford, and, beyond them, the silent marshes whence Boadicea went south; or, turning round, to see across the hazy sea the slow cargo boats making south for the Channel or north for (I suppose) Grimsby or Newcastle —this may not be Aristotle's "good life," but it is certainly Robert Bridge's "pleasant dream."

The sun is high, and, unscreened by a single cloud, unceasingly hot; and the wind blows southerly. Scarcely a sea-gull cries; the waves flop low and gently on the strand; the universal stillness is broken, indeed, only by an occasional fog-horn (owing to the haze of the heat) or perhaps a bomb dropped on some distant marsh by the R.A.F. in practice.

Yet how different this spot can be! Turn but the wind round to the north-east, or the clock back a hundred or so years, and the waters and the inland would become as Belloc and Crabbe (both immortally) described them . . .

Being utterly selfish, I hope that the wind may change. Because for those who still would run to see dawn on the mountains, or to cut laurels in the woods, it is a lively holiday that is the best. For those whose conception of

Digitized by Google

rest is to laze sunny hours away on the sand, there is the deck-chair; but to those who know that wind and spray are at least as good as the sun, the half-decker is the thing. Let us sail and sail and sail. Whence and whither? you ask. What does it matter? For the golden journey was not really to Samarkand: the delight of that trip lay in its being begun at evening to the accompaniment of camels' bells. Perhaps that is true of life: that there is no goal. But no reason there, for not making our sojourn something of a journey and adventure too.

The Rest of the World.

In such a mood as this one's ignorance of the transient affairs of the world lies less heavily on one than it might. Quite philosophically one accepts the news that owing to some mishaps on the railway, the London newspapers may not arrive until lunch-time. What is this rest of the world, that we should normally care so much about it? The League of Nations seems very far away, and in any case nobody here minds how "them furriners" arrange themselves or are arranged at the Council. No strike or lock-out, moreover, can ration the supply of wind or salt-water here. No: it is assuredly not in the spirit of Rupert Brooke when he wrote from Germany of Grantchester that one worries about the affairs of the rest of the world.

ALTER EGO.

APPOINTMENTS.

Mr. Robert H. Clive, British Consul-General for Morocco, left Tangier on September 14 for London. He will proceed in October to Persia to take up his new appointment in Teheran, where he is succeeding Sir Percy Loraine as Minister Plenipotentiary.

The King has approved the appointment of Mirza Zaffar Ali to be a Puisne Judge of the High Court of Judicature at Lahore in succession to Mr. Justice Walter Aubin Le Rossignol, whose retirement will take effect from October 4.

The King has approved the appointment of Mr. William Seeds, his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Caracas (Venezuela), to be his Majesty's Envoy Extraordinary and Minister Plenipotentiary to Albania. Mr. Seeds has held various diplomatic appointments, and in 1912 acted as Chargé d'Affaires at the British Legation, Athens.

The King has approved the appointment of Mr. W. E. O'Reilly, Envoy Extraordinary and Minister Plenipotentiary to be Envoy Extraordinary and Minister Plenipotentiary at Caracas. Mr. O'Reilly has served in Belgrade, Cetigne and Sofia, as well as in many other parts of the world

The Marquis of Linlithgow, the chairman, and the following members of the Royal Commission on Agriculture in India, Sir Henry Lawrence, K.C.S.I., Sir Thomas Middleton, K.B.E., C.B., and Sir James Mackenna, C.I.E., are sailing for India by the P. and O. liner Ranpura, which leaves Marseilles to-morrow (September 24). The Commission is expected to assemble at Simla early in October and begin their inquiry.

SINHALESE SELF-TAUGHT

By Don M. de Zilva WICKREMASINGHE, M.A.

Epigraphist to the Ceylon Government.

In Sinhalese and Roman characters, with the English Phonetic Pronunciation. Containing the Sinhalese Alphabet, with transliteration and phonetic signs used; Table of Syllabic characters, Tonic Accent; Classified Vocabularies and Conversations: Outline of Grammar; Terms and Phrases for Travel, Commerce, Planting, Public Works, Fishing and Shooting, &c.; Numerals, Money, Weights and Measures, &c.

Red Cloth, 4s. net; Blue Wrapper, 3s. net. Postage, 3d. extra.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25.

London: E. MARLBOROUGH & CO., Ltd., 51, Old Bailey, E.C.4.

BOOK REVIEW.

RAFFLES OF SINGAPORE.

"RAFFLES, 1781-1826." By R. Coupland, Professor of Colonial History in the University of Oxford. (Oxford University Press. 6s. net.)

Professor Coupland offers us an admirably clear and concise sketch of the life of Stamford Raffles, enthusiast, administrator, naturalist, a big figure in the East, whose foundation of Singapore was no sudden inspiration, but the fruit of continuous hard work and hard study. To ordinary people Singapore, standing at "the sacred doorway of the wide world's trade," is a symbol of the material side of Empire: if they will read this little book, as they ought to read it, they will see in Singapore the material memorial of a great dreamer, one of the band of men, nearly all British, who pioneered the transition from the doctrine of exploitation to the doctrine of trusteeship for the populations of Dependencies. Trusteeship is now enshrined in the world's public law as the Mandatory System, but a hundred odd years ago the idea was struggling for recognition, and it had found no more convincing expression than in Raffles' work in Java and Sumatra, both of them classic ground for the older doctrine. What Raffles tried to do, what he did, how he came into collision with the exploitationists of Holland and England, all these things, and more, are clearly explained by Professor Coupland, who works as an admirer of his hero, but at the same time is careful to let us appreciate the standpoint of the other side. The book is as welcome in form as it is in substance. With no puff on the wrapper, and no irrelevant foreword, we get straight to the text, and, having got there, we are allowed to stay without being distracted by footnotes, an adequate list of authorities being given at the end: altogether, a much better six-shillingsworth than the reviewer has seen for some time.

Messrs. Cassel and Company announce the publication next week of "The Changing East" by J. A. Spender. Mr. Spender who recently returned from a visit to the East compares the conditions in Turkey, Egypt and India, and describes his impressions and the important people whom he met in the course of his travels.

Mr. and Mrs. Philip S. Taylor, with their daughter, left London on September 20 on their return to Cairo.

As the result of an accident near Lahore, India, to a Bristol Fighter of No. 31 Squadron, R.A.F., on September 14, Pilot Officer Dick Culverwell Sherman, the pilot and sole occupant of the aircraft, was killed.

The first public sessions of the Back Bay Inquiry Committee, appointed by the Government of India, was held on September 17 at 6, Richmond Terrace, Whitehall, S.W.1.

Partial elections in Roumania to complete the number of senators in five districts were held on September 12. The Government secured all the seats with large majorities.

A memorandum has been submitted by Greece to the Secretariat-General of the League of Nations, denouncing Turkey as violating the Lausanne Peace Treaty and the Minorities Convention by forcing Greeks in Constantinople to renounce their minority rights.

The Index to Volume XXIX of "THE NEAR EAST AND INDIA" (January 7—June 30, 1926) is now ready and copies will be sent to subscribers on application to the Manager, "THE NEAR EAST AND INDIA," 170 Strand, London, W.C.2

Digitized by Google

PERSONAL AND GENERAL

TO-DAY

September 23, 1926 (New Style.
September 10, 1926 (Old Style).
Rabia 15, 1345 A.H., of the Moslem Calendar.
Tishri 15, 5687 of the Jewish Calendar.

The Aga Khan arried at Aix-les-Bains last week from London.

Sir P. J. Hartog left Marseilles on September 17 in the P. and O. s.s. Mantua for Bombay.

The King of Roumania who returned to Sinaia from Italy on September 12, arrived in Paris on September 16.

Sir Milne and Lady Cheetham who had been staying at Claridge's Hotel, left London last week for Rome.

King Fuad signed a decree on September 18 sanctioning the Egyptian Budget, and Parliament was prorogued on September 20.

Mr. Robert Vaughan Wild, Director-General of direct taxation in the Egyptian Ministry of Finance, has tendered his resignation.

Lord Irwin, Viceroy of India, has telegraphed a hearty welcome, on behalf of India, to the South African delegation on its arrival in India.

The Head Office of the Keren Hayesod (Palestine Foundation Fund) is expected to be transferred from London to Palestine by October 15.

The will of Colonel Cyril Venn Wilton Williamson (late Indian Army), of Broomway, Christchurch, Hants (net personalty £11,523), has been proved at £13,481.

Mr. G. P. Jacomb Hood will leave London on November 1 for India to visit Maharaja Sir Prodyat Tagore, who has commissioned portraits of himself and his family.

The Emir Feisul, second son of King Ibn Saoud, is to arrive this week in England, accompanied by Dr. Dalmondsi, Director of the Hejaz Department of Foreign Affairs.

Among the passengers who left London on September 17 in the P. and O. s.s. Ranpura were General Sir Charles and Lady Monro, for Gibraltar, and Lady Gauntlett for Bombay.

Captain Rignot and Adjutant Rossy flew on September 17 from Paris to Athens, a distance of 1,312 miles, in 10½ hours, an average speed of 125 miles an hour, without an intermediate landing.

The Maharaja of Rajpipla, who leaves the Savoy Hotel this week for India, gave a dinner party at the Hotel on September 15 to celebrate the winning of the Poona Atlantic Stakes by his horse Gardyloo.

Admiral of the Fleet Earl Beatty, First Sea Lord, and Countess Beatty, with a party of guests arrived last week on board their yacht Shelah at the port of Trogir (Trau), Dalmatia, where they will stay for several days.

The King and Queen of Yugoslavia, accompanied by the Crown Prince and the King's brother, Prince Paul, arrived at the Hotel Meurice, Paris, on September 17, for a stay of about a week. The King is consulting specialists before taking his holiday in France.

DOMESTIC ANNOUNCEMENT.

NURSE, Anglo-Indian, wants return India, 4 years in service with, and recommended by, Mrs. Hudson, Belleville, Parkstone Avenue, Parkstone, Dorset.

It is announced that the King and Queen of Roumania will pay an official visit to Italy in October.

Sir Rabindranath Tagore, who has been lecturing in Berlin, was received by President von Hindenburg on September 15.

The Rev. H. Danby, Canon of St. George's, Jerusalem, will deliver three lectures at Sion College, Victoria Embankment, on October 6, 13, and 20, at 11 o'clock. The subject of the lectures, which will be open to all without charge, will be "Some phases, ancient and modern, of the Jewish attitude towards Christianity."

It is announced from New York that the late Mr. Cleveland H. Dodge had given the Near East Relief Fund the whole of the War profits of which he was the unwilling beneficiary when virtual head of the copper industry in the United States. The contributions to the Fund from this source amounted to about fifteen million dollars.

Mr. Arthur Buller Elliott, of Strathaven House, Brent Street, Hendon, N.W., who had accompanied Mr. Cobham on his flight to Australia, and who died during that journey in the R.A.F. Hospital at Makina, Basra, on July 6, from gunshot wounds received while in flight over Mesopotamia, left an intestate estate now valued for probate at £1,453 gross, with net personalty £1,428.

The Rev. Dr. Eric Sutherland Robertson, M.A., LL.D., of St. Andrews, Fife, formerly vice-principal of the Punjab University and Professor of English Literature and Philosophy there, afterwards curate of St. Mark's, Barrow-in-Furness, domestic chaplain to the Bishop of Carlisle, and incumbent of St. John, Windermere, Westmorland, author of several works on the poets and the Bible, left £8,700.

The Emir Ghazi, the young son of King Faisal of Iraq, made his first aeroplane flight at Stag Lane Aerodrome last Thursday. He flew over London in the "Moth" aeroplane which won the King's Cup Air Race, piloted by Major G. de Havilland, and circled over Harrow School. The Emir Ghazi enters Harrow in the Easter term next year, but will stay in the meantime at the house of Mr. T. F. Coade, an assistant master and Old Harrovian, who will coach him for his entry into school life.

Where to stay in the East

YOUTH.

A specially valued correspondent, writing on the subject of an article that appeared in the issue of August 12 on Provincial Governorships, points out that a wrong impression is created by the statement that Indian Civilians can "claim the right to serve on for their full 35 years"; since the implication appeared to be that they could, at the same time, claim continued employment in appointments not inferior to those that they were holding when occasion for the claim arose. One understands that the actual statement about such a claim is technically correct; but, in the case of officers holding the highest appointments, all that they can do in practice is to let it be known that they desire further employment, if a suitable position should be available for which they are considered to be fitted. In the case of the two very distinguished officers named in this connexion, it has been pointed out that the suggestion appeared to be that neither Sir Reginald Craddock nor Sir Harcourt Butler would have been selected as rulers of the Province of Burma if it had not been that they both entered a claim for further employment that should be personally suitable: a proposition that only needs to be stated for it to be discarded as absurd. But, apart from the personal question, it is undoubtedly the fact that, as stated in the article referred to, "the appointment of officers to the highest positions comparatively early in their service has sometimes led to difficulty" in the matter of their disposal when the tenure of such a position terminates; the Government of India is naturally averse from declining to avail itself of the services of very valuable officers even when their continued employment is likely to cause a block in promotion. A "claim" by an officer who is not wanted would be met by the suggestion that he should return to the rank and file of his Province—an obvious absurdity in the case of one who has already governed it, and tantamount to a refusal of the claim. In the case of an officer who is wanted, all that the Government of India can do is to find a suitable appointment: and, in doing so, it is sometimes necessary to overlook the claims of younger men.

The modern tendency is to lay considerable stress on youth: a tendency that has been frequently neglected in India, not only in the matter of civilian officers—where, as suggested above, there is considerable excuse for doing so—but in that of military officers also. One calls to mind the case of an officer commanding an Indian Cavalry Regiment in France: who, when his corps was under orders to return to India, asked whether he had any chance of continued employment in Europe. He was told that, though he had commanded his regiment to the entire satisfaction of the authorities, his age—50 years—made him too old for appointment as a Cavalry Brigadier; so he returned to India. After doing so, he went up to Simla and asked if he had any chance of a Brigade in India. The authority approached looked at him as if he were a lunatic escaped from an asylum, and exclaimed, "Brigade! My dear fellow—you're much too junior." One also remembers the outcry that followed on Lord Minto's appointment of the late Sir George Roos Keppel as Chief Commissioner of the Frontier Province, over the heads of a multitude of seniors: all of whom expressed their intention of resigning immediately, though none of them did so: one of the superseded officers serving on to become, in the course of time, a particularly distinguished Lieutenant-Governor of one of the major Provinces. In the case of the Chief Commissioner of the Frontier Province, however, the difficulty about future employment did not arise; since, in those days, there was no time limit to his tenure. Sir Reginald Craddock had 23 years' service when he was selected for appointment as Chief Commissioner of the Central Provinces, and Sir Harcourt Butler had 20 years' service when he became a Member of the Viceroy's Council: and the impossibility of parting with either, before it became absolutely necessary to do so, placed the Government of India under the necessity of employing both of them for three years beyond the ordinary limit of 35. In the case of both, no one will deny that Government could not have done otherwise without doing itself a grave disservice; but they are two shining exceptions to what certainly ought to be an ordinarily invariable rule.

The War has effectively broken down the insistence on seniority that characterised the military authorities in India, and it is cheering to see how many young soldiers are now holding high positions there; but, though this departure from precedent is all to the good, it presents none of the difficulties that are inseparable from a similar movement on the civil side. A military officer who attains the rank of a general officer, if no suitable employment can be found for him on the termination of his appointment, automatically goes on the unemployed list until such employment offers or until he has completed three years unemployed, when he is obliged to retire. It seems a pity that there is no similar rule in existence among civil officers, at any rate in India: at present, the Government of India has no choice between discarding a high civil official altogether, or putting him into whatever appointment, suitable to his standing, happens to offer itself: with the inevitable result that it sometimes finds itself faced with the necessity of either fitting a square peg into a round hole, or making an appointment that will block promotion. Alternatively, invariable insistence might be made on the 35 years' rule for Indian civilians regardless of the ordinary time limit of tenure of a high appointment; which, though it would sometimes bear hardly on the officers affected, and would—as in the examples quoted—mean a definite, if temporary, loss of power to Government, is yet, in general, a very salutary rule. There are, of course, many individual exceptions; but, on the whole, 35 years' service in India may be looked upon as about the natural limit of an official's usefulness. It does, it is true, seem anomalous that military officers who rise to high rank should be considered still fit to serve well after attaining 60 years of age, while an Indian Civilian should have been reckoned, under the old dispensation, too old at 55—now, owing to the later age at which they enter the service, too

Digitized by Google

old at 58; but, in fact, a military officer who reaches general's rank does so nowadays a good deal younger than he did a few years ago, and the difference is not in practice nearly so wide as it looks. Also, in the much more nearly parallel case of a military civilian, the rule that compels them to retire on attaining the age of 55 is seldom departed from. It is incontestable that the employment of young men in high civil posts in India would be all to the good of the service: and, if present rules make such an ideal difficult of attainment, this is an excellent reason for their alteration.

CURRENT TOPICS.

Mr. N. M. Samarth.

Mr. Samarth, who died in London on September 18, had been handicapped by illness throughout the whole of his short term of service on the India Council. He first came prominently to notice when he accompanied the Indian Moderate deputation, headed by the late Surendranath Banerjea, to England in connexion with the Reforms: and his evidence before the Crewe Committee was generally considered to be an important pronouncement of the views of moderate Indian politicians on the subject. According to the obituary notice in *The Times*, Mr. Samarth was credited with having "originated the important formula of the convention whereby ordinarily, in matters in which the Government of India and the Indian Legislature concur, there should be no interference by the Secretary of State." He served on several important Committees in India, and was a member of the Lee Commission; but, though he did a great deal of sterling work, both in these capacities and as a member of the first Legislative Assembly, his name was not so well known to the Indian public as that of many politicians of much smaller calibre. His death is a further proof of the danger of the English climate to Indians who have passed the prime of life. Less than three months ago, in recording the death of Syed Hossain Bilgrami, the writer of these notes mentioned the fact that he resigned his appointment on the Council when, at the age of 66, he was refused permission to avoid the English winter by returning temporarily to India. In that case, timely resignation prolonged the Syed's life by 17 years: in this case, Mr. Samarth has died at his post. These are only two of a number of similar instances of the difficulty of acclimatisation: and one cannot believe that the duties of a member of the India Council are of a nature that forbid him the privilege of wintering out of England, at any rate if he be an Indian. Should the death of Mr. Samarth lead to a change in the rules in such a direction, the premature close of his useful career will not have come in vain, if it should prove the means of saving valuable lives in future.

The New India Party.

A paragraph in the *Manchester Guardian* says that Messrs. Lajpat Rai and Malaviya are organising a new National Congress party, which will oppose the Swarajists at the general election and will aim at a coalition of Indian Progressives and Independents for the purpose of ending obstruction, working the reforms, and preparing the ground for a constitutional advance at the close of the ten years trial period in 1929. "The framing of the new party is an emphatic announcement that responsible Indian politicians are tired of the miseries in which they have been enmeshed since the struggle between Gandhi and Das, and are determined to make a fresh practical start."

If this were really an accurate presentment of the facts, the position would be much more hopeful than it is. The crucial fact, that the new "National Congress" party is solely Hindu, has been omitted from the preamble: and the conclusion therefore misses the point altogether. The really emphatic announcement is, that Hindu politicians have at last realised that, unless they can form, at the polls, a united Hindu party that is prepared to end obstruction and work the reforms, they will find themselves faced by a united Mohammedan party that is prepared to do the same things. The existing "Congress Party," that is to say the Swarajists, are "enmeshed" in the Hindu-Moslem pact concluded, on paper, by the late Mr. Das: which is, one must suppose, one of the "miseries" referred to in the paragraph. No Hindu candidate who is prepared to make political concessions to the Moslems has any chance of election if opposed by a "hundred per cent." co-religionist: and it is in reliance on this undoubted fact that the new party intends to oppose Hindu Swarajist candidates at the general election. If the latter are returned in any considerable numbers, their pursuance of their declared policy will leave the field clear for Mohammedans to form Ministries: it will only be a solid phalanx of Hindus, ready to undertake the same responsibilities, that can prevent such a result. It is not the "miseries in which they have been enmeshed"—whatever may be intended by that phrase—that count now: it is the fear that the Hindus may find themselves "enmeshed in the misery" of having to sit impotently by while their Mohammedan rivals rule the roost.

The Cinematograph in India.

The news, that a number of Indian Princes are supporting a movement for the introduction of British and Indian films into India, will arouse general satisfaction, except perhaps in the United States. The unlettered Indian is an ardent patron of "the pictures," whenever he gets the chance: and it is not too much to say that the fare ordinarily provided for him at present, which is either highly sensational or erotic, and not infrequently both, has results that are quite disastrous. The "captions" of pictures may be Greek to him; but the language of the pictures themselves is a universal one, and only too often gives him an entirely distorted impression of Western manners and society. To him a white man is an Englishman, and a white woman an Englishwoman; he has no real conception of differences between Western nationalities, and it would be practically impossible to make him understand their existence. Also, there is a great deal of truth in a phrase coined lately by Mr. J. E. Woolacott, the recently retired Editor of the *Pioneer*, that "trade follows the film"; so that the new departure bids fair to be of great assistance, not only to the better understanding of English people by Indians, but to the practical advantage of both.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 2.

Swarajists v. The Others.

The political situation in Bengal is gradually clearing itself, and it must be admitted that the Congress party—the most advanced Extremists who are at liberty—has strengthened its position in the last few weeks. Mr. Sen Gupta, the nominal leader, has been making strenuous efforts to pull things together; but he is not made of the stuff which inspires a following, and the consolidation of his party is due to other causes. For one thing, both the seceders and the opposition are hopelessly divided, and it seems impossible for any two leaders to agree; not only does every leader require a party of his own, but it is also every party for itself and the devil take the hindmost. Then it must be admitted that the prompt show of force, made by the authorities when the last riots broke out, has combined with the rains to dissolve the cohesion of some of the newer political organisations, and Mr. Sen Gupta has succeeded in retaining a larger Mussalman section than anyone thought possible a few weeks ago. But the principal strength of the Party lies in the mentality of the Bengalee. Nearly all the "respectable" Indian papers have become more or less responsivist in tone, that is to say they realise that pro-

Digitized by Google

gress can only be made on constitutional lines; *Forward*, however, sings the same old song, the carol of the Congress—down with Government, down with authority; and *Forward* still has the largest circulation. At the moment, therefore, it looks as though the Swaraj party will again be in power, after the elections; but, although their war-cry is Non-co-operation, no one believes that they will refuse to accept office if they have the opportunity to take it.

Lala Lajpat Rai's Walk-Out.

There is an element of fitness in the fact that the Deputy Leader of the Congress Party should walk out of it as the most effective method of showing his disapproval of the policy which culminated in the walk-outs from the Councils. He holds that the abstention from attendance at the Council meetings has been "more harmful to Hindus than to any other class or community." His secession moves the Extremist Press to columns of comment and explanation: and his manifesto has called forth a serious reply from one of his late colleagues, very different from the chorus of abuse which usually follows an Indian party leader who changes his views. Undoubtedly he will be missed: and, outside Bengal, he has severely shaken the prestige of the Swarajists. This is a more serious thing than the local politicians are inclined to admit; but it would probably be too much to expect them to realise how little they matter in the Indian scheme of things, political or otherwise. While the leaders here spend their time in abusing the "bloated bureaucrats battening on the blood of Bengal," while they draw their allowances and try to plant their relatives into soft jobs, the Bombay political has lobbied protection for steel and is now out for the resurrection of his cotton shares via bounties or a stiff tariff. He is content to leave hysteria, and terrorism, to the Bengali, while he gets away with the goods; how long will it be before the Bengali will wake up to reality?

"Responsible Government."

Incidentally, the Bengali never seems to be able to resist an opportunity of advertising his political irresponsibility. The Swarajists assisting, the Bengal Council two weeks ago passed a Bill taking two recently-added suburbs out of the Municipal Area. The fact, that neither Government, the Corporation, nor any one else materially affected, was previously consulted, was pointed out during the debate: but the Bill was carried by a swinging majority. The matter has been hotly debated since, at three special meetings of the Corporation: and the Mayor's action in voting for the Bill—strictly as the Member for Chittagong, as he was careful to explain—was strongly criticised. No one appears to consider the whole thing as anything more than a legitimate election dodge, and the refusal of the Governor to assent to the Bill is now quietly awaited. Then the chorus will begin at the "thwarting of the will of the people," "contempt for the elected representatives of democracy," and "the mockery of the Reforms." No Indian paper will have the courage to point out that, while the Bill simply removed the areas from the jurisdiction of the Calcutta Corporation, it left them without any local administration whatever! This was quite probably deliberate, so as doubly to ensure the refusal of the Governor's assent. And so the farce continues.

Men and Things.

A large congregation went to the Cathedral on Sunday to see if the Bishop, who is a very human man, would notice the complaints of those correspondents to the Press during the week who asked for a different kind of sermon. He strongly defended his sermon on the Pharisee and the Publican, the first he preached on his recent return from home: and claimed that an appreciation of the other man's point of view would do much to settle the social problems of the day. Welcome back, Sir, and carry on.

There is no sign of a *rapprochement* between Hindus and Moslems. A few Mohammedans are still remaining in the Congress Party; but the politicals generally are grouping themselves strictly on religious lines, and a new and strong Moslem Party is being organised. The Legislative Assembly yesterday devoted five hours to debating communal unrest.

On two days running this week there was a high "bore" in the river: and, on the second occasion, no fewer than eight steamers broke from their moorings. Large areas of the Maidan were completely flooded for some hours.

The mail was two days late this week, "thanks to the coal strike," said the P. and O.; but an unkind correspondent has pointed out that the mail steamer was twenty years old, while the new boats are running pleasure cruises in Norway. Why not a time clause again?

Sixty thousand slaves are being freed in Nepal, whose Government is paying compensation to the late owners amounting to nearly £300,000. While the highest payment for female slaves was £7 10s. a head, mere men were round about £5 each.

The Deputy Mayor took his place at the meeting of the Calcutta Corporation yesterday, for the first time since the Committee was appointed to inquire into his conduct. Practically the whole of the members left the Chamber at once: and the meeting had to be adjourned for want of a quorum.

The Amendment Bill to the Criminal Procedure Code, which enables Government to seize any copy of a newspaper, book or document which contains writing calculated to promote feelings of enmity or hatred between different classes of His Majesty's subjects, awaits the assent of the Viceroy, having passed both Houses in the Central Legislature. It has been the subject of most adverse comment by all sections of the Press.

The Monsoon is really doing its duty at last, there having been over an inch of rain almost every day since last mail. The weather is very steamy, and colds and fevers are fashionable. The Courts have risen, and everyone who can is planning to get away for a spell.

The Trivial Round.

Racing last Saturday was most attractive; a long card, excellent finishes including a dead heat, and a fair distribution of the spoils combined with a reasonably cool and sunny afternoon to make a day worth remembering.

We note your orgy of sport, with Channel swimmers putting up daily records, and summer Soccer to keep the strikers from boredom. Good for Lancashire to be top again, and we were all delighted to hear of Rhodes' show in that fourth innings. Three hundred and sixteen for Hobbs also; what a wonder he is.

Rugger goes better than ever here. We have never had finer or harder games, or so many players, since the War. The 82nd Regiment (Prince of Wales' Volunteers), the two Caclutta teams and the Bengal Nagpur Railway have the best records to date.

The School of Music, on this occasion with the aid of the Cathedral Choir, gave another chamber concert at the Saturday Club on Monday, and the ball-room was full. The performances were very good, particularly the choir work and a Leo quartette for violins. The amateur section of the Symphony Orchestra is already at work for next season.

Another Revue Company is at the Empire, and the picture houses are still showing "Sumptuous Photoplays, Magnificently Produced," mostly from the U.S.A. They are still dancing sixteen annas at Firpo's; but it is much cooler at the Saturday Club, where the dinner dances have very much caught on.

Markets.

The jute market during the past week has been conspicuously firm, mainly owing to the slow rate at which jute is coming on to the market; in spite of this, a big crop appears almost inevitable: and, in these circumstances, the present high rates are unlikely to be maintained for any considerable time further. There has been a good demand for early gunnies, and the inquiry for later delivery shows signs of expansion. The piece-goods market continues to be in a neglected state, and the

Digitized by Google

expected Poojah demand at present shows no signs of materialising. Tea, in common with the London market, is weaker: and, at the sale here, all but the best descriptions were anything between half an anna and one anna lower. No definite reason can be ascribed for this reaction, but it is expected to be only temporary; even so, the present prices may be considered satisfactory and remunerative to most of those interested in the industry.

On the Stock Exchange, a rather fuller week has passed. The more speculative jute shares have stood out; but, generally speaking, prices are little above those quoted last week. Some of the cheaper coal shares have come in for attention, and the demand for shares generally in this section continues to be well maintained. A few tea shares have changed hands, and these transactions have been mostly at slightly lower rates; rubbers have been almost entirely neglected. A number of dealings in Government Securities have been put through, but prices remain unchanged.

The Exchange market closed rather quieter at the end of last week; but, with few bills showing at the lower rate, a steadier tendency has set in. Ready T.T. is quoted at 1s. 5 31-32d. Money is unchanged, and is nominally quoted at ½ per cent. for call and short notice.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, September 3.

The Changing East.

While waiting for the findings of the Back Bay Commission, it is rather interesting to look back on the changes that have taken place in Bombay topography in the twenty-five years that constitute the generation of an Englishman in India.

Among the countless respects in which the East is the exact reverse of the West is this: that in England it is the countryside that changes, while in India it is the town. A man may live for a lifetime in the heart of London and, except for a few architectural modifications, like the rebuilding of Kingsway and the abolition of Swan and Edgar's corner, there is no change in his surroundings. He must go to the rapidly growing suburbs, or the hills of Surrey or to the Bungalow Town that stretches almost without a break from the North Foreland to Littlehampton, to see how quickly the face of England is being altered.

In India it is very different: a railway passenger, when he has once got clear of the island of Bombay, can hardly see a single hut between Ghat Kopar and Poona that was not there twenty-five years ago. There may be an additional siding at Kalyan; there is the new attempt to make an industrial settlement a few miles further on: and there may be a few more cottages at Khandala and Lonavli at the top of the Ghauts. But that is literally all: there is no development in the villages, no more enclosed land, and no appreciable change in the proportions of swamp, grass-land and jungle.

It is in the cities that the change has taken place, and that change is due both to the enormous increase of English residents, and to the growth of wealth among Parsees, Hindus and Mohammedans.

Twenty-five years ago the Apollo Basin had just been filled in, and the Taj Mahal Hotel was rising on its site. Behind it, between the Colaba causeway and the railway line, there was a broad expanse of maidan, where the young men of Bombay used to live in tents throughout the cold weather. There was no Cuffe Parade: the sea washed right up to the walls of Colaba Station, till the reclamation of that small area was begun in 1903. West of Charni Road station, the triangle enclosed by the sea, the railway and Malabar Hill, which is now covered with residences and motor shops, was a feverish area of native huts and palm trees: and Malabar and Cumballa Hills were sparsely dotted with old-fashioned bungalows in large compounds. The change began with the building of Cuffe Parade, to provide European houses and flats to meet a demand which was beginning to arise in and about 1910; but, up to that time, I very much doubt if there was ever any difficulty in finding suitable accommodation for those who required it. Bungalows with large compounds were still available on Malabar Hill at Rs.200 a month, and everyone seemed to fit in quite comfortably.

As the War went on, it became obvious that there was a good deal of shortage of building space. Though the European commercial community diminished, there was a very large floating population of officers for whom room had to be found. By 1917 the mill boom had begun, and Indians of all communities began to look for residences on the European pattern. A good many blocks of flats were put up on Malabar Hill and elsewhere: and for a time the difficulty was surmounted.

But suddenly, on the conclusion of the War, there was an enormous influx of Englishmen, very many of them married men, into Bombay: and those who engaged them—and there were many who came out entirely on their own—found that the difficulty was not so much to know what to offer as a fair living wage, but to provide them with any accommodation at all. The very few parcels of land that came into the market changed hands at enormous prices. Huge blocks of flats sprang up on Malabar Hill, at Chowpatti and the newly reclaimed Ballard Estate: and it was the obvious congestion that made Government take upon themselves the development of Bombay, with mill chawls and cottage residences to the North of the Island, and the reclamation of Back Bay to the South.

In twenty-five years, therefore, the whole of the appearance of the centre of Bombay has been altered: and it is hardly too much to say that, where there was room for one European then, there is room for twenty to-day.

Whether Bombay can continue to support enough men of substance to occupy the available accommodation, let alone to populate the area of reclamation of Back Bay, remains to be seen. There is certainly a tendency to consider the city overbuilt to-day: and we can only hope that the normal growth of time will redress the balance.

Obituary.

The week has seen the death in London of two very well-known old Bombay residents. Mr. L. T. W. Forrest, who passed away at the age of 79 years, was one of the founders of the firm of Killick Nixon and Co., which has given to Bombay so many distinguished and public-spirited men. He continued his work in the London office of Forrest Nixon and Co. till the very end of his long life. Dr. A. Powell came to us immediately after the South African War, where he served in Lumsden's Horse, having previously been a very well-known figure in the Assam tea gardens. He held the office of Police Surgeon in Bombay for over twenty years, during which time he accumulated a very unusually wide range of friends in every possible circle in Bombay. Throughout that time he lived at the Byculla Club, a large part of which he ran as a Military Hospital in the War, in a circle of friends to whom his vigorous comments on his surroundings were a constant delight: and, when he retired to England, he maintained his connexion with Bombay from his consulting room in Harley Street and his chair in the Oriental Club.

THE TAXATION INQUIRY COMMITTEE.

On August 19 a Government resolution was moved in the Legislative Assembly, inviting the House to "recommend to the Governor-General in Council that he be pleased to take into consideration the report of the Taxation Inquiry Committee." The mover explained that this rather unusual procedure had been taken because the Government of India were not at present in a position to

Digitized by Google

announce decisions on the report, since it would first be necessary to consult Provincial Governments; but it was hoped that the Legislative Assembly would express its views so that, when the time came for decisions to be taken, Government would be in possession of those views as well as of those expressed by Provincial Governments and those contained in the report itself. The Assembly, however, refused to be drawn: and contented itself with an attitude that was aptly described by an educational legislator as comparable to the behaviour of a student of his acquaintance who, when asked to express his opinions on a particular matter, replied that the examiner should first express his own view, "and then I will say whether I agree or disagree with you." One prominent Indian member of the Assembly said, "My advice is to close up this book. Let us think no more of it until such time as the Government comes forward with a definite proposal": and this was the view accepted by the majority, a motion for the adjournment of the debate *sine die* being carried without a division.

The speech of Sir Basil Blackett, who introduced the motion, contained much important information. He said that in 1913-14 Land Revenue contributed 35.42 per cent. of the total revenue of India, Customs 24.30 and Income Tax 12.30 per cent.; while, since Land Revenue had ceased to be a central head after the introduction of the Reforms, the estimate for the central revenue in 1926-27 showed 62.4 per cent. from Customs, 23 per cent. from Income Tax and 9.3 per cent. from Salt. He declared that the proportion that the yield from Customs bore to the total revenue was a matter of some concern, and that he personally agreed with the view of the Committee that it would be preferable if direct taxation contributed a larger share. Incidentally, he stated that the incidence of taxation per head in India, which had been only Rs. 4/2 in 1902-03, and Rs. 5/8 in 1913, had in 1922-23 risen to Rs. 11/1. He felt that it was not sufficiently realised that the Reforms meant a revolutionary change in fiscal relations between the Central and Provincial Governments, as the Provinces had been converted from subordinate agents into separate Governments forming constitutent parts of the Indian Commonwealth, whose federal functions were entrusted to the Central Government. India, like the United States and in contradiction with Europe, had the inestimable advantage of forming a single economic unit, without any internal customs barriers except a few still existing in some of the Indian Native States, and "the provoking interference with commerce imposed by octroi and transit duties": and the removal of the former, and the abolition of the latter, were matters of great importance that called for early consideration. A serious defect brought out by the Committee was the tendency, on the part of municipalities and district boards, to place undue reliance on subventions from Provincial revenues: traceable, in most cases, to the unwillingness of many of them to impose adequate taxation and to collect it punctually and vigilantly. Another was the fact that local bodies preferred the least desirable forms of taxation, such as octroi, transit duties and terminal taxes, to direct taxation. While the Central Government might reasonably hope, before long, to take up the question of a reduction in taxation, the problem before the Provincial Governments was not so much that of reduction as the improvement of its administration and the better adjustment of its incidence.

We have all heard often of the desirability of the removal of "Likin" in China, though there are probably not many of us who have a very clear idea of what it means: and it comes as a bit of a shock to realise that India suffers from a similar disability on a small scale; for such imposts as octroi certainly do bear a family resemblance to the multitudinous internal, though not always legal, duties exacted in the interior of China. If, as seems to be the case from Sir Basil Blackett's speech, a serious attempt is in contemplation to get rid altogether of these vexatious local interferences with trade, and to bring about real and complete tariff unity in India, the prospect is a cheering one. India, no doubt, can never hope to rival the prosperity of the United States, in spite of the vastness of her population, nearly three times that of the U.S.A.; but at least the completion of the task of making her into a true tariff unit would give the greatest possible impetus to trade by removing a notable barrier, though one that is apt to be overlooked at present, to its expansion.

FUTURE COMMUNICATIONS WITH AFGHANISTAN.

(By LIEUT.-GENERAL SIR GEORGE MACMUNN, K.C.B., K.C.S.I., D.S.O.)

The treaty with Afghanistan, which closed the episode of that country's unexpected and unwarranted attempt to exploit in the name of Islam the unrest in British India, closed also once and for all the chapter of the closed door. For long, wisely or unwisely, it had been held to suit British policy to allow the Afghans to stew in their own juice, because of a belief that the less they saw of us the more they liked us: and there was no doubt reason for that belief. From the days of the Afghan war of 1878, no Briton penetrated Afghanistan, officially or otherwise, except on the rare occasions of some very special mission or some illness in the Amir's palace which needed a British doctor. To this, however, we may admit the exceptions of Sir Salter Pyne of pious memory, Acquin Martin, Doctor Lilias Hamilton and one or two other special employees. For all practical purposes, however, the Afghanistan to which, in the forties, British ladies and children and pianos had gone as a matter of daily routine, and in which young officers had ridden about in pairs to distant race meetings and the like, was a *terra incognita*. No doubt, for the time being, it saved a world of trouble. But it did not make for progress, trade or civilisation. The Afghan merchant loudly proclaimed his dissatisfaction. It gave him infinitely more trouble to get from Kabul to Peshawar than from Peshawar to Western Australia or wherever the spirit of commerce might move him. To get from Kandahar to Chaman, short and open though the route was, took longer than from Chaman to Calcutta: and trade emphatically voted at all times for the lifting of the *purdah*. But, with the Amir turned King, with all obligations to consult the British gone, with all liabilities of the British to protect him from the Russian abrogated, with Afghan embassies in Europe and with European agents in Kabul and, shade of Cavagnari! a British Minister in Kabul too, it was high time to see to those trade routes, and to do something to counteract that Russian penetration which has been so active.

The opening of the broad gauge railway through the Khyber has whetted the desire for better communication: and, though the larger portion of the caravans still come down into Peshawar, the merchants have realised the advantage of even that bit off the road distance for more valuable commodities. The contracts for lorry transport, and the use of cars to get to Kabul, have brought with them a demand for a really well graded road, since a railway is economically out of the question, and there is now every possibility of such a road being made; for the present track, though negotiable, is by no means good, and a new one is badly wanted. It seems probable that this may be built under the advice of British engineers, if not under their actual supervision. From Kabul to Kandahar a fairly good track for cars exists, regularly used by the King and his officials. What trade now wants is that the railway from India should be brought up the hundred odd miles that remain between Chaman and Kandahar. The fruit traffic alone, which joins the rail at Chaman from the orchards of the Helmund valley, should make the line worth while. Strategically it is badly needed; for, treaty or no treaty, it is the destiny of Great Britain to prevent the integrity of Afghanistan being interfered with by Russia. A break of gauge would be undesirable, but Afghan capital and credits are not ample: and a modern 2 ft. 6 in. gauge, while costing little, has a very considerable capacity if made with the

Digitized by Google

weight of metals and the rolling stock as used in some of the newer feeder lines in India.

In view of the penetration by Russian agents and Russian engineers which is going on from the north, it is high time that British interests should be developed from the south. To those who are used to the Afghan of even a dozen years ago, the Afghan official of to-day, in so far as his outer appearance goes, will come as a surprise. Beardless mustachio'd gentlemen of the Balkan type, with Eastern European uniforms, will be found wearing a *kalpak* of some kind, and equipped with such Western etceteras as wrist watches. To approach the ways of Europe is beginning to be as fashionable as it is in Anatolia, despite the opposition of the mullahs: and we should see to it that some of the ways are those of Western Europe. The entirely propaganda-made Islamic dislike of Great Britain is happily passing: and, with the dismissal and disowning of the Caliph and the House of Othman by Turkey, a different atmosphere is slowly spreading among the more serious-minded Moslems both of Kabul and India. With the desire for better communication with India, and the general atmosphere of sympathy and good will which the British Minister at Kabul has succeeded in engendering, there is no reason why the relationship between India and Afghanistan should not develop on most friendly lines. The King, while of little experience, has a great desire to be modern and effective: and, so long as he does not allow himself to be the catspaw of Bolshevik Russia in a campaign against the British in India, he has the guarantee of all assistance he may require, assistance which has been freely at his disposal during the last four or five years. But, whether the opening of Afghanistan and the approaches to the Indus be strategically wise or not, certain it is that military requirements and precautions can never, in these modern times, persist for long in blocking the requirements of progress and facilities for trade. At best it may hope to bend them slightly into the least harmful channels.

INDIA OFFICE COMMUNIQUE.

Agricultural Situation in India.

In India at the end of August the Monsoon was generally sufficient except in the dry zones of Upper Burma and two districts of Lower Burma, a few districts of the United Provinces and in parts of the North-West Frontier Province, Baluchistan and the Punjab States. In Bengal, owing to heavy rains, floods occurred in three sub-divisions of the Midnapore district, affecting about 500 square miles. There were breaches in the embankments of two rivers, and much damage was caused to standing crops and stored stocks. No loss of life was reported. Latest reports indicate the rapid subsidence of the flood waters. Relief measures have been undertaken in the areas affected, and funds provided for gratuitous relief. Floods also occurred in parts of the Punjab, Orissa and in various parts of Lower Burma, where crops were damaged considerably and three deaths are reported so far. Recent reports state that the floods are subsiding. A break in the rains is urgently required in the cotton tracts of the Central Provinces. Some damage was done to crops by insects in parts of Bengal and the Punjab.

The condition of standing crops is generally fair. Food supplies are adequate. Fodder and water are sufficient, except in parts of Madras. The condition of cattle is good, except in several parts of Bengal, where cattle disease prevails. In Assam the prospects of rice crops, tea and sugar cane are good. In Bengal, because of the abundance of water for steeping jute, clean fibre is expected; but, owing to the late monsoon, jute semi-looper and hairy caterpillars caused damage in deshi and tosha jute tracts in the Presidency Division, and the districts of Burdwan, Rajshahi, Bogra and Pabna. The extent of the damage at present is estimated at 20 per cent. in these areas.

In Sind the price of food grains is still high, but shows a tendency to fall. In Bengal the price of rice is rising gradually, whilst that of jute shows a downward tendency. In Bihar and Orissa the price of rice is higher than it was last year. In the Punjab the price of wheat is lower than last year. In Burma prices are for the most part higher than last year. They are steady in Bombay, excluding Sind, in Assam, Berar, Central India and Ajmer-Merwara, where scarcity works have been closed, and in Rajputana except in three States where a fall is reported. They are fluctuating elsewhere. On the whole the agricultural outlook is satisfactory.

THE INDIAN MAIL.

Steamer Fares.

It appears, from a question asked by a European member of the Legislative Assembly last month, that "certain steamship companies" have recently increased their fares between England and India by about 5 per cent. The inquirer wanted to know whether the Government of India "accept commission or rebate from the steamship companies or their agents on passages granted to Government servants under the Lee Commission's report": and went on to say that it is generally believed that they do, and that the explanation of the rise in fares to the general public is due to this fact. The official reply was, that the Government were unable to give any information in answer to the question: and that the deduction, drawn from the suggestion made in it, seemed "very far fetched": in any case, the Government did not propose to take any action in the matter.

It may, of course, be assumed that the refusal of information in reply to the specific inquiry is tantamount to an admission of the facts suggested by it: which, if so, merely amounts to admitting the continued existence of a contract rate for Government passages. Thirty years ago, when the first-class P. and O. fare to London was £55, officers of the British Service, proceeding home on leave on medical certificate, often received, in place of the free passage to which they were entitled, a cash payment of the Government contract rate with the P. and O.; which, if memory serves, was 550 rupees. With this, they were left to make their own arrangements for passage; which they generally did by travelling first-class on one of the cheaper lines, or second-class by P. and O. Doubtless a similar arrangement with the steamship companies is still in force: and, if so, there seems nothing "far fetched" in the suggestion that the large increase in the number of Government passages, entailed by acceptance of the Lee Commission's recommendation in favour of the grant of free passages to officers of the Indian services, has led the steamship companies to increase their ordinary fares. We are regularly told, every year, that the P. and O. carries its Indian passenger traffic at a loss: and it is obvious that a marked rise in the number of passengers carried at a reduced rate must necessarily increase the loss. Inquiry shows that the actual increase in fares is £4 on a first-class passage, and £2 on a second-class: and that there has been no corresponding increase in the Australian fares.

In the "bad old days," when the P. and O. and the Orient Line were in competition for the Australian traffic, the £55 which one had to pay to travel 6570 miles first-class to Bombay was enough to land an Australian passenger at Sydney, 11,630 miles from London, also first-class. Recent years, however, which have seen the conclusion of a working agreement between the P. and O. and Orient lines, have reduced the sentimental grievance of the passenger to India; since, for a voyage 77 per cent. longer, the Australian passenger then had to pay, on the average of the three grades of first-class, 49 per cent. more; which, by the recent increase of the Indian fares, has now been reduced to 48 per cent. If there is any grievance nowadays, it is therefore felt by the Australian passenger; who, on the assumption that the Indian fares are economic, has to pay only 29 per cent. less than he ought, instead of 77 per cent. as in the old days.

The Man-eating Taint.

A series of articles on man-eating tigers, from the pen of a well-known big game hunter, is appearing in the *Pioneer*. In one of these, the author discusses the reasons that induce a tiger so far to overcome its natural fear of man as to take to man-eating. The popular belief that man-eaters are always old, diseased or crippled animals, physically incapable of capturing their natural prey, is certainly wrong; but it seems likely that the taint is hereditary. A case that occurred, in one's own experience, in the Naini Tal Terai, and that is doubtless by no means singular, may offer a possible solution. Two Indian wood-cutters, passing along a path through the jungle, were subjected to an unprovoked attack by a tigress with two small cubs: one of the men was badly mauled, and the other managed to climb a tree. The wounded man crawled to a neighbouring village, and reported what had happened: and word was sent to the Superintendent, who happened to be in camp near by, and who went out on an elephant and rescued the treed man. The latter said that the tigress lay in a thick thorn bush close to his tree, and took no notice of him so long as he stayed where he was; but the moment that he made a motion to descend, in the hope that the coast was clear, she came out and warned him back. The elephant arrived just as it was growing dark: and, though the tigress could be heard growling in the bushes, she could not be located. The instinct to protect their young from fancied danger is strong in all animals—the writer was once literally obliged actively to defend himself against attack by a hen, which was leading a brood of chickens along a public road at the entrance to a Kashmir village. If it had so happened that the mauled man had been killed, it is most probable that the tigress would have given her cubs a lesson in meat-eating off his corpse: and this might well have impressed on them the idea that man makes a desirable meal, with disastrous results later on.

Another possible reason is that suggested by the author as, at any rate in some cases, being due to tigers having, in famine years, acquired the habit from preying on dead or dying victims of famine. Here again one can quote what is perhaps an analogous case from one's own experience. In 1918, the year of the great influenza epidemic, a shooting trip on the Ganges was rendered very unpleasant by the presence of a multitude of corpses in and along the banks of the river. In ordinary years, the Hindu dead are burned on the bank and their ashes committed to the sacred waters; but, on this occasion, the dead were so many that, in many cases, the most that could be done was to go through the form of applying fire and then pushing the bodies into the stream. At every bend in the river, corpses were stranded on the sand banks—on one small bank there were no less than 54, where the river made a specially sharp bend. An added horror was the presence of packs of village dogs, which fought over the corpses. Ordinarily, the Indian village dog is the most craven of cowards; but, on this occasion, it was quite different—when approached, they savagely stood their ground and had, for the time being, entirely lost their fear of man, even of a European armed with a gun.

Indian Seaports.

It is announced that, during the current year, the major Indian ports will be transferred from the control of the Provincial Governments to that of the Central Government; and that a special division of the Commerce Department will be constituted to deal with them, on the same lines as the Railway Board now deals with the Indian railways. It is interesting to note that Vizagapatam, the new port on the east coast of India, about midway between Calcutta and Madras, now in course of development, is included among the major ports. Reference to the progress of Vizagapatam has several times been made, comparatively recently, in these notes, particularly as regards its connexion with the Bengal Nagpur Railway, which is chiefly interested in and responsible for its development. The other major ports are Calcutta, Bombay, Madras, Rangoon and Karachi. Chittagong is not yet included, but its inclusion is expected to occur before long: and no one will be surprised if Cochin and Tuticorin follow suit in the comparatively near future. Ambitious schemes of development are in progress at all the ports mentioned: to which their transfer to the Central Government, and the creation of a special department to look after them, may be expected to provide an added stimulus.

INDIAN EXCHANGE.

London, September 20

With Rupee Exchange practically a fixture, we find less to chronicle and the past week has been singularly devoid of interest.

Rates in Calcutta and Bombay have been easier and the chances of 1s. 6d. T.T. have disappeared for the moment. The best open quotation available is 1s. 5 15-16d. in Calcutta, while Bombay is 1-32nd lower at 1s. 5 29-32d. for ready and near delivery. Some inter-Bank transactions are reported in Bombay at 1s. 5 15-16d. for cash, but the rate is not easily obtainable.

Exports have been dull and commercial bills very scarce. Good paper has been done for two or three mails at 1s. 6¼d. three months' sight and nothing has been placed under this figure.

Forward rates are quieter. T.T. for December has been settled at 1s. 6 3-32d. and January/February is still quoted 1s. 6⅛d.

In this market there has been only a moderate inquiry by remitters. Last week some amounts were fixed at 1s. 6d. T.T. for Calcutta, but to-day 1-32nd lower is practicable, and business for this and next week has been booked at 1s. 5 31-32d.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning.

Improving Conditions in Bulgaria.

Until very recently we have been receiving most unfavourable reports with regard to the economic situation in Bulgaria, and it is eminently satisfactory to learn that a distinct improvement is now in evidence. Among the country's troubles have been over-production and stagnation in the export trade. Our Sofia Correspondent, in a review of the situation this week, points out that the measures taken to remedy this position, coupled with a good harvest, have brought about a marked change and, as he puts it, "the horizon is clearing." An important factor in the situation is the financial assistance that is now forthcoming from abroad, and the moral effect of this in restoring confidence is no doubt pronounced. The Refugee Loan, the subject of such long drawn out negotiations before a satisfactory issue was reached, and the issue of which should not be long delayed, should mean much to the country in enabling the settlement on the land of a large body of people who under existing conditions were bound to present elements of difficulty to the country, but who will henceforth be able to make an increasingly important contribution to the country's industry.

The Sudan in 1925.

Following closely on the issue of the annual report of the Central Economic Board of the Sudan Government comes Lord Lloyd's report on the Sudan in 1925. This report is of special interest because 1925 is a landmark in the history of the Sudan owing to the completion of the Makwar Dam. One aspect of the development in the Gezira is specially emphasised. While the rains were generally poor and the floods of the Gash and Baraka rivers were much below the average, it is pointed out that "the existence of 80,000 feddans of excellent cotton in the Gezira will prevent any general depression of trade and will supply just that element of stability in the economic position which . . . . is so necessary for the country at the present stage of its development. Moreover, a third of the cultivable area is devoted to the production of food and fodder crops and guarantees the native from any danger of scarcity." The importance of this consideration in a year when there may be shortcomings in rain and flood cultivation is obvious.

Cotton Growing.

There are some interesting comments in the report on the progress in regard to rain-grown cotton in the southern provinces. This, it is stated, is satisfactory up to the present, though very naturally emphasis is laid on the point that progress is bound to be slow owing to the backward nature of the population and the transport problem. Ginning factories are being erected in various places, thus making it possible to deal with increasing quantities of cotton, but it is pointed out that there will be a difficult stage to overcome in the future "between the point where the limit of the resources of local transport is reached and that at which railway construction would be justified." It is believed that mechanical transport will not provide an entirely satisfactory solution. As regards the future of cotton growing generally it is felt that the prospects are favourable provided development can proceed steadily and prices of cotton do not fall much below the present level.

Palestine's Trade.

The most recent figures published for the trade of Palestine, those for the June quarter, are somewhat disappointing. The value of the imports was £E1,616,783 as compared with £E1,655,741 for the corresponding period of 1925, while the value of the exports showed a slight increase at £E279,203 as against £E275,630. Both as regards imports and exports there was a marked decrease as compared with the March quarter, the fall in the case of the latter being as much as £E110,615. It has to be remembered, of course, that Palestine is in a rather singular position as regards trade development, for it lacks the resources and potentialities of regions like the Sudan, and progress must be dependent in the main on the growth of small industries, but it might have been thought that the energy and capital devoted to the country in the last few years would by now have had a more positive effect on the trade returns.

Another Turkish Experiment.

The exchange has been the subject of the latest of the Turkish experiments which have intrigued Europe in the last few years and have set people wondering as to the ultimate outcome when a State is run apparently on a series of startlingly sudden brain-waves. For some time the Turkish lira has been showing signs of weakness, and with a view to bringing about an improvement the authorities prohibited dealings on the Bourse over the rate of 910 per pound sterling, believing that in this way it is possible to regulate exchange. The attempt was short-lived, and exchange is again free, and the lira is now round about 927½! It was suggested in a recent issue of THE NEAR EAST AND INDIA that Turkey needs an adviser as to the effect of the measures she takes on foreign opinion. A case could also be made out for the appointment of a financial adviser.

BULGARIAN NOTES.

(From Our Own Correspondent.)

Sofia, September 10.

Economic Conditions.

While Bulgaria's political situation is steadily improving both internally and externally, her economic conditions during the past few months have left much to be desired. The country is suffering from overproduction in many directions, and particularly in connexion with the chief article of export, tobacco. The stagnation in the sale of tobacco which began last year coincided with various other circumstances equally unfortunate to Bulgarian economy, which is essentially agricultural; the general stoppage of sugar refineries in 1925 deprived the grower of the profits which normally accrue to him from the cultivation of sugar beet; and whilst the cereal harvest was good, the low rate of exchange prevented him from deriving all the benefit that he might expect. Consequently depression extended throughout the whole of the retail trade, which depends largely for its custom on the peasant.

In order to remedy this state of affairs measures were taken towards the end of December to facilitate the export of tobacco; export taxes which weighed heavily on the commodity were removed. Then in March, with a view both to encouraging exports and to reinforcing protection of national industry against foreign competition, customs tariffs were revised. These measures speedily lessened the ill-effects of the crisis. The favourable conditions anticipated for the 1926 harvest brought the end in sight. The fears entertained regarding the stability of the lev are now remote. The National Bank will doubtless shortly reconstitute, in favour of expected exports, its holding of foreign exchange which has allowed it for the past 2½ years to keep the rate of the lev stable without any exterior help.

The horizon is clearing. From various sides foreign capital, of which Bulgaria stands in so much need and of which she has been deprived during the past twelve years, is beginning to come to her again, as before the wars; English capital with the Refugee Loan and with the concession for the export of pork, German and Austrian capital with the concession for forest exploitation. This additional capital will strengthen exchange and help the country to resume its progress, interrupted for practically 15 years, towards the complete utilisation of all its natural resources.

Foreign Trade.

Official statistics for 1925 show an adverse trade balance of 1,600 million leva. Even if allowance be made for the fact that exports are generally underestimated, it is certain that the value of imports has exceeded that of exports. On the other hand the position was reversed for the first four months of 1926. In spite of the progress made in the Bulgarian textile industry, especially by the Silven and Gabrovo manufacturers, textiles take the chief place among imported articles, the main sources of supply being Italian and English.

Bulgaria buys all her metal goods and machinery abroad. Copper, produced by the Plakalnitza mine, is exported raw. The metallurgical industry scarcely exists in Bulgaria. The needs of the country, however, are considerable and will doubtless increase with the large works projected or in course of construction, e.g., the building of new railways, electric power stations, water supplies, forest exploitation, etc., and with the necessary popularising of agricultural machinery, motor cars, bicycles, etc., all articles with which Bulgaria is still insufficiently provided.

Tobacco which now constitutes Bulgaria's principal article of export, has suffered for the past year from an absence of sales. Statistics do not convey an exact account of this situation, in so far as they record exports of tobacco which resulted from sales previously concluded, or were merely despatches under consignment to Hamburg, Dresden, Trieste or such other big markets of Central Europe. This non-sale crisis is due to several causes: first of all to the increase of import taxes on raw tobacco imposed by Germany, which, until last year, was the biggest buyer of Bulgarian tobacco, and secondly to competition from Turkish and Greek tobaccos. This competition, which was to be expected when Anatolia and Greece should have recovered their full powers of production, after the establishment of peace, has made itself felt very severely for the last year. Although Bulgarian production has steadily decreased since 1923, when it reached 45 million kgs., falling to 40 million kgs. in 1924 and to about 30 million in 1925, production is, nevertheless, in excess of market needs. For the past year prices have fallen considerably. The big tobacco firms have had to restrict their purchases from the producers; some of them have completely suspended purchasing since last harvest.

Although the sale of tobacco was helped at the end of December 1925 by the raising of the export taxes, there still remains an amount of 35 to 40 million kgs for disposal; in this total is included a balance of 15 million kgs. from the 1923 and 1924 crops; the remainder constitutes the 1925 crop, which comes on the market as from October 1926, the major portion of which appears to be still unsold. It may be noted that as local consumption absorbs about 5 million kgs. the balance of the 1925 crop for export is thus reduced to about 25 million kgs.

The 1926 crop is reported to be even smaller than those preceding; it is estimated, at a maximum, at 20 million kgs. The areas planted with tobacco have been very restricted, especially in Northern Bulgaria, which produces practically only inferior qualities. This will have a salutary effect both in safeguarding the reputation of Bulgarian tobacco and in reducing the quantity of overproduction. If the Anatolian crop is small, as may be expected owing to the dry spring, the disposal of Bulgaria's surplus tobacco will be greatly facilitated.

The export of eggs prospers, although it has not yet reached the pre-War figures (14,600 tons in 1911). Bulgarian eggs are exported to a large extent to Switzerland, via Buchs, whence they are sent to Germany, England, etc. In 1925, owing to the customs dispute between Germany and Poland, Bulgarian eggs were imported into Germany without Polish competition. In 1926 they have once again to contend with this competition; in addition it seems that the English strike is likely to affect the normal export of Bulgarian eggs to Great Britain.

The 1925 grain harvest has been good. Export, however, did not come up to expectation. In the first place, owing to the fact that this harvest follows two bad years (44,700 tons of corn were bought abroad to make up the deficit of the 1924 and 1925 crops) the reserves which have been exhausted must be replenished; secondly, as other countries have had a good crop, there has been a fall in prices of about 30 per cent. and farmers are inclined to hold on to their supplies.

The 1926 crop is reported to be equally good. The drought from which southern Bulgaria suffered in April

and May would seem to have reduced the quantity of corn expected by about 20 per cent. The rains which have fallen continuously since the end of May, particularly in the north, have spoiled the wheat, barley and rye. In the circumstances, however, the harvest is rather good. The prospects for maize are excellent owing to the wet summer that we are having; the crop is expected to be 50 per cent. better than that of 1925.

The reserve stocks having been replenished in 1925, it is estimated that enormous quantities of grain—notably maize—will be available for export.

Cocoons are exported mainly to Italy. The silk industry still remains very little developed. At the moment an effort is being made to extend it, in order that Bulgaria can work the cocoons herself.

The Exploitation of Forests.

On July 30 an Austro-German group (under the name of Bulgarische Forstindustrie A.G.") were granted a concession to exploit the forest land in the region of Kritchim-Dovlen, situated in the Rhodopes, south of Philippopolis. Conforming to the conditions laid down, the concessionaires undertake not to sell the timber cut down unbarked, but to work it mechanically or chemically; they must, therefore, construct the necessary saw mills and factories; in addition they will instal a Décauville railway for development purposes. The manufactured products will be free of taxation. The revenue due to the State from the concessionaries is fixed at a minimum of 4 per cent. on production; it will be remitted to the State in the form of manufactured products or unfinished goods. At the expiration of the concession all the installations will revert to the State. The concession was to be granted to the tenderers offering to increase the percentage payable to the State to the highest figure. The successful firm has undertaken to increase it from 4 to 10 per cent. The forests comprised in the concession of July 30 are mainly coniferous.

On October 15 another concession will be granted on similar terms for the forests of Malko-Tirnovo and Vassiliko (in the Eastern Rhodopes, near the Black Sea). The forests included in this second group comprise oak and beech trees. Thanks to their inaccessibility, all these forests have escaped the systematic felling suffered by the territories under Turkish rule. Up to the present they have remained unexploited owing to lack of sufficient technical means, and Bulgaria has had to import at great cost from Roumania the wood that she needs. As a result of these concessions the country will no longer need these imports, new industries will be created and in addition afforestation will be promoted, as the revenues accruing to the State from these undertakings are earmarked for the "Fund for the encouragement of agriculture and forest cultivation."

The award of July 30, which has already received Government confirmation must, in order to become definitive, be ratified by the Sobranye, which will have to discuss and sanction the contract between the Ministry concerned and the concessionaire.

The Air Force flight from Cairo to Aden and back, which consists of two Vickers-Victoria machines with seating accommodation for 24, and is under the command of Air Commodore Samson, arrived at Aden at noon on September 19 from Massawa. The outward flight was via Khartoum, and the machines will return via Wady Halfa.

THE SUDAN IN 1925-26.

(Continued from page 316.)

Future Prospects.

The unfortunate effects of the poor rainfall of last summer, which are mainly felt by the town dweller, will be rapidly neutralised, if the rains of 1926 are satisfactory, while the circulation of money as a result of the large cotton crop of the Gezira Scheme, and the opportunities of employment which this scheme affords, should have considerable compensating effect in alleviating the economic difficulties of the present.

In the meantime the Government has arranged to issue dura to the poor at a price considerably below that at which dura has been selling on the market, and is acquiring a reserve of dura from abroad, in order to deal effectually with profiteering or any threat of famine either in the towns or in districts where crops have been exceptionally poor. In taking these measures it has been the object of the Government to interfere as little as possible with the course of trade, if carried on at a reasonable profit. Railway rates have been reduced in order to encourage importation of dura from abroad, and Customs duty on imported dura is being waived with the same object in view.

In years of bad rainfall and a low Nile flood, the supply of grazing and fodder for cattle and sheep and other animals at once becomes a serious problem. The areas affected and the number of animals involved are so great that general relief is impossible. In such times there is a wholesale migration of animals to the south in search of grazing, buit in districts north of Khartoum this is impracticable. In order to preserve the working animals in these parts extra pumps have been installed in Dongola Province, and an experiment is being made in feeding cotton seed to cattle.

Cost of Living.

The rise in the native's cost of living during the latter part of the year may be illustrated by the movement in the monthly prices of food grains (dura) at Omdurman. The price per ruba of about 12½ lb. varied in 1924 between 30 mms. and 45 mms., the price for December being 40 mms. This figure was maintained for January and February, 1925; it rose to 50 mms. in March, to 55 mms. for August and September, to 70 mms. for the last 3 months of the year, and for the first 3 months of 1926 was 75, 80 and 85 mms. respectively.

The prices of articles, other than sugar, entering into the native's cost of living have remained much the same. There has been a slight fall in the price of cotton piece-goods. Reference has already been made to the substantial reductions in the Government price of sugar.

As regards cost of living for foreigners, the weighted index number shows a slight fall from 165 in 1924 to 162 in 1925.

There has been no change in the general level of wages of unskilled and semi-skilled labour, which has remained at about P.T.5 per diem. No serious shortage of labour has been reported.

Chamber of Commerce, who are building new offices and a Bourse. Numerous formal or informal meetings have been held with its members, at which most useful discussions, both of policy and of the larger details of trade questions, have been dealt with. An annual joint meeting between the Central Economic Board and the Chamber has been held for the last three years.

An important development this year is the enactment of the Companies Ordinance under which Sudan Companies and Associations may register as Limited Liability Companies.

A further reform under consideration is an Ordinance for the registration of partnerships in the Sudan. In both matters the Chamber of Commerce has been consulted as to its views and has given valuable advice.

Transport Rates.

The trading community is naturally very closely interested in transport questions, and particularly in railway and steamer rates and charges. The very numerous reductions in transport rates which have been made during the last few years are testimony of the desire of the Government to reduce these charges when practicable, and during the year further rates have been revised, e.g., on motor cars, benzine, perishable and fruit traffic (other than dates) and other articles. New reduced through rates from Port Sudan to Rejaf on the Upper Nile and cheaper rates by mechanical transport between Rejaf and the Belgian Congo have also been introduced.

Another development, which has been mooted for many years, should shortly take practical shape, i.e., the provision of bonded warehouses at Port Sudan, and possibly also at Khartoum. These, to start with, will be under Government control, and will be managed by the Sudan Government Railways Department, who are in a position to find at once the necessary warehouse accommodation and a certain proportion of trained staff.

Foreign Interest.

The large capital works which are now being carried out in the Sudan, such as, for instance, the new quays at Port Sudan, the bridge over the White Nile between Khartoum and Omdurman, the new water supply for these towns, and, above all, the completion of the first producing stage of the Gezira Irrigation Scheme in the cultivation of 80,000 acres under cotton, have still further stimulated the growing interest in the economic development of the country and its latent possibilities, to which reference was made last year. Visitors interested in one form or another of business during the year have been numerous, and there is a constant demand for information and statistics on economic subjects.

Compared with a few years ago, the visitor to the Sudan is at a great advantage owing to the facility with which many parts of the interior unserved by railway or river can now be reached by motor car, enabling inquiry into conditions to be made on the spot.

Motor Transport.

An interesting item in the trade records of the year is the increase in the value of motor cars, etc., imported by the public from £E31,366 to £E66,154, and of motor spirit from £E37,642 to £E62,008.

The development of motor transport since the War represents one of the most striking innovations which the country has seen, and though commercial transport of goods by motor has not yet made much progress, except as regards cotton, the most remote parts of the Sudan can now be reached by touring car. The effect on the general administration of the country, both politically and economically, is already very far-reaching. In some areas mechanical transport is even now paving the way for a railway. Generally speaking, the spread of motor transport is bringing sensibly nearer the date when the more distant parts of the country can be linked up to the central economic system.

Southern Provinces.

With the gradual extension of the railway, the economic centre of gravity has continued to shift southwards towards the rain districts, and though for the time being and for a number of years to come the main interest as regards production will lie in the Gezira Irrigation Scheme and its extensions, there is every reason to believe that the provinces which lie immediately south of that line will soon begin to undergo development and react to economic activities common to the more northern areas. Upper Nile and Nuba Mountains Provinces contain a very large population, and have great latent possibilities for the production of cotton, grain, gum, oil seeds and cattle.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, September 25). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Stockwell for Port Said, Colombo, Madras, and Calcutta (London, September 25).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, October 6).

British India Line.—S.s. Mandala for Bombay and Karachi (London, October 8); s.s. Mantola for Colombo, Madras, and Calcutta (London, October 9).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also Corfu, Gruz, and Ancona if inducement (Liverpool October 16, Swansea October 19); s.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Glasgow, Liverpool, and Swansea October 23).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 2); s.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (last steamer of the season for Galatz and Braila) (Liverpool, October 30).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, October 1); s.s. Nagoya for Colombo, Madras, and Calcutta (London, October 2).

Prince Line.—S.s. Soldier Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, September 29).

Ellerman and Papayanni Lines.—S.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 25); s.s. Bavarian for Gibraltar, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 25); s.s. Gerano for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool October 2, Swansea October 6); ss. Egyptian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 2); a steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, October 9); s.s. Algerian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 16). * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 21.

The failure of Mr. Churchill's attempt to bring about a coal settlement repressed activity on the Stock Exchange where apart from a boom in tin shares recent events have been dull. Another adverse factor, to which the greatest attention is necessarily being paid, is the bad showing of the August trade returns, which reveal the increasing intensity with which the coal stoppage is reacting upon our external commerce. The great growth revealed in the adverse balance of the merchandise trade figures—a process which can hardly fail to continue until the mines have been working again for some time—adds to current fears of a strain on the exchanges and of hardening money rates. The position of the trade balance is such that any heavy campaign of overseas borrowing might exert a serious effect. One is almost inclined to ask whether the foreign loan embargo, objectionable though it was, may not be restored. Under the present conditions the stability of sterling exchange rests to no small extent upon the large volume of foreign balances which have returned to London in the past eighteen months. Obviously money rates here must be kept sufficiently high to guard against their withdrawal. The second winter of the re-adopted gold standard will therefore be fraught with serious anxieties, not merely to those who control our financial destinies, but to the investment world. Our gold stocks are large, and helpful co-operation of American monetary policy may be counted upon, but, nevertheless, it would, on present appearances, seem to be a miracle if the country gets through this autumn without at least one rise in Bank Rate. There is, however, a disposition to be believed that a rise will not take place for a week or two.

Oil Alarmists.

Most of our readers will probably, by this time, have learned the gist of the remarks made in the recently-issued report of the Federal Oil Conservation Board. We are tempted to revive the matter because of the probability that a few investors may have been made a little nervous by this statement that a shortage of oil supplies is likely in the not far distant future as it follows so closely upon Professor Thorpe's doleful predictions to the same effect at the last British Association Conference. We have had our fill of these "scares" during the past twelve months, although seldom a year goes by without at least one alarmist giving vent to his opinions.

It is possible, of course, that a few years hence the American production of petroleum may be of smaller proportions than it is now, and that the new areas now being developed will not, by the time, have been sufficiently tapped to make up for the falling off in the United States. Any serious reduction of output in the latter field, however, would probably act immediately as a spur to prospectors in other parts of the world, and the period of shortage would therefore, it is reasonable to expect, be of only short duration. Moreover we must remember that engineers and scientists are particualrly busy at the present time, endeavouring to discover new and more efficient methods of refining. When an improved process is found there should be an automatically higher yield of gasoline and kerosene from the crude oil. This in itself should do a great deal towards the elimination of waste. Finally we would point out that when the American Conservation Board's report was published here it had, as in the case of Professor Thorpe's remarks, little or no effect upon oil share quotations. The oil market is always a sensitive one, so that the stability shown in the face of these alarmist utterances is probably the best indication of the extent to which they are seriously regarded.

British Controlled—"The Curtain Raised."

At last the directors of the British Controlled Oilfields "are in a position to raise the curtain" and to place before the shareholders "as exactly as we see it, the fullest information." The information does not make very pleasant reading, especially when it is stated by the Board that "from the most careful examination it appears that about 30,000,000 dollars of the capital of the Company (45,000,000 dollars) has been lost." In case there should be any misapprehension on the matter in the minds of investors we should like to remind them that the Board, five members of which have now resigned, only occupied office for a few months, and that it is in no way responsible for the very unsatisfactory state of the Company's affairs. Rather, indeed, it is to be congratulated on having the courage of placing before the public the full facts of the case. The financial difficulties with which the undertaking is faced are a heritage from earlier years. For instance, in 1919 the Company purchased certain rights in Ecuador and Costa Rica for the sum of 4,375,000 dollars Preferred stock, and 15,000,000 dollars Common stock, with an undertaking to discharge and pay money due to the Governments of Ecuador and Costa Rica. In connexion with these concessions the Company spent £276,632 on machinery alone, only to find that the Costa Rica concession was declared invalid and no legal right to obtain oil in Ecuador was forthcoming. Other ventures in Peru, San Salvador, Nicaragua, Colombia, Honduras and British Guiana cost the concern 5,000,000 dollars. These right with the exception of those in Peru which were sold for £10,500, have proved valueless. Operations in Trinidad, too, have yielded a net loss of £65,000 per annum. As a matter of fact, as the directors point out, the only area of proved value is that first acquired, namely the Buchivocoa Concession in Venezuela. This district has been divided into three sections. One of these sections was transferred on a profit-sharing or royalty basis to the Standard Oil Company which, however, has not yet drilled one well of commercial value. A second section was also disposed of, so that the Company now only retains one portion of the field. This is a doleful story, and investors will not, we imagine, be hard put to it to agree with the former directors' statement that "if it is desired to put this Company on a sound financial footing, a drastic reduction of capital is essential." It is a pity that the suggestion was not made earlier. The whole story is a piquant lesson to the investing public of the danger of purchasing any oil shares except those of established companies with a good past record.

PROBLEM No. 46.
White to play. What result?

The position I gave on September 2 occurred in a recent tournament game. It was Black's fortieth move, and he played R—QKt, after which it is very difficult to find a good continuation for White, certainly not a winning one. Play continued 41, P—Kt3, P—R5!; 42. R—B3 (the only saving clause), KtxP; 43, P—K3 (ch), KxP; 44, PxP, R—Kt7; 45, R—K2, R—R7; 46, BxP, RxP, and the game is drawn.

NEWS FROM ALL SOURCES.

A Commercial Treaty has been concluded between Belgium and Yugoslavia on the basis of the most favoured nation treatment.

M. Charron, the delegate of the League of Nations charged with the control of the Bulgarian Refugee Loan, arrived in Sofia on September 16.

In its final form the Egyptian Budget estimates an expenditure of £E39,360,000 and a revenue of £E37,873,000, leaving the deficit to be met from the Reserve Fund.

The Bulgarian Sobranye has ratified the agreement reached between the Bulgarian Government and two British firms, the Commercial Company of Salonika and the Oriental Tobacco Trading Company, for the settlement of claims for the destruction of their warehouses at Djumaia during the first Balkan War.

Reuter's Athens correspondent reports that the Commission appointed to study the needs of Greek aviation has placed an order for 25 aeroplanes with the Morane-Saulnier factory at Puteaux, France. The order has been placed abroad, as it is considered that the English Blackburn works at Phaleron are not yet in a position to supply all the country's requirements in the matter of aviation.

Mr. Chadwick H. Moore, Managing Director of Moore's Modern Methods, returned last week to London after a short visit to Greece. He arrived in Athens on the day of General Kondylis's *coup d'état* and when he left on the morning of September 9 the guns were being trained on the barracks of the Republican Guard in preparation for the events of that fateful day.

Motors and Motoring

By G. B. B.

At fairly regular intervals we find writers recurring to the subject of our oil supply, its probable duration, and the plight of a world without oil. We are told with almost monotonous regularity that great concern is being, or for some time past has been, felt in America regarding supplies of oil in the country in relation to the rapid increase of home consumption and the demands made upon American sources for oil and its derivatives. It appears that President Coolidge has received a report from the Special Federal Oil Conservation Board in the course of which is the following remark: "Our experience with the exploitation of our consumers by foreign controlled sources of rubber, nitrate, potash and other raw materials should be sufficient warning of what we may expect if we become dependent upon foreign nations for our oil supplies." All of which means that the United States is beginning to feel some apprehensions lest her oil supply shall not maintain its present plentiful, profit-earning level. We have, in fact, the findings of an official committee to the effect that the United States has only six years' supply of oil, at the present rate of consumption, in the known pools. After that I suppose all our oil will come from the Near, Middle and Far Easts!

Olympia.

The show at Olympia this year will see the introduction of a number of new models to the public. I have already hinted at the possible appearance of a new light car! I may say that we shall also see a new Lea-Francis, a six-cylinder Humber of 20 h.p., giving out an actual 55, an 18 h.p. Armstrong Siddeley of new design; a 9 h.p. Rover with many improvements; a 12 h.p. Daimler with a standard coupe; a long wheel-base Armstrong Siddeley; a six-cylinder Wolsely, a new Morris-Cowley and—last but by no means least in importance, a new Clyno. So far as prices are concerned, I hear there will be two makes of cars offered at £100, whilst the man who has budgetted to spend £150 will be able to make a choice amongst half a dozen or more models. Further, the instalment system of paying will be pushed extensively and for some cars a £10 note will secure delivery, the monthly instalments being proportionately low. This is one way of bringing motoring within the reach of the million.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended September 11:—

The arrivals of sultanas since the opening of the season are estimated at 10,225 tons and the sales to date are put at 10,020 tons.

Closing prices Smyrna: per cwt. c.i.f. London/Liverpool:—Type 12, 51s.; type 13, 53s.; type 14, 55s.; type 15, 57s.; type 16, 60s.; type 17, 65s.

The market remained firm with unchanged prices until Wednesday. The two following days were holidays and the market was closed. Meanwhile arrivals, which were expected to be heavy this week, showed no increase, tending to confirm the views which had been gradually gaining ground that the yield is proving short of the early estimates. The returns which have been actually obtained by individual vineyards in the main districts of production, have proved 20 to 30 per cent. short of anticipation, and the total returns now available of the smaller centres, where the drying has been completed, effectively confirm the shortage in yield on the first estimates made. The market opened very active on Saturday, and an advance of 2s. to 3s., according to quality, was quickly established. The market closed strong with every indication of prices being carried to a higher level. There appears to be a considerable uncovered position for end September and October 1-15. Estimates of the yield have been reduced to 33-35,000 tons.

The arrivals of figs are estimated at 6,207 tons and the sales to date are put at 5,889 tons.

The embargo on shipments of figs from the interior to Smyrna was raised yesterday, and a large quantity of fruit arrived this morning which is now being transported to the market. All the fruit available is likely to be readily absorbed by shippers who are pressed to meet their engagements for shipment during the first half of this month. An unbroken succession of dry north winds, unusual for this time of the year, are tending to check the full development of the late growing fruit and consequently to reduce the weight of the crop. On the other hand this dry weather has completely dispersed all signs of blight from the trees in most districts.

Roumania proposes to negotiate a treaty of commerce with Italy.

The Egyptian Parliament has reduced the cotton tax from 25 to 20 piastres per kantar.

The Roumanian customs receipts for the first six months of 1926 amounted to 3,839,000,000 lei, an increase of over 10 per cent. as compared with the receipts of the same period of 1925.

Messrs. Vickers Limited announce that they have received an order from the Admiralty for a large submarine depot ship. The main propelling machinery consists of twin screw double acting internal combustion engines, which will be manufactured at Barrow-in-Furness from British materials under licence from the M.A.N. Company.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

Cotton and Cotton Goods.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended September 15:—

Egyptian Futures.—Sakel Contract.—Throughout the week, this market has shown a nervous and unsettled tone, with consequent sharp and erratic fluctuations. That the recent rapid advance had driven in the weaker portion of the "short" interest was apparent during the earlier days, when quite moderate profit-taking operations found support lacking and running off prices 40 to 50 points; under further "bullish" Alexandria advices and buying orders from that quarter values developed renewed strength during the past two sessions, to decline sharply again late this afternoon on further liquidation, so that at to-night's close the list shows losses of 5 to 10 points for near and 15 to 20 points for distant position on the week. In accordance with the general tenor of crop cables, there appears little doubt that the yield has suffered latterly through climatic and other causes, but to what extent, or whether the ground lost can be in part recovered by favourable weather from now onwards, remains to be seen. In the meantime, it would appear as if the retrograde movement in the American markets and the deplorable state of trade, both in this country and elsewhere, have for the time been side-tracked as ultimate issues, and that the speculative element in Egypt have loaded up in anticipation of forced commercial buying on the adverse crop news.

Available stocks, both here and in Egypt, are negligible, although, locally, the position is rendered easier owing to the weight of tenderable Sudan Sakels on offer. There is a feeling in the market that tenders of the last-named may have to be faced by holders of November, unless disposed of to the trade in the meantime, it is due to this that the Liverpool/Alexandria straddle difference is quite abnormal and likely to continue so for some little time. The Government's acreage and yield estimates were published at the beginning of the week and are as follows, 1,785,000 feddans and 6,789,000 kantars (Sakel 2,863,000 kantars). Owing to the lateness of the crop and lack of contracts from hedging sources, the market at the moment is particularly susceptible to "Bull" manipulation, but we consider that, in the absence of improvement in the American markets or increased activity in trade circles, sales on strong markets are to be recommended.

Upper Contract.—Under the influence of declining American, values in this market have steadily fallen away during the past week. Crop accounts have latterly been disappointing, and the yield and quality now promise to be inferior to last season. In comparison to other varieties, the existing level appears on the high side, and reductions in price essential to attract any weight of trade support. Values on the week show a decline of 50 points.

Egyptian Spot.—Inquiry for spot cotton on a fairly extensive scale has again been met with and a good business has resulted. Sakel prices have tended to harden still further, but Uppers, probably from sympathy with the easier American markets, have cheapened somewhat.

Sakel cotton has been in general request, all grades commanding attention at one time or another, and, owing to the scarcity of several qualities, notably F.G.F. and Fully Good, some difficulty has been experienced in fulfilling orders. The demand for the better grades of Sakel has again shown improvement, and, at the other end of the scale, some revival of interest in the very low qualities has been seen.

Uppers from 13d. to 14d. have been in good request and the customary end-of-the-season scramble for the cotton below Good Fair continues. Business in the latter chiefly consists in acceptance of so-called "special offers" cabled from Egypt. Less business has been seen in Pilion cotton, and other growths have been neglected. Egyptian spinners in many cases are turning their attention to "outsiders," and there is little doubt that if the rise in prices continues beyond its present level, the percentage of those doing so will increase rapidly. It was recently reported that a considerable line of Tanguis cotton has been purchased during the past few weeks by a very important concern, which normally uses nothing but Egyptian.

As regards Egyptian cotton, purchases by spinners still continue to be in small lots, but in Sudan Sakel, in which a much better business has been done this week, one or two fairly good "lines" have been placed.

C.i.f. business has been very quiet, but forwardings to spinners for the week ending 10th inst. show some improvement at 6,449 bales.

Estimated sales 2,400 bales Egyptians and 3,130 Sudan.

Quotations of Sakel show an advance of from 25 to 40 points, whilst those of Upper have been reduced 30 points on the week.

F.G.F. Sakel to-day 18.45d.

F.G.F. Upper to-day 13.75d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report dated September 9, state:—

The market in futures during the week has been active, but the tone at to-day's close was not by any means so firm as was the case during the early days of the week. The week's summary of price movements is as follows: Sakellaridis: November, 33.65 dollars, 0.53 dollars up; January, 33.05 dollars, 0.55 dollars up; March, 32.75 dollars, 0.50 dollars up. Ashmouni: October, 23.40 dollars, 0.03 dollars down; December, 23.35 dollars, 0.02 dollars up; February, 23.50 dollars, 0.07 dollars up.

The speculative buying which was the feature of last week has again been in evidence, but to-day has seen some liquidation, and, as a result, Sakel prices show a decline of about 1½ dollars from the high level touched on Monday. The speculative buying has about exhausted itself, without inducing any rush on the part of the trade, and the holders of the position are not so confident as they were. The market is beginning to realise that recent bad crop reports were exaggerated, and this realisation, coinciding with a bullish American Bureau report, is responsible for to-day's liquidation. The speculative position is still large, and failing an aggravation of crop conditions, we do not think that the present level of prices can be maintained. Commercial houses have used the futures market but very little, and Liverpool interests have been sellers.

The demand from spinners has been very poor for this period of the year, and reflects the empty order books reported from most consuming centres. Lancashire has been buying only actual requirements and we cannot find that any important forward business has been put through for the Continent or America.

The Government has taken a census of the varieties forming the stock in Alexandria at August 31. We reproduce same below and, but for the fact that some Delta Zagora seems to have been included in Upper Egyptian Zagora we think that it is very nearly correct; the stock includes the Government cotton. The Sakel stock contains much undesirable cotton and the Uppers stock is composed mainly of top grades for which there has been little demand during recent months.

Stock in Alexandria at August 31, 1926, in kantars: Sakellaridis 710,369.04; Mit Afifi 1,176.63; Asil Afifi 2,329.10; Nubari 4,933.82; Pilion 24,405.53; White 3,867.05; Theodorou and Casulli 3,256.97; Ashmouni and Zagora (U.E.) 285,674.26; Zagora (Delta) 26,414.89; Scarto 5,238.26; Sekina and Afrita 24,312.06; Fouadi 652.79; Maarad 31.93; Nahda 5,611.03; "310" 1,515.60; Various 729.93; Total 1,100,518.89 kantars.

The Chamber of Deputies has this week had before it the projected law for the prevention of the mixing of different varieties of cotton and has approved it in its

Digitized by Google

draft form without amendments, in order that it may be put into operation during the coming season. In spite of the acceptance of the law as drafted without discussion, we doubt whether the necessary organisation will be created in time to deal effectively with the present crop.

The week's receipts amount to 30,608 kantars against export 54,906 kantars; the stock in Alexandria stands at 1,132,897 kantars.

Spot:—Sales amount to about 6,300 bales, of which we estimate 3,000 bales Sakellaridis, 3,000 bales Ashmouni, 100 bales Zagora, 100 bales Pilion and 100 bales White.

Sakelaridis:—A good business has been done from Good Fair to F.G.F. Good, and these grades are now really difficult to find, that is to say, a really good style of cotton. There has also been some demand for the good grades, but differences all round remain about unchanged.

Ashmouni and Zagora:—There is still a very active demand for the medium grades and a resultant keen competition to obtain the few lots showing on the market. About 2,000 bales of new crop cotton has arrived so far in Alexandria, but buyers have not shown very much interest. Business in the low grades has been restricted by the lack of stocks. Spot differences from Fully Fair up to and including Fully Good Fair have somewhat hardened, but remain unchanged for other grades.

Pilion:—Some business has been done in Good and Fully Good at about last week's premiums.

White:—A few lots of Good Fair and Fully Good Fair have changed hands at about last week's differences.

Crop 1926: Crop news received this week has not confirmed the pessimistic reports which were going the rounds of the market last week. The crop has suffered damage, but the true condition is much better than many people think.

In Upper Egypt the crop is opening fairly normally, and apart from the lateness referred to in our previous report, there does not seem to be much wrong with the crop in Middle Egypt nor in the Northern districts of Upper Egypt.

In the Delta the crop has suffered from pink boll worm to a larger extent than last year, but the very heavy attacks reported are not by any means general; the attack varies enormously and an average over the chief Sakel producing districts shows about 10 to 12 per cent. more bolls attacked than at the same time last year—not very alarming. The chief factor which is going to affect the final yield is the lateness of the crop; the delay at present is about 20 days from normal, and even good weather from now onwards cannot produce a yield equal to that of last year. It is as yet too early to give an estimate of the yield as the majority of the bolls are still green.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Greece and Constitutionalism.

The political forces dammed by General Pangalos, which General Kondylis unloosed by his *coup d'état* of August 23, have proved too strong for the latter. His first intention appears to have been to act the mild and model dictator, in contradiction to the forceful, fitful Pangalos, with the genuine purpose of leading Greece back to constitutionalism. The politicians, however, would have no half-measures; General Kondylis to them was a soldier, and they refused to regard him as a political leader or to recognise the party which he claimed to have formed. His insistence on the introduction of proportional representation in the approaching elections savoured more of the dictator than of a constitutional Prime Minister, and was sufficient to serve as a warning to those who favoured the system. Even the courageous disbandment of the Republican Guard failed to convince the critics that as a soldier General Kondylis had now completely burnt his boats. He was forced to realize that he would remain suspect to the end, and as a final gesture of his sincerity he has announced his withdrawal from politics after the elections. His followers are urged to support other Republican parties or to stand as independent candidates in the Republican bloc. Until the elections General Kondylis and his Government intend to remain in office; but it is significant that the Prime Minister has not considered it advisable to absent himself from Athens, in order to attend, as he had originally planned, the unveiling of the British Memorial at Doiran.

General Kondylis on his Defence.

It is too early to form an accurate estimate of General Kondylis and the part that he has played in Greece in the return to constitutionalism, or to decide whether the politicians have done well in driving him out of politics. His evidence at the trial of the officers commanding the Republican Guard has met with a mixed reception. He stated that he had been approached by two of the officers, who offered to instal him in General Pangalos's place; but he had urged upon them the necessity of a return to normal conditions by the recall of Admiral Kondouriotis as President of the Republic and the holding of elections. When, however, he realized that Greece was in danger of having one Dictator replaced by another, General Kondylis temporized wtih the officers and agreed to the exercise of the dictatorship (presumably, under himself) for another eight months, and then to proceed to the holding of the elections. He admitted that, much as he abhorred deception, he had no intention of keeping his promise, but felt constrained to adopt the course that he did, in order to save Greece from further dangers. As soon as he was placed in power, he used the obvious wish of the nation for a return to normal political conditions as an argument with the officers of the Republican Guard for the abandonment of their scheme and called upon them to retire from the Army and either to go abroad or to stand as candidates at the approaching elections. When they refused, General Kondylis decided upon the forcible disbandment of the Republican Guard, with the results known. The accused officers maintain that General Kondylis alone is responsible for the bloodshed on September 9, as the Government troops were the first to fire. In all the circumstances Greece will be fortunate if the political confusion does not become worse confounded before the elections on October 24.

The Italo-Roumanian Treaty.

The fear impressed in these pages that the Roumanians would find little in the Treaty concluded by General Averescu with Italy to wax enthusiastic over has been confirmed by the luke-warm, and in some quarters hostile, reception that has been accorded it in Roumania. Some allowance must be made for the inevitable tendency to belittle everything that political opponents do and to make capital out of any disappointments that can be associated with their actions. Yet it was difficult for the unprejudiced observer to discover what compensation the Roumanian Government had obtained for the serious omission to secure Italy's ratification of the Bessarabian

Digitized by Google

Agreement of 1920. As things are, Italy has incurred much abuse in Russia for having ventured to promise Roumania that she will ratify the Agreement when she can do so without prejudice to her interests—in other words, when Russia allows her to ratify it. The Italian undertaking implies, at least, that Italian sympathy is with the *status quo*, and to this admission the Soviet Government takes strong exception. In the circumstances, therefore, Roumania would not seem to have much to worry about. The safety of Bessarabia lies within that province, in the contentment and general progress of its inhabitants; towards this goal no amount of paper agreements with foreign countries can assist the country a single metre. The moral effect of the Allies' Agreement is not seriously weakened by Italy's failure to endorse it, now that the Italian Government has pledged itself not to renounce the agreement. It was the fear of this latter risk that handicapped Roumania until General Averescu returned from Rome with the Italo-Roumanian Treaty in his pocket.

War Memorials.

As on the occasion of the recent "pilgrimage" to Gallipoli, so last Saturday, when the War Memorial erected by the Imperial War Graves Commission on Colonial Hill, near Lake Doiran, in Macedonia, was unveiled by General Sir George Macdonogh, many more than those who actually took part in the ceremonies will have been present in spirit on those spots hallowed by memories of heroism and sacrifice. It was fitting that the two ceremonies should follow hard one on the other —the first the personal passing tribute and testimony of individual loss, the second the permanent token of national gratitude. By common consent the experience of the British Army in Greece was unique in the history of forces campaigning in a foreign land. It was fighting, indeed, in the common cause, but in circumstances which prevented its first arrival from being welcomed. Yet by strength of character and owing to that ebullient good will and cheerfulness that mark the British soldier on active service the Salonika force before it quitted Greek soil had won its way to the heart of the people among whom it was quartered. For this generation, indeed, the Greeks will have no need of any reminder of that comradeship in arms; nor, we may hope, will they ever have occasion to forget the far-flung might of the British Empire. The Doiran Memorial, however, will be a worthy monument to the dead, if in the years to come it reminds the living, in a region where racial animosities have been more conspicuous than a sense of the brotherhood of man, that good fellowship is not incompatible with national greatness.

The Majesty of the Law.

The possible monotony of ex-King Hussein's life in Cyprus has been broken by an incident in the police courts, which, it is to be feared, will have convinced him that the British authorities are resolved to show him no favour even when they can do so without trouble to themselves. The ex-Queen of the Hejaz, it is stated, had handed a sum of money to a Secretary to be forwarded to Egypt through a Bank; but the money failed to get as far as the Bank, and ex-King Hussein prosecuted his Secretary for theft. He attended the Court in person to give evidence; but when the presence of the ex-Queen was required, he resolutely refused to allow her to be called as a witness. In the face of this refusal the Court dismissed the case. There may be more behind the matter than appears in this bald summary; but, if the facts are as stated, a considerable amount of sympathy will be extended to the ex-King. It may, no doubt, be the case that Justice can be no respecter of persons, but it would be thought that a British Court had sufficient knowledge of Islam and its ways to respect Moslem feelings and to allow the ex-Queen's evidence to be taken on commission. The majesty of the law may have been vindicated, but, if the Secretary kept the money and escapes scot-free, there will have been a grave miscarriage of justice, that will not redound to the credit of an island where several unedifying incidents in the official world have occurred of late.

THE DOIRAN MEMORIAL.

A British War Memorial commemorating those who had fallen on the Macedonain front was unveiled on September 25 by Lieut.-General Sir George Macdonogh in the presence of representatives of the British and Greek Governments, of the Army and Navy of each country, of the Greek ecclesiastical authorities and of the Salonika Municipality. The Monument, which consists of a stone cenotaph, some 40 ft. high, surrounded by four plinths bearing the names of the dead, stands on the summit of Colonial Hill, a rocky eminence overlooking Lake Doiran and the Struma Valley. It has been erected by the Imperial War Graves Commission, whose representative Sir Frederick Kenyon was present at Saturday's ceremony. Near the base on each side of the cenotaph is fixed a marble panel with the dedicatory inscription in English on one side, in Greek on the other. This inscription reads:

"In glorious memory of 418 officers and 10,282 men of the British Salonika Force, who died in Macedonia and Serbia, 1915-1918, and to commemorate 1979 of all ranks who have no grave, but whose names are on the panel. They did their duty."

After the unveiling of the Memorial, which had been draped with British and Greek flags, and on the conclusion of the service of dedication Sir George Macdonogh addressed those present. He expressed regret that General Sir George Milne's duties as Chief of the Imperial General Staff had prevented him from performing the ceremony, and continued:

General Milne, moreover, gave me a message. He asked me to tell all who fought and worked with the British Army that we had not forgotten them, and that the memorial on Colonial Hill stands as an emblem of the spirit of mutual good-fellowship and devotion which permeated all ranks of the Allied army, and that, beautiful and lasting as this stone monument may be, yet he believes that the best and most permanent monument to the British troops in Macedonia is that which remains in the hearts of her inhabitants.

THURSDAY, SEPTEMBER 30, 1926.

FRANCE IN SYRIA.

News from Syria continues to be inadequate and obscure. Reports of isolated engagements convey no clear impression of the progress of the revolt or of the headway that the French are making against it. Speaking before the Permanent Mandates Commission in Geneva on June 17, M. de Jouvenel stated that the revolt in the Jebel Druse was coming to an end; but in the three months that have elapsed since then it is his own High Commissionership and not the Druse rebellion that has come to an end. The war in Syria has now lasted fourteen months; throughout this period conditions in the country must have steadily deteriorated. Apart from the loss of life and actual damage to property, the set-back to trade is likely to have its effects long after the suppression of the revolt. If it were a question of a conflict between two evenly matched opponents, neither of whom would give way on a matter of principle, the indefinite prolongation of the struggle might be accepted philosophically by the world at large; but it is idle to pretend that France, if she were so minded, could not have suppressed the rising within a few months. For reasons of her own, she prefers to allow the struggle to continue without any serious effort, in any way commensurate, that is to say, with the power that she wields, to restore peace to the country. If Syria were an ordinary French colony, it could be argued with some force in France that the matter is one which concerns herself alone. The country now being devastated by prolonged warfare, however, is Mandated Territory, and, sooner or later, the responsibility of the League of Nations will become involved. This aspect of the case must have been in the mind of the Permanent Mandates Commission at its meeting in Rome last February, when it reported that, as it was anxious not to make the task of France in Syria and the Lebanon impossible of performance, it did not at that time recommend the Council to set up a commission of inquiry independent of the Mandatory Power. Possibly it was the implied threat in these words that prompted M. de Jouvenel at Geneva last week to declare that the Mandates Commission had prolonged the war in Syria by three months.

The high hopes entertained of M. de Jouvenel's High Commissionership were not realised, and it is difficult for any Englishman to read his statement before the Permanent Mandates Commission last June without a keen sense of disappointment. From the point of view of her own interests Great Britain has no wish to dispossess the French of their Mandate, as it is not to her advantage to have the frontier separating her mandated territory from Turkey increased. The prolongation of unrest in Syria, however, is prejudicial to the interests of both Palestine and Iraq, and the time may come when, although unwillingly, Great Britain finds herself obliged to support the suggestion that France, in regard to Syria, should, in Roosevelt's pregnant words, "get on or get out." It was the general tenour of M. de Jouvenel's statement, as reported in the minutes of the Mandates Commission's ninth session, rather than any specific remarks that will have troubled the members of the Commission. The High Commissioner spoke as one who had been completely disillusioned during his short stay in Syria; he was obviously antipathetic to the Syrians, and was at no pains to disguise his contempt for them. He emphasised their mutual antagonisms, ridiculed their weakness for petitions, and found their patriotism a danger. The very form of his "report" to the Commission exposed him to the charge of imitating the lawyer who, when he has no case, attacks the other side. M. de Jouvenel presented no adequate report, but merely subjected the statements of petitioners and others, as well as newspaper allegations, to a scathing analysis or refutation. Forensically, no doubt, he scored many points; but the recital must have brought home to his audience the unlikelihood of France's being ever able to make a success of the Syrian Mandate. He claimed that the Mandatory Power should no longer take responsibility for making any changes in Syria, and that, if changes were to be made, these should be the result of the express desire of the Syrians themselves, ignoring the fact that France was responsible for the change that is at the root of the trouble —the partitioning of Syria into four separate States. Yet when he was asked merely to authorise negotiations for the incorporation of Alexandretta in a united Syria, his reply was chilling, if correct; although he made good play of the subsequent decision to maintain Alexandretta within the Syrian union. He made no mention of the currency question, until pressed by a direct question, and then gave no indication of realising what an important bearing this matter had on France's troubles in Syria.

In fairness to France it has to be admitted that at no time did her task in Syria promise to be an easy one. She underrated its difficulties in the belief that she could rule there as effectually as she rules in Cochin China. It was common knowledge, however, that her appointment as Mandatory was resented by the people with the exception of a very small group, and it shows how little the principles underlying the mandate system weighed either with the French or with those who agreed to her appointment that she should have been imposed upon the Syrians against their will. As things are to-day, France will presumably consider that her prestige in the East depends on her seeing the matter through in Syria. Yet she would seem to stand to lose as much by the indefinite prolongation of the present indeterminate state of affairs as by a withdrawal. The alternative is either to crush the rebellion within a short time or to proclaim a complete amnesty and allow the people to govern themselves within the four corners of the Mandate, as is being done in Iraq. M. de Jouvenel laid stress on the clash of religious and feudal interests in a Syria left to itself, and seemed to imply that an obligation was laid on France to keep the antagonistic sections separate from one another. The history of the Mandate has exploded this theory, and from the French point of view it is better that the people should have their disunion turned against themselves than be united in a common hostility to France and everything French. A new High Commissioner may yet succeed where so many of his predecessors have failed; but it is to be feared that passions in the country have been roused to such an extent that the people will refuse to believe the French capable of better things, however much they protest the adoption of a new policy.

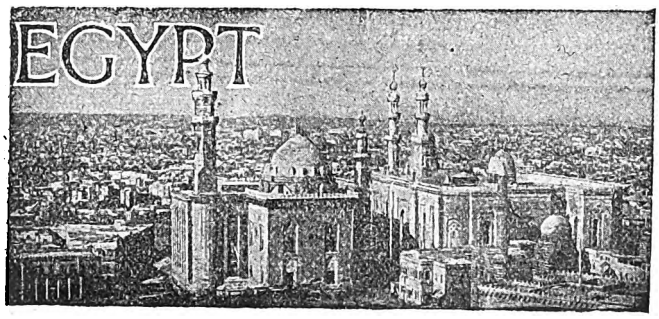
The Near and Middle East*

From Our Own Correspondents.



Cairo, September 19.

The Wakfs' Budget.

One thing and another have combined to spin out the parliamentary session over the past week, and the Chamber will not rise until to-morrow evening at the earliest. The fact that the General Budget was disposed of and the validating law passed before the budget of the Ministry of Wakfs had survived its ordeal in the Chamber raised a rather curious point of Constitutional procedure. Prior to 1923 the Ministry of Wakfs had always been regarded as apart from the rest of the Administration. The Wakfs' budget was presented to the Council of Ministers without details being given of the expenditure of certain departments, such as that controlling theological institutions. The Constitution, however, laid down that "the principles applied to the General Budget of the State shall be applicable also to the Ministry of Wakfs' budget." In 1924 the Chamber of Deputies made an unsuccessful attempt to enforce this article of the Constitution. This year, had the Wakfs' budget been passed by the Chamber in time to have been validated by the law which put into operation the rest of the State Budget, that course would have been taken, and probably nothing would have been heard of the matter. But when, the General Budget having been already disposed of, the Government decided to draft a special law, for submission to Parliament, validating the Wakfs' Budget, the Palace raised objections, contending that the Wakfs' Budget should be made operative, as in the past, by a simple Royal decree. This argument, it would seem, must have been based upon a misunderstanding of the provisions of the Constitution, but it was persisted in sufficiently to cause something approaching a political crisis. It is now stated that the difficulty has been settled and that the Chamber will consider to-morrow evening the draft law validating the Wakfs' Budget.

A Moslem Index Expurgatorius.

A more serious danger to the present Ministry arose out of the discussion of measures taken against Dr. Taha Hussein, a professor of the State University, who last year published a book, "Pre-Islamic Poetry," which was considered by the ulema to contain attacks on the Moslem religion. There was a considerable outcry from Al Azhar at the time of the appearance of the book, and the Rector of the University took the bull by the horns by buying up the whole of the first edition of the book and getting an undertaking from Dr. Taha Hussein that the type would be broken up. When the present Government took office it reviewed the matter and decided that the action taken was adequate. But a number of Deputies, led by Sheikh Khayati, a well-known firebrand, determined to raise the question in the Chamber, and Zaghloul Pasha, for unknown reasons, but presumably as a sop to Al Azhar which has suffered badly at the hands of Parliament during the past few weeks, offered no objection to a resolution being put calling upon the Government to refer Dr. Taha Hussein to the Parquet, for eventual trial. The Minister of Education pointed out that such a motion would be unacceptable to the Government, but the Chamber would not be deterred. Eventually the Prime Minister intervened to declare flatly that the Chamber's interference in a matter concerning only the executive power could not be tolerated. He and the Minister of Education had given their careful consideration to the subject, and, if the Chamber now decided upon discussing the measures taken, he (Adly Pasha) would regard such action as indicating a lack of confidence and would resign. A long argument followed between Adly Pasha and Zaghloul Pasha, and it looked as though a breach was inevitable, when Ahmed Maher Effendi rose to propose an adjournment of ten minutes. The Chamber gladly seized this opportunity of relieving the tension and during the interval the Ministers present, Zaghloul Pasha, and Hussein Rushdy Pasha, President of the Senate, all left Parliament and met at Zaghloul Pasha's house. There, after a three-hour discussion, a settlement was reached, and on the following evening the motion which had caused all the trouble was withdrawn.

The Functions of Parliament.

This incident is the most serious that has occurred as a result of the Chamber's wish to usurp the functions of the executive authority, but it is by no means the only one. Zaghloul Pasha, whose control of the Chamber during the session now ending has in many respects been admirable, seems to have no clear idea of the respective functions of the legislative, the executive and the judicial authorities. On several occasions he has allowed the Chamber to trespass on the authority of the Government in a manner which must have been very galling to the Prime Minister and his colleagues. On some occasions the President of the Chamber has seemed to wish to usurp also the duties of the judiciary. Such a case has been the affair of Saleh Enan Pasha, of which some details were given in my last letter. Enan Pasha has now been placed on pension, a decision which seems to be a very scandalous one, seeing that Enan Pasha has clearly been the victim of a clever intrigue skilfully engineered with the object of entrapping him, and in which the Minister of Public Works, Osman Moharrem Bey, together with the Assistant Under-Secretary of State in the Ministry of Public Works, Ahmed Bey Abdel Wahab, a young man who owes his promotion in large degree to Enan Pasha, have played conspicuous rôles.

Enan Pasha has been dismissed primarily because he is popularly supposed to be "the friend of the English." In the second place, although he has avoided association with any local political party, he has never hidden his opinion that the Zaghloulists were not working in the best interests of their country. The Zaghloulist Ministry of 1924 would have dearly liked to have expelled Saleh Pasha from the service then, but their own downfall came about before the necessary intrigue could be hatched.

Unfortunately for Enan Pasha, he has alienated from himself in the present case much sympathy, through his own very foolish behaviour. Not without reason, he regarded the Minister of Public Works as a very interested party in the conspiracy, but his suspicions should not have led him to refuse to give the Minister information, or to discuss the case with him at all. That refusal has been the principal ground on which the Council of Ministers had justified the dismissal of Enan Pasha. Nevertheless, it is a bad case of persecution, and Zaghloul Pasha must either have been badly duped or else he has lost nothing of his old vindictiveness and unfairness to those who do not share his views.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

PERSIA.

Teheran. September 8.

The Political Situation.

The deadlock with regard to the Cabinet is no nearer solution. Mustofi el Mamalek, who was entrusted by the Shah with the formation of a Ministry before the Mejliss was opened, had naturally to present his Cabinet to the House as soon as it assembled. The Deputies, however, seemed to be doubtful as to whether they would accept Mustofi and his Cabinet, and in consequence of this obvious lack of confidence he repeatedly tendered his resignation to the Shah, who each time refused to accept it. Eventually, seeing that this deadlock was very detrimental to State affairs, His Majesty last week sent the Acting Minister of the Court (in the absence of Teymoor Tash), his cousin, Cheragh Ali Khan Pahlavi, to Tadayyan, President of the Mejliss, to ask what the views of the House were. A private session was thereupon held and a large majority passed a vote of confidence in Mustofi and confirmed his appointment as Prime Minister. The latter then presented his Cabinet, as previously formed, to His Majesty; but he has refrained from presenting it to the Mejliss, as it now appears that although they approve of Mustofi as Premier, some members of his Cabinet are not acceptable, and as the Prime Minister sees no reason why he should change it and turn out, for no apparent reason, some of those whom he had asked to join his Ministry, the deadlock continues.

September 12.

A few days ago the Prime Minister had an interview at the Mejliss with the leaders of the various parties, who tried to persuade him to reconsider his decision, to reconstitute his Cabinet and to present it as soon as possible. The meeting, however, was abortive, Mustofi maintaining his attitude that he saw no reason why he should let down his colleagues, and sooner than desert them he would resign. Accordingly last Thursday he once more tendered his resignation, which was ultimately accepted by the Shah, who thereupon sent to the Mejliss and asked whom the Deputies chose as successor to Mustofi. The majority favoured Motamen ul Mulk, and his name was, therefore, submitted to His Majesty, who received him in audience the next day. Motamen ul Mulk has never held the Premiership, although he has long been a Deputy and enjoyed the confidence of the Mejliss to such an extent that he has been President during its last four terms. It is not known yet whether he will undertake to form a Cabinet; but he is said to be averse from doing so, and in this event the political crisis is likely to continue, for there are few, if any, of the possible candidates for the Premiership who have a sufficient majority in the House to warrant their taking office. The papers strongly criticise Mustofi's action in persisting in his resignation, in spite of the Deputies' decided preference for him and their vote of confidence: they lay stress on the serious effects on the country, if the present crisis is allowed to drag on for any length of time, pointing out that the Mejliss has now been in session over two months, and none of the may vital and important Bills which have been drawn up have yet been submitted to it for discussion, in the absence of a Cabinet enjoying the confidence of the Parliament.

Meshed, August 2.

The Rising in Eastern Persia.

A few weeks ago the rumour reached us that there was a mutiny of the Persian troops along the Russian border, and that these troops, reinforced by hundreds of the Turkoman tribesmen, had taken the town of Buinurd and were advancing on Kuchan and Meshed. It was said also that they had red flags attached to their bayonets and were distributing red handbills among the people. Their leader, according to the report, was the Sardar Jang, a commanding officer of recognised ability. None of the troops had killed their officers, but the officers had united with the troops, and all were advancing in good order. The reason assigned for the mutiny was that the troops were eight months in arrears in their pay, a state of affairs which, in conjunction with the high prices that have prevailed, owing to the failure of last year's wheat crop, would make them ready victims to Bolshevist propaganda. In fact it was stated that their slogan was "The Sardar Jang for President of a Soviet Republic!"

A day or so passed and refugees began to arrive from Kuchan. Among the early arrivals were the chief of the Revenue Department in Kuchan and a wealthy landowner, who reported that the town was all astir, and as cars had been sent to bring the money that was in the Revenue office to Meshed, they had collected a few personal effects, and with their wives and children, and household staff, had left Kuchan before daylight. The advancing forces, they said, were only an hour or so out of the town and no effective resistance was expected.

"The Commander of the Army of the East," called the Amir Lashkar-i-Shark, whose headquarters are here in Meshed, appeared to be much alarmed and sent urgent messages to Teheran for assistance. He maintained that there would be no point in trying to check the uprising with the troops that he had here, as they would most probably join the mutineers. Four aeroplanes arrived suddenly from Teheran and it was reported that three thousand troops were coming in motor lorries. Incidentally, it appears that two months' pay was immediately given to the troops in Meshed. One contingent of six or seven hundred of the Teheran troops arrived within the first week; according to the statement of one of the drivers, there were disabled lorries delayed here and there all along the road.

Events in Kuchan.

In the meantime the troops in rebellion had taken Kuchan, were pasturing their horses in fields and gardens and were taking whatever they needed from the shops in the bazaars, giving promissory notes that were to be payable after they had taken Meshed. As far as could be heard they had been guilty of no violence. Only a day or so later, however, the report came that Kuchan had been retaken by the Shah's forces. One of the aeroplanes that had gone there almost immediately after reaching Meshed had dropped bombs in the Public Square, killing twenty or thirty civilians and wounding many others.

The sudden bombing of the city of Kuchan and knowledge of the fact that the Shah had sent fresh troops, aeroplanes and armoured cars from Teheran had a demoralising effect on the mutineers, and accordingly, when the Shah's troops reached Kuchan, they found the mutineers had fled. Their escape was not to be easy, however, for the soldiers of the Shah were advancing in three directions, first by way of Sharud and Astarabad, along the shores of the Caspian Sea; second, from Nishapur; and third, from Meshed. The only recourse for the fugitives was in the direction of the Russian border.

In a very short time it was announced that the leaders of the mutineers had been captured, attempting to make their escape in the clothes of ordinary day labourers, and the Amir Lashkar gave out that papers, signed by the Russian Consul General, had been found upon them. He added that, after he had made this discovery, the Russian Consul General had come to see him, had remarked that the situation was getting rather serious for the safety of Meshed, and had asked whether he thought it advisable to request the assistance of Russian troops. According to the report that reached me the Amir Lashkar ordered him out of his office, saying that he had already found documents bearing the Consul's signature, on the persons of the men who had been captured.

Fact or Fancy.

In Persia reports can rarely be taken at their face value, and it is not always easy to disentangle fact from fiction. Apart from the question as to whether our Russian neighbours have been fostering disaffection among the Persian

Digitized by Google

troops, one thing seemed to be obvious, namely, that money received from the financial administrators by the Army had not been reaching the troops. Another generally accepted fact was that the Amir Lashkar had been making much money personally out of the famine situation. It was through his authority only that the Government here in Khorasan could enforce the orders for the sale of wheat, and it was rumoured that he exercised this authority in such a way as to make large profits for himself. The opinion of the troops seemed to be that he was personally to blame for their not having received their pay. It was altogether possible that the disaffection of the troops was in reality nothing more than a fully justified protest of hungry, unpaid men against the rascality of their Commander-in-Chief. It was possible that all the talk about the Russians, which, by the way, appeared to originate with the Amir Lashkar himself, may have been but a part of his effort to represent the action of the troops as something more general and more serious than resistance to his personal administration. This is the opinion that a good many people were openly expressing, but at the same time there was an undertone of mistrust of the Russians.

The Coming of the Shah.

Then came the news that the newly-crowned Shah of Persia, Reza Khan Pahlavi, was coming himself to Khorasan. The Amir Lashkar bought a magnificent eight-cylinder motor car, in which he hoped to meet the Shah. But there was much discontent in the city, or at least uncertainty, as to what the future for Persia would be. If the Shah and his various Amirs were simply working together to loot the country systematically, the prospects under the new dynasty offered little more than a repetition of what happened under the previous dynasty. But a day or so after the Shah started from Teheran an aeroplane left Meshed at daybreak. The Amir Lashkar had been called to Sharud, supposedly for a conference with the Shah concerning arrangements for his visit to Meshed. Posters were put up throughout the city indicating where the different classes of the citizens were to assemble, and where some of the special classes should go, outside the city, to meet him as he approached. The custom of going outside the city to meet friends is very ancient in Persia. This time the Amir Lashkar was to go by aeroplane to Sharud, a distance of nearly three hundred miles. The principal city officials were to go to Sharifabad, a small village twenty-six miles from Meshed. The Consular Corps, among whom the Foreign Secretary very kindly included the men of the Presbyterian Mission, were to go to Turuk, a small place on the road, eight miles from the city. Artisans of various classes were to assemble at the Paen Khiaban, or Lower Avenue, Gate, as the Shah would enter by that gate and make his way directly to the Shrine. At the Shrine he would pay his respects to the sainted Imam Reza, who is buried there, and then proceed along the Bala Khiaban, or Upper Avenue, through the street called "The Four Gardens," where merchants and others were to assemble, to another street called "The Head of the Water" and on to the Public Square and the Governor's Palace.

But the very day after these notices of the order of the parade had been posted other notices were put up to the effect that, as it was the month of Muharram, the sacred month of mourning, the people would be expected to refrain from putting up decorations or illuminations and from going outside the city to meet the Shah. This was said to be on account of objections raised by the mullahs or priests of the city. Before it was known what attitude the Shah would take towards the protest of the religious authorities, however, word came that when the Amir Lashkar reached Sharud he was immediately put under arrest, the charge being that he had misrepresented the character of the supposed mutiny for personal ends. The following day other notices were posted to the effect that the people were all to be free to do as they pleased in regard to decorations and as to going outside the city.

I received my notification to go to Turuk, to be there at three o'clock on the afternoon the Shah was expected. The whole city seemed to be ready for the big event, for it was many years since the Shah of Persia had come to the city of Meshed. The Municipal Committee had had men working day and night to sweep and sprinkle the streets, and the various city departments and associations of merchants and tradesmen had managed on very short notice to put up a surprising number of decorations and stands or arches for illumination.

At Turuk, opposite the big pavilion tent that was reserved for the Consular Corps, newspaper men, and prominent citizens, there was another tent for the leading officials of the Shrine. Besides these two tents a special tent had been put up to be at the disposal of the Shah. When His Majesty reached Turuk, he left his car for a few minutes and entered this hut. He sent at once for the three foreign Consuls—the British, the Russian, and the Afghan. These three men were the only foreigners who had opportunity to meet the Shah, and when they had shaken hands they returned. The Shah then met the three or four leading Shrine officials and, entering his car again, went on to Meshed.

We all drove back to the city in a great cavalcade, automobiles, carriages, mounted troops, a company of artillery; all the way back we passed more and more of those who had come out on horses or donkeys, or on bicycles, and there were hundreds also who had walked.

A short distance this side of Turuk our carriage was stopped and the services of the *hakim-yangi-dunyah*, the Doctor of the New World, was called for. A very heavy man had fallen from his horse and had landed head first on the stones. The doctor saw that his skull was fractured, so an automobile that came along was requisitioned and the man and some of his friends went with the doctor as quickly as they could to our American Mission Hospital. But the unfortunate man died on the way.

I went on in the carriage to the British Consulate, near the Public Square, where the ladies of the American Presbyterian Mission were waiting to see the Shah pass on his way to the Governor's Palace. The Shah rode in the first car, an open car, with no one else except the chauffeur. Before him were his mounted escort, carrying lances with the Royal pennants, and behind were His Majesty's personal guard in an armoured car. Then came four or five touring cars with the rest of the party.

The Shah is himself a man of a decidedly military appearance with strong, determined features; as he reached the end of his journey, he seemed to show slight signs of fatigue. But probably crowned heads have more than physical weariness to make them profoundly tired.

Last of all, about half an hour behind the others, came the Amir Lashkar, riding in an inconspicuous car, under arrest. At present nobody knows whether he will be vindicated and restored to favour or whether he will be hanged. The Shah is going to Kuchan and Buinurd himself and will probably soon have first-hand information of all that lies behind the rumours that have kept things interesting in Khorasan for the past month.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per Annum.

Further particulars may be obtained of E. H. Keeling, Hon. Sec., 7f, Grosvenor Street, W.1.

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

General News.

The two French aviators who recently beat the world's record by their non-stop flight from Paris to Bunder Abbas, arrived here last Sunday at midday, having left the latter place at 7 a.m. They have now returned on their homeward flight, via Baghdad.

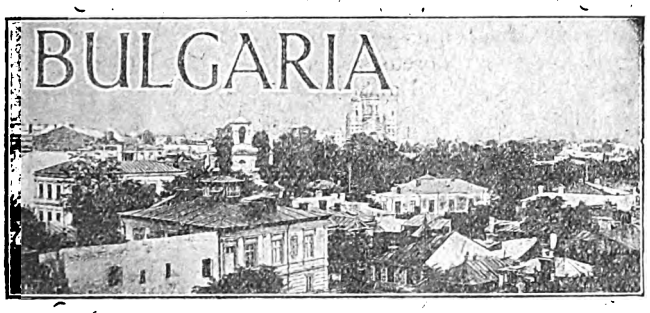
Djan Mohamed Khan, Commander of the Eastern Army, who was arrested, degraded from his military rank, and brought to Teheran on a charge of embezzlement of public funds, has, rather to the general surprise, been released.

Signor Galli, who has been Italian Minister here for the past three years, is leaving in a few days' time, having been appointed to the Legation at Lisbon. He and Madame Galli have made themselves deservedly popular among the Diplomatic Corps and the European community generally, and they will be much missed.

News recently came through of a rather nasty incident near Kermanshah, where a convoy of cars and lorries coming up to Teheran for the Anglo-Persian Oil Company was held up by the Persian Amnieh, and the English drivers maltreated, though fortunately not very seriously. It is hoped that the Oil Company will take a strong stand in the matter, as reports of interference with all sorts of transport by these road-guards have been only too frequent of late.

The situation in Kurdistan, to which the Government have dispatched troops, appears to be quite quiet, and the Salar ed Dowleh, about whom we hear nothing, seems to have made no headway, as indeed no one expected he would.

The last week or two the weather has become decidedly cooler, and, although the summer has not actually been excessively hot, it is nevertheless a relief to think the heat is over, and we are now looking forward to the first rains of autumn.



Sofia. September 17.

Re-Grouping of Political Parties.

With the approach of the elections for the General Councils which will take place in November a marked activity is showing itself in the political world, more especially among party leaders. The result of these elections is supposed to indicate how the next general election for the Sobranye will go. The date for the general election has not yet been fixed, but cannot be before next May. The parties have already begun to rearrange their forces with a view to preparing the ground for future electoral coalitions. For instance, the Radical party has united with the right wing of the Agrarian Union, that is to say, with the dissentient section of Stara Zagora, under the leadership of the old Agrarian leader, M. Draghieff, while the Democratic party, which without doubt forms the most important section of the Opposition, has engaged in negotiations with a view to the formation of a lasting entente with the Agrarian Centre, which represents both numerically and politically the entire Agrarian Union, although the leaders strive among themselves for the exclusive direction of the Party. On the other hand, the National Liberals, who are reorganising themselves, openly encourage this *rapprochement* of the Agrarians with the Bourgeois parties, from which they hope to derive equal benefits. The Democratic party, representing the Government, is likewise engaged in strengthening its ranks. Its influence has appreciably diminished, but this is only natural after an administration lasting three years —three years of trouble and all but civil war. Its influence has been weakened by numerous defections and by many unfortunate events. With regard to the Socialists they no longer count, consumed as they are by interminable dissensions.

Communist Intrigue.

It was thought that communist or agraro-communist conspiracies were a thing of the past. It would seem, however, that this is not the case and that these have not yet disappeared from Bulgarian political life. A conspiracy has just been discovered, the work of an organisation of young Bulgarian Communists calling itself the "Consomol," after its prototype in Russia, the name being derived from an abbreviation of three Russian words meaning Committee of the Union of Youth. This organisation, formed a year ago in order to reconstitute the remains of the Communist party which had been officially dissolved and effectively crushed, and to undertake Bolshevist propaganda in political syndicates, in corporations, sporting groups, etc., had hitherto been kept secret, but was discovered by the police a fortnight ago. Since then fresh details of the conspiracy come to light daily; in every case they have been traced to the instigation of the Bolshevist centre at Vienna and under the active influence of Bulgarian communist leaders who have emigrated to Moscow. The most turbulent of these, Gheorghi Dimitroff, had recently visited Vienna and Prague, in order to confer with the most active of the former Agrarian Ministers, Nedelko Athanassof, with a view to carrying out, for financial considerations, outrages in Bulgaria. These outrages aimed at the persons of the President of the Council, the Minister of War, the leaders of the Democratic Entente and in addition at a number of public buildings, such as the Sobranye, the offices of the Cabinet, and the Military School; at the same time certain foreign Legations were to be attacked with a view to provoking foreign complications. The plot has now been discovered, and consequently frustrated; but the affair is none the less significant.

The Salonika Fair.

The Hellenic Government, as is known, has organised a large Fair at Salonika, to be held during the first half of October. All the Balkan countries have been specially invited to take part in it. The Bulgarian Government readily accepted the invitation, and has announced a number of facilities to be accorded to Bulgarian exhibitors for the transport of their products. Bulgarian merchants and manufacturers have responded freely to the Government's appeal, and are preparing to take an active part in the Salonika Fair. M. Bobochevski, Minister of Commerce and Industry, has signified his intention of visiting the Fair as Bulgaria's official representative. The Salonika Fair will thus accentuate the increasing improvement in relations between the two neighbouring countries —Bulgaria and Greece—whose large common interests have led to the approaching opening up of negotiations for the conclusion of a commercial treaty.

Bulgaria and the Balkan Allies' Note.

The exchange of Notes between Bulgaria and her neighbours has ended with a new collective communication which the Yugoslav, Roumanian and Greek Legations addressed on September 11 to the Ministry of Foreign Affairs by way of acknowledging the Bulgarian Note of August 23. The message informs the Ministry in a very friendly, but at the same time dry, tone that their respective Governments had noted the peaceful declarations expressed therein, but that, without wishing to enter into discussion with the Bulgarian Government, they adhered to the affirmations formulated in their Note of August 11, which, they said, were based on actual facts, and that, consequently they would await the execution of

Digitized by Google

measures which the Bulgarian Government stated that it has taken or would take to prevent the activity of revolutionary activities, especially in frustrating any attempt on the part of bands to cross from Bulgarian territory into that of the said neighbours.

Liquidation of two British Claims.

The Sobranye has just approved, at the request of the President of the Council, a convention concluded between the Bulgarian Government and two British firms, the Oriental Tobacco Trading Co., Ltd., and the Commercial Co. of Salonica, Ltd., which had brought an action against Bulgaria, the first for a claim of £157,511 sterling, the second for £115,949 sterling, as indemnity for the destruction of their tobacco depôts at Serres and Gorna Jumaia during the first Balkan War, in July, 1913. The convention ratified by the Bulgarian Parliament liquidates the two claims, together with the interests accumulated since 1913, by the payment of a sum of £102,548, to be paid by the Bulgarian Treasury direct, without the intervention of the administrator of Bulgarian property seized in Great Britain, which was allocated for the settlement of private debts, not belonging to the State, owing to British subjects.

Constantinople, September 21.

Constantinople's Municipality.

To judge from an account of yesterday's meeting of the Municipal Council it would appear that it has at last been realised that a certain amount of modifiable extravagance is being indulged in in various departments of the Prefecture and many of the councillors have declared war on the policy. A letter was read at the meeting held in honour of the visiting Egyptian football team and the Admiral Yamamoto. It was further disclosed that 4,000 liras had been allotted for the printing of the Council's minutes. The Council also criticised the expenses incurred by superintendents of sanitary inspectors, who, in spite of there being a large number of motor cars at the disposal of municipal officials, had considered themselves justified in expending 480 liras on hiring additional cars for their use. The latter item was soon disposed of, however, as it was decided that these officials would have to reimburse the municipality out of their own pockets. One member of the Council declared himself utterly incapable of conceiving why municipal agents should carry revolvers. Their work, which consists of controlling traffic, chasing small boys and street vendors from prohibited areas and generally seeing that shops carry out municipal regulations, hardly does seem to necessitate the possession of these "clinchers of arguments," and the question has, therefore, been referred to a commission *ad hoc*.

Enter the Omnibus?

There is further talk about Constantinople having an omnibus service. As far as the general public is concerned, the prospect of a "bus service" has been in danger of entering the same category of scepticism which attends some of Nastradji Hodja's tales. For nearly two years the population of Constantinople has been nourishing plans for revenge on the Tramway Company and promising themselves the long desired satisfaction of travelling otherwise than by packed and disagreeable trams; but up to the present the more luckless portion of it has been constrained to continue to display its ability (which has now developed into a fine art) of hanging on the steps and buffer guards of their homeward-bound trams. This time, however, there appears to be far more chance of the project materialising, as the Prefect of Constantinople has just returned from the capital armed with the approval of the Minister of Public Works for the establishment of this service by the Municipal authorities. Up to a very short time ago it was generally announced that a British group had obtained the concession for the supply of material and exploitation of the service and that 150 buses were on the point of leaving England. In view of the consequent developments proving that the scheme, as far as England is concerned, has fallen through, a very bad and regrettable impression has been made on the public here, which now ridicules any further talk of contemplated activities by British concerns.

Railway Fares.

Delegates of the various railway companies operating in Turkey are now meeting to discuss the question of increasing their passenger fares and transport rates in view of their inability to do more than cover their expenses. The object of this congress is receiving indignant criticism from the whole of the Press and the commercial world. The invariable system of companies serving the general public in Turkey, when finding that the amount of their expenses is too closely approaching that of their receipts, is immediately to resort to making the public pay higher fares. Such a procedure as that of ascertaining whether it is possible to cut running expenses is, apparently, never considered. As one paper rightly points out the personnel employed by railway companies in Turkey would practically suffice for services operating three times the amount of rolling stock. All short distance trains carry at least four ticket collectors on every run, whereas the work could be done by the station officials who abound in great numbers. In spite of the affluence of personnel complaints regarding delays and bad handling of goods are every day occurrences and the high rates charged for transport constitute one of the primary causes depriving certain products of their competitive prices. Added to this the business world here has also to support the burden of the Port Monopoly. Lighterage, loading and unloading charges, and all port services exceed those of any port in the world. It is hardly surprising, therfore, that considerable apprehension is being shown by producers and merchants at the prospect of still further crippling increases being made.

The Rate of Exchange.

If rumour is to be credited speculators on the pound sterling exchange run the very grave risk of making the acquaintance of the Angora Tribunal of Independence. Apart from the fact that one of the members has already intimated that the Tribunal is by no means ignorant as to what is happening on the Constantinople Bourse, the authorities have issued warnings against operations which would tend to send up the pound sterling still higher. Contrary to custom the English pound has appreciated in the middle of Turkey's export season and has caused the ruin of many important business men here. The Bourse authorities state to-day that they mean to have the exchange down to 750 before long; but they wisely refrain from saying how this is to be accomplished. Commission agents having placed credit orders in England when the pound registered about 860 now find, in the event of not having then bought sterling to cover their bills on delivery of the goods, that they are deprived of their profit. The fluctuations of the last month remain inexplicable even to financial experts, especially as Turkey is still said to have exports at Smyrna to the value of 7,000,000 pounds sterling which have not yet been sold. At the present rate of exchange it is extremely difficult for firms to secure orders for English products.

ABYSSINIA AND THE HOLY PLACES.

II.

By Alex Devine.

Great Britain as Protector.

By erecting, in conjunction with the Prussian Government, a Protestant Bishopric at Jerusalem on the widest basis the British Government had, knowingly or unknowingly, assumed the official rôle of protector of these Abyssinian pilgrims. For nine years this rôle proved to be an easy one: the Abyssinian Government made no appeal to the protector of its nationals in Jerusalem until towards the autumn of 1850. In that year the British Consul in Abyssinia, Mr. Walter C. Plowden, whose murder in 1860 by a rebel named Garred on the road to Massawa seems to have started the long and fateful misunderstanding between the British Government and King Theodore III, which culminated in the storming of Magdala by Sir Robert Napier on April 13, 1868, gave some Abyssinian priests who were setting out for Jerusalem a letter of recommendation to Mr. James Finn, Her Britannic Majesty's Consul at Jerusalem. Armed with this official document the blameless Ethiopians made their way to the Holy City and presented themselves and their letter to Consul Finn.

Shortly afterwards they appealed to him for protection from the attacks of Mohammedans, who insulted them for wearing white turbans. They protested that it was the custom of their country, and that they were not amenable to the customs or rules of Turkish subjects. After some time, however, they yielded on this point and adopted the dark-coloured turbans generally worn by Christians at Jerusalem. But they continued to pay frequent visits to the house of his Lordship, the Right Reverend Samuel Gobat. On October 10, 1850, they made another appearance at the Consulate to complain that the Armenian clergy were endeavouring to deprive them of their Church and their Convent adjoining the Great Church of the Holy Sepulchre. They declared that on this point they had previously consulted Bishop Gobat, who, hearing that the Armenians had stolen the key of the buildings in question, had advised them to seize it immediately after Divine Service, while the Coptic deacon was looking in another direction. This they had done, but the Armenians threatened to beat them, unless the key were restored. Forced into the position of an involuntary mediator, Consul Finn consulted the Abyssinians' official protector, the Protestant Bishop, who in the course of a long conversation told him that the Abyssinians had formerly been a flourishing body at Jerusalem, having intercommunion with the Armenians and Copts and possessing a large library and valuable documents. At the time of the last plague however in 1838, they had all died. The Turkish Governor, Ibrahim Pasha, at the instigation of the Armenians, then burnt all their books and papers for fear, as the Armenians alleged, that these documents might spread infection. Ever since then the Abyssinian pilgrims had to reside in the lost remains of their former possessions, the Convent called Deir Es Sultan, and had to subsist mainly on the miserable food given them by the heads of the wealthy Armenian Convent.

The Armenians and the British Consul.

The Copts, acting as tools of the Armenians, had for some years kept possession of the key of the little Church attached to the Abyssinian Convent, only occasionally admitting the Abyssinians to Divine Service. Lately they had refused to let the key go out of their hands, and this action was the reason that had induced his Lordship to advise the real owners to obtain it by a strategem. The following day the Abyssinian priests visited Consul Finn again; and they were followed by a deputation from the Bishops and Elders of the Armenians, who declared that the church claimed by the Abyssinians had been recognised as their property for the last 400 years and that the Abyssinians were "like wild beasts, going hither and thither, not fit to be trusted with property, but yet had stolen the key," at the instigation of the English Bishop.

The Armenians eventually agreed to Consul Finn's suggestion that the Church should be kept open to both parties until the new Patriarch should arrive, when the case might be impartially examined and documents consulted in the presence of Bishop Gobat and himself. In a conversation with his Lordship, which Consul Finn had after the Armenians had left, the Protestant-Bishop accused the Armenians of being cunning liars; for he knew that the Church and Convent had been Abyssinian property twenty-five years previously, he himself having visited the library and examined the books and archives at that date. Consul Finn accordingly drew up a document embodying the terms of agreement as to the use of the Church and stipulating that the key should be deposited every night with some third party, such as the Pasha or the Prussian Consul. To the last-mentioned clause however the Armenians would not consent. They would keep the key themselves "for the sake of honour." A few days later the matter came before the Pasha, and Bishop Gobat proposed that, pending the arrival of the new Armenian Patriarch, the Abyssinians should keep the key of the Church door entering from their Convent and that the Armenians should keep the key of the other door entering the Church from the Great Church of the Holy Sepulchre. On November 17 Consul Finn inspected the Abyssinian Convent and its little Church. On November 19 the new Patriarch, John, arrived and was consecrated on November 23. On December 28, Viscount Palmerston, writing from the Foreign Office, expressed his approval of the steps taken and of the advice given by Consul Finn.

The Abyssinian Claims.

To understand the nature and validity of the Abyssinian claims fully it is necessary to remember that in 1850 the Copts, Armenians, Syrians, and Abyssinians subsisted in one ecclesiastical inter-communion, the Armenian Convent being the wealthy and powerful patron of the other three, and that the Abyssinians laid claim not only to their own Church and Convent but to the Coptic Church, the Coptic Convent, the small Armenian Convent with much adjacent property, as well as to property in the great Armenian Convent in a distant part of the city. The Coptic and Abyssinian Convents are near together, and the Copts had no access to their Church save through the Abyssinian Convent and Church. At the time, however, of the calamitous plague of 1838 the Copts, instructed to that effect by their Patriarch in Cairo and by the Armenians in Jerusalem, gained the Pasha's assent to the burning of the Abyssinian documents and got possession of all the keys of the two Churches and Convents. These they had kept ever since, allowing the Abyssinian pilgrims to reside in the dilapidated ruins of their ancient Convent, but locking them up there every night with no provision against sudden illness. Then came the interval between the decease of the late and the arrival of the new Armenian Patriarch, "in which space of time the patriarchal vicar, a clever and cunning man, acting in concert with the Coptic Patriarch of Cairo, used the poor Abyssinians with great severity, beating them, chaining them, and refusing them access to the Church except at rare intervals." The Abyssinians naturally assumed some degree of hope when Bishop Gobat arrived in Jerusalem in 1846. They met him at the City Gate, and the first words which his Lordship uttered within Jerusalem were addressed to them in their own language. Subsequently some of their clergy brought a letter from their king, Ras Ali, to his Lordship and, as we have seen, a letter of recommendation from Mr. Plowden to Consul Finn. But all the time they were laying their grievances before the Bishop and reminding him of their claims to large property, claims in support of which, as they admitted, they could produce no documents.

At length his Lordship advised them to take the course which they had adopted, that of seizing the key, in order not only to recover possession of it, but to throw upon the Copts and the Armenians the burden of proving their

Digitized by Google

right to regain it. Subsequently an order came to Jerusalem from his Excellency Wameek Pasha that the key should be restored to the previous holders. Then arrived his Grace the new Patriarch of the Armenians, who adopted a conciliatory attitude towards the Abyssinians. He rebuked the patriarchal vicar and the bishops in the presence of the Abyssinians and of Consul Finn, professing himself the parent both of Copts and Abyssinians and asking "why should a father take a church from one of his children to give it to another." As a result, too, of a long conference between his Grace and Consul Finn on December 5 the following arrangements were made. The Abyssinian Church was to be kept free for both convents, and the Copts were to hold the key. But the practice of locking up at night was abolished; while, should the Abyssinians have any cause for complaint, they could appeal through the British Consul to the Patriarch. These arrangements were to hold good until both sides produced documentary proof of property right.

Consul Finn's comments on this eirenicon are worth quoting. "This is a very important concession"; he says, "for now the Armenians will no longer be able to beat the Abyssinians or chain an iron collar round their necks, with a screw to tighten the collar, as they have done less than two years ago. And again the Armenian Convent can no more demand the Abyssinian Convent and Church for their own property, overlooking the Copts, as they did lately in a letter to his Lordship our Bishop, and verbally to myself. The present arrangement will not interfere with a daily feeding of a certain number of Abyssinians by the Armenians. Whether this is a distribution of alms, or a commutation for the usurpation of landed property, may be discussed probably hereafter. I have further to remark that those most conversant with such politics believe that the (Armenian) Patriarch is afraid of driving the Abyssinians to desperation and of their throwing themselves upon the Anglican Church (especially as they are now constantly reading for themselves the Holy Scriptures, given them by our Bishop), which might give them subsistence, and in virtue of its protection rebuild the Abyssinian Convent, which not only adjoints the Holy Sepulchre Church, but covers the subterranean chapel where, it is believed, Saint Helena found the Crosses. Finally I should observe that the English influence is acknowledged in those transactions, in consequence of the letter of King Ras Ali to his ancient acquaintance, our Bishop, and of the letter from Mr. Plowden to myself; but more especially because his Lordship has repeatedly assured myself and the Armenian authorities that King Ras Ali has petitioned Her Majesty's Government to have the Abyssinians in Jerusalem placed under British political protection. His Lordship tells me that he is endeavouring to obtain the same by means of His Grace the Archbishop of Canterbury."

Attitude of the Foreign Office.

In a dispatch addressed from the Foreign Office on February 15, 1851, Viscount Palmerston expressed his approval of the steps taken by the British Consul to effect a reconciliation between the Armenians, the Copts, and the Abyssinians residing in Jerusalem. Nothing more was heard officially of the Abyssinian claims in respect of the Holy Places for eighteen months. By this time Bishop Gobat had returned to England and was staying as the guest of Baron von Bunsen at the Prussian Legation, 9, Carlton House Terrace. From that address the Bishop sent a letter, dated June 29, 1852 and signed "S. Angl, Hierosol," to the Earl of Malmesbury, the Foreign Secretary in Lord Derby's Ministry, informing him that about the commencement of the year a meeting was held at Gondar, attended by the Negus, the two independent chiefs Ras Ali and Dejajmatch Oobear, and some of the most influential ecclesiastics of Abyssinia, at which it was resolved that the two chiefs should write to Her Majesty the Queen of England to ask her to authorise Bishop Gobat to superintend and to protect their countrymen visiting or residing in Jerusalem, and to authorise her representative, Consul Finn, to lend him his assistance when needed.

Letter to Queen Victoria.

His Lordship enclosed translations of the two letters and his own "Statement concerning the Present State of Abyssinians at Jerusalem." Ras Ali's letter merits quotation by reason of its quaintness. It runs as follows:—

"From the Head of the Judges, Ali, the servant of God, the King of Kings, who is one in the Godhead and three in persons.

May this reach the Queen of England! How are you? Are you well, equal to Heaven and Earth? I desire and expect to be in friendship with you; may you also desire my friendship. What is it that, whilst you exist, my inheritance is taken from me? Whilst every one abides in his inheritance, I am deprived of mine. Now do (what is needed) that I may not be deprived of my inheritance; (for) I have been deprived of the portion of ground belonging to Abyssinia (in Jerusalem). To be deprived of one's inheritance is a hard thing; for the inheritance of the earth (of Jerusalem) is the inheritance of Heaven. Let not my relations be deprived during your reign. Let, I pray you, Samuel Gobat be their keeper, that my relations may not be removed from my inheritance. The matter is now in your hand. Send me word for whatever you want and I shall send it."

Dejajmatch Oobear's letter runs the same, save that it omits the last sentence. It may, therefore, be taken for granted, as may also Bishop Gobat's "statement," the facts of which have already been summarised. Bishop Gobat's letter and enclosure were communicated to the Earl of Malmesbury on July 5 by Chevalier Bunsen, who supported the Abyssinian proposal, remarking that "As the protection granted by the British Government to those influential men, whose claims seem just, would essentially contribute to promote the authority of the Bishopric of Jerusalem, in which Prussia and England take an equally great interest, I take the liberty to recommend this question to your Lordship's kind consideration."

Now, although Chevalier Bunsen, as representative of the King of Prussia, the co-founder with the Archbishop of Canterbury of the Jerusalem Bishopric, possessed an indefeasible right to forward a letter to the British Foreign Secretary from the second Bishop, whom in accordance with the original agreement his Royal Master had appointed, and to support the proposal which that Bishop had submitted for the consideration of Her Majesty's Government, he was not, perhaps, well advised in exercising his right in the second instance. By the terms of the constitution of the Bishopric the British Government had undoubtedly proclaimed itself protector of the Abyssinian Christians resident in or visiting Jerusalem. But to invest the Protestant Bishop with a measure of political power, to set him up as a sort of Abyssinian Patriarch, in rivalry with the Latin Patriarch protected by the French and with the Armenian Patriarch protected by the Turks, was not in accordance with British diplomatic policy, which under Palmerston's rule had for twenty years aimed at conciliating a restless and aggressive France and of maintaining the integrity of the Turkish Empire threatened by Russia and the Egyptian Pasha. Accordingly the Earl of Malmesbury made no scruple about administering an emphatic snub both to the Protestant Bishop and to the Prussian Minister. To the latter he announced, with a mere blunt acknowledgment of the Chevalier's letter, "I have the honour to transmit to you under flying seal the reply which I have returned to Bishop Gobat's communication." To the former he issued the following definite instructions:—

"I have to state to you in reply that Her Majesty's Government cannot undertake to protect officially the natives of Abyssinia who may chance to be residing in the territory of the Sublime Porte. But Her Majesty's Consul at Jerusalem will be instructed to use his good offices for them in case of need, as members of a Christian Church in spiritual communion with the Established Church in this country.

Digitized by Google

In regard to yourself, the licence from the Crown, under which you were consecrated, enables you to exercise spiritual jurisdiction as well in Abyssinia as in Syria; and I think it on every account desirable that, as a purely spiritual authority, you should confine your interference in behalf of Abyssinians visiting Jerusalem exclusively to spiritual matters."

Resolved in this unforeseen emergency to do all that a man occupying his subordinate position could do to help the Abyssinians, yet equally determined by caution to combine the *sauviter in modo* with the *fortiter in re*, the intrepid Consul Finn affected to be embarrassed by the strictly qualified favour which under his new instructions he was empowered to extend to the Abyssinian residents in Jerusalem. In reply to the Foreign Secretary's dispatch of July 10, 1852, he pointed out the difficulty of countenancing the Abyssinians without raising the resentment of the Copts and Armenians:—

"I shall very willingly attend to these instructions in favour of the poor and oppressed people. But I fear it will often require delicate management in using those friendly offices; since they have powerful enemies in the rich Armenian community and the vindictive Copts, and are themselves of very hot temperament. Especial delicacy will be required, if they should undertake to rebuild or make repairs in the Convent. Our benevolent aid will be certainly misunderstood; for the Oriental ecclesiastical establishments will not fail to regard *this species of protection* as an indirect step of the Protestants towards gaining a portion of the Church of the Holy Sepulchre, which they could not obtain otherwise. The Abyssinian Convent covers part of the sanctuaries, especially the reputed place of finding the Crosses."

On the general tenour of Consul Finn's letter the Earl of Malmesbury made no comment in his despatch of September 28, 1852. He merely warned the Consul "most carefully to avoid taking any step which may seem intended to obtain for the Protestant community at Jerusalem a portion of the Church of the Holy Sepulchre."

(To be continued.)

THE WEEK AT HOME.

Saturday.

The Coal War of Attrition.

Yesterday, September 24, may prove to be a landmark in the history of the Conservative Party. For it was then that the Conservative Prime Minister finally rejected the miners' fresh and wide offer of peace terms. The Government, looking all round and particularly behind the situation, professed itself satisfied that the miners' proposals offered no prospects of "a lasting peace": and so we are still where we are.

Whether the Government is right or wrong it is not in my capacity to state. But it is obvious that the struggle is now one merely of attrition, that the workers must lose and lose heavily, and, above all, that the reconstruction of the industry, as foreshadowed in the Samuel Report—that reconstruction which, after all, was thought to be the main element in the whole affair—is now gone by the board.

Consideration of these things can surely do little good to the Conservative Party, even by those observers whose comments upon this particular dispute are limited to the not very profound solution of assassinating Mr. Cook. But the party aspect of the matter is of little importance: what is so tragic is that Great Britain as a whole should be suffering, and, through the lack of reformation in the mines, have the prospect of prolonged suffering.

The Question of War Guilt.

To those who questioned whether Germany's entrance into the League of Nations had ensured a change of heart in the administration of Berlin, the recent utterance of Dr. Stresemann upon the question of war guilt and the future of the former German colonies in Africa can have come as no surprise. One finds in this country very little disposition indeed to suppose that the latest recruit of the League has joined the European Army under any other colours than his own. And this statement of Dr. Stresemann at Geneva to the effect that the entrance of Germany implied a withdrawal of the charge against her of responsibility for the War has appeared as a complete confirmation of the general suspicion.

From the League of Nations' point of view it is a grave pity that the German statesman should so have interpreted the entrance of Germany to the pacificist counsels of Geneva; but in the eyes of those nations who fought against her in the War it is something more than that. The alarm that at once spread through the French Press appeared to be shared even by journals here which consistently try to uphold the cause of the vanquished.

Business Men's Counsels.

The difference between the opinion of the business man and that of the Government of the day is always a matter for solemn consideration, although it is probable that that difference is now considerably less than it was, say, last century, when statesmen were not so wont to consult the economic "interests" of the country, but rather acted in what they disinterestedly felt to be the nation's best interests. But it may be instructive to note a few of the suggestions entertained by the Association of the British Chambers of Commerce a day or two ago. That they should have inveighed against the present system of high taxation was only natural, for their main concern is the making of money, not the spending of it. These economies got on to a more political plane, however, (the plane on which, perhaps, their influence is not too healthy for the country) when they unanimously demanded the amendment of the Trades Disputes Act of 1906, and when they declared that the coal dispute had been prolonged by the insistence of third parties on joining in the quarrel.

It is scarcely to be doubted, however, that the Government was fully aware of the opinion of the Chambers of Commerce long before the meeting at Hull.

Home Products.

The plight of English agriculture is generally known, but the actual difference between comparatively recent and present times is, I think, not often realised. Particularly in regard to the food market is our falling off to be noticed. It is probably within the experience of everyone to have travelled in our districts—whether in West, East, North, or South—and to have found such things as ham, butter, cheese to have been produced, not, as might be thought, locally, but in countries like Scandinavia, Denmark, or Canada.

It was on this subject that Lord Bledisloe, Parliamentary Secretary to the Ministry of Agriculture, had some revealing things to say the other day to the farmers of Essex. In praising the benefits of organisation (he instanced the great wheat pool in Canada that had secured the stabilisation of wheat prices in this country), he pointed out that foreign producers were remarkably well organised to supply England with foodstuffs. And he showed that, although the Eastern Counties at one time had a monopoly in the production of pork, now 95 per cent. of London's pork came from Holland.

The Benefits of Paternity.

An amusing problem was raised a day or two ago by Sir Henry Dickens, who is the Common Serjeant, but is also the son of Charles Dickens. To the Old Bailey Bar Sir Henry complained that all his life he had been shadowed by his father's name and its attendant publicity. But is it really a disadvantage to have a famous father? One thinks, for example, of the two Pitts, the two Arnolds, of the two Chamberlains even. On the other hand one thinks of—well, perhaps it were better not to mention names of famous men whose passing on of their abilities to their sons was not or has not been notorious. I forget what the biological law says on this point, but in the "creative" category, at least, I should think that the instances of fathers handing on their genius are very rare. With inferior people like politicians, for whom social esteem is no inconsiderable factor, perhaps a better case could be made out.

Billiard Rules.

It is rather fun, when so much talk has been indulged upon the desirability of altering rules of other games, to see the Billiard Association and Control Body quietly and without any fuss making a most important alteration. Henceforth consecutive hazards are to be limited to twenty-five, thus abolishing at one blow all our budding George Grays. Of course the monotony of consecutive hazards has long been complained of, and it is true that billiards in this country, though different from billiards in some other countries, is not a national game; but it is good to find that the controlling authority can so quickly make up its mind.

As a matter of fact, the alteration will have little effect upon the play of any but experts; it will pass serenely over the head of, though not undiscerned by, the ordinary humdrum player who makes his 100 in 20 minutes. But for those who assert, rightly, that billiards is the best indoor game, it is only fitting that a change of rules should be treated as seriously as, for instance, the cricketer would treat a change in the width of the bat.

Alter Ego.

OBITUARY.

Major W. E. Marshall, who was only recently appointed Principal Medical Officer to the Sudan Defence Force, died in Khartoum on September 24, from complications following gastritis, within ten days of taking up his new appointment. He served in the Sudan from 1909 to 1914 and again from 1919 to 1921, when he resigned on being appointed British Agent and Consul at Jeddah, a post which he held from April, 1921, to May, 1923.

NEWS IN BRIEF.

The King of Roumania successfully underwent a slight operation at the Castle of Sinaia on September 22.

An Exchange message from Vienna states that M. Pashitch, the Yugoslav ex-Premier, is dangerously ill at Ragusa Vecchie (Dalmatia).

The appointment of Mr. Bhagwan Singh Varma to be a Nominated Indian Unofficial Member of the Legislative Council of Kenya is gazetted.

Najim al Fahad al Sadun was on September 22 brought before the magistrates of Nasiriyeh on a charge of having murdered Mr. A. B. Elliot, Mr. Alan Cobham's mechanic.

The Diet at Warsaw on September 25 passed the second reading of the Bill ratifying the Polish-Roumanian Treaty of Guarantee, which was signed at Bucharest on March 16.

On his arrival at Basrah on September 26 from Bushire, Mr. Alan Cobham at once went to visit the grave of his mechanic, Mr. A. B. Elliot, who was shot by an Arab during the outward flight over the desert.

The Reshitza works last week handed over the first locomotive entirely constructed in Roumania. It weighs 86½ tons. The equipment of the shops being now complete, they will be able to turn out about eighty locomotives a year.

The first London Mosque, 63, Melrose Road, S.W.18, will be formally opened by H.R.H. Emir Faisal, Viceroy of Mecca, as the representative of his father, H.M. Sultan Ibn Saoud, King of the Hejaz and Nejd, at 3 p.m. next Sunday (October 3).

The Messageries Maritimes is claiming £T22,000 (£2,400) from the owners of the Turkish ship Bozkurt for damages incurred by the Lotus when she came into collision with the Bozkurt. The Constantinople Commercial Court will try the case.

The transport Assaye sailed from Southampton on September 21 with one thousand N.C.O.'s and men of the Royal Air Force for Egypt, Iraq and India. The Assaye flew the R.A.F. ensign and had on the bridge the R.A.F. badge presented to the ship some time ago.

PERSONAL AND GENERAL

TO-DAY

September 30, 1926 (New Style).
September 17, 1926 (Old Style).
Rabia 22, 1345 A.H., of the Moslem Calendar.
Tishri 22, 5687 of the Jewish Calendar.

The Maharaja of Rajpipla left London on September 25 for Paris.

The Maharao of Kutch will arrive at the Hyde Park Hotel on October 2 from Scotland.

Lord Plumer, High Commissioner for Palestine, and Lady Plumer arrived last week at Sorrento for a few weeks' stay.

The Earl of Lytton, Governor of Bengal, accompanied by the Countess of Lytton and Lady Hermione Lytton, left London on September 23 for India.

Mr. R. J. E. Humphreys, Commercial Secretary to the British Legation at Bucharest, returned to his post on September 18 from leave in England.

Viscount Halifax, who proposes to pay a visit to his son Lord Irwin, Viceroy of India, hopes to leave England for India in November.

General Averescu, Romanian Prime Minister, who was received in private audience by the Pope on September 21, left Rome the following day on his return to Roumania.

Madame Ferid Bey, wife of the Turkish Ambassador, and her daughter returned to 69, Portland Place on September 24 from the Continent.

The Afghan Minister to Turkey has received a dispatch from his Government announcing the conclusion of a pact of security between Afghanistan and Turkey.

The Times Rome correspondent states that the King and Queen of Roumania will visit the Vatican during their State visit to the Quirinal next spring.

The Gaekwar of Baroda, who left London on September 24, entertained Colonel A. G. Bannerman, of the India Office, at luncheon at the Piccadilly Hotel on September 21.

Sir Grimwood Mears, Chief Justice, Allahabad High Court, and Lady Mears arrived in London from India on September 25. They are staying at the Hotel Belgravia.

Colonel Douglas Capitaneanu, formerly Roumanian Military Attaché in London, has arrived in London with Mme. Capitaneanu, and is staying at 42, Ennismore Gardens, S.W.7.

Viscount Willingdon, the new Governor-General of Canada, and Viscountess Willingdon sailed last Saturday from Southampton for Canada in the Canadian Pacific liner Empress of Scotland.

The Overseas League will entertain Mr. Cobham at a luncheon at the Criterion Restaurant on his return from his flight to Australia and back. Friday, October 8, is the day provisionally arranged. Air Vice-Marshal Sir Sefton Brancker will preside.

Lieut.-Gen. Sir John Shea, hon. colonel of the regiment, inspected the 13th London Regiment (Princess Louise's Kensington Regiment), under the command of Lieut.-Col. Lord Raglan, on September 26 in Kensington Gardens. During the War Sir John Shea commanded the 60th Division in Palestine, where the 2/13th London Regiment served under him. He is Adjutant-General in India, where he returns in October.

PROMOTIONS, APPOINTMENTS, ETC.

The King has promoted Sir Hari Singh, the new Maharaja of Kashmir, to the honorary rank of Colonel in the Army.

M. Nicolas Titulesco, Roumanian Minister in London, has been appointed as the Permanent Representative of Roumania on the Council of the League of Nations.

Professor Triandaphyllopoulos has resigned from the Ministry of Justice in the Greek Cabinet, and has been succeeded by M. Tsitseklis, who was Minister of Justice in the Michalakopoulos Cabinet of 1924-25.

The King has approved the appointment of the Rev. Stuart Holman Biddlecombe, lately Archdeacon of Ispahan (Persia) to the Vicarage of St. Anne, Kew, vacant by the resignation of the Rev. Sylvanus Fox Lloyd.

Major-General E. F. Orton, C.B., has succeeded Major-General P. Holland-Pryor, K.C.B., C.M.G., D.S.O., M.V.O., as Deputy-Adjutant and Quartermaster-General at Poona for the Southern Command. General Orton, formerly in the Royal Dublin Fusiliers, was in China during the Boxer rising and has seen service against the Boers, Wazirs, Mohmands, Swatis, Afghans, and in Tirah and Iraq.

Lieut.-Colonel Stephen Seymour Butler, C.M.G., D.S.O., who has been Military Attaché at Bucharest since 1923, has been appointed Inspector-General of the West African Frontier Force, with effect from October 1, in succession to Colonel R. D. F. Oldham, C.B., C.M.G., D.S.O., who has been selected to command the 6th Infantry Brigade. Colonel Butler served in the Egyptian Army from 1909 to 1915, in South Africa from 1899 to 1901, in British East Africa and the Nandi Expedition in 1907, receiving the African General Service medal with two clasps. Later he received the Sudan medal and clasp for serving with the Tagoi patrol in the Sudan in 1911. During the European War he served with the Egyptian Expeditionary Force in 1914-15, in the Dardanelles (being attached to the Anzac Corps), and in France in 1916-18. Mentioned in dispatches three times, he was awarded the 1914-15 Star, the C.M.G., the D.S.O., a brevet lieut.-colonelcy, the Croix de Guerre with palm, the Order of the Nile (fourth class), and Order of the Sacred Treasure. He did some exploration in North Central Arabia in 1907-8.

THE DOIRAN MEMORIAL.

(Continued from page 354.)

The Lesson of Service.

Ten thousand British dead lie round us. It was here on these mountains that surround us that many of them died on the field of honour; in the Struma Valley below us many laid down their lives from disease; yet farther away on the Ægean Sea many a soldier and sailor fell a victim to submarine attack. But wherever they died they left behind them a glorious lesson of self-sacrifice, of devotion to duty, of love of King and country. It is for us to take that lesson to heart and by ordering our lives in its spirit to ensure that they did not die in vain.

But few of these men gained any personal distinction. The theatre in which they fought was looked on as a secondary one; there were no spectacular events, no special glory to be gained, but it is this which makes their example all the more valuable. It is an example of hardships willingly endured, of monotony borne uncomplainingly, of danger faced unflinchingly—all done for the one sole reason that it was their duty. In this they were but following the immemorial tradition of their kind, one well known to ancient Greece, for you will recall what Thucydides says of the Greek soldiers of his own age, which we may thus paraphrase: "These men, devoting their lives to the common cause, gained undying fame and the most glorious of tombs, not only those in which their bodies lie, but those in which their glory is enshrined as an everlasting memory. The whole world is the tomb of famous men."

A Tribute to Foes.

And now I would say one last word as to this memorial. It is not, and is not intended to be, a monument to the victors. The passions aroused by the War have long since been stilled, and all we have erected here is a memorial to our comrades who died in the performance of their duty far from their homes and from their loved ones. It is a sign of mourning and of gratitude and not of triumph, and it is a permanent expression of that feeling which impelled so many of our countrymen and countrywomen to come here in pilgrimage but a few weeks ago. The 2,000 men here commemorated were inspired by loyalty to their country and by devotion to her cause, and we willingly recognise that thousands of others, not merely our allies but also our one-time foes, were inspired by equally lofty motives, for in duty all the world is kin. For all who died in Macedonia, whether British, Allied, or enemy, I would say in bidding them farewell: Requiem eternam dona eis, Domine, et lux perpetua luceat eis. May they rest in peace.

THE EMIR FAISAL.

The Emir Faisal, second son of King Ibn Saoud of the Hejaz, arrived in London on September 23 for a visit of about a month. He is accompanied by Dr. Abdullah Dambidji, Minister of Foreign Affairs of the Hejaz, a private secretry, Abdullah Fazil, and Mr. Jordan, H.B.M. Vice-Consul at Jeddah. The Emir is to be presented to the King. His other public engagements will include the inauguration next Sunday of the new Mosque built by the Ahmadiya community at Southfields. Since his arrival in London the Emir has visited the Zoological Gardens and has witnessed the performance of a revue at a West End theatre.

At a world congress of Baptists held recently at Budapest the delegates included, among others, representatives from Roumania, Yugoslavia and Bulgaria.

According to a telegram received by the Air Ministry, a Bristol fighter belonging to No. 5 Squadron crashed in attempting to make a forced landing on the N.W. Frontier last week, and sank in the River Indus. No. 344,719, A.C.I. Percy Jones, the passenger in the aircraft, is presumed to have been drowned. Flying Officer Denniss Robinson, the pilot, sustained only slight injuries, and reached the bank of the river safely.

The Bulgarian Sobranye has authorised the opening of judicial proceedings against the members of the Stambouliski Cabinet for the alleged misappropriation of the 4,000,000 Swiss francs (£160,000)which were found in bank-notes at the residence of the late M. Stambouliski after the *coup d'état* which overthrew him on June, 1923. The ex-Ministers involved are M. Omartchersky (Education), General Muravieff (War), M. Athanassoff (Railways), and M. Stoyanoff (Interior).

The India Society will start the autumn season on the evening of October 20, when Mr. E. B. Havell will read a paper by Mr. A. Ghose, of Calcutta, on "Old Bengal Paintings," with lantern slides. In November Sir John Woodroffe will deliver an address on "The Indian Magna Mater." The Society has in preparation a volume on the Bagh Caves in Gwalior, with many illustrations, obtained by the Society at the instance of the late Maharaja Scindia. An exhibition of the copies was held at the British Museum last autumn. Among the contributors to the volume will be Sir John Marshall, Colonel C. E. Luard, Dr. Ph. Vogel, and Mr. M. B. Garde, Superintendent of Archæology, Gwalior State.

At the cremation on September 21 at Golders Green, N.W., of the body of Mr. Naraven Madhew Samarth, who died in London on September 18, Colonel A. D. Bannerman, Political Aide-de-Camp to the Secretary of State for India, represented the Earl of Birkenhead, and among the other representatives of the India Office present were Mr. S. F. Stewart, Mr. W. Robinson, and Mr. C. H. Kisch. Among others present were Sir C. S. Bayley, Colonel Warliker, Mr. K. D. Mavlanker, Dr. S. A. Kapadia, the Hon. Sir C. Setalvad, Dr. R. T. Nariman, Mr. H. D. Bhabha, C.I.E., Sir Atul Chatterji, Sir Mohammad Raffique, Lady Ghosh, and Sir B. Melick.

Several changes, says *The Times*, are taking place in the Madras milltary command, and among contemplated movements is the transference of headquarters from Wellington to Bangalore. Major-General John Ponsonby, C.B., C.M.G., D.S.O., is this month succeeded in the command by Major-General Alexander L. Tarver, C.B., C.I.E., D.S.O., from the 22nd Indian Infantry Brigade at Secunderabad. A Southern Brigade Area is being established at Madras under Colonel-Commandant R. B. Morgan, from Jhelum, and the appointment of First-Class Station Staff Officer at Fort St. George will be discarded in favour of two Third-Class Officers for Madras and Bangalore.

TOLERATION.

Bepin Chandra Pal's weekly article in the *Englishman* discusses, in the issue of September 2, recent developments in the Moslem and Hindu creeds. He says that Hinduism has, until late years, always stood for toleration: and that Islam originally did so, but has lately been becoming more and more aggressive, with the result that Hinduism, particularly some of its more modern offshoots such as the Arya Samaj, has taken to copying its attitude. He does not, apparently, think that Christianity was ever tolerant of other religions: and declares that Islam and Christianity preach what he calls a "credal universalism," and that Hinduism could claim a "cultural universalism" until it came in contact and conflict with credal and aggressive propagandist religions such as Islam and Christianity; with the result of bringing about a "new and imitative credalism" in some of the latest Hindu religious movements, which has been largely responsible for the present communal dissensions in India. Mr. Pal quotes the injunctions of the Prophet regarding the attitude of his followers towards Jews and Christians: each of which communities was to enjoy complete religious freedom in the Moslem commonwealth; while, as regards the latter, Moslems were instructed to observe a much more than passive toleration—"If the Christians stand in need of assistance for the repair of their churches or monasteries or any other matter pertaining to their religion, the Moslems are to assist them." He goes on to suggest that, though Jews and Christians were the only two non-Moslem communities with which the Prophet came into direct contact, the spirit of tolerance and universalism that he displayed in dealing with them "would have been equally shown to Hindus and others also" if he had come across any. Here one cannot agree with Mr. Pal. From the very beginning, Islam has always been an iconoclastic creed, that set its face strongly against any form of idol worship. To extend toleration to the other "people of the Book" is one thing, but to do so to the followers of a religion, one of whose main tenets is the veneration of idols, is quite another.

One remembers a conversation on this subject with a Mohammedan soldier who, like most of his kind, was always ready to discuss religious questions with his British officers. Asked whether he believed that no one, who was not a Moslem, could hope for salvation, the soldier rather doubtingly said that he supposed that this was so. "But," said the interlocutor, "my father and mother were Christians, I was brought up as a Christian and received instruction as a child in that religion. Surely it is not right that I should suffer because of that?" With this proposition he agreed, and admitted that it was not right that those who, like his British officers, had had no chance of instruction in the true religion, should be condemned for following the faith of their fathers, and that they might certainly hope for salvation if (in the words of the 39 Articles) they were diligent to frame their lives according to the law of their sect and the light of nature. Thereupon one went a step further: and said that, if this were admitted in the case of a Christian, it ought to be equally admitted in the case of a Hindu. But the soldier would have none of any such extension—"No, no," he cried, "on no account whatever. The Hindu is a worshipper of idols, and as such is entirely outside any chance of salvation. It does not matter how exemplary may be his conduct, nor is the fact that he only follows the faith of his fathers of any avail—his case is hopeless from the start, and must always remain so."

It is this attitude that makes it so difficult to see any prospect of realisation of the "mutual tolerance" that is usually spoken of as the goal towards which Hindu and Moslem ought to strive in order to abolish communal bitterness. If this were merely a matter of politics, there would be no reason to despair of a settlement: not even if it were a question of conflict between two forms of the same religion, such as that between Catholics and Protestants in Ireland and Canada, which is often quoted, by Indian politicians, as a parallel case to the Hindu-Moslem division in India, and as offering an example that India may reasonably hope to follow in time. The Moslems are themselves familiar with what really is a parallel case—the division between Sunni and Shia in their own creed. But the religious difference between Mohammedan and Hindu is on an altogether different plane, where the former declines to admit that the latter follows what can properly be called a religion at all—he is incapable of making the slightest attempt to allow for the Hindu point of view, or to appreciate the many excellences that are contained in, at any rate, the purer forms of the Hindu creed: he condemns him unheard as a "but parast"—an idolater. Bepin Chandra Pal makes out that modern developments in Hinduism are due to the desire to emulate the "credal universalism" of Islam and Christianity, whose assumption of divine authority "hurts the natural pride of race" of the Hindus and makes them desirous of putting forward a similar claim. But there is more in it even than this. The natural pride of the Hindu revolts at the idea that the Moslem should—as, in sober fact, he does—refuse to admit the existence of such a thing as the Hindu religion: all the more so, when he does admit the existence of Christianity and Judaism as religions, even if mistaken ones. A Sunni Mohammedan, for instance, would paraphrase our prayer-book list of "Jews, Turks, Infidels and Heretics" as "Sunnis, Jews, Christians and Shias," and would consider this to be a comprehensive list of the religions of the world. The average Indian Moslem finds it possible, though not always easy, to extend religious toleration to the Christian and the Jew, even if only grudgingly to the one and contemptuously to the other; but it is quite impossible for him to do so to the Hindu. An ardent Mohammedan may welcome the declaration of Jihad—the holy war in which the souls of true believers slain in battle go straight to Paradise—against the infidel Christian; but, in the midst of the fiercest fighting, the recognition is always there, even if only subconscious, that the Christian is a man and a brother: deserving of the sharpest correction, but a proper object for toleration when the punishment is over. Idolatry, on the other hand,

Digitized by Google

is the unpardonable sin: in a fight against the idol-worshipper, no declaration of Jihad is necessary, and Paradise is assured, without it, to any Moslem dying in such a fight: no subsequent toleration is possible, for the aim is nothing short of extermination. The fanatical Moslem exults in this idea, and the Hindu fiercely resents it—what he specially resents is the assumption of what is more than even infinite superiority, for it denies to himself any religious status at all. And over so great a gulf fixed between the two communities in India, it seems literally impossible that a bridge can ever be thrown. All that does seem possible is the retention of the policeman who shall keep the peace until each side, developing along its own lines, shall have made itself strong enough to forbid attack by the other; so that both may live, and even work, together in and for the good of their common motherland, in a condominium of interest.

CURRENT TOPICS.

The Reforms.

A remarkable election manifesto has been issued by Mr. Edward Villiers, explaining why he is not seeking re-election to the Bengal Legislative Council as one of the three members for the European constituency of the Presidency and Burdwan. "I am absolutely convinced," he says, "that the reforms are totally and fundamentally wrong, both in principle and practice. I have seen nothing yet which justifies our taking a country steeped for generations in the practice and traditions of aristocracy and handing it over unasked to the dishonesty, inefficiency and extravagance of democracy. Even if we are going to carry out the policy of teaching India political responsibility, we are going the wrong way, and actually are teaching her irresponsibility. Until the reforms, recast on the basis of a strong untainted central Government, are applied solely to the Provinces, until the transferred subjects are really transferred, lock, stock and barrel, without interference by the Government or influence by official votes, the Councils each having a separate purse and separate responsibility to work out their individual destinies for good or evil, I see no hope for the practice of the reforms."

This is strong speaking, especially from one who has been so prominent a member of the Bengal Council until now: but it certainly does reflect the opinions of a large number of non-official Europeans in India. It is beginning to be realised how important has been the assistance given by these gentlemen in the working of the reforms, how whole-heartedly they have striven to make them successful, and how impossible ultimate success must be without their help. Many of them, at the inception of the reforms, expressed doubt or disapproval, and yet loyally sank their own opinions and gave of their best in the interests of India. If they are now reaching the conclusion that the present reformed constitution does not forward those interests, their considered views are of the first importance. Mr. Villiers' statement comes very pat when compared with the recent remarks of Sir Robert Horne at Glasgow, when he warned his audience of the necessity for recognising that different peoples required different kinds of government, and declared that it was "a vast error—indeed, an ignorant, an insolent error—to suppose that, because they had flourished under one particular set of arrangements, every other country, at whatever stage of political development, could immediately have imposed upon it the same arrangements."

It is daily becoming more evident that what is needed, in the case of India, is a sustained and deliberate effort to discover the form of Government best suited to her peoples, and concentration on the attempt to provide them with that. Mr. Villiers' use of the phrase "a strong untainted Central Government," and his championship of devolution in the Provinces, point a way that has been consistently advocated in THE NEAR EAST AND INDIA, which finds encouragement in the knowledge that it has received public support from so competent and instructed a critic.

An Indian Fabian Society.

It is announced that Mrs. Besant has decided to start an Indian Fabian Society, which hopes to introduce socialist ideas into India "by educating the public on social, economic and civic questions by purely constitutional means." Any practical attempt to improve the education of the Indian public is welcome; though it is perhaps unlikely that a campaign aiming at "the regulation of production, distribution and service for the common good instead of for private profit" will appeal to the Indian peasant. The Society apparently recognises this, for in its advocacy of the public ownership and control of land, an attempt is made to gild the pill by the inclusion of "equitable consideration of established expectations, and due provision as to tenure of the home and the homestead."

It must be assumed that the formation of the Society is preliminary to that of a Parliamentary Socialist Party in India: and that the programme put forward has, as its ultimate object, the education of the electorate for the purpose. This is a phrase that has been much in the mouths of political Indians of late: all of whom promise the immediate start of what is rather humorously described as "work" in the villages, though signs of performance have so far been wanting. The establishment of the Society has come rather late for the general election, so far as socialist candidates are concerned; but it might prove a useful ally to the Swarajists if it acts up to the practice of its eponymous hero. The dictionary description of Fabius is that he "foiled Hannibal by avoiding decisive contests, while constantly harassing the enemy by marches, countermarches and ambuscades." This pretty exactly describes the tactics of the Swaraj Party, particularly in the matter of the marches and countermarches at which they have lately shown themselves to be so adept.

Cable Errors.

It is rather laughable, and at the same time a little disconcerting, to find, in a cable printed in the English newspapers, that very distinguished lawyer and ex-member of the Viceroy's Council, Sir Tej Bahadur Sapru, labelled as "a Court subordinate judge." The error, of course, arose from a mistranslation of the "telegraphese" in which the message was sent: what the sender really intended to say was that a suit had been brought by Sir Tej Bahadur Sapru "in the Court of the subordinate judge." It is only a trifling matter, but it does point a moral. In view of the growing interest of the British public in Indian affairs, of which we hear so much, it would surely be worth the while of the great dailies to keep on their staff an Indian "expert" who would at least save them from absurd mistakes of this kind. Since some of them, at any rate, obviously do not do so, one is obliged to deduce that experience has taught them that it is not worth while; which leads to the further conclusion that the "growing interest" is only a propaganda cry that has little or no foundation in fact.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 19.

The Invitation to Gandhi.

A few short years ago the word of Gandhi might have stood against the Indian world; hundreds of thousands flocked to see him, his proclamations were accepted as inspired, the more credulous said he was working miracles, and millions believed he was about to assume actual kingship and reign over the Indian Empire. He went to prison instead, and since then he has proceeded by steps to his present retirement, where he spends his

Digitized by Google

days in his home in spinning and contemplation of the turning of what he calls "these tiny wheels of God." A group of Indian leaders have now called upon him to come forward and again unite the warring factions and conflicting interests of the numberless parties which make up the political world of India to-day, but he shakes his head and says he must sit and watch until the storm has blown over, parties are united and Hindus and Mussalmans, Brahmins and non-Brahmins and suppressors and suppressed have joined hands. That means, if it means anything, that Gandhi has finally given up political life. He takes the opportunity of preaching again the cult of the "Charka," the spinning wheel, whose gentle hum serves to lull his mind into a sleepy peace while it provides the thread for his loin-cloth of *khaddar*, country-made calico. In the wheel he sees salvation for India, the creation of a habit which will effect not a punitive and violent boycott, but a health-giving, non-violent, constructive boycott of foreign cloth.

The Cult of Contemplation.

Mahatma Gandhi has been preaching this cult for five years, but it has made no headway and to-day there is far less *khaddar* to be seen than there was even a year ago. In fact it has almost disappeared from the ken of the average European, and the only instances which come to mind where it is still conspicuous are the ill-fitting and dirty, loosely-hanging sacks that have taken the place of the smart uniforms of the ex-soldier messengers in the Municipal Offices. They are typical of the Indianisation of that organisation and its activities. The fact is that someone has to earn the rice and ghee for the family, and every member of it who has to face the conditions which prevail in this workaday world automatically has to abandon the cult of the charka, for it won't work as a money-getter, and food costs money. Gandhi and his creed have ceased to count as things that matter in the Indian political world.

The Volcano is Extinct.

Nothing shows this more than the manner in which the appeal to Gandhi and his reply have been ignored by the Extremist Press. With the exception of the *Bengalee*, the Moderate, Nationalist, Responsivist, or whatever it may be, organ, all the other members of the family have found far less significant things to be of greater interest, and they have left the subject severely alone. It has been left to the English papers to print Gandhi's column of really charming and poetic aspirations in full. Truly, as the *Englishman* says, the faith that once inspired so many of India's millions is no more and, politically speaking, Gandhi is an extinct volcano.

Communal Trouble Again.

The particular volcano that is in *Forward's* mind this week is the communal one, for we have had another outbreak at Kidderpore in the dock area with the usual hundred and a half casualties. A licensed Hindu procession passing a mosque, but not at prayer time, went on playing its music, when a crowd of Mussalmans rushed out and protested, but vainly, that it should stop. Like a flash the usual crowd collected, and the processionists were attacked and routed; but they reformed half a mile off and, being themselves reinforced, they gave as good as they got. Meanwhile police sergeants were rushed to the spot and quickly got the area under control by posting guards at all street exits, and so isolated the fighting elements. *Forward* again alleges that the whole affair is due to the deliberate planning and policy of Government. The type of argument is the usual one, a mixture of half-truths and malice cemented with a permanent antipathy to discipline, control or authority of any kind. There can be no doubt left as to the appeal that this kind of thing makes to the national temperament, seeing how *Forward* flourishes on it, and it is a sorry thing for Bengal that it should be so. Government has had its usual bad luck in its recent Press prosecutions, the High Court generally discharging anyone who by chance is convicted and fined in a lower court. So *Forward* again gets out its sulphur, stirs up the racial fires, and again this volcano starts emitting poison gas.

Politics in General.

There is no rest for the dead and buried Saint in the centre of the Calcutta New Market. Although his body was ordered to be removed a year ago, the Chief Officer of the Corporation has not taken any steps, and this in spite of the fact that there has been a standing resolution on the agenda waiting to be moved calling upon him to explain his inaction. The matter was again debated at the meeting this week but was again adjourned.

Sir Abdur Rahim has issued a strong Manifesto addressed to the Mussalmans of India calling upon them to defend their communal interests, and it has been met with a storm of abuse from the Swarajist Press. The general tone of the remarks remind one of the smile on the face of the tiger when he returned alone from his walk with the lady of the Niger.

Further correspondence between Lala Rajpat Rai, who has resigned from the Congress, and Pandit Moti Lal, the leader who has remained within the fold, has been published; neither side is convinced that there is anything to be said for the other's point of view. The secession of the former has seriously affected the position of the Congress Party in India generally.

Although Dacca is a predominantly Mohammedan town, the population is so large that the Hindu community there is numerous and powerful; their annual great procession was licensed to take place during the current week and, as a protest against the licence permitting music before the mosques, a *hartal* was declared by the Mohammedan majority. As a result of this the city became a place of the dead, whilst the Hindus found considerable difficulty in obtaining sufficient coolies to run their procession. It is a refreshing change to read of a *hartal* which is not directed against Government.

At the end of the last session of the Legislative Assembly, all communities joined in tributes to Mr. Patel, the Speaker, who has developed from a Bombay Extremist to quite a successful Parliamentary President. He was unable to resist the temptation in reply to claim that he had undertaken the work, and done it well, in order to show that his countrymen could be entrusted with responsibility. The Extremist Press mildly claims that his record "proves that Indians are not a bit inferior to the people of any other country in discharging onerous obligations in any high office." M'yes.

Men and Things.

This being the monsoon season, there are accounts coming through of severe floods in various parts of the country. There have been large scale catastrophes in Burma, and a portion of the Dooars is cut off by river breaches in Northern Bengal.

An appeal is being made to raise funds to endow a Chair in Calcutta University to commemorate the work of Sir Ronald Ross, the "man who has made half the world habitable" with his anti-malarial work. It is curious that the City which was his headquarters when he made his discovery has hitherto done nothing to commemorate the fact, but his visit this coming cold weather affords an opportunity to remedy this.

The Rotary Club on Tuesday heard a lecture by Mr. A. C. Atkinson, a schoolmaster in the La Martiniere College, on "European Education in India." He pointed out the difficulty of attracting home-bred schoolmasters when living costs were rising while incomes from investments remain stationary. His address has drawn a violent letter from a member of the Domiciled Community, saying that schoolmasters from Home are not required and the plums should be given to the country-born: such an outlook is a tragedy in the present state of affairs in India.

Somewhat lower rents are promised for the forthcoming cold weather, but housing accommodation of all kinds in

Digitized by Google

Calcutta is still costly as compared with Home standards. It is difficult to see how they can drop so long as people demand houses wth eight times the "cube" that would satisfy them at Home.

We note with interest the preparation for the Air Mail Service to Karachi from January next. Given luck in connexions, it seems that this would save five days in getting Home. What with the changes and the limited luggage, it does not sound as if it is going to be very attractive in the early stages.

There has been a reflection on this side of the activities on the Bombay Exchange in Tata's shares, on the publication of the scheme for paying part dividends on the second preference schares. Whatever else steel protection has done, it has certainly helped Tata's shareholders.

The Diocesan Record publishes a note by the Bishop on the success that has attended the efforts of himself and his brother of Bombay in pushing the Indian Church Measure through at Home. One has still to find a responsible layman here who regards the measure as anything else but highly undesirable, to use a mild expression. Speaking of church matters, we made up last Sunday for brighter sermons by a batch of the most intolerable hymns that have survived from the days of Albert the Good.

The Trivial Round.

We are anxiously awaiting news of Cobham to-day. There has been a severe monsoon storm about since the morning, and there is no news of him from Rangoon where he was due to arrive last evening.

Saturday last was the last day of the first Monsoon Meeting at Headquarters when, in spite of the heavy going underfoot, there was a very pleasant and sporting afternoon. Backers had rather the worst of the argument; Hayhoe saddled three winners; and a pleasant cool breeze made things very tolerable.

Have you noticed that the Calcutta Football Club were able to send £1,494 15s. 10d. to St. Dunstan's as a result of a Charity Match this year? Not so bad for a purely amateur organisation run by *sahibs* for their own amusement.

The Rugger section, which must be one of the most flourishing Rugger clubs anywhere, is going great guns, and the teams are now getting in practice for the Cup. The matches commence next week, and the holders will have to go all out in order to retain the pot. Incidentally, charming lads though they may be, they are getting a little too obvious in their methods at the theatre after Saturday's games.

Speaking of the theatre, "Our Cabaret Company" is at the Empire, produced by Charles Chamier and including Muriel Varna and Tubby Stevens. These are two of the best variety artists we have seen in Calcutta for years, and they are getting excellent houses as a reward for their enterprise. A most cheery show.

In imitation of your attempts on the Channel, long-distance swimming racing in the Hooghly began to appear two or three years ago, and it is now a regular feature at the end of the rains. The first of the series, a thirteen mile race with the tide, took place on Sunday, and only a few seconds separated the first six home. It is only thirteen years since Bengalis commenced to learn racing strokes at swimming, and now there are thousands who swim and play polo up to first-class standards.

Markets.

The local jute market, as opposed to upcountry markets, has been quiet during most of the week; jute has been coming in more freely, with the result that sellers are more anxious to do business, but Mills have continued to hold off in anticipation of a further lowering of rates in the near future. Gunnies have followed the course of the jute market and close quiet with a weaker tendency. A slightly better feeling has been noticeable in the piecegoods market, in spite of a fresh outbreak of rioting in the suburbs of Calcutta. Dealers from the consuming centres are beginning to arrive, and the general opinion is that the Poojah sales will be in full swing within a week or so. Although the reports from London indicate a firm tea market, the sale here was disappointing and, for all but the best descriptions and dusts, lower prices were offered. Buyers are continuing to stand out, and appear to be confident that there will be a further reaction before long. This will depend almost entirely upon the weather experienced in the gardens during the next month or two. The out-turn figures for August shew an increase of about 2½ million maunds over that of the same month last year.

The Stock Exchange has been singularly featureless of late; Government Securities remain very steady with little business passing and, even in that favourite of markets, the jute market, fluctuations did not amount to more than a matter of a few annas. Reports of a few of the Companies have been issued, but the considerable losses shown have had no effect upon the shares, as they had already been heavily discounted. A few transactions in coals are reported at round about current rates, and a few more dealings in cotton shares have been put through. Teas are more or less unchanged, but it is probable that prices for all but the selected shares will tend to drop in view of the likelihood of a further fall in the price of the commodity, as a result of the anticipated big crop for this year. Rubber shares are the turn steadier, but business has been chiefly limited to picking up odd parcels of shares at prices below quotation rates. The price of the raw material has been very steady at 1s. 8d.; and a continuance of this firmness may bring forth a revival of interest in this market.

The Exchange market has been steady with little business showing. Ready T.T. remains at 1s. 5 31-32d. Money shews no signs of tightening, and is still quoted at ½ per cent. for call and short notice.

AURI SACRA FAMES.

By JANUS.

In Indian circles the rupee is always with us, particularly when rupees are scarce: and, now that a moribund Legislative Assembly has left the Currency Report open for discussion until after the general election, it may be worth while to put forward some considerations on one side of the subject which has not so far received sufficient prominence in the Press. Not that I want to blame the Press for the inadequate treament the topic has received. It was cruel of the authorities to release the Report in Bank Holiday week: but it was more than cruel to keep back the appendices for a month, and in the circumstances the Press acquitted itself tolerably well, even if it sometimes failed to get to the root of the matter. For myself, I must confess that the predominant feeling produced by the Report is one of shame, vicarious shame of course, that India is proved to be not good enough for the system of currency it has evolved. The gold exchange standard is one of those great Victorian inventions for facilitating business which have come to their own slowly. It may be compared in this respect to the gas-engine, which for years filled a definite but limited place in the world, and then, in the fullness of time, gave birth to the motor and air-plane among other unforeseen developments. The gold exchange standard has not yet flowered, but one knows that it will in due time develop into that international currency for which the world is waiting, but for which the world is as yet scarcely ripe: and in the meantime it is the best national system that has been devised. It ought to be, judging by its ancestry, for Jews and Scots, Dutchmen and Quakers, professors, bankers and stockbrokers, all had a hand in its invention: but it was in India that the system was worked out, and now a competent Commission finds, with obvious regret, that the system is too good for India, because it is not yet fool-proof, and, in currency matters, India is unfortunately a fool or something worse. The old, vicious appetite for

Digitized by Google

gold and silver at almost any price, the greatest single cause of India's secular poverty, puts the new invention beyond her reach, and for the time she must be content with the gold-brick standard, which is by no means to be despised, but is at most second best. I wish Bombay in particular would try to look at the question from this point of view.

One of the most valuable features of the Report is in fact its explicit recognition of the ruinous effects of India's inordinate appetite for the precious metals, and a good deal of space is given to possible methods of curing the patient. The most striking suggestion under this head was made by a group of officials in the Financial Department, who pressed for a gold currency, partly in order "to cure the uneconomic habit of holding the precious metals as a store of value." Ingenious as it is, the plan is psychologically bad. The idea that people won't hoard what is easy to get seems in fact to fall into line with the common statement, which I believe is wholly devoid of truth, that a new hand in the confectioner's shop is allowed to eat all she wants, and loses her taste for sweets in less than a fortnight. Probably a young and healthy appetite could be cured by temporary surfeit without much permanent injury; but in this matter India is not young, and the appetite has become a disease. A more just analogy would be an attempt to cure an elderly and confirmed drunkard by giving him the free run of the club bar: in theory a cure may be possible, but in practice it is certain that something would burst first, either the drunkard or the club. The Commission say, though in more polite language, that the patient would last longer than the club, and we may leave it at that.

There is much more to be said in favour of the alternative proposal put forward by the Commission, of offering savings certificates repayable in gold after a term of years. It is like saying to the drunkard of our analogy: "Pay for your drinks now, and we'll give you them, with good interest, in five years' time; or, if you really get very thirsty in the interval, you can have them earlier by sacrificing some of the interest." There is, I think, good psychology in that proposal; because the delay might very well operate to break the habit in a substantial proportion of cases, and many holders would be tempted to renew their certificates at maturity. The details of the plan will need more attention than the Commission could give, because there is the obvious danger that a political or commercial panic, coming five years after a very large issue of certificates, might involve a heavy drain on the gold reserve just when it ought to be strongest; but, assuming that the scheme is organised in such a way as to avoid any sudden liability of a dangerous size, the gold certificate may very well prove to be—not a complete remedy by itself—but a useful ingredient in a comprehensive course of treatment. In the same way, the re-introduction of the one-rupee note, which was stupidly "axed" in the recent penny-wise period, will contribute its mite towards realising the ultimate aim, which is to convince India that the precious metals are now out of date, bad to keep and bad to spend, that for spending paper is far better, and that the best way of keeping your money is to lend it on interest to someone you can trust.

How to inculcate that lesson is, I think, the most important of all the questions which now confront the Government of India. Its importance lies in the fact that nearly all the other questions are in their essence economic, that they cannot be solved without a large increase in the national income, and that no really large increase can be looked for until the accumulated idle wealth of the nation is put to useful work. The currency system can do something, for good or for evil, according to its design and its operation; but it cannot solve the problem by itself. All over India one sees signs that a change in outlook is slowly coming into existence in these matters, as in others: the need now is for concerted effort to accelerate the process, to concentrate attention on the urgency of the need and the magnitude of the resources available for meeting it, to turn pious opinions into constructive zeal. It is not the job of the Financial or any other single Department, however gifted: it is the work for a statesman big enough to drive the Departments as a team, and to carry the public with him.

SIR SALTER PYNE.

The mention by Sir George MacMunn, in his article on future communications with Afghanistan in the last issue of this paper, of the name of the late Sir Salter Pyne, recalls to memory a short period of acquaintance with that very remarkable man, in the course of a voyage to India in 1896. In particular, his account of his first public appearance in Kabul, when the Amir Abdur Rahman sent for all the leading maulvis and mullahs of his kingdom, and introduced to them the new manager of his factories. "You see this Feringhi?" said Abdur Rahman. "I have taken him into my service: and what I want to tell you is that, if he dies—from whatever cause, snake-bite, cholera, or anything else—I'll hang the whole lot of you." Abdur Rahman was a man of his word: and Sir Salter Pyne said that, so long as the Amir lived, he felt safe; but that, after all, he could not live for ever: and every time he went on leave it was with the intention of not returning. But, every time, he thought that he would give it just one more trial; for, said he, "to tell you the truth, the game's too good. It isn't so much the pay that I get, though I have nothing to complain of there; but the Amir gives me ten per cent. commission on every order that he places for machinery for his Kabul factories—and that's something that is really worth having."

As everyone knows, Sir Salter Pyne was a mechanic on an Indian Railway when he first got the Afghan job: and, to begin with, "Tom Pyne," as he used to call himself, was a bit of a rough diamond, very different from the polished gem that he afterwards became. Stories about his early days were legion: some founded on fact, others quite frankly apocryphal. Two of the best—one of each brand—were the following. On his return to England after he had been knighted, he found himself a celebrated character, and was made a lot of in London society. At a large reception, he was buttonholed by a peeress no longer in her first youth; who said "They tell me, Sir Salter, that the Amir of Afghanistan buys his wives at auction. Now, if I were put up to auction in Kabul, what do you think the Amir would bid for me?" "Well, I don't rightly know, your Ladyship; but I can tell you this—that, whatever he did bid, you may bet your boots that Tom Pyne would go a 'undred better." The other, fathered on Tom Pyne as part of his description of a dinner party to which he was bidden at Windsor Castle—was "I was down at the far end of the table, among the small fry, and I told 'em a funny story. But Bee-eh-*trice* was listening, and Bee-eh-*trice* she wags her finger at me and she says "Pyne!" she says "Pyne! y'are a fair old knock-out."

THE INDIAN MAIL.

Polemic Literature.

In the debates on the Bill conferring powers on the Government to confiscate literature tending to excite communal hatred, its supporters had much the best of the argument in both Houses of the Central Legislature; but there is good reason for thinking that the facts are in favour of its opponents. In the absence of the Swarajists from the Assembly, there was little serious opposition. Some of them are reported to have asked permission to return to the House for the purpose of opposing the Bill, but were not allowed to do so: and this seems to suggest that the Swarajist leaders have correctly gauged the situation. What opposition there was, concentrated chiefly on a demand for the limitation of the currency of the new law, with the added suggestion that, though the measure

Digitized by Google

in itself was salutary, Government was tackling the question in the wrong way. No recommendation of a better way was forthcoming, beyond that implied in a rather quaintly worded complaint by a member of the Upper House that "there was a spirit of lawlessness in the country, due to the failure of Government to see that communal riots did not occur in future." To this the obvious reply was that the powers now asked for were intended to be used with that express object: and, in theory, this answer is a conclusive one. In fact, however, there is a great deal to be said for the view advanced by the *Statesman*, that the best thing that Government can do, having obtained their new powers, is to forget that they have them. "If people are determined to print communal literature, the officers of the law will pant after them in vain. Authority can always be made to appear ridiculous in a chase of this kind, and can always be driven on by daring men to extremes which it never contemplated in the beginning."

It is, unfortunately, only too certain that the general election of November will be fought on communal lines, and will be accompanied by a flood of communal oratory that the new law can do nothing to stop. Its existence may, however, act as a deterrent—the knowledge that inflammatory pamphlets and newspaper articles are liable to confiscation and destruction may make the extreme controversialist think twice before he produces either, especially the latter: though, in fact, it will be exceedingly difficult to draw a line above which reference to Hindu-Moslem differences—which is, after all, inevitable—is fair comment, and below which it is objectionable. It may be assumed that action under the new law will not, in practice, be taken against any literature that is not a long way below any such line: and it will be something to the good if a considerable proportion of this is seized and destroyed, instead of being allowed free circulation. In a largely illiterate country like India, the harm done by literature is much less than that achieved by the spoken word: and the real question at issue is not whether the new law is logically justifiable, but whether it is worth while. Since Government evidently thinks that it is, it may be hoped that its opinion will be justified by results: though one is inclined to expect that they will be so small as to be practically negligible.

Misquotations.

The use of quotations is not peculiar to English writers in India, but there are some that seem to exercise a special fascination on many of them. It is, for instance, seldom possible for such a one to mention anyone asking for more without adding "Like Oliver Twist"—a simile that even found place in an official report referred to in these columns a few weeks ago. To lie low, "like Brer Rabbit" is another, though it has not the same merit of accuracy. A new variant of the latter misquotation occurred in a recent issue of one of the leading newspapers of India, in which the Swarajists were described as behaving like Brer Rabbit, in "sitting still and saying nuffin." Another issue of the same paper declared that the Andaman Islands were to the Legislative Assembly "what King Charles's head was to Uncle Dick." One is tempted to ask, why "Uncle"? and to expect that a rival newspaper, whose Editor seems to specialise in quotations from Dickens, will echo the query.

INDIAN EXCHANGE.

London, September 27.

During the past week Government have announced the final forecast of the jute crop as about 109 lakhs of bales, which is considerably under the estimated outturn given in their first forecast, about the middle of July, of 115 lakhs of bales. From private sources we gather that the crop is in fair condition, and is expected to yield more than the Government forecast, but it is about a month late, due no doubt to the delay in the arrival of the monsoon.

We learn that good business has been done in jute in Calcutta during the past week, and the lower level of prices will no doubt stimulate the market.

All over India the crops are three or four weeks late, and this also applies to the cotton crop on the Bombay side. Some damage has been done in the North-west by heavy rains, but so far as we can ascertain, the rainfall has weakened all over the peninsula, within the last few days, and the outlook so far is favourable.

Rupee Exchange has moved within narrow limits since we last reported, Calcutta being steady at 1s. 5 15-16d. T.T., with Bombay 1-32nd lower. Business, however, has been done in Bombay at 1s. 5 15-16d., and although three months' commercial bills are quoted at both places at 1s. 6d 9-32d., good commercial paper has been placed at 1s. 6¼d. Forward rates are very steady, and importers have settled in Calcutta T.T. 1s. 6 1-16d. from the middle of November, 1s. 6 3-32d. for December, and 1s. 6⅛d January-February.

In this market the general rate for remittances to India has been 1s. 5 31-32d., with nothing lower

More business has been done in forward T.T. at 1s. 6 7-64d. for January and February, but the best rate offering now is 1s. 6⅛d., at which there are more buyers than sellers.

A feature in last week's Currency Return of the Imperial Bank is the withdrawal of Currency Notes to the extent of three crores, which is set off by the reduction to a similar extent of the securities held in this country. This transfer enables the India Office to meet its liabilities to the Secretary of State without disturbing exchange in India by making a remittance at present rates.

The steadiness in Rupee Exchange, which is likely to continue, hardly necessitates these weekly notes, but they will appear at intervals when special features call for comment.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning.

Sudan Trade Figures.

The figures of the trade of the Sudan for the first half of the present year, which are now available, make an eminently satisfactory showing. The value of the imports was £E2,950,190 as against £E2,675,113, while that of the exports was £E4,022,014 as against £E2,820,941. The volume of trade rose from £E5,706,125 for the first six months of 1925 to £E7,216,524, an increase of £E1,510,399. It will be noted that the Sudan has now a large trade balance in her favour, and it might naturally be assumed that the rapid rise in exports ought to have a more marked effect on the import trade than has been the case. The explanation is to be found in the fact that the export total does not entirely represent money that remains in the country, and what might be called the "economic" balance of trade would therefore be somewhat less than would appear to be the case.

The Cotton Position.

It would be surprising if we passed through a cotton season without receiving one or more conflicting reports regarding the United States crop. This year reports had indicated that the American crop would not be unduly large, but the official report which appeared last week threw a very different light on the situation, estimating the average yield per acre at 160 lb., which compares with 143.5 lb. at the same time last year. This points to a crop round about 16,000,000 bales, and as the prospects in other cotton growing regions, so far as is known at present, are extremely favourable, it follows that, given these expectations are realised and provided there is no startling change in the crop situation in America, there is not the slightest danger of a world shortage of cotton in the near future. It must, however, be emphasised that if world consumption had developed normally the visible supplies of cotton would be readily absorbed and indeed would not be enough to meet requirements. It is only the fact that the economic depression resulting from the War has reduced the world's purchasing power that has averted a cotton shortage, and, so to speak, has given the world a breathing space to provide more cotton in view of the inevitable demand in the future. If the American crop this time is as large as would seem to be probable, it means inevitably that prices will be unduly low, and this is, as I have pointed out, unfortunate because it is bound to exercise a retarding influence on the development of cotton cultivation in the Empire. Obviously it is to America's interest at this juncture to produce as much cotton as she can.

British Motors in Turkey.

Time and again I have pointed out that the main reason for the failure of the British manufacturer to play the part he should in the Near East markets is his unwillingness to go out of his way to meet local requirements. An illustration of this is forthcoming in an article on British motor cars in Turkey in the current issue of the *Journal of the British Chamber of Commerce of Turkey*. It is pointed out that the reason why few British cars are in use in Turkey is that they have been imported direct by their owners while most foreign makes "are well displayed in up-to-date showrooms with garages and repair shops." Naturally in the circumstances the foreign car receives the preference over one which if anything goes wrong may have to be laid up for some time pending the arrival of a spare part. "Inquiries," it is added, "are occasionally received from British manufacturers regarding the possibility of business in this district. Unless, however, these makers are prepared to meet their competitors along the lines mentioned, or unless a local firm is prepared to put up the necessary capital to do so, there is no likelihood of British makers being able to get a look in." It is satisfactory to know that one well-known British light car is represented in Constantinople by agents who have an adequate supply of spares and can provide every facility in the way of repairs, but one would like to see much greater keenness on the part of the motor industry as a whole. Probably the explanation of the apathy with regard to foreign markets is the incessant home demand which is likely to increase as the prices of cars continue to fall.

The Egypt-India Air Service.

On the whole the speech of Sir Eric Geddes at the meeting of Imperial Airways could only be regarded as distinctly encouraging with regard to the development of civil aviation. At the commencement of an undertaking such as this profits are not to be looked for; it is sufficient to know that the company's traffic is rising, and the fact that for the first five months of the current financial year the company carried more passengers than in the whole of the past year speaks for itself as to the demand for air communications and as to the prospects before the company in the future. Special interest naturally attached to what Sir Eric Geddes had to say with regard to the forthcoming Egypt-India service which is due to commence in January. He said that the construction of new aeroplanes and engines was progressing satisfactorily, and that the aeroplanes were being fitted with three air-cooled engines each, and would be capable of easily maintaining their flight with two engines only. The service is one which should be profitable, and it provides a vital link in the chain of communications.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 28.

Stock Exchange business has shown some expansion this week, although the mining sections did not provide as much excitement as in the previous week. The most interesting event was the circulation in mid-week of rumours that a coal settlement was imminent, which caused a slight brightening all round with especially noteworthy improvement in Conversion Loan and Home Railway stocks. But when the rumours were seen to be unfounded a relapse occurred, and, so far as gilt-edged stocks were concerned, was accelerated by the stiffening of money rates. But the range of prices covered by these contrary movements was nowhere very wide. The episode throws light on the probable course of events when the coal trouble really is settled.

The news of the Miami disaster brought heaviness to the market for insurance shares, but there is no reason whatever, so far as can be ascertained, for insurance shareholders to be alarmed. No one in the City knows as yet what the claims are likely to amount to. But on the other hand it is not credible that they will be such as to strain the position of the stronger companies. The art of risk-spreading has progressed many stages since the great San Francisco calamity. The story that insurance companies were selling Government stocks to meet their losses is not worthy of belief.

Another important event of the week was the issue of a £4 million loan by New South Wales, which was not expected in the Consol market. Other big loans are in preparation, and nervousness is growing over the whole trouble of the volume of overseas lending during the next few months, in view of the unsatisfactory trade balance position caused by the coal stoppage.

The Rubber Outlook.

Although there are minor cross currents affecting the situation, conditions in the market for raw rubber are primarily influenced by the American trade position and the more cheerful advices from the United States in the past few days have been responsible for a distinctly firmer tone in the London market. At the moment the price of the commodity stands appreciably below the average which must be recorded for the three months ended October 30 next if full standard production is to be retained in the ensuing quarter. The outlook, however, is complicated by the fact that exporters are known to hold a large amount of back coupons, that is export permits, which have not been used. The existence of these, it is thought, would be likely to minimise the effect of a 20 per cent. reduction in permissible exports, should such reduction be made in the next quarter, and some observers are inclined to think that there will be no noticeable difference in the amount of rubber coming forward during the next two or three months. On the other hand, a 20 per cent. reduction in the quota, though perhaps not immediately effective on supplies, is likely eventually to restrict them. As regards the longer view, we observe that some authorities in America are suggesting that the growth of the motor industry foreshadows an early expansion in rubber consumption, and that since there was little fresh planting of rubber before 1925, demand may again outstrip supply in the not distant future. In the meantime the share market is firmer, a small demand being sufficient to cause an appreciable advance in quotations.

A Bank's Saving Scheme.

Thrift was one of the first virtues inculcated by the Victorians, and there is general agreement that there is not less need for it to-day. The War and the post-War circumstances resulted in heavy calls upon reduced savings, while reconstruction abroad and adaptation and development at home continue to require substantial funds. And those who, in pre-War days, mainly fed the stream of our savings are not now able to contribute their former quota. Therefore, it has become necessary to tap the resources of the capitalist of modest means. This being so, we welcome the effort made in this direction by the Midland Bank, and are pleased to note the success which has attended it.

We may add, for the benefit of those readers unfamiliar with it, that the Bank has instituted a "home safe" scheme. The person taking out a "home safe" opens an account at the bank with a minimum of 5s., and the "safe" is lent on the understanding that until its return the five shilings is continued in the account. The bank branch holds the key of the "safe." The depositor receives a pass-book, and the amounts periodically gathered from the "safe" are transferred to the account and can be drawn on up to £2 anywhere at any of the 1,850 branches of the bank, provided that sum is shown in the pass-book.

Interest at 2½ per cent. is allowed on every completed ten shillings from the date of paying in, which is an advantage to the depositor compared with the system often observed of computing interest only on the monthly balance.

A Speculative Foreign Investment.

The Customs' collections of Salvador show remarkable vitality, the service of the A. B. and C. bonds being covered practically four times over. The increase in the August figure was 48 per cent., and for the year to date progress has been on a scale that bids fair to exceed the original estimate of £1,400,000 for the twelve months. This advance is the more satisfactory since it reflects the real commercial development of the country as well as a closer yield, due to the exceedingly efficient supervision of the American Fiscal Agent. The service of the bonds is specifically secured on 70 per cent. of the Customs revenue, but the whole can be utilised should it be needed. There is no other State, save China, the interests of whose foreign creditors are protected by an Agent in full control of the Customs. Series "B"—the 6 per cent. sterling bonds—are quoted on the London Stock Exchange, there being £1,026,060 outstanding. The bonds are redeemable at par in 1957, but the Government has the option to repay before this date on giving suitable notice. At the present price the bonds give a return of £7 4s. They rank, of course, in the speculative category and, for that reason, we do not care to recommend them for the general body of investors. Those, however, who can afford to take a little risk might do worse than to consider a purchase.

It is announced that the Marquis of Reading is joining the board of directors of the Palestine Electric Corporation, Ltd. Sir Alfred Mond, Sir Hugo Hirst, and Mr. James de Rothschild are also to become directors of the Corporation.

NOTICE IS HEREBY GIVEN that the next ORDINARY GENERAL MEETING of the South Indian Railway Company, Limited, will be held at the Offices of the Company, 91, Petty France, Westminster, S.W.1, on Wednesday, the 6th October, 1926, at 12 noon for the purpose of receiving the Directors' Report and Statements of Accounts for the Year ended 31st March, 1926, and for the transaction of the ordinary general business of the Company.

The Transfer Books will be closed from Friday, the 17th, to Friday, the 31st day of December, 1926, both days inclusive, for the preparation of the half-yearly Warrants.

Transfers will not be received at the Office while the Books remain closed.

The Warrants payable on and after the 1st January, 1927, will be forwarded to the Proprietors on the 31st December, 1926.

By Order,
ALEX. MUIRHEAD,
Managing Director.

THE BELGRADE-SARAYEVO-SPLIT RAILWAY LINE.

Long before the liberation of the Serbs, Croats and Slovenes there arose the idea of constructing railways from the Danube to Split, and for years the proposal was discussed during the days of Austrian rule, at first secretly and later on, quite openly, at longer or shorter intervals. The idea was always two-fold:—it was to meet both a national and an economic need of the Serbs and Croats. There were many hindrances in the way of its realisation, both greater and smaller. There was the great capital expenditure which it would involve, and on the other hand the lack of capital; the mountainous character of the land separating the sea-coast from the interior; the interests of the different districts, and party, racial and local circumstances. One of the great difficulties to be overcome, however, was the very continental mind of the greater majority of the population of Yugoslavia, which had not sufficient maritime sense to realise the immense significance of connexions with the sea and a coastal outlet. This meant also a very small number of experts for the building of that kind of line requiring port construction and coastal work. A glance at a map of Yugoslavia will show the disproportion between the density of the railway system of the northern third of the country as compared with the southern two-thirds. What is especially remarkable is the scanty, or rather non-existent, railway system in Bosnia, Herzegovina, Dalmatia, and particularly in Rashka, Sandjak, Montenegro and Metohia. Even the few railways there have a narrow 76 cm. gauge, half the normal European gauge, and were not constructed for economic and State needs, but for strategic reasons and in the interests of certain industries. Moreover, these lines were built in accordance with the political plans of the late Austro-Hungarian Empire, or for the needs of the individual who built them (Steinbeiss, and the Bar Company). Consequently they are winding and have steep gradients, and are not rational or convenient for considerable traffic.

On the other hand an examination of the physical map of Yugoslavia showing contours, clearly marked river valleys and mountain ranges, or a map of the density of population and fertility of soil will explain clearly the difficulty of the problems confronting the young Yugoslav State and the immensity of the task which it has to fulfil. If the sea did not form such a separate element in the whole problem, it would be an easy matter to remedy the fact that there are no lines in that direction, but, parallel to the plains of the Sava, Drava, Bachka, Banat and Morava there rise steadily higher and higher mountains, becoming more bare and rocky, until the great massive mountain ranges rear their heights only a few score kilometres from the beautiful Dalmatian coast. But against these difficulties in connecting the Danube basin with the Adriatic is the fact that there penetrate through these mountain barriers a number of natural routes which lead through gorges near to, or actually as far as, the sea. The Hungarians found a natural route by the valley of the Bosna, the relatively not too great obstacle of the Ivan range and the valley of the Neretva. The conflicting interests of the Austrians and Hungarians, and the hostile attitude of both to the Slav regions give the reason why no use was made of the most convenient route from Pannonia to the sea by way of the rivers Una, Vutishnitza and Krka. The valley of the river Drina also makes, to some extent a less good, but quite natural route in the direction of the Adriatic.

But one of the most important factors which is lost sight of by many Yugoslav experts, owing to their inexperience in port and coastal matters, is the question of the terminal points of the Adriatic railways along the sea-coast.

Along the now united coasts of the S.H.S. Kingdom,

Digitized by Google

with the historic mountains of Dalmatia, Liburnia and Illyria, within the chain of islands are to be found such a number of harbours that it is difficult to choose from them the best outlet. But the difficulty remains only as long as the interest is confined to the physical map. As soon as a closer investigation is made of the condition of the harbours it soon becomes evident that only a few places come into consideration. An investigation of the geographical position of the individual places, the configuration and bottom of the harbours, the scientific and constructional conditions of the land and sea floor, and a study of the details of trade, industry, economic development, etc., soon reveal the great economic preponderance of the harbour of Split (Spalato), and after it of Shibenik (Sebenico) and Dubrovnik (Ragusa). Sushak, as the successor of Fiume, has a special position, while the Bay of Cattaro is exceptionally situated, as a still undeveloped commercial port, indeed, but with an extraordinarily good natural harbour. These are the chief outlets of Yugoslavia to the sea, and the only places to which railways of any importance can be built successfully.

Recently most has been heard of the Belgrade-Sarayevo-Split railway, and rightly so, since it is the most important Adriatic line. Offers for its construction have been already received from several foreign and Yugoslav emigrant companies.

The importance of this line lies in the fact that it connects three such important places, Belgrade, the capital of the Kingdom, Sarayevo, the chief city of Bosnia, and Split the largest town of Dalmatia. In addition it connects the confluence of the Sava, the great navigable Yugoslav river, with the Danube, and the great mining and forestry centre of the Balkans, and both of these with the largest Yugoslav seaport. It brings into touch with one another the most fertile agricultural regions of Europe and the barren, rocky, but minerally rich Dalmatia with its boundless wealth of sea. It can contribute much to the internal economic and political consolidation and unity of the districts of the Serbs, Croats and Slovenes, hitherto forcibly kept disconnected. Over the bridge at Panchevo the corn of the Banat will be able eventually to compete with American goods; the industry of Veliki Bechkerek and Belgrade will be brought down to the sea; the great plum growing districts like Valyevo will have a new commercial highway; the salt mines of Kreka will be supplemented by cheap sea salt; the financially oppressed mines of antimony and lead, and the unused or little exploited mines of chrome and other metals will be revivified; while the forest areas of Bosnia will attain their proper value. The heavy iron industries of Varesh and Zenitza will receive an impetus for more extensive and more profitable work. The numberless sawmills and mines all over Bosnia and Herzegovina will make rapid progress. The line will have special significance for the bauxite deposits of Herzegovina and Dalmatia. Finally the stone, marble, cement and artificial manures, as well as the fish and agricultural products of Dalmatia will be brought to the markets of the interior.

This Adriatic line will pass through the heart of the State, connecting the lowlands of Bachka and the Banat, *via* the wealthy mountain ranges and fertile plains of Bosnia and Dalmatia, with that other wealth-producing expanse which circles the whole world.

Another primary importance of the line is the fact that it passes through the heart of the country on a route which has practically no other railways, and traverses regions in which Serbs and Croats of three faiths and in all stages of progress and culture are most mixed. In this way it will do much for their mutual acquaintance and intercourse. The educated folk of Italian culture will mix with the oriental, and with the influences of the German and Hungarian schools. The fiery enthusiasm and idealism of the coast dwellers will contribute realism to the outlook of the men in their hinterland.

But the most important point of all about the scheme is its unparalleled economic importance, and that it will be practically the only Adriatic railway which would be profitable almost from the beginning. It connects two of the greatest industrial centres of the country, Veliki Bechkerek (via Panchevo) and Split, and passes through the large industrial centres of Belgrade, Varesh, and Sarayevo. The Banat, the most fertile and wealthiest agricultural region of Europe, the Morava, the most fertile plain of Serbia, the Drina, the Sava, the cornlands of Bosnia, will all be linked with the sea by the shortest route. The famous plum centres of Serbia and Bosnia, Valyevo, Obrenovatz, Shabatz, Biyelina and others will be able to count on export by sea. The raisers of the well-known Serbian and Voivoda pigs will gain new markets and new possibilities of export from the coast.

At first it seemed that this line would give advantage only to the continental districts by opening a new way into the world for the plains of the Danube and Sava, but good fortune has brought it about that this route will debouch on to the most developed part of the whole coast.

At the point of its termination Dalmatia has developed large industries of cement, fish, stone, bauxite, asphalt, marble, artificial manure, etc. The need of the large towns of the interior, and especially the yet uncompleted capital for asphalt can be supplied. Instead of the worthless, crumbling, yellow and sandy stone, with which the largest buildings of the capital and other towns are constructed, it will be possible to use the famous, milkwhite and durable stone from the islands of Brach and Korchula. The fruitful plains of Bachka and the Banat will be fertilised with the artificial manures of Dalmatia and will give a threefold yield. Cheap sea freights and short railway transport will bring directly and cheaply coffee, rice, machinery, hardware, and other goods from the most distant parts of the world. Since practically every centre on the line is already more or less economically developed, there can be no doubt as to the profitability and economic success of this railway.

If in construction the route is chosen which has the least obstacles, then the line will be the cheapest of all the Adriatic railways. It is almost as short as the connexion of the Danube with other ports on the coast—Dubrovnik and Cattaro, because at that part the coast is nearly parallel with the middle course of the Danube. Strategically, the line is an important one for the young S.H.S. State, because it is the best protected, and emerges at strategically the best situated and naturally the best protected port in the Castellian Bay.

Various companies are interested in the line, and of these special attention has been attracted recently by the company of Yugoslav emigrants in South America, who ask a concession for 75 years and a guarantee from the State of 8 per cent. This offer to build the railway with private capital has been regarded very favourably by the business world of Yugoslavia, but has been opposed at the same time by the Montenegrins who think that they would be injured by the building of the line, which would not pass through their country. Their strongest arguments are the law of the Blair loan (in which an Adriatic railway was schemed to terminate at the Bay of Cattaro), and the War service of that part of the country, which, it is a sad truth, has not a single railway over its 45,000 square kms. of poor mountain country. But, although the need of Montenegro for a railway is obvious, this cannot be used as an argument against the construction of a railway to the Adriatic *via* Belgrade-Sarayevo-Split, because Montenegro cannot compete economically, and consequently it is difficult to interest private capital in that country. The construction of a railway to the Bay of Cattaro from Serbia, therefore, will have to be done by means of a State loan, as should have been the case with the uncompleted Blair Loan. The S.H.S. Kingdom will have to endeavour as soon as possible to satisfy the demands of those districts, but this must not be allowed to interfere in any way with the building of the most important Adriatic railway, especially when this is to be done with private means. It is, therefore, hoped that a provisional concession at least will be granted at once to the company for the tracing of a line which will bind the State to no one, and will not cost it a dinar.

BANKING CONDITIONS IN YUGOSLAVIA.

The prevailing banking system in Yugoslavia is one of small local independent banks. These at present total 650, and possess capital and reserves to the amount of about 2½ milliard dinars, which gives an average of 4 million dinars. The largest banks are at Belgrade, Zagreb, Sarayevo and Liubliana; these have in some cases capital and reserves amounting to 200 million dinars. But, taken as a whole, the independent strength of the S.H.S. Banks is relatively small, and quite insufficient for the enormous economic tasks of the now united Kingdom. The reconstruction of economic life after the chaos of war destruction was effected out of home means, with very small assistance from reparations, and a quite inconsiderable amount of help from foreign capital. The capital wealth of the regions now united into one has for long been mainly agrarian, and consequently the banks, for the most part scattered and independent institutions as they are, cannot represent any very great financial factor.

Nevertheless, they have done all they could to serve the economic interests of their country in the years since the War. The first necessity was for the rebuilding of houses and business institutions, for many of the towns and villages were demolished during the fighting. Then again it was necessary to repair and extend many old factories, and to build new ones to manufacture the requirements of the plundered population. Many new enterprises were set up too, often in excess of the consuming power of the people. The great wave of optimism which swept over the country caused many to undertake work without making sufficient critical investigation of conditions. It came about, therefore, that far too much home capital was invested in buildings and factories. The purchasing power of the nation as a whole did not grow so quickly as had been expected. Still worse, during the last twelve months conditions in the world's corn markets changed and seriously affected exports from the S.H.S. Kingdom, primarily an agricultural State, and thereby diminished its national income. The reduced purchasing power of the agricultural population had adverse effects in unemployment and in the smaller profits of home industries, as well as on many commercial and speculative undertakings. The wide and considerable stagnation in business and a marked fall in prices are the chief characteristics of the present phase.

The general position affected the banks also, which were deeply involved in the current of business. The position of the banks is such that it illustrates exactly the position of the business world in general. To the 2½ milliard dinars of their capital and reserves, the banks altogether have over 10 milliard dinars of savings deposits and credit (at the National Bank and other large home and foreign banks); i.e., deposits and other funds exceed their own means. Again, four-fifths of the banks' assets are invested either directly in buildings and factories, or else indirectly through the current accounts and bills of their clients or in the shares of companies. This means great loss of liquidity through the tying up of funds in industry and building. The result of this is that credit is very dear, and has been for a long time, the rate of interest being 15-18 per cent., and for discount with poorer guarantees as much as 30 per cent.

This serious lack of liquidity among the banks has caused the money market to suffer from inelasticity, which it shows in its sudden fluctuations. In the second half of 1925 there was a surplus of cash, on account of the preparations for the export campaign, and since there was an absence of convenient short-term investments, hundreds of millions of dinars were left lying barren in safes. This year, on the contrary, with a much more active building season, there has occurred an unprecedented lack of ready money, and the dearness of credit has increased still more.

At the present moment the general falling off in national income owing to the difficulty of agricultural export, affects the banks, not only in regard to their liquidity, but also as regards the amount of their investments. The general fall in prices, and consequently in immovables and investments also, has affected balances, especially of those banks which were too rash in investment and founding enterprises. In Belgrade three banks failed during the summer, and all three were banks which had dealt largely in building houses, shops and factories and in mortgage loans. (They were the Boskovitch and Co., Serbian Construction and Belgrade Mortgage Banks.) On the coast the large Coastal Savings Bank at Sushak also failed, while a number of other banks have serious difficulties with their investments.

Much assistance in the present time of crisis is expected for business from the banks. But the banks on their part are confronted with the problem of gaining assistance for themselves, in order to make their funds more liquid, and to ease themselves of much capital expenditure and investment credits. One extremely urgent need is for the State Mortgage Bank to issue a large loan on mortgage obligations, and from the income on that loan to grant long term mortgage and investments loans to industry, building and communications. By this means, the greater number of these credits would be transferred from private deposit banks to the State Mortgage Bank, and the private banks would thence acquire once more liquid turnover capital, with which they could exert a favourable influence on the home money market. The State Mortgage Bank has every possibility of doing this. It is an enormous institution, dealing with over 650 million State and other public funds, and possesses in addition large reserves of its own. Its mortgage obligations are guaranteed primarily with the property of its mortgage debtors (the Bank gives loans on first-class municipal and business property, at the most to one-half of the value, strictly estimated); and secondarily with its own funds and reserves, while in the last instance the State guarantees directly all the Bank's obligations. Since, moreover, the Bank has extensive connexions abroad, its opportunities for effective influence on the present situation are very great.

In the second place the privileged National Bank of the S.H.S. Kingdom will have to give active and direct help by re-discount credit to banks and business men. At present its credit fund is relatively small (actually about 1,500 million dinars). The issue, together with the metal covering of one-third, makes the metal covering greater than the law prescribes. But the National Bank is reluctant to increase this fund even with the corresponding metal covering, in order that the total note issue may not stretch into the sphere of inflation, for the State has a debt to the Bank of nearly 3,000 million dinars taken out in notes, and covered solely with State immovable property (estates). In order that the National Bank might increase its credit fund, the State would have to repay its debt, thus making way for grants of credit, without having recourse to inflation. The idea is being suggested in many quarters that the State should sell its domains, which are pledged to the National Bank, either at home or to foreign buyers. In any case the S.H.S. State has too many domains (large forests, occupying 30.5 per cent. of the surface of the Kingdom: rich mines of iron, coal, lead, bauxite, etc., agricultural property, water power, etc.) and there is no reason why out of jealousy it should keep them indefinitely in its own hands, when by selling them it could do far more good to national economic life.

It is also to be noted that by the sale of some of the State domains, their exploitation in private hands would be much more intensive, with a greater investment of liquid capital in them. If the capital for this came from abroad it would bring new blood into the national organism and would give still another positive element for the solution of the economic crisis.

These suggestions have received attention and perhaps will be accepted. This would be one decisive step forward in the economic life of this otherwise economically well-placed State.

PROF. DR. M. NEDELJKOVITCH.

YUGOSLAVIA'S FOREIGN TRADE.

I.—Commercial Balance.

During the first six months of this year, Yugoslavia's foreign trade was as follows:—

	Tons	Gold dinars
Imports	593,206	345,154,051
Exports	2,616,625	359,377,259
Exports greater by ...	+ 2,023,419	+ 14,223,118
	or	
	+ 341.10%	+ 4.12%

The value of exports as compared with imports, expressed in percentage, during the first half of this year was 104.13 : 100. For the first five years, the S.H.S. Kingdom had an adverse trade balance, but during the last two years the percentage values of its exports as compared with its imports were respectively:—1924, 116.02 : 100, and 1925, 101.73 : 100. Moreover, since in each of these two years exports have exceeded imports during both half years, the trade balance for the whole of 1926 will doubtless be favourable also.

II.—Details of Imports and Exports.

During the first half-year of 1926 the chief imports of the S.H.S. Kingdom were as follows:—

Article	Tons	Millions gold dinars	Per cent
Cotton fabrics	6,008	48.7	14.12
Woollen fabrics	1,174	22.4	6.50
Machinery and apparatus ...	10,705	16.1	4.67
Cotton yarn	3.396	15 1	4.37
Fully wrought iron goods ...	19.374	14.7	4.26
Raw Coffee	4,300	10 4	3 00
Raw hides of domestic animals	4 676	9.5	2.77
Coal of all kinds	265, 62	9 3	2 68
Vehicles	2.942	8.0	2.31
Raw Cotton	3.360	7.1	2.07
Electro technical goods ...	1.790	5.6	1.64
Kitchen salt	32.907	5 5	1.58
Shelled rice	9.572	4 8	1.38
Wool	1 626	4.7	1.36
Rails, rly. material for bridges, roofs and workshops ...	10,178	4.4	1 26
Unwrought and half-wrought iron	22,417	4.3	1.25
Copper vitriol	8.597	4.3	1 24
Benzin all kinds	9.011	3 8	1.10
Sheet iron	9,808	3.6	1 03
Vegetable oils, all kinds ...	3.409	3 5	1,03
Petroleum	13,944	3.5	1.01
Shoe (not sandal and topboot leather)	115	3 3	0 96
Printing paper	5 063	3 0	0.86
Shoe and Saddlery leather ...	161	2.8	0 8 3
Various woollen (not made up) goods	258	2.7	0.78
All other	203 252	124 0	35 94
Total	593,206	345.1	100 p.c.

Yugoslavia's chief exports during the first six months were:—

Article	Units	Amount	Mill. of gold dnrs.	Per cen
Maize	Tons	709.644	94.7	26.34
Wood: —for building	,,	605,638	41.4	11.52
—for fuel	,,	143,454	2.7	10.76
Eggs	,,	21,062	35.3	9 82
Corn: —Wheat ...	,,	105,342	28 8	8.02
—other ..	,,	17,113	2.5	0.68
Meat: —fresh ...	,,	10,193	14 7	4.10
—meat products	,,	648	1.8	0.50
Live cattle ...	Head	51,572	14.7	4.08
Crude copper ...	Tons	6,261	13.7	3 80
Live pigs	Head	80.153	9.4	2.60
Cement	Tons	173,776	6 3	1.76
Live horses ...	Head	22 257	7.2	1 72
Wheat flour ...	Tons	13,292	5.9	1 64
Hemp	,,	6 699	5.1	1.41
Prunes	,,	9,445	5 0	1.41

Calcium cyanide ...	,,	12.659	3.5	0 97
Tanning extracts...	,,	6,029	2 4	0 68
Oak railway sleepers	,,	371,562	2.1	0 58
Opium	,,	45	2.0	0.56
Beech railway sleepers	,,	584,182	1.9	0 54
Wooden articles ...	,,	6,617	1.7	0 48
All other ...	,,	661,153	52.6	14.67
Total	Tons	2,616,625	359.3	100 p.c.

The above chief export and import articles appear in practically the same quantity each year. From the lists it is evident that Yugoslavia imports mainly manufactured goods, and exports raw and agricultural products. Yugoslavia is an agrarian country with manufactures only in their infancy.

III.—Trade by Countries.

The chief countries trading with Yugoslavia during the first half of 1926 were:—

(1) From which Yugoslavia imports.

Country of origin	Million gold dinars	Per cent.
Austria	71.7	20 79
Czecho-Slovakia ...	63.1	18.29
Italy	49.7	14.41
Germany	41.6	12.05
Great Britain	21.1	6 12
France	16 7	4 84
Hungary	15.4	4.46
U.S.A	14.4	4.17
Roumania	13.6	3.93
Brazil	7.8	2.27
Greece	7.4	2.13
Switzerland	3.8	1.09
Belgium	3.6	1.06
Poland	3.3	0.97
Holland	2 9	0 83
British India	2.5	0.72
Argentine	1.1	0 33
Canada	0 7	0.21
Turkey	0.6	0.16
Sweden	0.5	0.13
Other Countries ...	3.6	1.04
Total	345.1	100 p c.

(2) Countries receiving exports.

Country of destination	Millions gold dinars	Per cent.
Italy	106.1	29.52
Austria	62.1	17.28
Roumania (down Danube via Braila) ...	54.9	15 29
Germany	29.1	8 10
Czecho-Slovakia ...	28.4	7.90
Greece	17.9	5.01
Switzerland	16 9	4.70
Hungary	14.4	3.99
France	10.9	3.04
Great Britain	3.7	1.04
Egypt	2 9	0.82
U.S.A	2.6	0.72
Holland	1.6	0.44
Poland	1.2	0 35
Turkey	1.1	0 32
Belgium	1 1	0.32
Spain	0 9	0 25
Argentine	0.8	0.22
India	0.8	0 22
Albania	0.3	0.09
Other countries ...	1.7	0.38
Total	359.3	100 p.c.

IV.—Exports.

The exports of the S.H.S. Kingdom during the first 7 months of last year and this year were as follows:—

	Tons	Million Gold Dinars
1st 7 months 1925 ...	2,436,831	431.1
1st 7 months 1926 ...	2,964,035	400.6
Increase (+) or decrease (-) during 1926	(+) 527,204	(-) 30.5
	or	
	(+) 21,63%	(-) 7.07%

Exports this year were greater in quantity but less in value than during last year. The falling off in the value of Yugoslavia's exports this year was due to two causes: (a) the fall in the prices of agricultural products on the world markets since last autumn, which seriously affected Yugoslavia's foreign trade, since her exports are mainly agricultural; (b) the increase in the value of the dinar during this year as compared with 1925. The increase in value during the first seven months of this year was 4.35 per cent. as compared with the same months last year. But although the value of Yugoslavia's export goods has diminished, yet the trade balance will certainly be favourable, owing to the considerable increase in quantity.

THE LIUBELYE RACES.

(From A Yugoslav Correspondent.)

Yugoslav motor sport is most developed in the northern part of the country, where the roads are rather better. In the Alpine regions, in particular, the motor tourist may be sure of roads in reasonably decent condition and of beautiful scenery as well.

On August 8 the trial races for motor cars and cycles were duly run up the Alpine high road which leads from picturesque Trzitch in the Karavanke to the Liubelye Pass on the Austrian frontier 1366 m. above the level of the sea. The vehicles were classified in categories according to cost—a much simpler and more satisfactory method than any classification according to h.p., the method still in use on the Continent, more particularly because the latter does not permit of free competition between individual makers who construct their cars on totally different lines.

The trial races were brought off under truly terrible weather conditions. Rain poured in the valleys, and on the height of the pass it was snowing hard so that it was exceptionally difficult and even dangerous to traverse the prescribed track. The King and Queen of Yugoslavia, both enthusiastic motorists, went over the whole of the course in their Fiat 509 on the eve of the races. They came over again next day from their summer resi-

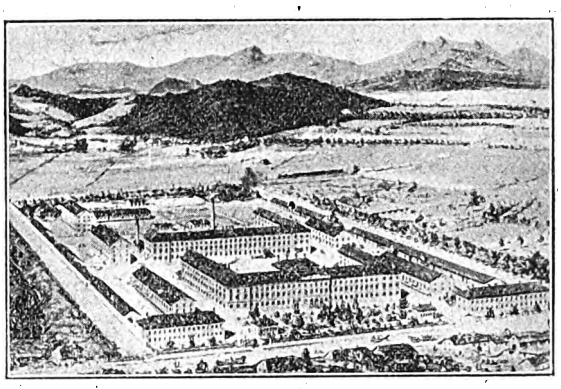
The Liubelye Pass.

dence in Bled in spite of a warning telephone that the weather was extremely inclement, and witnessed the races to the very end at 2 p.m., when the last of the competitors came in. Wet through and coated with snow, the royal couple stood at the goal with the competitors and race stewards—among them the writer of these lines. The temperature fell to 2 degrees C. below freezing point (about 28 F.). The King repeatedly praised the true sporting spirit which animated both competitors and organisers. The most thrilling moment in the races was the arrival of the winner, Mally, with his Lancia-Lambda touring car, who had traversed the course in the record time of 11 min. 50 sec., thus beating even the racing cars which were some ten seconds slower. Mally was in splendid form. At the very end of the course, just beside the spot where the King and Queen were standing, his tyre burst, covering spectators and officials with a shower of stones and icy mud. The course, which has sixty-three turns and a rise of over 28 per cent., he traversed at an average pace of sixty kilometres an hour. The Ansaldo and Senechal racing cars were ten and twenty-eight seconds slower than he—which is not to be wondered at, however, if we bear in mind that water was pouring down the road in torrents and the chauffeurs were blinded with snow and rain.

Among the motor cycles, the British B.S.A. (motor cycle and side car) and Sarolea did best. The B.S.A. victory was largely due to excellent driving. The Rudge Whitworth also did very well.

The Alpine world displayed all its terrors and its treachery that day; man his obstinacy and nerve;

State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes



State Tobacco Factory in Liubliana.

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

machinery its wonderful powers of endurance and obedience.

Of course there was little to be seen of Alpine scenery. The mountain giants were shrouded in mist; the wind howled as it tore the leaves from the trees, and buffeted our faces as if in protest against the invasion of these mountain solitudes by ourselves and our cars. The race resolved itself into a stubborn battle between man and his will and the elements—and man won out, pitting his mind and his little machine against the powers of nature in their most destructive mood.

Here lies the secret of every chauffeur's love for his engine; the mystery of the touch of tenderness with which he will listen to the throbbing of its iron heart; the quick sense of what is difficult or exacting for its powers.

The Yugoslav Liubelye races bear witness to the high standard of motor sport in Yugoslavia. They have shown that the country has motorists who are not only sportsmen heart and soul, but men of iron will and nerve as well. And proudest of all are we because we may count our beloved King and Queen as being of their number.

Twenty-five cars competed, and nine motor cycles (with and without side-cars). Over a hundred cars with spectators had come up from various parts of Yugoslavia, and a goodly number from Austria as well—all in spite of the appalling weather. That everything went off well is largely due to the excellent management of Major Jaklitch and M. Rado Hribar. It is now settled that the Yugoslav hill-climbing motor races are to be an annual event and an international one in future.

YUGOSLAVIA'S COMMERCIAL TREATIES.

One of the most important economic problems awaiting solution after the War was that of a customs policy which should correspond to Yugoslavia's new circumstances. Like every other State which participated in the War, Yugoslavia had at first to pass through a period of uncertainty. In the early years after the War a whole series of temporary commercial treaties were signed with the former enemy countries and with the new States. All these treaties were based on the principle of limitation and compensation. This period did not last long, and as early as 1921 negotiations were begun with Italy for the conclusion of a commercial treaty, rejecting the principle of compensation and returning to the pre-War principle of the most favoured nation. Since, however, Italy takes the first place in Yugoslavia's export and import trade and in her economic and political relations in general, and also since this was the first permanent post-War commercial treaty with a Customs section, it is not surprising that the negotiations lasted a very long time, and that the treaty was not definitely signed until 1924.

The conclusion of this first treaty broke the ice, and it was followed by the conclusion of a treaty with Austria in 1925. The year 1926 has been an extremely busy one in this respect. Treaties have been concluded with Albania, England, and Hungary, while negotiations are in progress with France and Belgium.

The Austrian and Hungarian treaties were concluded in the main on the same lines as that with Italy. The Albanian treaty has certain special characteristics. While it gives this country certain concessions in respect of navigation and the erection of public storehouses, Albania gains small compensations in the agreement on frontier trade, which gives her great freedom in importing her products into Yugoslavia's frontier districts. These concessions, which are held to represent a great financial and economic sacrifice on the part of the S.H.S. Kingdom, and to be altogether disproportionate to the more or less theoretical concessions made by Albania in the treaty, are the fulfilment of the desire of the Albanians that their frontier population should have free access to Yugoslav markets.

The commercial treaty with Great Britain is divided into two parts. The first, a customs agreement with the clause of the most favoured nation, was concluded at Belgrade in the spring. The second, or general section, as announced a month ago, was concluded at London. Its contents are not yet known. It will be interesting to learn whether it contains mutual obligaions in the prohibition of import and export, as well as in regard of customs rates. The pre-War treaty with Great Britain had only a one-sided obligation for Serbia in that respect, because at that time Great Britain had free trade, in the full meaning of the term. Since then, conditions have changed throughout the world, and England also has given up much of her pre-War puritanism, so that Yugoslavia accordingly considers it necessary to demand from her treaty obligations for the free import of her goods into British territory.

FLOOD AND STORM DAMAGE.

Of the 6,017,178 hectares sown, 240,000 were ruined by floods, or 2.5 per cent. of the total area. It seemed at first, immediately after the catastrophic storms, that the havoc wrought was colossal. Now, however, this fear has been shown to be groundless. While the destruction was still in progress, the Ministry of Agriculture asked its provincial advisers for expert detailed estimates of the damage. The answers which came in later were of a comforting nature, and the figures of damage which they contained were steadily less. From one district a number of reports have been coming in during the last six weeks, and each succeeding one has given smaller figures of loss. The careful collection of exact data regarding the losses

Under the heading "Cash" a gold dinar is reckoned as a dinar an English pound as 25 dinars, a dollar as 5 dinars, an Italian lira as one dinar, a Swiss or French franc as a dinar, a coined silver dinar as a dinar, etc.

Discount rate: 6 per cent. Loans on securities: 8 per cent.

Digitized by Google

is still proceeding. It is, however, already officially established that the original estimate of the damage done was very considerably exaggerated. The districts which have suffered from inundation are as follows, in the order of the amount of damage:—Bachka, Osek, Danube, Shumadiya, Nish, Morava and Zagreb.

THE MONOPOLY ADMINISTRATION.

For the three months ending June 30, 1926, the Yugoslav Monopoly Administration shows receipts amounting to 619,316,496 dinars, as compared with 589,126,070 dinars for the corresponding period in 1925, and an estimated revenue of 601,225,000 dinars. To the total the Tobacco Monopoly contributed 441,241,937 dinars; salt, 77,577,903 dinars; kerosene, 30,364,872 dinars; matches, 33,457,108 dinars; and cigarette paper, 35,037,492 dinars:—

The statement of revenue and expenditure issued by the Monopoly Administration for the first quarter of the financial year was as follows:—

REVENUE	Dinars.
Monopolies (June)	211,380,299
,, (April—May) ,,	407,936,197
Customs (June)	122,743,034

Sundry a/cs & Cash in Hand	42,641,599
	1,312,817,124

THE POSITION IN THE SUDAN.

Cotton has loomed so large on the Sudan horizon of late that it has rather tended to obscure the fact that, important as this crop is, it so far affects directly only a relatively small part of the vast terrain of the Sudan. The survey of affairs in the Sudan contained in the report* now issued comes therefore as a useful corrective, covering as it does the whole economic position in the country. We give the following extracts:—

Condition of the People.

In any estimate of the general condition of the native population important qualifications have to be taken into account. More than half the people live a primitive life in remote districts which as yet lie almost entirely outside the orbit of foreign trade. Furthermore, even in the Central and Northern Sudan conditions vary in the extreme, as, for instance, from the rich irrigated cotton districts of the Gezira to the narrow strips of land along the Nile, where the people eke out a precarious existence by means of "sagias" (water-wheels) and shadufs. In these areas are also the nomadic tribes, who live entirely by the maintenance of their flocks and herds. The northern districts also comprise the large urban populations, which present problems entirely different from those of the rural districts.

Again, if statistical standards are taken in estimating the welfare of the people, it has to be remembered that imports reflect the effect of the crops of the preceding year and only to a small extent those of the year under review. Consequently, in a country which depends for its economic products on a relatively small and variable rainfall, conditions may undergo a radical change in the course of the year. This has been the case in 1925. A small harvest, combined with other factors, has led to a sharp rise in the price of food grains, and a year which began well has ended in embarrassment to the lower paid wage-earning class, especially in the towns, and in hardship to the very poor. Measures are being taken to ease this situation as far as possible; precautions have been taken in good time, and so far there is no reason to fear any widespread or acute distress.

* Report on the Finances, Administration, and Condition of the Sudan in 1925.

Sugar a Gauge of Prosperity.

Subject to these limitations, it may be said that though records of imports and exports in 1925 do not suggest any marked improvement in native conditions in the last few years, there is, on the other hand, no evidence of any decline. Imports of cotton piece-goods, a purely native import, has been well maintained, and the large increase in value of imports in recent years of tea and coffee is mainly due to native demand, and is a sign of a distinct rise in the standard of living. A more accurate gauge of native prosperity is the consumption of sugar, which increased from 11,600 tons in 1924 to over 15,300 tons in 1925. The money spent by the public on sugar in the latter year was approximately £E. 1 million, as compared with a pre-war annual expenditure of some £E. 300,000. Early in 1925 the price of sugar, the trade in which is still controlled by the Government, was reduced by 6 millièmes (1½d.) per lb., and a further similar reduction has recently been made. Cheaper sugar, which is a staple article of diet in the northern part of the country, represents a substantial economy in the cost of living, and is some compensation for the high price of grain.

In the southern districts the gradual substitution of poll tax and tribute for "ushur" tax has benefited the taxpayers and led to an increase in cultivation, while the introduction of cotton-growing has provided a number of people with a money crop which relieves them of the necessity of finding cash by other means.

Future Prospects.

The unfortunate effects of the insufficient rainfall of last summer, which are mainly felt by the town dweller, will be rapidly neutralised if the rains of 1926 are satisfactory, while the circulation of money as a result of the large cotton crop of the Gezira scheme and the opportunities of employment which this scheme affords should have considerable effect in alleviating the economic difficulties of the moment.

With the general extension of the railway the economic centre of gravity has continued to shift southwards towards the rain districts. For the time being and for some years to come the main interest as regards production will be in the Gezira irrigation scheme and its extensions, but the possibilities of developing provinces south of this area have been receiving careful attention. The provinces of the Upper Nile and Nuba Mountains contain a large population, and have latent resources for the production of cotton, grain, oil seeds and cattle. Further south, in the Bahr-el-Ghazal and Mongalla provinces a beginning has been made by introducing cotton growing, but the economic development of the region is as yet untouched. The main problem is transport in one form or another, accompanied, as far as cotton is concerned, by the provision of ginneries and quick marketing arrangements.

Foreign Interest.

The large capital works which are now being carried out in the Sudan, such as, for instance, the new quays at Port Sudan, the bridge over the White Nile between Khartum and Omdurman, the new water supply for these towns, and, above all, the completion of the first producing stage of the Gezira irrigation scheme in the cultivation of 80,000 feddans under cotton, has still further stimulated the growing interest in the economic development of the country and its latent possibilities, to which reference was made last year. Visitors interested in one form or another of business have been numerous during the year, and there is a constant demand for information and statistics on economic subjects.

Railways and Steamers.

Mr. A. C. Parker, who has succeeded Captain E. C. Midwinter as general manager of this Department, reports a successful year. The net profit after making provision of £E100,074 for interest charges on loan accounts, £E18,163 for special reserve and £E130,000 for capital improvements was £E387,160. In passenger

Digitized by Google

traffic there is a decrease of £E27,686 in receipts, but an increase in the number of passenger journeys from 499,535 in 1924 to 552,567 tihs year. Third-class passenger traffic was affected by the absence of Egyptian army moves and the completion of the Sennar Dam, but fourth-class traffic, which is confined to natives, shows a satisfactory increase of £E14,766 in receipts from 68,182 additional passengers. Goods traffic, excluding the stone and water traffic in connection with the Sennar Dam, amounted to 377,174 tons, as compared with 369,761 in 1924; receipts were £E925,944, as against £E885,978. The Sennar Dam being completed in the first half of the year, the local transport of stone and water in connection with this work fell from 363,451 to 89,946 tons.

Shipping Intelligence.

LAUNCH OF M.V. MODAVIA.

The motor vessel Modavia, which is being built by Messrs. Vickers, Ltd., to the order of the Donaldson Line, Ltd., was launched from the Naval Construction Works at Barrow-in-Furness on September 23 by Miss Kathleen Donaldson, daughter of Mr. Norman Donaldson, a partner in the well-known Glasgow shipping firm of Donaldson Brothers, Ltd. The launching ceremony was a very simple one, the only guests present in addition to Mr. Norman Donaldson and his daughter being Mr. Charles Donaldson, jun., and Mr. David Hosie, both of the Donaldson Line.

The Modavia is practically a repeat of the M.v. Moveria, which was built by Messrs. Vickers, Ltd., and delivered to the Donaldson Line on January 12, 1925. She is designed for the Canadian cattle trade, and also for the carriage of refrigerated and general cargo and is being constructed to the requirements of Lloyd's to obtain their 100 A1 with freeboard certificate for a complete superstructure vessel having a tonnage opening.

The following are the principal dimensions:—Length overall, 398 ft.; length B.P., 385 ft.; breadth, moulded, 53 ft. 6 in.; depth moulded to upper deck, 38 ft.; draft loaded, 26 ft. 4 in.; speed, 11½ knots.

The vessel is framed generally transversely, but the double bottom is constructed on the Vickers-Wingate longitudinal frame system. The end double bottom tanks are arranged for water ballast, the tank under the engines is reserved for cattle water, with the fresh water and feed water carried immediately aft of this space, while the remaining tanks are arranged for either oil fuel or water ballast. The vessel has three continuous decks with a fourth deck in Nos. 2 and 3 holds, and seven transverse W.T. bulkheads, all except the collision bulkhead extending only to the second deck. Nos. 1 and 5 holds are arranged for general cargo, but have a centre line bulkhead fitted for grain cargo. The tween decks above these are arranged for either cargo or cattle. Nos. 2, 3, and 4 holds and tween decks are insulated for the carriage of chilled meat. The whole of the upper tween decks is fitted with cattle stalls, having six large cattle doors in the ship's side.

The hatches and cargo working gear are arranged for handling the cargo rapidly. Each hatch is served by two steel tube derricks and twelve 7 in. x 12 in. steam winches are fitted for controlling the derricks. Four 28 ft. lifeboats are arranged, two each side on the boat deck amidships, fitted under davits of the round bar type. A steam steering gear of the Wilson-Pirrie type is fitted in a steel house on the aft end of the upper deck, controlled from the bridge by means of telemotor. The vessel has two steel masts, with lowering topmasts suitable for the Manchester Ship Canal, and a 1½ K.W. wireless set is provided. Marconi direction finding wireless apparatus of the latest type is also installed. A complete electrical installation to light efficiently the whole of the vessel is fitted, and the vessel generally is arranged in the most up-to-date manner for this class of trade.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, October 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Holywell for Port Said, Colombo, Madras, and Calcutta (London, October 2).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, October 6).

British India Line.—S.s. Mandala for Bombay and Karachi (London, October 8); s.s. Mantola for Colombo, Madras, and Calcutta (London, October 9).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also Corfu, Gruz, and Ancona if inducement (Liverpool October 16, Swansea October 19); s.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Glasgow, Liverpool, and Swansea October 23).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 2); s.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (last steamer of the season for Galatz and Braila) (Liverpool, October 30).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, October 1); s.s. Nagoya for Colombo, Madras, and Calcutta (London, October 2).

Prince Line.—S.s. Scottish Prince for Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, October 5).

Ellerman, and Papayanni Lines.—S.s. Egyptian for Gibraltar Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 2); s.s. Gerano for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool October 2, Swansea October 6); s.s. Algerian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool October 16, Swansea October 16); s.s. Griqua for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 16); s.s. Roumelian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 6). * Subject to sufficient inducement. Transhipments:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

The directors of the South Indian Railway Co., Ltd., have decided to recommend that a final dividend for the year 1926 of 2½ per cent., less income tax, be paid from surplus profits on January 1, 1927, making, with the guaranteed interest of 1¾ per cent. payable on the same date, a total payment of 4¼ per cent. for the half-year ending December 31, 1926, and together with the payment that was made on July 1, 1926, a total payment of 8 per cent. for the year, being the same as the dividend paid for the previous year.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended September 16 state :—

Since our last report the futures market has been very active, and prices again show a fresh advance. The week's summary of price movements is as follows :— Sakellaridis : November, 34.45 dollars, 0.80 dollars up; January, 33.55 dollars, 0.50 dollars up; March, 32.95 dollars, 0.20 dollars up. Ashmouni : October, 22.80 dollars, 0.60 dollars down; December, 22.65 dollars, 0.70 dollars down; February, 22.70 dollars, 0.80 dollars down.

Speculative purchases continue to be mainly responsible for the firmness of our market, and there can be no doubt that the speculative open position is fairly large. Pessimistic reports on the crop, especially Sakel, continue, but our private reports from the various districts show these reports to be exaggerated. The contra of the bullish speculative position seems to be composed of straddle sales by Liverpool operators, either against Liverpool Egyptian or against New York American, and some sales by export houses and interior merchants against crop forward purchases. The demand from abroad has been slightly better than it was last week, and it is said that the bulk of the orders have been in new crop Ashmouni for Continental account. It is very difficult to express an opinion on the market at present, but, failing any big increase in trade demand or a further serious deterioration of the crop, present prices seem high, both for Sakel and Ashmouni. The week's receipts amount to 59,557 kantars against exports 48,252 kantars; the stock in Alexandria stands at 1,089,789 kantars.

Spot : The market was closed on Friday last for the Jewish New Year Festival, but per contra opened on Saturday. Greater activity has been shown during the week in both Ashmouni and Sakel, particularly the former. Total sales amount to about 7,800 bales, of which we estimate 2,500 bales Sakellaridis, 4,800 bales Ashmouni, 200 bales Zagora, 200 bales Pilion, and 100 bales White.

Sakellaridis : All grades have been in good demand. It is only the scarcity of cotton from G.F/F.G.F. upwards which has restricted the turnover and the premiums paid for these grades have hardened very considerably. A few lots of new crop cotton have arrived on the market and have changed hands at good premiums; it is yet too early to give any opinion on the new crop Sakel.

Ashmouni and Zagora : Arrivals from the interior total about 10,000 bales for Ashmouni, and what we have seen of this cotton has been good both in style and shape. There has been a considerable demand for all grades and the difficulty of obtaining cotton from F.G.F. downwards has induced buyers to increase their limits. Above F.G.F. premiums remain about unchanged except for the better lots of new crop which have changed hands at rather higher premiums. All the new crop cotton appearing on the market is immediately snapped up.

Brown : No transactions recorded.

Pilion : A little more interest has been shown in this variety from Good Fair to Good, without much change in spot differences.

White : A few small lots of Good have changed hands at about last week's differences.

Crop, 1926 : Our latest crop news from Upper Egypt show conditions to be fairly satisfactory. There is always the fact that the crop is late and has suffered damage, but this damage is not excessive. As regards Lower Egypt, the latest reports received indicate an average delay of a full two weeks, and the crop, especially Sakel, has suffered from the cold weather in August and from the recent humidity. The percentage of bolls attacked by the pink boll worm is greater than at this time last year. The exact extent of the damage from the worm is very difficult to estimate; the attack is fairly serious but not alarming. Weather conditions during the past week have been distinctly better than recently and this is all to the good

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended September 22 :—

Egyptian Futures.—Sakel Contract.—Erratic fluctuations have continued to be in evidence during the past week; under the influence of fresh "bullish" activities in Alexandria, and buying orders from that source, values reacted sharply immediately after our last report, the November position recovering to a few points below 17d. At this point, more favourable crop advices, poor trade support and the persistent decline in American values brought in liquidation, which still continues, with the result that prices have eased materially, to-night's close being 19 to 34 points for near and 19 to 25 points for distant below the level obtaining at the date of our last report. The present season differs altogether from preceding years on account of the negligible forward business transacted so far, and the proportionate limited commitments for Sakel yarns for distant deliveries. With normal trade and conditions, this might be construed into a "Bull" point as indicating a heavy deferred buying movement, but from advices and observation, there is little doubt that certain counts of Sakel have been supplemented most effectively by yarns produced from other varieties, particularly East Africans and Peruvians. These latter cottons are available to-day at a discount of, roughly, 600 to 700 points below F.G.F. Sakel. In addition to this, we have never previously at this period of the season been carrying heavy stocks of fine Sudan cottons or had the promise of regular large supplies from this source. During the past two days, the Alexandria market has begun to show signs of weakness, which, unless some factor crops up to create a radical change in the outlook, may develop into a scramble to get out. Even at the reduced difference ruling to-day, straddle sales of Egyptian against purchases of American appear to afford fair prospects of a reasonable profit : in addition, "short" sales on strong markets would also seem to be recommendable.

Upper Contract.—Values in this contract continue to be under the influence of a further decline in the American markets, also, in addition to this, trade support has been distinctly moderate. The dearness of Upper Egyptian in comparison to similar outside varieties is still marked, and on this account we consider that prices will in all probability ease further. Since we last wrote values have declined 25 to 40 points.

Egyptian Spot.—Prices have shown a tendency to fluctuate during the past week, but on balance the result has been distinctly in favour of buyers. The strong "Bull" element in Egypt have found it more difficult of late to justify their recent campaign, in face of declining American markets and better weather news from their own plantations. Cotton is now on the move and its influence on the course of prices should be felt more and more from now onwards. The local inquiry has again been of fair extent, but has produced few fresh features, whilst actual sales, in face of a dropping market, have shown a considerable reduction from the figures reached during the previous week. For Sakel an improved inquiry has been noticed within the limits of 18d. to 10d., but the lower qualities have not been quite so much in favour.

Uppers have continued in good request, but the range of inquiry has appeared to drop rather quicker than the actual market, and 12d. to 12.50d. appears to be the popular range at the moment. The selection available at these prices is a poor one. A fair business has been done in Sudan Sakel, which has attracted an increased amount of attention from spinners as the market has declined. As far as can be ascertained, it has been the lower qualities at from 50 to 150 points on November which have received most support. White Sudan (all qualities) has met with a comparatively good inquiry, but with somewhat disappointing results. Pilion at from 13.50d. to 14.50d. has been in fair request, and a slight revival in the demand for the best "White Egyptian" has been remarked on one or two occasions. With regard to the latter, the selection is an extremely limited one. Interest in forward cotton has shown, perhaps, some slight improvement, but, so far, prompt shipment has been the limit of the inquiry, and New Crop cotton has remained neglected.

Forwardings to spinners for the week ending the 17th inst. have again improved, the returns amounting to 7,420 bales Egyptian and 1,691 bales Sudan. Estimated sales, 1,900 Egyptian and 1,050 bales Sudan. Quotations of Sakel have been reduced 45 points and those of Uppers 30 to 35 points. F.G.F. Sakel to-day, 18d. F.G.F. Upper to-day, 13.25d

Motors and Motoring

By G. B. B.

Thrills.

Brooklands last Saturday was a place of thrills. Road racing conditions were simulated fairly successfully and the acute bend provided at the fork and the twisty bit in the straight were not by any means unrealistic as were the hairpin bends in last month's Brooklands Grand Prix. As a matter of fact, the barrier-enclosed bend in the straight was taken by many competitors at -- m.p.h. It was a pity there was an accident, which might easily have been much worse than it was, but apart from that this 200-miles light car race was a fine affair and was admirably managed. By the way, I would congratulate the Brooklands people on the way in which they are enforcing their regulations concerning silencers. That the modern sports car is far too noisy is the opinion of many people, and it is an interesting thought that there are large numbers of cars in ordinary use on the road which would not be considered to be silent enough to be permitted on the track at Brooklands.

New Models.

There is rather a marked attempt just now on the part of certain motoring journalists to depict the advantages of the good second-hand car and to show how quite easily a bargain may be picked up. That reminds me of the Yorkshire man who spoke so loudly about the generosity of Yorkshiremen as a class that his hearers began to object. "Show me," asked one, "where a Yorkshireman ever gave more than he was forced?" Quick as lightning came the reply, "Thee buy a horse fro' a Yorkshireman and thee'll get good measure; thee'll get the horse—and thee'll get experience!" It is that way, frequently, with the buying of second-hand cars; one gets experience.

Not that I would stigmatise all second-hands for one moment as bad bargains; far from it. But for myself I would rather buy a cheap new model than an expensive second-hand model cheaply.

This season I understand there will be plenty of new models to choose from. Last week I mentioned some, and since then I have heard of two new products which are to sell at about £100. It is strange what peculiar fascination there can be about the £100 car. These models are a Gillett and a Waverley. The former is a Willesden production from the works of the British Ensign Motors, Ltd., and has a four-cylinder engine of 56 mm. bore and rather less than double that in stroke, with a total capacity of about 1,030 cubic centimetres. Overhead, push rod operated valves, an electric lighting and starting set and an all-steel body on quarter elliptic springs makes a neat, comfortable and, I should say, serviceable turnout.

The Waverley has a twin-cylinder, water-cooled, 7 h.p. engine, and the horizontally opposed twin type and a four-speed gearbox. This is made by Waverley Cars, Ltd., also in the Willesden district. Side screens and self-starter here are extra to the standard fitting, which includes hood, screen, and spare wheel. Front wheel brakes are fitted, and the wheels are wire, with balloon tyres.

A collision between two aeroplanes at the Kbely Aerodrome, Prague, on September 24, resulted in the deaths of two Yugoslav flying officers, Lt.-Colonel Yovan Yugovitch and Lieut. Eugen Nyegovan, and of Staff Captain Yindritch Kostrba, a Czecho-Slovak flying officer. The accident occurred as the squadron of five Yugoslav aeroplanes, which were visiting Prague and other cities, were taking off from the aerodrome. The signal given to a Czecho-Slovak aeroplane was mistaken by one of the Yugoslav pilots as a signal to him, and the two machines collided before they had cleared the ground.

THE LIUBLIANA AUTUMN FAIR.

(From Our Own Correspondent.)

Liubliana, September 15.

The Liubliana Autumn Fair was in the main an agricultural show on lines familiar enough in England. It included horse, cattle, and dog shows; gardening, too, received due attention. It was courageous of the Fair Committee to carry it through this year, for the harvest and fruit crop have been damaged by inundations, and the whole country is "in the sign of economic crisis," as they say here. Still, there was much that was interesting, and more that was promising. The possibilities of dairy farming in Slovenia are very great and as yet only tentatively exploited. Given perseverence, experience, and enterprise, Slovenia might become a small Switzerland in this respect. Even so, the exhibits of the associated dairies showed how far we have travelled since 1921. Styrian wines of course, need no bushes, but they seemed specially mellow this year, more lacking in the tartness which usually distinguishes them from the French brands they resemble. There was a large amount of agricultural machinery, much of it sent by foreign exhibitors; there were motor vehicles, and a whole pavilion was given up to radio accessories. One large pavilion was devoted to a Slovene painters' exhibition. The modern trend was distinctly predominant. Some of the black and white work was very clever and so was the sculpture, of which one would gladly have seen more.

PALESTINE TRADE.

The following report on trade conditions in Palestine, dated Jerusalem, August 27, is published in the Monthly Review for September issued by Barclays Bank Limited:—

Trade activity during August showed a slight improvement over the preceding month, sales were fairly steady and imports from the United Kingdom were higher. Buyers continue to place orders for winter requirements, and in clothing an increased demand, especially for ready-made garments, is reported.

A large demand for tea is in evidence, preference being for cases containing ¼ lb. tins. The consumption of this commodity is fairly considerable, and in many quarters it is thought that an excellent opening exists for shippers who desire to extend their trade to this territory.

British cycles enjoy a very wide reputation and increased activity in this trade is apparent.

Owing to rinderpest, which spread from Syria into Palestine, the Local Government has prohibited the slaughter of cattle for food, and if prevailing conditions continue, a great demand for frozen meat and for cattle food will be forthcoming.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Egypt in England.

The formal handing over by the contractors and furnishers of Bute House to the Egyptian Legation coincides with the visit of Sarwat Pasha, Egyptian Minister of the Interior, to London, and it is to be inferred that he will endeavour to form an opinion, for the benefit of his Government, on the merits or demerits of the residence purchased for Egypt's representative in this country. From the full description of Bute House that appears elsewhere in this issue an idea can be formed of the attractiveness of the new Egyptian Legation. If it had been possible to keep the cost of the reorganisation and furnishing within the original estimate, Egypt would have had good reason to be satisfied with her acquisition. But in order to justify the outlay it is considered necessary that Bute House should accommodate not only the Legation and Consular staff, but the personnel of the Educational Mission as well. If it is to do this, a further sum of money will have to be spent on the South Street portion of the property; and to gauge the value of this additional outlay will possibly be one of the tasks that Sarwat Pasha will set himself. On reflexion it may be found that Bute House will be serving its full purpose when it contains the Chancellery and the Consular offices, and the advantage of leaving the Educational Mission where it is will be recognised. One day, we may hope, Egypt will regard the Legation as reflecting the special position in which she stands in regard to Great Britain, and will hold that a country which sends six or seven hundred students to complete their education in England may well have a notable residence to house her Diplomatic Mission.

The London Mosque.

Although, as Khan Bahadur the Sheikh Abdul Qadir humorously remarked last Sunday after he had opened the new Mosque at Southfields, the eleventh-hour withdrawal of the Emir Faisal from participation in the inaugural ceremony may have had its advantages from the point of view of "publicity," the disappointment felt by the Ahmadiyya community at having so mysteriously failed to secured the presence of the representative of the keeper of the Holy Places of Islam must have been intense. To the outside observer, however, this last *contretemps* was but successor to another matter for surprise: that the Wahhabi monarch should ever have consented, as consent he did, to gracing the efforts of so enlightened, or, alternatively, of so heretical a sect as the Ahmadiyyas. But this dispute and its explanation are the Moslems' own affair. Yet it is permissible for non-Moslems to regret the dissensions here displayed, and the loss of the opportunity which the Wahhabis undoubtedly had for making picturesque manifestation of their position in Islam. Turning to the long-standing problem of the desirability of a mosque in London, we would say this: that if the response shown on Sunday be any indication of the Ahmadiyya movement, then this new Mosque in London is still insufficient to meet the increasing needs of Mussulmans here. The French and German Governments have attempted to solve their own problems by the official construction of mosques in Paris and Berlin, but it has yet to be proved that theirs is the best way to win the love of the Prophet's followers.

The Greek Crisis.

The development of the political crisis in Greece brought about by the fall of the Dictatorship and the forceful abolition of the Republican Guard has been noticeable for the open discussion of a restoration of the Monarchy, a subject *tabu* under severe pains and penalties during the the régime of General Pangalos. History may one day

Digitized by Google

decide that it was from sheer weariness of spirit and in a mood of complete despair that Greece acquiesced with seeming indifference in the suppression of the Monarchy. It would, therefore, be a natural reaction, if after a brief experience of republicanism which had spelt despotism, and threatened with unending political wrangles, Greece made up her mind that she would give the monarchical system another trial. That moment, however, is not to be yet. Political animosity is a plant of sturdy growth in the country; it matters little what the point at issue is, provided that it supplies a clear-cut issue for hating your opponent and denouncing him as the personification of all evil. For the moment Greece is divided into Republicans and Monarchists, and both can preach to their hearts' content the wickedness of the others' system. But the Republicans are in possession, and it would be short-sighted foolishness on the part of the Royalists to attempt to restore the Monarchy on the strength of a small majority vote. If Greece is to derive benefit from the restoration of the Dynasty, it must be by the very general wish, amounting almost to unanimity, of the nation as a whole. For the time being, therefore, the only sane course for the Monarchists to adopt is to acquiesce loyally in the Republican system and to make the best of it. The decision to take part in the elections is sound; they would be still better advised, if they could co-operate with the Republicans in the government of the country, in order that Greece might be given an opportunity to heal her political wounds.

In Smoother Waters?

Backed by the President, Admiral Koundouriotis, General Kondylis appears to have weathered the storm which threatened to capsize his Premiership before the General Election. The meeting of the political leaders on September 28 did not result in the discovery of any common ground for the rival parties, but they agreed to proceed with the elections, which have had to be postponed for a fortnight to November 7, on a proportional representation basis. The decision of the Court Martial that tried the officers of the mutinous Republican Guard to pass sentence of imprisonment for life and not to impose the death penalty on the two ringleaders will have saved Greece from further embitterment. Colonel Zervas and Colonel Dertilis may not have many friends in Greece to-day, but sentence of death, although possibly salutary from the point of view of army discipline, would merely accentuate the unhappy divisions among the people.

LONDON'S FIRST MOSQUE.

Owing to causes over which, apparently, neither the Emir Faisal himself nor the Ahmadiyya community in London had control, the opening ceremony on October 3 of the new Mosque at Southfields—the first mosque in London, and one built entirely by Moslems—had perforce to be delegated to other hands than those of the distinguished Wahhabi Prince. The misunderstanding by which the young Emir was originally appointed to open the Mosque and then debarred from doing so caused a last-minute choice to be made of a presider over a picturesque and historic function. This fell upon Khan Bahadur, the Sheikh Abdul Qadir, member of the Indian Delegation to the League of Nations.

The ceremony itself was both simple and impressive. The Imam of the Mosque, Mr. A. R. Dard, having recited from the Quran, with a short prayer gave to the Sheikh a silver key with which to unlock the doors of the Mosque. This done, the Imam read out a message from the head of the Ahmadiyya community in Qadian, Mirza Mahmud Ahmed Khalifatulmasih, the key-note of which was the duty which lay equally at the door of Christian and of Mussulman to strive for peace and friendliness on earth. To this end houses consecrated in the name of God might be made centres of union.

Following upon this was an address by the Imam, including the reading out of congratulatory messages from all parts of the world. In his address the Imam confessed his inability to understand the change in attitude on the part of Ibn Saoud towards this effort of the Ahmadiyya community. He emphasised the need of toleration, which reposed, not in minimising or modifying the points of difference between men in this world—points which would persist eternally—but in recognising them and understanding them.

Khan Bahadur Sheikh Abdul Qadir protested his unworthiness to open the Mosque. First, he was not a prince; and secondly, he disliked ceremonies. But he conceived it his duty, although not a member of the Ahmadiyya community, to attend this function. It was the part of Moslems in the West to show the West that toleration and broad-mindedness could be practised in Islam as elsewhere, and he welcomed this endeavour at Southfields. Incidentally, he expressed the hope that the British Government would follow the example of France, and build a mosque in the capital of the British Empire.

Then came a striking address by a non-Moslem, the Maharaja of Burdwan. He also conceived it his duty to attend the ceremony, to give proof that Hindu and Muslim could live in amity. The occasional riots in India derived, not from mundane but from spiritual causes, and in any case they represented a passing phase. He was glad to have been asked to attend a Muslim gathering, regarding this occasion, with Khan Bahadur presiding, as a manifestation of the catholicity of Islam.

Among those who accepted invitations to be present were some members of the diplomatic and consular corps, Viscount Mersey, Lord Vesty, Lord Ashfield, Lord Riddell, Sir Newton Moore, M.P., Col. Sir Arthur Holbrook, M.P., Sir Park Goff, M.P., Sir Michael and Lady O'Dwyer, Sir William Simpson, Sir Henry Jackson, M.P., Mr. H. St. J. B. Philby, Lt.-Col. T. S. B. Williams, and Lt.-Col. Cunliffe-Owen. It was noticeable that no Moslem country was officially represented.

The mosque itself, even in its present state, is a striking edifice. Standing close to the District Railway (a fact which probably caused more convenience last Sunday than it will to actual worshippers in the mosque) it reposes gracefully among the surrounding mass of villas. It is constructed of steel and concrete, and is provided with windows. In other words, it does itself represent the kind of compromise between East and West that the members of the Ahmadiyya community endeavour to strike between Islam and Christianity.

EGYPT AND HER PROBLEMS.

After a prolonged session, extending almost to the third week of September, the Egyptian Parliament has risen for an all too brief holiday. General expectation attaches considerable importance to the next session. During the first of the present Parliament the Deputies have conveyed the impression that they have been feeling their way over untried constitutional ground, possibly even, in some cases, manoeuvring for position. There have been trials of strength not only with the Government, but also with the venerable President of the Chamber, Zaghloul Pasha. The tug-of-war, whether engaged of deliberate intent or by chance, seems to have swayed this way and that, and it is not apparent that either side is conscious of having secured any permanent advantage. In the early stages of the session nothing was more striking than the tact, skill and determination with which the President kept the Chamber to the business in hand and checked it from raising unnecessary issues. Whether the strain of the long session and summer heat caused Zaghloul Pasha to relax his hold, or whether he decided that it would be politic not to drive his team with too tight a rein all the time is not clear; but the fact remains that the closing weeks were marked by a variety of "incidents" which suggested waning influence. These were almost exclusively of a domestic character, arising, it may be, from the anxiety of the Chamber to keep its finger on everything connected with the public life of Egypt. Thus there were differences of opinion as to the extent to which the Deputies could usurp both the executive powers of the Government and the judicial powers of the judiciary; but of themselves these conflicts need betoken nothing more than inexperience combined with an intensive seriousness of purpose. For those who are concerned to see Egypt pursue a smooth course in the early days of her independence and to concentrate the talent that she can command on her material advancement causes for misgiving are to be found in the possibility that too frequent passages of arms between Government and the Chamber may lead Adly Pasha Yeghen and Sarwat Pasha to regard their task as hopeless, and in the ominous election, on the morrow of their acquittal by a majority vote on a charge of implication in the murder conspiracy directed against British subjects, of two prominent members of the Wafd. Zaghloul Pasha, it is true, required them to stand as Independent candidates; but, as his authority ran so far, it could with equal ease have been exerted to prevent the two "Independents" from being elected by Zaghloulist votes.

Apart from this one failure to live up to the promise that characterized his acceptance of the office of President of the Chamber instead of the Premiership, the correctness of Zaghloul Pasha's attitude has received wide recognition. The interest and significance attaching to the coming session turn on the question whether his hold on the extremist among his followers is still effective, or whether these are beginning to realise that they can take advantage of the veteran's advancing years. There are many indications that the moderate and extremist sections are struggling for mastery in the Wafd, and it is a natural tribute to the exceptional position which Zaghloul Pasha holds in the eyes of his countrymen that it should be believed that only the section which has his active or moral support will win the day. For the extremists, it has to be inferred, the height of statesmanship is still represented by attempts to promote an open conflict with Great Britain, whether by crude efforts at intrigue in the Sudan or by physical clash in Egypt itself. The moderates, on the other hand, with whom Zaghloul Pasha has been at pains to identify himself, must welcome such a step as the visit of Sarwat Pasha to England, in the hope that the ground for an honourable and reasonable understanding between the two countries may be explored yet further. That no common meeting ground has yet been disclosed is due to the fact that there has been little or no attempt on Egypt's part to discover one. As set out in their original terms the respective standpoints are incompatible; but it is at least possible that the dispassionate discussion which the Wafd has hitherto vetoed may change the whole aspect of the controversy.

It is with the object of promoting discussion that we publish in this issue, in a Special Section devoted to Egyptian matters, an article on the future of the Sudan, putting forward a concrete proposal for reconciling the interests of Egypt and Great Britain, as well as for furthering the real interests of the Sudan. Sir Murdoch Macdonald's record is a guarantee that the subject will be handled dispassionately and his suggestion is one that merits careful consideration. He utters a warni against the indefinite perpetuation of the present cen tralised form of government in the Sudan, with a steady output from Gordon College, Khartoum, of young Sudanese who consider themselves trained and qualified to take over the administration of the whole country with its complex of races and tribes. Egypt, he points out, with the example of India before her, may well view with alarm the prospect of the Sudan exclusively in the hands of the Sudanese. If, however, the Sudan were regarded as a series of distinct units, as it really is, and young Sudanese were brought up to understand that their legitimate administrative outlook must be restricted to the government of their own race or unit, the fear of a united hostile Sudan in the distant future would be removed from the Egyptians. Supervision would remain in British hands, but Sir Murdoch Macdonald would restore a touch of reality to the Anglo-Egyptian Condominium by the inclusion of an Egyptian in the Condominium Council. The scheme looks farther ahead than those who would solve the question by making the Sudan a British colony may care to do to-day; at the same time it offers Egypt a more generous solution than the present intransigent attitude of her extremists may seem to justify. Adly Pasha and his Government, however, realize that if once Egypt is allowed to negotiate with Great Britain as an intellectual equal, and not, as in 1924, after the manner of a spoilt child, a sound and worthy compromise on the basis of this scheme or on similar lines can ultimately be devised.

The Near and Middle East*

From Our Own Correspondents.

Jerusalem, September 22.

Negotiations with the Arabs.

Details of the negotiations conducted by Arab notables with the Acting Chief Secretary for the Government of Palestine have been published from what appears to be an authoritative Arab source. These details throw additional light upon the semi-official and secret conversations to which I referred in my letter on August 26. The procedure followed in these conversations seems rather unusual. To begin with, the notables were not representatives of the recognised Arab parties. Mr. Mills, Acting Chief Secretary, had no assurance that, even if agreement were reached on all points, the proposals would be acceptable to the majority of the Arabs. Four meetings are reported to have been held, and upon the last occasion it was agreed that Mr. Mills was to summarise the conversations in a memorandum to be approved by the other side before submitting them to the High Commissioner. If the Arabic and Hebrew translations of the document which have been made available to the public, are to be trusted, Mr. Mills does not appear to have fully satisfied his Arab friends. They are said to have returned the draft with the remark that they were astonished at the disparity between the tone and contents of the memorandum and the conversations it purported to summarise.

A modification in the Order in Council enabling the formation of a Parliamentary Government giving the population the right to take part in the making of laws was, according to Mr. Mills' summary, the principal condition put forward by the Arabs. The chief difficulty in the constitution of a representative Government being the Mandate based upon the Balfour Declaration, the Arab notables were to agree to treat the Zionist pledge as an international undertaking of the British Government in which the Arabs of Palestine were to show no concern! At the same time, the Arabs seem to have offered an amendment to the Palestine Constitution containing an interpretation of the British Zionist pledge based upon the White Paper of 1922. Several Arabs were to be nominated on the Executive Council of the Government, and the "Parliament" was to consist of the High Commissioner, an Upper Chamber of Notables, and a Lower House of elected representatives. The Arabs agreed that among the notables might be included senior British officials appointed by the High Commissioner. The Lower House was to consist of representatives elected on the basis of one for each twenty or twenty-five thousand of the population. Both houses were to be entitled to initiate legislature, except laws dealing with the Government's fiscal policy, and draft legislature concerning international obligations of His Majesty's Government, i.e., presumably, the Jewish National Home. There were to be three electoral precincts, Moslem, Christian, and Jewish, but none but citizens of Palestine were to be entitled to vote.

These disclosures were published in the leading Hebrew daily here on September 15, and on the 16th there appeared in the same newspaper a leader analysing the negotiations in a manner which may be taken as fairly representative of the unofficial Jewish view. The principal grievance is that Mr. Mills encouraged notables opposed to any admission of the principle of the Jewish National Home in the laws of the land; that, in Mr. Mills' summary, the National Home was not so much as mentioned; that there was no reference to facilities for the immigration of Jews (without which the National Home is regarded as an empty shell); that, in brief, the British obligation towards the Jews was carefully disguised under the phrase "British international obligations." Strong objection is taken to the spirit of these negotiations, which are said to have been carried on behind the backs of the Jews, who, however, consider it premature to object to the assumption that the system of elections is always to be based upon the proportional representation of the entire population.

Mr. Mills' negotiations appear to have evoked no enthusiasm among the notables with whom he conducted these protracted pourparlers, while they have intensified the distrust and suspicion of the Jews, who feel slighted because in so vital a matter an important official of the Government considered it expedient to encourage, if not initiate secret and one-sided negotiations.

A Visit by the Prince of Wales?

The mere announcement in the London Press that the Prince of Wales may include Palestine in the Spring tour planned for His Royal Highness has intrigued and thrilled Palestinians of all shades. The highest Government officials here appear totally unaware of any such intention, though it is not improbable that Field-Marshal Lord Plumer, who is now on leave, may have some private information on the subject. What lends more credence to the report is that arrangements for the dedication in April of the British war cemetery on Mount Scopus are well under way, and that General Sir George Macdonogh, the ex-Adjutant-General, was here recently and was in touch with the British War Graves authorities. Unless General Macdonogh had some far more important object in view, or was bound on a significant mission the nature of which may not now be divulged, it seems extremely unlikely that the arrangements for the April ceremony would have brought him to Jerusalem at this time if, as officially stated, there is no connexion between these proceedings and the reports of the Prince of Wales' participation in them.

Jaffa as Administrative Centre.

Conjectures about Jerusalem's ceasing to be the administrative centre for the Southern district appear to have been well founded. For at least two months Jaffa has been the seat of the Governorate for the district, with Major Campbell, Assistant District Commissioner, acting as the District Commissioner in the absence of Sir Ronald Storrs, who has accepted the office of Governor for Cyprus. It is not believed that a new officer will be brought out to replace Sir Ronald Storrs, and it is a foregone conclusion that Major Campbell will succeed to the office. In the strict order of seniority Major Abramson, now District Commissioner for the North, will be offered the post, but in view of his attachment to and uncommon knowledge of the affairs of the North, he is not likely to accept Jaffa in exchange for Haifa.

Industries in Tel-Aviv.

With the present slump in industry and trade, it is heartening to find that some of the tender and tiny industries in Tel-Aviv are weathering the storm, and that here and there new ones crop up. A silk factory in Tel-Aviv, owned and operated by a wealthy Viennese Jew, had shut down for a space and was re-opened a week or so ago. For the present, operations are limited, but the factory is expected to get into its full stride in a very short time. An American capitalist, for many years a leader in the artificial tooth industry in Philadelphia, has established a small factory in Tel-Aviv. He is confident of marketing his product without difficulty. His overhead costs, owing to the rather low standard of local wages, will compare favourably with Philadelphia, and climatic conditions appear to be auspicious for the chemical processes involved. A tin pails factory in Tel-Aviv announces a large order from an international firm at Beyrout, which has taken over the representation for Syria. A corks factory has also announced new orders, while the textiles factory, "Lodzia," has branched out into the silk stocking line, and the foundry of Tel-Aviv reports satisfactory progress and expansion.

Off Duty.

On Tuesday evening pedestrians taking an after-dinner walk along the Nile embankment between the Residency and Kasr el Nil bridge might have seen the Public Works Department's river steamer Denderah lit up and obviously ready for a trip. On the upper deck, alone, sitting under an electric lamp and absorbed in an evening newspaper, was an old man. Probably most of the few persons passing by that way at the time noticed the venerable figure without recognising it or discovering in its presence any especially interesting circumstance. Yet there was, for anyone with a memory covering the last few years, something rather remarkable about the peacefulness of the scene and the fact that the reader was all alone. For the old man was none other than Saad Pasha Zaghloul, President of the Chamber of Deputies.

It may be suggested that the spectacle of Zaghloul Pasha reading a newspaper, even on a Nile steamer, is hardly one of the wonders of the world. But surely there was something significant in the sight of the old man, who twenty-four hours earlier had been making a "breaking-up" speech in the Chamber, which during the last few months he has so completely dominated, sitting entirely alone and, seemingly, at perfect peace with the world. It was only necessary to think of the numerous occasions in the past when the Wafd leader has arrived at or left the Capital, of the cheering and shouting, decorations and processions, to appreciate that here was evidence of a changed atmosphere. To have concluded that Zaghloul Pasha's solitary state implied a lessened popularity would have been to have erred greatly. He has probably never been more universally popular than now. And, bearing in mind his generally admirable handling of the Chamber of Deputies, we may say that he has never better deserved popularity. But the fact that he can now come and go unaccompanied by popular plaudits seems to indicate a realisation that shouting and tumult are indifferent political weapons. The little incident of the white-haired old man on the Nile steamer is typical of the changed conditions in Egypt. However much we may criticise the proceedings of the Egyptian Parliament and whatever forebodings of crises ahead may be uttered by our ever-present pessimists, we may at least find consolation in present peacefulness. Never during the past eight years has the Egyptian political atmosphere been more satisfactory than now. Indeed, so cloudless is the sky that, with past experience of Egyptian affairs, there is instinctive apprehension of some bolt from the blue. But such fears, it may be emphasised, have no apparent foundation in an Egypt which, with the rising of Parliament, finds singularly little of excitement in its morning newspaper.

Excitement over Cotton.

Deprived of other sources of interest, public opinion finds expression in grumbling at prevailing cotton price levels. Although during recent weeks Egyptian cotton has recorded price advances which local banks consider to have had no solid justification and concerning which there have been repeated warnings in the periodical circulars issued by the banks and leading cotton houses,

Digitized by Google

a feeling of optimism had been gradually spreading until two days ago. Then, in sympathy with the heavy selling in America, consequent upon the latest report of the American crop prospect, the bottom suddenly fell out of the local market and there was something like a panic on the Alexandria Bourse. Prices went down nearly two dollars in half an hour and the cafes buzzed with excitement. As usual in such circumstances, a section of the local Press has attributed the slump to the machinations of speculators, and the Government has been urged not only to check the downward tendency by further heavy purchases, but also to introduce new regulations aimed against the *gros baissiers de la Bourse*.

A Drug Story.

The latest local scandal consists in the discovery that a group of provincial police officers, not content with neglecting their duty in regard to the suppression of the traffic in hashish, cocaine and other narcotics, have for some time past been carrying on a very profitable smuggling business of their own. The most active member of the group appears to have been an ex-Army officer who was transferred to the police as a result of the reduction in the Army's establishment when Egyptian units were withdrawn from the Sudan. This officer's work at his police post in Upper Egypt seems to have been so light that he could frequently absent himself for several days at a time in order to journey to Alexandria or Port Said, where confederates, who were in charge of the work of getting the forbidden drugs safely ashore, furnished him with new supplies for distribution among the gang's sub-agents in Upper Egypt. Eventually, this officer's constant travelling, together with the fact that he was invariably accompanied by two large trunks, which seemed excessively big and heavy for week-end visiting, aroused the curiosity of the proprietor of a hotel in which the officer was accustomed to stay. No very close examination of the trunks was necessary, for hashish has a peculiar characteristic odour readily recognisable by anyone who has had previous acquaintance with the drug.

The sequel consists in the arrest of this officer and two others of the police, and it seems possible that the inquiry will lead to several other arrests. The fact that the first officer's frequent absences from duty and his passion for travelling between his post and Egyptian seaports had apparently not been noticed by his superiors has caused no little comment, as also has the circumstance that the smuggling conspiracy was discovered only through the inquisitiveness of an innkeeper. The Arabic newspapers assert that the local police forces are rotten with corruption, and demand an exhaustive inquiry and general cleaning up. A praiseworthy desire, but the Ministry of the Interior may be sympathised with if it regards the task before it as a very difficult one. Efficient and incorruptible police forces, like silk purses, are not made out of the first material that comes handy, and the Ministry cannot, by putting men into police uniform, endow them with standards of conduct and a conception of duty not always found either west or east of Suez.

ROUMANIA.

Bucharest, September 21.

Treaty Making.

The signature by General Averescu and Signor Mussolini of a treaty of friendly alliance between Roumania and Italy forms the main preoccupation of the Roumanian Press of all parties this week. The Liberal Party attempted some time ago to conclude a similar treaty with Italy, but failed owing to Signor Mussolini's attitude in regard to the annexation by Roumania of the Province of Bessarabia. As Italy is now in negotiation with the Soviet Government with a view to the conclusion of a treaty, it is clear that she could not at the same time, without damaging her own interests, conclude a treaty with Roumania recognising the annexation of Bessarabia. Hence the protocol to the treaty with Roumania in which she reserves to herself the right of free action in regard to the ratification of the Inter-Allied Agreement of October, 1920, relative to Roumania's annexation of Bessarabia. The Liberal Press is highly indignant at the signature of any treaty with Italy which leaves this question open; but General Averescu has preferred to place his country on an openly friendly footing with the nearest of the great Allied Powers, leaving the vexed question of Bessarabia to be settled with Italy when a more suitable opportunity is offered.

The Treaty, as is known, is intended to pave the way for a commercial convention between the two countries. The Press makes a great virtue of Roumania's peaceable intentions in all directions, as shown by the various treaties that she has just concluded. The fact is that Roumania has absolutely nothing to gain, and practically everything to lose by a war, in whatever quarter it might break out.

In the course of last week two laws were promulgated ratifying respectively (a) the convention between Roumania and Czecho-Slovakia, signed on May 7, 1925, relative to extradition and judicial assistance in penal matters, and (b) the convention for reciprocal judicial assistance in matters of civil and commercial law concluded between Roumania and Czecho-Slovakia on the same date.

Roumania and Council of the League.

Great satisfaction is felt in this country at the election of M. Titulescu to a place on the Council of the League of Nations for the three years' period, and it is felt that with M. Titulescu and Dr. Benesh both on the Council the interests of the Little Entente will be well represented. M. Mitilineu, Roumanian Minister for Foreign Affairs, has now returned to Bucharest from his attendance at Geneva, and comments on the gratifying fact of M. Titulescu's apparent popularity with his colleagues on the League Council.

The Rise of the Leu.

It is not an unusual phenomenon that the leu should rise at this season of the year, when the grain exports begin in earnest, but the rise is the more felt this year as it coincides with a very considerable increase in railway tariffs and also of Customs duties, which have resulted in a general rise in prices of all commodities, with the exception of a few cereal products, etc., which are always cheaper at this season. The price of firewood, for instance, has gone up 50 per cent. in Bucharest, and there is a hard winter in store for the poorer section of the town population. So keenly was this felt that a Government Commission was appointed to investigate the causes of the rise which were popularly attributed to speculation by the timber merchants. The Government's agents appear, however, to have been satisfied that the rise was entirely accounted for by increased cost of labour and of transport. The leu at present stands at 918 to 923 to the pound sterling.

Probably one of the causes of this improvement is the fact that the trade balance for the first half of the year is a decidedly favourable one. Moreover, the grain exports are now beginning and no large quantities of goods are being imported.

ABYSSINIA AND THE HOLY PLACES.

III.

By Alex Devine.

For nearly six years the question of the Abyssinian claims was shelved or continued in abeyance. It will be noted, however, that already Consul Finn had interpreted Lord Malmesbury's instructions "to use your good offices for the protection of any Abyssinians who may chance to be in Jerusalem" as authorising him to carry out a "species of protection" on behalf of this people. On June 21, 1858, the Consul, chronicling a recent visit of Abyssinian notables to Jerusalem, proceeded to inform his official chief of the construction he had put on this term:

"I reminded them of their people, when in this country, being *under Her Majesty's gracious protection,* by your Lordship's directions in 1852; and that, aware of their depressed state in Jerusalem, I had lately taken advantage of a deputation returning thither (*i.e.,* to Abyssinia) to address a letter to the King, informing him of their protection here, and of my desire to carry out Her Majesty's benevolent intentions. That I had lately established one of themselves as President over the rest, and should be glad if some effectual measures could be taken for confirming them in their right to their own convent here, which although known by all parties to be theirs, as long as it is kept out of a legal court, might be lost to them if contested, since all their documents were destroyed some years ago, probably at the instigation of the Copts and Armenians, under pretext of danger of plague. The Maccar (Councillor of State) promised to recommend to his King the sending of a properly appointed officer to superintend the Abyssinian affairs in Jerusalem. Of late years I have had Abyssinian servants always in my household, and one of these has left this country in the train of the Maccar, in order to return with him to his home. I find them an undisciplined but high-spirited people; proud of being independent of Mahometans, and, in their own country, able to cope with and to resist the latter, on more than equal terms, in the name of Christianity."

In his next communication with the Foreign Secretary, written nearly a year later, on May 27, 1859, the Consul took occasion of a false alarm created by a report that the Grand Duke Constantine of Russia was about to purchase the Abyssinian Convent from the Copts to insist on the uncertain nature of the tenure by which the Negus's subjects occupied it. He again dwelt on the fact that the Abyssinian claim, well supported by prescription, was buttressed apparently by no legal documentary evidence, and then went on to say:

"I have formerly mentioned a stone tablet built into the wall of the Holy Sepulchre Church as being said to substantiate their claim to the property; but on proceeding to take a copy of it by photography some years ago, I found it to be in the Georgian language and probably referring to a Georgian convent which was formerly in that neighbourhood. The truest demonstration of the Abyssinian claims lies in the fact of its recognition by universal oral testimony and of its being undisputed by any existing party in Jerusalem. Still to obviate possible danger in future, it may be expedient to obtain some document from the Porte, in which their right should be acknowledged; and perhaps this might be had by means of some petition of the Rulers of Abyssinia requesting Her Majesty's good offices with the Sublime Porte for this object, such for instance as a renewal of that presented in June, 1852 (*i.e.*, the letter of Ras Ali to Queen Victoria). For myself, I should be rather inclined to leave the question at rest, and to watch carefully what takes place, in fact; inasmuch as every year adds to the value of oral testimony and actual possession. There might be a danger also of the Porte, when asked for a document, attempting to fetter the Abyssinians by an assertion of the Sultan's supremacy over their country."

In anticipating an ultimate assertion of the Sultan's suzerainty over Abyssinia, the Consul was indulging in no prophetic strain. He knew that, as the Abyssinians in religion were under the same Patriarch as the Copts, the Turkish Government regarded them as practically of the same nation. He knew, too, that the resident Pasha would use every effort and device to avoid recognising them as non-Rayahs. The only way of preventing the surrender of the Abyssinians to their enemies, the Copts and the Armenians, was to obtain from the Porte a formal document establishing them as foreigners and independent of Turkish authority. Consul Finn then, after having kept silent for nearly three years, took occasion of a quarrel between the Copts and Abyssinians one Sunday during Divine Service in the Abyssinian Church at Jerusalem, to enforce this view on Sir Henry Bulwer in a letter dated March 11, 1862. "I think," he added rather curtly, "the time is now come to ask for such a document."

Abyssinia and Turkey.

It must be at once admitted, in view of the relative standing of two such officials and of their great disparity in rank, that the spectacle of a British Consul residing in one capital inditing so frank a dispatch to a British Ambassador attached to another capital, though apparently not irregular (for Consul Moore subsequently addressed himself immediately to Sir Henry Bulwer instead of mediately through Earl Russell) has yet some appearance of oddity. Consul Finn's brusquerie was rendered the more patent by the fact that the personage he so unceremoniously addressed held the position of British Ambassador at Constantinople, a position which the previous occupant, Stratford Canning, had by length of service, a grim and stubborn spirit, and splendid abilities, raised to a state of unprecedented importance. Still, since Henry Bulwer was far from being Stratford Canning, he was scarcely justified in writing the following protest to Earl Russell (the former Lord John Russell), who was now acting as Foreign Secretary under the Premiership of Viscount Palmerston:

Constantinople, June 1, 1862.

"My Lord,

I have the honour to transmit to your Lordship herewith a copy of a dispatch which has been addressed to me by Mr. Consul Finn respecting the protection which, as it would appear, he has been in the habit of according to the Abyssinians established at or visiting Jerusalem. On referring back to previous correspondence on this subject I find that Mr. Finn alludes to an instruction from the Earl of Malmesbury dated July 10, 1852; but I am not aware that a copy of that dispatch was ever communicated to the (Constantinople) Embassy. I am consequently somewhat at a loss to perceive under what authority Mr. Finn has assumed the protection of these people, and should feel obliged to your Lordship's instructions on the subject.

I have, etc.,
Henry L. Bulwer."

Digitized by Google

On May 7, 1862, Consul Finn resolved to bring matters to a head and wrote a dispatch to Earl Russell which, being too important and too detailed to summarise, is to be given in full. Here it is:

Jerusalem, May 7, 1862.

"My Lord,

I have the honour to state to your Lordship that his Excellency Sureja Pasha came to me lately to impress upon my attention the political principle that the Sublime Porte will never recognise the Abyssinians as a people independent of their dominion and to assure me that all ancient Firmans or other documents issued on their behalf used to pass through the hands of the Civil Governor of Jeddah. . . . I observed that Jeddah had no more to do with Abyssinia than Calais has to do with England; and that as far as regards religious matters, in which the Abyssinian Church is subordinate to the Armenians in this country, this proves no more than the same relation of the Pope of Rome does to the Austrian, French and Spanish Consuls here, who are yet independent of each other nationally. I then reminded his Excellency that three or four years ago the Abyssinians were actually at war with the Pasha of Egypt, and gained some considerable advantages over him. The Pasha contended that this proves no more than does the rebellious state of certain outlying towns in the Desert, which are yet counted in the Pashalic of Jerusalem. As the conversation proceeded, I mentioned the political disruption of Algiers and of Greece from Turkey, and asked why the Porte did not claim those countries also. His Excellency replied by asking sharply, 'Has the Porte ever recognised her loss of Algiers?' and said that, on the contrary, 'all Algerines coming to this country acknowledge themselves to be Turkish subjects. As to Greece, its independence has been acknowledged because England had joined with the other Powers to compel the recognition.' I made no reference to the common idea that the Sultan claims to be King of India also; because I wished to exclude all controversy between ourselves that did not directly bear upon the question before us, namely, the nationality of the Abyssinians. The conversation concluded by my stating that I am awaiting directions from your Lordship and from Constantinople, and by my promising to give Sureya Pasha a letter on the subject of my protection of Abyssinians. I here enclose copy of what I sent. I also promised to use my friendly efforts to accommodate matters now in dispute between the Copts and the Abyssinians. For this he thanked me, but refused to join me in the task, as he could not recognise my right to exercise any jurisdiction in Abyssinian matters. I have the honour to represent to your Lordship that this is not a mere matter of theory, such as the recognition of Algiers or of India to be free from Turkey, but that the Abyssinians are in danger of losing the last poor remains of their large ancient possessions in Jerusalem, if placed under a Turkish Pasha and so under the convents of their oppressors, the Armenians and Copts, who are Turkish subjects. For myself, I can have no interest, nor can Her Majesty's Government have any interest, in the question, except that of advocating the cause of a persecuted people. I should explain to your Lordship, in conclusion, that I have been in the habit of giving passes to Abyssinians on their returning hence to their own country, but no other documents whatever on any occasion.

I have, etc.,
James Finn."

To dismiss this section of the "Correspondence respecting Abyssinians at Jerusalem, 1850-1867," we may add that Consul Finn sent a copy of this dispatch to Sir Henry Bulwer on May 5, 1862, wrote a letter to Sureya Pasha on May 2, informing him that whatever he had hitherto done on behalf of the Abyssinians had been done by virtue of directions received from his Government in London ten years previously, namely, the instructions contained in the Earl of Malmesbury's dispatch of July 10, 1852, which in a letter dated May 29, 1862, Earl Russell enjoined Consul Finn to follow "with caution and prudence," and that, in a brief note to Sir Henry Bulwer, the British Foreign Secretary forwarded to the British Ambassador at Constantinople copies of his own reply to Consul Finn and of Lord Malmesbury's earlier instructions.

(To be continued.)

A reunion of members of the British forces who fought at Salonika was held on October 3. The men paraded at the Horse Guards, and after an inspection by General Sir George Milne a short service was conducted by the Chaplain-General to the Forces. Subsequently the members, headed by the band of the Welsh Guards, marched to the Cenotaph, where wreaths were laid by the president of the Reunion (Major F. W. Sharpe) and by representatives of Allied troops who served in Salonika.

Book Reviews

TURKEY, EGYPT, INDIA.

"THE CHANGING EAST." By J. A. Spender. (London : Cassell and Co. 10s. 6d.)

Among the many things for which we, as a nation, ought to be grateful, is the fact that we have had a school of journalists who have made it their business earnestly to study foreign affairs, to keep abreast of the latest developments abroad, and to handle their knowledge for the benefit of the public with distinguished ability and wisdom. The school constantly attracts new recruits, but it is one in which experience must necessarily count very largely, and we naturally turn with most expectation to the writings of the veterans. Of these the two most distinguished are probably Sir Valentine Chirol and Mr. J. A. Spender. So, in opening a book by the latter dealing with the contemporary history and political state of three countries which specially interest readers of THE NEAR EAST AND INDIA we expected much.

Nor were we disappointed. Of Turkey Mr. Spender had no visional acquaintance till the end of last year, when he visited Constantinople and Angora. But, knowing his subject and knowing what to look for and where to look for it, he has produced a very vivid sketch of the political side of Turkey as then existing, and, indeed, as it still exists. Turkey is so desperately keen on being herself that she is constantly getting into difficulties. Whether she will be able gradually to evolve a policy which will give her more or less what she wants while preserving intercourse with the rest of the world cannot be prophesied. Unless she does, her future existence in her present form must necessarily be doubtful. And so much depends on Mustapha Kemal Pasha. "Government and Parliament are first and last Kemal, and no one knows what would happen to the new republic, if he were to pass from the scene." One of the chief of the problems which await urgent solution is that of Constantinople. It is not enough to profess determination to hold the place. In order to enable it to be held, its unrivalled advantages as a commercial port must be made use of and kept available for the rest of the world. If this is not done, it is perfectly certain that some other nation will want to take Turkey's place, with results which certainly would not help on Kemal Pasha's ideals. Yet, up to now, this "nest of vipers" is being treated by the Government with contempt and a kind of foolish oppressiveness which is effectively killing off the remains of commerce in the Port. If this continues, with the results anticipated by Mr. Spender, it is a black prospect for European peace.

In Egypt the author is picking up the threads which he knew so well as a member of the Milner Commission. He sees much to make him regret that the Government of the time did not boldly put into effect the recommendations of that Commission and grant the country its independence at once, but definitely subject to the limitations which were unfortunately reserved for later discussion. We think that few Englishmen will find fault with this opinion. But this course was not taken, so we have to take things as they are and to strive to make the best of them. Egypt has to realise that its geographical position and fertility are unique. It lies right across the most important trade route of the world and its abundant supplies of long-staple cotton are wanted by the whole world. Not only has it, unlike Turkey, to make up its mind to live at peace and amity with a large European commercial population, but its own absolutely complete independence is an impossibility. If England were to proclaim this to-morrow, the next day France and Italy would be disputing its possession. Whether either of these countries would be willing to allow Egypt anything like the degree of independence which we propose is a question which Mr. Spender does not dwell on. The answer to it is probably pretty accurately guessed by the Egyptian. The author, however, sees no insurmountable difficulty in the two Governments coming to an agreement. If necessary, England must be prepared to say simply that we do not propose to allow the questions under dispute to be re-opened.

Before leaving this section, we would quote Mr. Spender on the redoubtable Saad Pasha. "Having known Zaghloul for many years and seen him in all moods, I am not ashamed to say that I entertain a very friendly feeling for him. He is humorous and kindly and greatly beloved by his friends and intimates. Whatever he may be in public, he is certainly not an anti-British fanatic in sentiment or temperament, and he often speaks with pleasure of the old days when he worked amicably with his British friends and colleagues. I cannot help hoping that his stormy career may have a peaceful ending, but his misfortune, so far, is that he has been unable to effect the difficult transition from agitator to statesman. He therefore runs the risk of being the prisoner of the public opinion which he himself has created, but which it now needs the statesman's touch to convert to practical ends."

When we come to the Indian section, we find Mr. Spender a determined opponent of the "Lost Dominion" class of pessimists. He had travelled in the country fourteen years before, at the time of the Delhi Durbar, and found that, in almost all respects, India had politically grown far more healthy. He has no doubt that the Montagu reforms are responsible for this state of affairs, coupled with Lord Reading's skilful and sympathetic rule. The truth is that, in this section, he is rather too much the Liberal politician writing for the *Westminster Gazette*. But this need not blind us to the soundness of many of his views, which are largely the same as we, in THE NEAR EAST AND INDIA, have been insisting on for the last year. Dyarchy, of which he was once one of the most eloquent supporters, he admits to have been a failure. The Ministers in charge of transferred Departments are in a false position in every way, and, in short, the scheme will not work. There is too much opening for irrespon-

The Changing East

by J. A. SPENDER

In this important volume the author gives an account of his recent travels in the East, and compares the conditions in Turkey, Egypt and India. Mr. Spender was at the New Turkish Capital, Angora, during the Mosul crisis and while in India he met many notable people, including the famous Indian leader Ghandi. Of Egypt he writes with knowledge obtained as a member of the Milner Mission.

sible action in the Assemblies and the system of election is on wrong lines. A deadlock has been arrived at, owing to one party insisting on co-operation before any advance can be made, while the other insists on advance preceding co-operation. When he comes, however, to reiterating how fatal has been the fixing of the unhappy date of 1929 for the next move onward, we part company with him. Indeed, almost at the end of the section, he appears to have realised that even 1929 leaves little enough time to formulate proposals. It is all very well to ridicule the attitude of Government as being that of a nurse offering a child lollipops if it is good, but how can any reasonable Government conclude that Indians are fitted to exercise extended powers unless they see that they are making good and wise use of those they have? He, wisely, shies off making any real suggestion of an alternative. For we can hardly take very seriously his proposal that it should solemnly be proclaimed now that the debate on the subject is opened and that students should be encouraged to work at the question with the aid of a simplified edition of Sir Frederick Whyte's little book recently compiled at the request of the Government of India. There are some slips in his statement of facts. For instance, it is not correct to say the Punjab is independent of the monsoon because it is supplied with water from the Himalayan snows. The truth is that recent engineering works have enabled the Punjab to make use of large tracts of land which formerly lay waste because the monsoon never reached them. We yield to none in our respect for Sir Malcolm Hailey's administration of the Punjab, but Mr. Spender seems to forget that these great schemes were worked out in the times of his predecessors, of whom Mr. Spender, by implication, seems to disapprove. We would also observe that, while it is perfectly true that members of the Viceroy's Executive Council are responsible, jointly and severally, for all its decisions, it is misleading to say "in the Central Executive there is no division of departments." Mr. Spender himself frequently uses the term "Home Member," which he oddly enough always encloses in quotation marks.

But little faults of this kind only prove that our author is human, a quality which he displays in another and more excellent sense throughout his discussion. The fact is that no one desirous of studying the difficult and intricate question of Indian politics can afford to neglect this book. It throws light on dark places and often gets much deeper into the real working causes than works on the subject usually do. Above all it is throughout marked by sympathy with and understanding of both sides. C. S.-W.

THE WEEK AT HOME.

London, Tuesday Morning.

The Return of Cobham.

Even the coal dispute was temporarily forgotten last Friday, when Mr. Alan Cobham made his historic return by seaplane from Australia. Certainly London thought of little else during that memorable noontide. This remarkable feat of aviation seemed to get hold of the public imagination immediately after the unfortunate death of Elliott in Iraq: ever since that event the progress of the great airman and his assistants has been duly recorded and "stunted" by the popular Press. Cobham's was a mighty achievement and he thoroughly deserves his reputation as the national hero.

But cheer for him as they might, Englishmen as a whole have, it seems, still to be educated in the value of flying. There is among them yet a distrust—proved, unhappily, by recent aerial disasters, not be wholly unfounded—of the new methods of travelling, and it will, one assumes, be some years before the conquest of the air takes its place in popular esteem by the side, say, of the conquest of the sea by ironclad ships or of the land by the steam train. Assuredly, however, nothing could have been more effective in stirring insular interest in imperial aviation possibilities than this last flight of Mr. Alan Cobham.

The Struggle of the Miners.

The end of the mining dispute, they say, is at hand. The lockout is stated to be solving itself, by the simple process of the return of the men to the pits upon the owners' terms. This fact has led some observers to assert that reason at last has triumphed, that an economic solution—the only real solution—has inevitably been reached, and that if only the districts will accept the Government's offer, all may yet be well. One imagines that such observers look upon the present tendency of events with considerable satisfaction.

In another quarter, however, it is the fashion to impute the wholesale defeat of the men's cause to bad leadership, and, indeed, one much more often hears of the desire that Mr. Cook shall be eternally removed from all influence among the miners than that the industry shall, through the lockout and its ending, once more regain its prosperity. But, after all, is not that prosperity the main thing that should be the nation's concern? The condition of its coal industry is a thing that will concern Great Britain long after Messrs. Evan Williams and Cook are dead.

One is at a loss, in writing before the decisions of the districts are known upon the offer to accept district agreements in conjunction with the Government safeguards, to sum up upon the dispute. At the moment one has, I think, to be upon the Stock Exchange in order to derive many crumbs of comfort from the fact that some miners have felt the inconvenience of having no money more keenly than others.

The Kennel Club Show.

It has been said that every true Englishman likes two things: cricket and dogs. And one was reminded of another saying last week, when the annual Kennel Club Show was opened at the Crystal Palace, that there are but two classes of men: those who like dogs and those who fear and detest them. It is at any rate obvious that the popularity of dogs in this country is as great as ever. At this show 2,323 dogs have been staged, belonging to 73 different breeds. Naturally, the newer types have attracted the most attention, such as the Alsatian (a rarity before the War), the Afghan hound, the Saluki, or the Elk-hound. At the moment the tendency appears to be in favour of large dogs—which, after the disgusting vogue for such canine absurdities as Pekingese or lap-dogs, is very good. But even now, in this hardier time, there are still far too many of this latter class. On the whole, however, the constant types of terriers and retrievers maintain their place.

The Australians' Departure.

The departure of the Australians last week, together with the end of Summer Time last Sunday, made us feel that the spirit of cricket has once more left these shores, and will not return, except in cables from more favoured lands, until May. This last Test team of Mr. Collins was not a great combination, and was noticeably lacking in greatness (if excelling in mediocrity) in bowling, but it was on the whole very popular with our various "publics." Apart from their tendency not to observe the essentially English custom of always playing to win, these Australians' conduct was irreproachable, and of some of them, such as Macartney, Bardsley, Andrews, Mailey, Oldfield, and others, we shall still be talking fifty years hence.

Alter Ego.

Much indignation has been caused in Constantinople, says *The Times*, by the appearance of a Greek bank note of the value of 500 drachmæ, bearing a picture of what is stated to be the Mosque of Saint Sophia, Constantinople. The Press regards this bank note as evidence of General Pangalos's attitude towards Turkey.

PERSONAL AND GENERAL

TO-DAY

October 7, 1926 (New Style).
September 24, 1926 (Old Style).
Rabia I., 29, 1345 A.H., of the Moslem Calendar.
Tishri 29, 5687 of the Jewish Calendar.

Viscount Inchcape left London on October 2 for Paris.

The Greek Minister in London has returned from Geneva, to No. 51, Upper Brook Street.

M. Carapanos, the Greek Minister to France, arrived in London from Paris last week, staying at the Ritz Hotel.

Khan Bahadur, the Sheikh Abdul Qadir, who opened the new Mosque at Southfields on October 3, has left England for India.

Muzahim Beg Pachachi Zada, Minister of Communications and Public Works in the Cabinet of Yasin Pasha, left England on October 3. After a short stay in Paris he is returning to Baghdad.

The Hon. Irene Hastings, Lady Bolton, Sir Cecil and Lady Walsh, Lady Skeen, and Sir F. and Lady Rowlatt left London on September 30 by the P. and O. special train to join the s.s. Narkunda at Marseilles for Bombay.

The Maharaja of Burdwan arrived in London on September 29 from Brussels. Accompanying him were his two sons, the senior and junior Maharaj of Kimari, together with several Indian Princesses. Servants and retainers in native costume were in attendance. The Maharaja and his suite are staying at the Royal Palace Hotel, Kensington.

Sir Kay and Lady Muir were entertaining last week for the shooting at Blair Drummond, their residence in Perthshire: Lord and Lady Manton, Captain FitzAllan Howard, Colonel Langdale, Lord and Lady Monkswell, Mr. Hubert Walter, the Bulgarian Chargé d'Affaires, Captain Petroff-Tchomakoff, Major Muir, Mr. Ion and Miss Villiers-Stuart, and Captain and Mrs. Studd.

The Indian delegation to the Imperial Conference includes the following:—

Delegates.—The Secretary of State for India, Sir Bijay Chandmahtab, Maharajadhiraja Bahadur of Burdwan, and Mr. D. T. Chadwick.

Advisers and Secretaries.—Major-General W. M. St. G. Kirke, Deputy Chief of the General Staff in India; Mr. G. H. Spence (Secretary to Delegation), Mr. G. S. Bajpai, and Maharaj Kumarudav Chandmahtab of Burdwan, Private Secretary to the Maharaja of Burdwan.

His Majesty's Government entertained the Emir Faisal at luncheon at Claridge's Hotel on September 29. In the absence of the Secretary of State for Foreign Affairs, the Earl of Birkenhead presided. The guests at the luncheon included Dr. Abdullah Bey Damluji, Abdulla Ibrahim Effendi, Lord Lloyd, the Secretary of State for the Colonies, Sir William G. Tyrrell, General Sir Reginald Wingate, Air-Vice-Marshal Sir Sefton Brancker, Sir John E. Shuckburgh, General Sir George Milne, Sir Edward T. F. Crowe, Major-General Sir Percy Cox, Rear-Admiral W. W. Fisher, Brigadier-General Sir Gilbert Clayton, Sir Ronald Storrs, Lieutenant-Colonel Sir Henry McMahon, Sir George Schuster, the Hon. C. C. Farrer, the Hon. T. A. Spring-Rice, Mr. Victor A. L. Mallet, Major Hubert Young, Mr. W. J. Childs, Mr. E. E. Beare, and Mr. F. R. Jordan.

The Emir is to be received in private audience by the King on October 9, and will leave England two days later. It is stated that he will cross to Holland, where he will spend a week, and will subsequently stay for a fortnight in France. He is due to be back in Mecca about the middle of November.

NEWS IN BRIEF.

Lady Griffin, wife of Sir H. Daly Griffin (I.C.S., retired), died on September 27 in Vienna.

Four brigands convicted of looting, arson, and the murder of gendarmes were hanged at Beyrout on October 2.

Sturry Court, the home of Lord Milner for the last 19 years of his life, has been presented by Lady Milner to the King's School, Canterbury.

Five people were killed and 12 injured in a collision on October 2 between an express and a slow passenger train at Cotzoreni, near Craiova (Roumania).

General Averescu returned to Bucharest on September 28 from Rome, and went to Sinaia the next day to submit to the King the results of his visit to Italy.

Sentence of life imprisonment was passed in Athens on October 2 on Colonel Zervas and Colonel Dertilis, leaders of the mutiny of the Greek Republican Guard on September 9.

The Queen of Roumania, accompanied by her son and daughter, Prince Nicholas and Princess Ileana, left Sinaia on October 2 for Paris, where her Majesty is spending a few days before sailing from Cherbourg on October 12 for the United States.

It is reported in Teheran that Colonel Fula-ed-Din, Major Rohollah Khan, and other persons have been shot by order of the Shah of Persia for having conspired to assassinate his Majesty and the Valiahd, together with some high officials and members of the Mejliss.

Lieutenant Demons, who was imprisoned for several weeks by the Turkish authorities in connexion with the Lotus affair, and later released, arrived at Marseilles on September 28, where he was warmly received by the delegates and officers of the various seamen's unions and the officials of the Messageries Maritimes.

The two Vickers "Victoria" biplanes (each with two 450 h.p. Napier "Lion" engines) which left Cairo on a flight to Aden and back on September 15 landed at Heliopolis on September 29. They were under the command of Air-Commodore C. R. Samson, Chief Staff Officer, Middle East Command, Royal Air Force.

I.C.S. RECRUITS.

The paragraph in *The Times* of September 29 on the results of the recent Civil Service Examinations is not headed "India office Communiqué," but is stated to be "from a Correspondent"; but its genesis is obvious. It says that, for this year's examination, there were 183 entries, 93 of which were European; that, for the 35 vacancies announced in the Indian Civil Service, 30 Europeans and five Indians were successful: and that "it is understood that the intellectual level of the candidates is unusually high." It finds an opportunity to include a little propaganda about the Lee Commission's recommendations, "the removal of the misconceptions which followed the introduction of the reforms, and the favourable reports brought home by the younger members of the Service"—in which latter phrase the comparative adjective is doubtless used with intention. It refers to the fact that "the best type of young Englishman is now being attracted" to the I.C.S., and deduces the "steady re-establishment of the popularity of the Indian Civil Service as providing a career for University men of the right type."

Examination of the lists of candidates declared successful, while generally supporting these claims, shows the necessity of allowing a certain margin for shrinkage. Of the first 21 names, ten (including the first four) appear in the Home Civil Service List only: six in all three lists—Home, Indian and Colonial: one in both Home and Indian: and four (including one Indian) in the I.C.S. list only. The next three names are two for the Home and one for the Indian: though the latter may, of course, have appeared for the Home Civil Service also, though not high enough to figure among its successes. Then follow 23 names in the Indian List, thirteen of which also occur in the Colonial Civil Service List. Of the ten names that do not so occur, four are those of Indians—second, third, ninth and tenth in order. It is a practically certain deduction that the thirteen candidates, who sat for the Indian and Colonial Services, also sat for the Home examination: and it is at least probable that some of the six Europeans, who did not take the Colonial alternative, did the same. The net result is, therefore, that of the first 21 successful candidates, India has definitely secured three Europeans, and has a chance of also securing some at least of the seven others who sat for the Home examination also. In that case, she will doubtless lose the services of some of the next seven Europeans on the Indian List whose names do not appear in the Home Civil Service List as issued—in the case of most of them, no doubt only because they did not pass high enough to figure in it. When commenting on the same list last year, one said that the list of acceptances would be of more interest than the list of starters: and this is still the case. One also expressed the opinion that the stage, when the candidates' preference was "H.C.I.." had definitely passed, and had been succeeded by "H.I.C.": and this opinion is confirmed by the present list. But there is evidently still a long way to travel before the ideal arrangement of letters, "I.H.C.," comes into being.

CURRENT TOPICS.

Mahratta Commissions.

It is announced that two special scholarships, one for Sandhurst and one for Dehra Dun, have been granted to Mahratta candidates for commissions in the Indian Army. The grant is intended as a special mark of recognition of the services of the Mahratta regiments during the War, in which they displayed qualities that were something of a surprise even to those best qualified to assess their military value at its proper worth. A century ago the Mahrattas were among the stoutest fighters in India; but, though they were still officially reckoned among the "martial races," it was widely believed that, after a hundred years of peace, they had become less so in fact than in name, until they proved the contrary in the Great War. Those acquainted with the true story of the failure at Tanga in German East Africa know how admirably the Mahratta regiment behaved on that unfortunate occasion, when some of the other Indian units were found wanting. It was from such a test, than which it is difficult to imagine one more severe, that the Mahrattas emerged triumphant, reviving at one blow "the military reputation held by their race in the days of Shivaji, the founder of the Mahratta Empire": a reputation which their subsequent exploits in the War served emphatically to confirm.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 16.

The Bengal Police.

The annual report on the Bengal Police must be considered eminently satisfactory, even by the wildest of the wild men: and they are in fact silent, as a change from the mixture of sneers and innuendoes which usually follows its publication. There was less ordinary crime in Bengal last year than at any time since pre-War days, and the Bengalee is also beginning to help himself, as there are now over a thousand organised Defence Parties in the Province. Further, crimes of violence have been practically completely absent in the Province during the year. This is the answer to the critics of the policy of interning known anarchists; but the Press of the people who benefit by the cessation of so-called political murders and dacoities is silent on the matter. This wonderful record of quiet achievement has been accompanied by rigorous retrenchment and a cutting down of expenditure in every direction; policing Bengal now costs about one-twentieth of the amount spent in policing England with three-quarters of its population and area. Communal troubles will make a different story for the current year; but nothing can detract from the honour due to the handful of English (and Irish; the Scots do not seem to find police pay attractive) and their Indian colleagues of all ranks, who have obtained such results in the face of never-ceasing abuse and unfair criticism

(Continued on page 401.)

EGYPTIAN INDUSTRIES.

Egypt depends primarily for its existence on its cotton. The principal cotton area, where the long-stapled cotton is grown, is that fertile stretch of land encompassed by and in the vicinity of the two great arms of the romance-laden River Nile, the country called the Delta. At one time this was known as the granary of Europe and of the greater part of Western Asia. Considerable areas of short-stapled varieties of cotton, closely resembling American cotton, are grown in Upper and Middle Egypt. The ownership of the cotton lands is divided between the Pashas, who are proprietors of large tracts, and the fellaheen, or small owners.

Agricultural Products.

Besides cotton, the following crops are grown in Egypt: wheat, barley, maize, sorghum, rice, beans, lentils, lupins, bersim (lucerne), flax, sesame, earthnut, safflower, sugar cane, sisal, henna, onions, melons, cucumbers, tomatoes, dates, pomgranates, mangoes, etc.

Cigarettes.

The manufacture of cigarettes is one of the leading industries in the country. Egyptian cigarettes are world-famed. Tobacco leaf to the value of £E1,271, 325 was imported during 1925. The principal countries from which tobacco is imported are Greece, China, Russia, Turkey, Japan, Bulgaria, Syria and U.S.A. Cigarette factories are established in Cairo, Alexandria, Tanta, Zagazig, Menouf and Assiout. Egypt exported during 1925 cigarettes to the value of £E382,570. The largest factory in Egypt employs over 3,000 hands with an annual wage bill of £100,000.

The Sugar Industry.

The sugar industry is in the hands of one large company, the Société Générale des Sucreries et de la Raffinerie d'Egypte; its able managing director is Henri Naus Bey.

The company, which has a capital of 114,000,000 francs, has factories for crushing cane and the production of raw sugar at Sheikh Fadl, Abou Quorqas, Nag Hamadi, Arment and Kom Ombo. It also owns a large refinery at Hawamdieh capable of refining the entire Egyptian output and in addition raw sugar imported principally from Java.

Distilleries.

There are a considerable number of distilleries in Egypt, chiefly in Alexandria and Cairo. During the War these distilleries had a very prosperous time and large quantities of rum and brandy were distilled and purchased for the troops and for use in the hospitals. Since the War, partly owing to the heavy imports and also to the new excise duty, the output has considerably decreased.

Alcohol.

There is only one firm of any importance manufacturing pure alcohol, the raw material from which the alcohol is manufactured being molasses obtained from sugar cane. The factory has plant capable of producing 11,000,000 kilos of alcohol yearly, which is sufficient for the needs of the country and gives an ample margin for export.

Beer.

Formerly there were two companies in Egypt brewing beer, the Société Anonyme des Brasseries d'Egypte and the Société Anonyme "Crown Brewery of Alexandria," which competed against each other. The companies have now come to a working ararngement whereby the "Crown Brewery" at Ibrahimieh, Alexandria, produces all the beer required for consumption in Alexandria and the Delta and the "Pyramides" Brewery in Cairo brews for the needs of Cairo and Upper Egypt. Beer is also exported from Egypt to Cyprus, Palestine and Syria. The beer brewed in Egypt is of excellent quality.

Rice Hulling.

The average area grown in rice is 222,000 feddans, with an approximate yield of one ton per feddan.

Rice hulling is carried on principally in Alexandria, Rosetta, Damietta and Mansura. The leading rice hulling company is the "Rosetta and Alexandria Rice Mills Company" situated on the Mahmoudia Canal, Alexandria. This mill hulls nearly half of the Egyptian crop and is well equipped with the latest type of machinery. The "Bomonti" Brewery at Karmous, Alexandria, converted their brewery into an up-to-date rice hulling mill.

Textiles.

Weaving, with the exception of one silk factory at Damietta, owned by Abdel Fattah El Lozy Bey, which has up-to-date machinery worked by electricity, is carried out on hand looms, mainly of the "Pit Loom" type. The most important centres are, for the weaving of silk:—Damietta, El Mehalla el Kubra, Cairo, Abu Tig, Edku, Menzaleh, Bagour and Akhmim, about 2,000 looms producing about 3,000,000 metres.

Cotton weaving is carried on at Galioub, Mehalla el Kubra, Cairo, Alexandria, Abu Tig, Kim el Nur, Qordassa, Mit Abu Khalid, Nawasa-el-Bahr, Damietta, Beni Suef, Assiout, Girga and Naqada; about 8,000 to 10,000 looms with an annual output of 15,000,000 metres. For the weaving of wool the chief centres are Saft el Turab, Kerdassa, Bouche, Abu Qorqas, Abu Tig, Kous and Naqada, about 2,000 looms turning out about 4,000,000 metres, and for linen Surs El Layan, Batanoun, Cairo, Benha, Mit Abou Khalid, Kom el Nur, Belbois, Akhmim—about 500 looms with an output of 500,000 metres.

It appears from the above-mentioned figures that 22,500,000 metres of silk, cotton, wool and linen are woven in the country.

The following are the quantities in kilograms and value of various yarns imported into Egypt during 1925:—

		Quantity	Value
Cotton yarns	...	3,040.047 kgs.	£E497.427
Woollen ,,	...	217.805	£E 81.399
Silk ,,	...	240.227	£E258,879
Silk (Artificial)	...	149.590	£E 63,638
	Total	3,647,669	£E901,343

Cotton Spinning.

The Filature Nationale d'Egypte, situated in Alexandria, is the only cotton spinning mill in Egypt. After going through many vicissitudes, it is now in a strong position. The mill has 50,000 spindles in operation and employs 2,000 hands. Large quantities of cotton cloth are exported to Turkey, Greece, Syria, Palestine, Roumania and the Balkan States.

Dyeing.

Thousands of small dyeworks are scattered throughout Egypt, the great majority of villages having one or more dyeworks. Synthetic indigo and natural indigo are the principal dyes used. In 1925, 429,826 kgs. of synthetic indigo were imported.

Rug Making.

Rugs and "kleems" are manufactured in a considerable number of villages. The most important rug making industry is that of the Bedouin Industries, organised by the Frontier Districts Administration. Very large numbers of rugs are woven by the Bedouin women. The wool being bought locally, only vegetable dyes are used. Large numbers of "kleems" are woven at Beni Adi, Assiout Province. Other rug weaving centres are Cairo, Fua, Beni Suef, Bouche, Minia, Assiout, Nag Hamadi and Kharga Oases.

Ready-made Clothing.

The only factory existing in Egypt for the manufacture of ready-made clothing is that of the Clothing and Equipment Company of Egypt, founded in 1882 with a capital of £150,000. In 1915 the company erected an

Digitized by Google

up-to-date factory at Shubra, near Cairo, which is equipped with machinery of the latest type. The factory, when in full work, employs 800 hands, practically all Egyptians, and is under the management of Brigadier-General C. W. Compton. Most of the cloth used by the company in the manufacture of clothing, uniforms, etc., is imported.

In Cairo and Alexandria there are large numbers of small workshops where clothing is made; the majority of the large towns have their local Egyptian tailors.

Tarbush Manufacture.

Unfortunately, the only tarbush factory in Egypt, founded by H.E. Ismail Asem Pasha in 1909, has now closed down principally owing to foreign competition. The output of the factory was 700 to 800 tarbushes per diem. In 1925 Egypt imported 47,667 dozens of tarbushes, valued at £E17,142.

Boot and Shoe Manufacture.

This is now a thriving industry in Egypt and considerable progress has been made as regards quality. Cairo and Alexandria are the main centres of the industry. Large quantities of boots and shoes are manufactured in Damietta. There is only one factory in Egypt equipped with modern machinery for the manufacture of boots and shoes.

Leather Tanning.

This is a prosperous industry, the main centres of which are in Cairo and Alexandria. Hides and skins are obtained locally from the abbatoirs. There are a few tanning establishments where machinery is used. One of the most up-to-date tanneries is to be found in Mansura.

Leather Work.

This industry has made vast strides in recent years, principally due to the training of pupils in the various Trades Schools scattered all over the country.

Leather trunks, suit cases, attaché cases, portmanteaux, saddlery, etc., can be made in Egypt which are equal in quality to those produced in Europe and can be bought at a lower price. Both local and imported leather is used. Enormous quantities of ladies' leather bags are made in the Cairo bazaars and are sold at very moderate prices.

Soap Manufacture.

Cairo, Alexandria, and Tanta are the main centres in Egypt where ordinary household or washing soap is manufactured; a small quantity of toilet soap is being manufactured.

Egyptian soap is principally made from cotton seed oil, caustic soda, cocoa nut oil and palm oil. In some cases olive oil, imported from Greece, Syria or Palestine, is used. There are several large soap factories in Egypt and innumerable smaller ones. Egyptian soap, when well made and dried for a reasonable period, is equal in quality to the best Palestine soap.

Oils. Cotton Seed Cake.

The production of cotton seed oil and cake is a flourishing Egyptian industry. There are seven large crushing mills owned by European companies in Alexandria, Cairo, Kafr el Zayat, and Mit Ghamr. Other oils produced in the country are linseed, castor oil, lettuce, sesame, ground nut, and quortum.

Matting and Basket Making.

Mat-making is a thriving industry, the principal centres for which are Kafr el Hosr, Menouf, Fayum and Damietta. 80,000 m. of mats are ordered yearly by the Ministry of Wakfs (Pious Institutions) for covering the floors of the mosques. Matting is made from reeds known as Samar and Bordi, especially grown for the purpose. Palm leaf baskets and crates are made wherever palm trees are grown, more especially in the provinces of Fayum, Giza and Sharkieh. Fancy baskets are made in the Fayum, Tanta, Esna and the Province of Aswan

Petroleum.

Oil was first produced in commercial quantities in Egypt in 1910 at Gemsah in the Red Sea District. In 1925 the production of oil amounted to 179,651 metric tons. The oil found in Egypt does not by any means suffice for the needs of the country, large quantities of kerosene, benzine and oil fuel being imported.

Minerals, Metals and Precious Stones.

Local interest in mining is small, owing to the fact that the population of Egypt is almost entirely engaged in agricultural pursuits and has no knowledge or experience of mining. The most important area for mineral deposits is on the coast of the Red Sea and the Gulf of Suez.

The following minerals are to be found in Egypt; Phosphates (106,808 metric tons in 1925), manganese (80,589 metric tons in 1925), gold, lead and zinc, peridots and nickel, soda, alumina, magnesia, ochres and pigments, also nitrate shale. The Department dealing with minerals is the Mines and Quarries Department.

Furniture.

The manufacture of general furniture and woodwork forms a very important industry in the country, which employs some 50,000 workmen. The main centres for the manufacture of furniture, some of which is equal to the best types of furniture manufactured in Europe, are Cairo, Alexandria, Damietta and Assiout. Carpenters, capable of making rough furniture, are to be found in every town and village in the country.

Ivory and Inlaid Woodwork.

This industry is carried on in a small scale and is a flourishing one. Ivory is imported from the Sudan. Large quantities of ivory necklaces are made, also bangles, parasol handles, fly whisks, paper-knives, powder-boxes and pens. The chief centres of the ivory workers are Assiout, Luxor and Cairo. The inland woodwork is of a very high standard and is principally made in Cairo and Assiout.

Bedsteads.

There is only one firm in Egypt manufacturing bedsteads; their factory is situated in Shubranear, Cairo. The raw material is imported from Belgium, England and America. The manufactured articles are sold to the various furnishing establishments and are also exported to Palestine and Syria.

Paper Manufacture.

There is only one firm in Egypt, at Alexandria, which manufactures grey, brown and red wrapping paper.

Salt.

The requirements of the country are supplied internally with the exception of refined table salt. The principal salines are situated at Mex (Alexandria), Damietta and Port Said.

The distribution of the salt is mainly in the hands of the Egyptian Salt and Soda Company. In 1925 211,037 metric tons of salt, valued at £E32,744, were exported from Egypt, mainly to the Far East.

Jewellery, Gold and Silver.

According to a special census taken in March, 1915, there were then 2,232 jewellers in Egypt, of which 609 were in Cairo, which is the centre of the trade. The greater part of the jewellery is of native design of a high degree of fineness, very massive and does not contain any precious stones. The workmanship leaves much to be desired, but carefully finished work of artistic design would not be bought except by the comparatively few Europeanised Egyptians.

(To be continued.)

The Spence Case.

Mr. J. Spence is the mill assistant who has been twice arrested, twice tried, and twice acquitted on the same charge, an assault upon a coolie. The second arrest was due to the zeal of a higher official who, with no apparent reason, passed orders that the case should be reviewed. The second tribunal confirmed the decision of the first, and stated that the retrial was unnecessary: and the High Court, on appeal, has confirmed this. The European Association has addressed a strong representation to Government, stating its opinion that the action of the executive official was unduly influenced by comments of a certain type in the Extremist Press: and it calls attention to a very similar occurrence in a recent Assam case. The Association asks that steps should be taken to prevent abuses arising from an undue sensitiveness to press-manufactured "Indian opinion." This is a real danger, especially when one remembers certain types of doctrinaire Socialists, humanitarians and what-nots, amongst the scholars who can pass examinations; and democratic government can too easily become government by clamour. It is difficult to steer a middle course, and the Indian Press of all sections keeps a sharp eye open for the "kickers and slappers" who notoriously exist, and daily become more out of place in India. The Extremist's talk of his care for the coolie is sheer humbug which deceives no one; the fabrication of cases is an immemorial art and a recognised form of sport in India; the chance for the political lawyer to run cases of this kind without charge, merely for advertisement in the constituencies, is creating a competition for opportunities. The abuses are not all one side, however, and the matter is one which calls for the most careful consideration of every one, official or non-official, who comes to India from a country which profess to be guided by the Christian creed.

Cobham.

The golden pinnacle of the Shwe Dagon Pagoda, which gives quite a "Fuji" effect to the view of Rangoon from the river, has been much in the mind this week, as day after day passed and no news came of Cobham. Long distance flight alone is enough to keep us keenly interested in him and his doings, for every step forward cuts away another strip of our isolation; but here we have a good fellow doing a sporting thing on the largest scale, and everyone this morning feels a personal relief in the news that he has at last broken through the worst storms he has ever known, to get to Rangoon yesterday. He must have a great heart, and his present achievement will encourage the ordinary pilot to regard monsoon flights as the routine that they must become if the Karachi service is to be permanent.

Rangoon.

Speaking of Rangoon, we hear that the proposed extension of the Rent Act there has been narrowly defeated in the Burma Council. Rents are still high, but it is now generally realised that, with a surplus of accommodation available, legislation does not help to a solution of the housing problem. Sir Harcourt Butler, Governor of Burma, has delivered the first of a series of lectures on Administration to the students of Rangoon University, and he paid special tributes to the Police and Forest services, to both of which Burma offers exceptional opportunities. Sir Harcourt has a way of his own which has brought him conspicuous success in his governorships, and his genial directness makes a quick appeal to the Burmese temperament. Certainly his lecture was most happily phrased, and it will be a great encouragement to his executive, both British and Burmese.

Political.

There has been a certain amount of communal trouble in Dacca during the last week, following the boycott of the Hindu procession. Had the sporadic outbreaks not been well handled in their early stages, there might easily have been riots comparable with the recent ones in Calcutta, and *Forward* states that this was actually the case. The facts appear to be very different, and the outbreaks were confined mostly to small parties. There were a number of isolated cases of stabbing; but strong forces of police have been posted all over the city, and this morning's report is that the situation is well in hand.

During the week a Conference has been in progress at Delhi between all branches of the Hindu political organisations, in order to see whether it would be possible for them to join together under the banner of the Congress for the next Elections; the principal reason for the meeting was to endeavour to patch up the breach which has been caused by the secession of Lala Lajpat Rai and his followers. In spite of the efforts of the more moderate men on both sides, the Conference has failed: and it is now certain that the mantle of the Congress will only cover those who pretend for the present that they will take no part in Government if they are returned to power. The remainder of the Hindu Extremists will go to the country with the same principles, but they will agree to accept office and endeavour to secure Swaraj by constitutional means.

Bepin Chandra Pal's weekly article in the *Englishman* is a wail that the only Hindu political party which has any real organisation in the country is the Congress Party. He sees little hope for the Congress-Responsivists, Independent-Responsivists, the Nationalists, the Liberals, the Moderates, or any others who are outside the Congress camp and are quarrelling amongst themselves.

Mr. J. M. Sen Gupta, the wearer of the triple crown, has gone to Chittagong in order to nurse his constituency for the forthcoming elections. Chittagong has always been an Extremist hot-bed, and nothing that the leader can say there will be too wild for the wild men of Eastern Bengal. In the meantime, his work as the Mayor of Calcutta is completely neglected, and the Corporation organisation gets slacker every day.

The Corporation debate in regard to the burial of the *Pir*, the alleged Mohammedan saint, under the meat stalls in the New Market, has again come to nothing. The Mayor frankly stated that the discussion would do no good to any party whilst elections were in progress, and the matter has therefore been shelved indefinitely.

HAVE you been along the Nile to Luxor or Assuan? It is a wonderful voyage by one of the Anglo-American Nile Tourist steamers. The American Express are General Agents and can reserve cabins in advance for any of the weekly sailings from Cairo.

Services for Travellers to India

SERVICES that smooth the path and take the trouble out of travel. Your steamship passages booked at no extra cost.

A uniformed man to meet you at Bombay or Calcutta. An office nearby to take care of your baggage, issue tickets and arrange tours to any point inland. It pays to summon American Express service to your assistance before you leave Europe.

Digitized by Google

There is little of interest in the Extremist Press this week beyond party cross-talk. The general indications are that, in Bengal at least, the Congress Party are well ahead with their election work and are likely to attain a majority, principally because their opponents are hopelessly divided. In the rest of the country the situation is far from clear, and no one is inclined to be a prophet.

Men and Things.

Germany's entry into the League of Nations is welcomed on this side of the globe, in that it means helping towards the settling down of affairs generally and the restoration of trade. Germany has already practically recovered her pre-War position in regard to trade with India, and persistent efforts are being made, by propaganda and otherwise, to extol India as a market for German goods. The hide interests are hoping that this may mean a restoration of their pre-War prosperity: and, in fact, a settling down of conditions on the Continent will be felt in all the principal export circles here.

The police have been giving special attention lately to the drug traffic which makes its headquarters in Calcutta, although much of the opium and cocaine which filter through into India does not arrive by sea. The deportation of the *goonda* element from the City has removed many of the principals engaged in the traffic, and has rendered the task of the police much easier. Unfortunately there is no public opinion amongst Indians in this matter: and drug taking is one of the many peculiar things that are regarded with equanimity as the legitimate recreations of wealthy men with time to kill.

Considerable publicity has been given to Dean Inge's book and Reuter has cabled a lengthy précis of the output of his bluer moments. The Dean should not despair; let him travel in India for a year, and see how his countrymen carry on through the hot weather and rains and still manage to keep smiling. He will see ample reasons for optimism in regard to poor old England.

The Acting Chief Justice, Sir N. R. Chatterjee, has retired after sixteen years on the Bench: and, as the Court is now in vacation, the permanent incumbent, Sir Lancelot Sanderson, resumes his position. It is understood that this is his last cold weather, and there is much speculation on the question of his successor. Rumour had it that Sir George Rankin would be appointed; but, if Sir Ewart Greaves should return, it is understood that there may be difficulty in ignoring his claims.

The Trivial Round.

Racing continued at headquarters on Saturday last, in a hot and sticky atmosphere. Few people seemed to enjoy themselves, and the unpleasantness of the weather was increased by the fact that most of the winners that got home carried little money. The bookies must have found the afternoon a compensation for three or four of the preceding meetings.

Rugger is in full swing, and the games for the Cup started yesterday. The regimental visitors are distinctly strong, and the tournament should produce some good games. The popularity of the game is more marked than ever, and the Club stands were crowded out for the annual England and Scotland match on Saturday last. The ground had dried during the morning, and was in perfect order: and the game was one of the finest ever seen here, reminding one strongly of a 'Varsity Match in Queen's Club days. No quarter was asked or given, and play was really brilliant; probably the best man on the field was W. H. Wainwright, who has recently arrived; he played an inspired game as the English full back, being substantially responsible for their win by six points to three.

The Football Club has just distributed the proceeds of its Charity Matches this year. In all nearly £5,000 has been given away: the C.F.C., however, has still some distance to go before it can be compared with the Turf Club as a giver of good gifts to charities.

The Fifth Chamber Concert took place at the Saturday Club on Monday, and once again the ballroom was full. It was a pleasing evening, the principal instrumental work being Schubert's Quintet, Op. 144, which was competently played by M. Sandré and past and present pupils of the School. There was some charming ensemble singing by lady students, and we heard for the first time in India a delightful part song of Roland Boughton's.

The Cabaret Company still fill the theatre with cheery shows, and help us to forget the weather. We are sceptical of the news in the cables from your end, stating that some Rajahs are putting down a million sterling for film houses throughout India; the demand here is already fully met by Madan's organisation and its imitators.

Markets.

A quiet tone has continued to pervade the jute market; prices remained at about previous levels until a few days ago, when an easing took place, as a result of sellers showing more inclination to do business. With Mills coming in at once, everything on offer was quickly absorbed, and prices soon adjusted themselves. Gunnies have been very quiet, with a particular dullness in the market for forward delivery. The improvement in piece-goods has been fairly well maintained, although the volume of business has fallen below expectation. Up-country dealers are continuing to arrive; but there is still the feeling in the market that, with the prospect of cheaper cotton, prices will not maintain their present level.

The tea market here has followed the course of the London market, in spite of the expectation of lower prices at the sale this week. On the contrary, all descriptions were bid up to last week's levels, and a number of the better qualities were bought at prices up to six pies in excess of these. The outturn figures for the first half of this month are not yet to hand; but the opinion is that there will be little difference between this period and the same time last year.

In the Stock Markets, Government Securities have been steady, with the 3½ per cent. and New Loan inclined to harden. There is little to report upon other sections: jutes have been little dealt in, a few small parcels of coal shares have been registered, and there has been mild inquiry for tea shares without effecting much alteration in prices. Generally speaking, the stock markets are going through a dull period, brightened up only by the liveliness in the tin share market on the strength of the commodity, which has now passed the £300 mark.

As a result of very few bills showing during the week, the Exchange Market has been dull and the rate for ready T.T. has fallen to 1s. 5 15-16d.; the undertone at the close is steadier. Money remains in abundant supply, and is nominally quoted at ½ per cent. for call or short notice.

LONDON CITY MISSION.

AYAHS AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and to introduce them (if disengaged) to families about to travel to the East.

For Terms and Conditions apply to the

LADY SUPERINTENDENT, 4, King Edward Road, London, E.9.; or to

J. NEWCOMBE GOAD, Secretary, Foreigners' Branch, Mission House, 3, Bridewell Place, London, England.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, September 17.

Cotton Prices.

American cotton seems to be well on its way down to something like pre-War levels: and Bombay, as I have often pointed out in these letters, stands or falls so entirely on its business in raw and manufactured cotton, that it is as well to take stock of the position at every change.

Two years ago it seemed as if the American cotton output was not likely to expand to meet the growing demands of the world. The steady development year by year up to the time of the War, which had fully kept pace with the expansion of trade, seemed for some reason or other to have met with a permanent check: and the shortage in American cotton seemed likely to transfer the centre of the cotton manufacture of the Empire from Lancashire to Bombay.

Two large American crops in succession have, temporarily at any rate, altered the position: and for the moment Lancashire is likely to have all the cotton she can possibly want, at prices which compare very favourably indeed with those of Indian varieties. The condition is not likely to be a very permament one, because we are now reaching the point at which it does not pay the American grower to produce cotton. What that level is, we cannot say in Bombay. We know that nearly twenty-five years ago the price fell below 4d., and that there were then certain signs that the planting of cotton was checked: and we know that three or four years ago it was claimed that 10d., or even a shilling, was not enough to cover the cost of production in post-War conditions: and so on the whole I suppose we may take it that there is nowadays no inducement to plant cotton much below 7d. per lb.

What it costs to produce Indian cotton can never, I suppose, be ascertained. It is grown almost entirely as a by-product to foodstuffs by millions of small farmers, whose idea of accounts is strictly limited: so much so that ninety-nine out of a hundred of them have not much more in view than to grow their own food for their own consumption, and to sell their other crops for what they will produce. But they are for this very reason extremely reluctant to sell in a falling market. They do not understand why prices should be lower than last year, and they are quite prepared to refuse offers till the last possible moment.

There seems therefore every possibility that the weight of American cotton coming on to the market, coupled with the reluctance of Indian sellers to deal at low prices, will make Indian cotton relatively very dear in the next few months: and this will be accentuated by the stabilisation of the rupee at 1s. 6d., the effects of which, though no doubt negligible in other circumstances, will be felt very sharply whenever American cotton is cheap and abundant.

Though, up to this point, the advantage seems to be all with the Lancashire mills, we know that, in fact, they are going through a very bad period indeed, and are all of them on extremely short time. This seems to me to be an inevitable condition while the world is waiting for cheaper cotton to have its effect on cloth. India is a particularly clever buyer of piece-goods: and when the humble ryot thinks that cloth is too dear, he simply buys none for a year or two, and waits his opportunity.

I believe myself that, as soon as the fall in cotton has become effective, there will be a very heavy demand from India; which Lancashire will be able to handle first, by virtue of its large and cheap supplies of American cotton: and that subsequently the improvement in trade will pass to the Indian mills.

Trade throughout the world has been held back ever since the boom of 1920 by the single fact that the whole world has been afraid to buy cloth at a price based on that of the one and only raw commodity which has consistently remained at twice its pre-War level. When cloth once more reaches a price at which the population of all the old world has some encouragement to buy, the wheels of commerce are likely to get back into their old tracks again. Apart from strikes in the coal trade, the question of unemployment in England depends mainly on the prosperity of the cotton mills, where full work brings with it not only the wages of the operatives themselves, but incidentally prosperity to the transport and distributing industries of England and, through England, of the world. Cheap cotton will not in the long run do much harm to the producers: but its benefit to all the other industries of the world will be incalculable.

Obituary.

Mr. George Wittet. A fortnight ago I wrote of the change that has come over Bombay and its architecture within the memory of the present generation: and I was writing in ignorance of the death of the man who, more than any other, has left his mark upon modern Bombay.

George Wittet, in a career which alternated between Government and private service, adapted himself from the first to the needs of the Bombay climate. It cannot be easy, as we have seen in many places in India, to find the golden mean between the old-fashioned Indian bungalow and an English garden city cottage. But Wittet did it, and his smaller residences ought to serve as a model for future architects.

His great work, the chance of an architect's lifetime, was the Gateway of India on the Apollo Bunder. This has been criticised, no doubt; but it has always seemed to me a superb work, which is likely to be more and more admired as time goes on. With the huge bulk of the Taj Mahal Hotel looming on one side of it, it must have been the most difficult problem to secure the right proportions: and I think Wittet has given us a building which is not only first-class in itself, but is adapted almost perfectly to its surroundings.

In private life Wittet was the most interesting of cynical conversationalists on a very wide range of subjects: and he was, with Dr. Powell, one of the party of five or six that made the entrance hall of the Byculla Club such an attractive assembly room in the hour before dinner ten years ago.

INDIA OFFICE COMMUNIQUE.

The Bombay Back Bay Enquiry Committee have been requested by the Government of Bombay to submit an interim report, containing their recommendations as to the steps that should be taken to ensure that work on the reclamation, so far as may be necessary, may proceed without interruption during the coming fair season, pending the submission by the Committee of their final report. The following is the text of the recommendations which they have telegraphed to the Government of India.

1. Committee unanimously recommend reclamation of blocks 1, 2 and 8; block 1 by dredging from Back Bay in next working season, and thereafter both blocks 1 and 2 by either dredging or dry filling, whichever may prove more economical or advantageous. Dredger should work three shifts. Block 8 should be completed as quickly as possible by dry filling. Storm water drains 6 and 7 in blocks 1 and 2 should also be completed, and parapets in blocks 1 and 8 constructed in due course.

2. With regard to block 7, the Committee note that its area is 654,000 square yards, and that the quantity of dredged filling, exclusive of murum topping, required to fill the block is 2,050,000 cubic yards. They consider that, if the dredger is worked efficiently for three shifts daily, the blocks should be completed, so far as dredged material only is concerned, in the course of the season at a rate of 8 annas per cubic yard, and that this rate is much below the cost of any other method of filling at some future date. The cost of murum topping, develop-

Digitized by Google

ment, interest and depreciation, has, of course, to be added to this. The Committee note also that the dredging plant is available on the spot and that the superior staff cannot be dispensed with without six months' notice. At the same time they are impressed with the uncertainty regarding the date and rates at which the land, if reclaimed, could be disposed of, and this makes them doubtful if it would be a sound proposition financially. They therefore consider that in the circumstances it is for the Local Government to decide for themselves whether any action, and if so what, should be taken in respect of this block, pending the decisions of Government on the final report of the Committee.

3. The Committee wish to emphasise the necessity of taking immediate steps to find new and nearer quarries for murum, and to arrange definitely for more abundant and speedier supplies at cheaper rates than at present.

4. We have not been able to discuss the precise terms of this report with our Chairman, who is now en route from India, but understand that he is in agreement with the substance of our recommendations.

THE INDIAN MAIL.

India's Chemical Industries.

A report by Mr. H. E. Watson, of the Indian Institute of Science at Bangalore, gives an account of the chemical industries of India. It divides them into "indigenous" and "imported" industries, and says that, while the former have achieved considerable success, the latter are almost non-existent. Among the indigenous industries the most important are the manufacture of sugar and salt, and the pressing of oil. As regards sugar, though the yearly output amounts to between 2½ and 3 million tons, only three per cent, of this is refined sugar: and as regards salt, the annual outturn of which is about 1¾ million tons, the by-products are almost entirely neglected. The report says that, during the War, a factory was engaged in the manufacture of Epsom salts while, a few miles away, hundreds of tons of magnesium sulphate were being run into the sea. Another factory, which was started early in the War for the production of magnesium chloride, found the cost of production too high to enable to to compete with the imported product, and had to close down. More than half the oil pressed in India is obtained by very primitive methods, which give unsatisfactory results.

As regards the imported industries, the report says that, though a number of miscellaneous chemicals were made during the War, their production has either greatly diminished or ceased altogether. A certain amount of sulphuric acid is made, from imported sulphur, and the distillation of essential oils, one of India's oldest industries, is still carried on; but the only such venture of any magnitude that has been really successful is the manufacture of sandal-wood oil, mostly produced in Mysore State, where it is a Government monopoly. Mr. Watson says that "most of the population is not interested in goods made by modern processes, with the solitary exceptions of cloth, kerosine oil and matches: and, where chemical products are concerned, the demand is restricted to an exceedingly small section of the community concentrated to a certain extent in large towns separated by great distances." In spite of this, owing to the magnitude of the population, the total demand is, in many cases, so considerable as to justify the starting of a large factory if it could supply the whole of India; but the internal freight charges are so heavy that such a factory would seldom be able to compete successfully with imports landed at the great sea-ports.

Disraeli once raised a laugh in the House of Commons when, in a statement regarding the prospects of trade, he said that they were good because of a noticeable increase in the demand for chemicals. The Members of Parliament of that day did not see the connexion, and accepted the statement as a joke. People are wiser now, and realise the great extent to which trade relies upon chemistry. The industrial development of India, which many people foresee, is not likely to attain great proportions until she is in a position to produce a good proportion of her own chemicals: and Mr. Watson's report gives reason for supposing that she has a long road to travel before she can hope to reach such a position.

Trade Returns for July.

The returns of India's sea-borne trade for July have been received this week in a very fragmentary state, for details of the exports are almost entirely lacking, and the usual figures of the percentages of the various countries in the total trade are absent. The imports of private merchandise show a large increase in value over those for June, from 1634 to 2063 lakhs. Exports of produce and manufactures fell from 2416 to 2271 lakhs, and net imports of treasure from 372 to 256 lakhs: with the result that the visible balance of trade in India's favour, which has been in evidence for so long, disappeared altogether, amounting to no more than 8000 rupees for the month. Under the major heads of imports, the value of food, drink and tobacco rose from 168 lakhs in June to 406 in July, and of manufactured articles from 1245 to 1465 lakhs; while that of raw materials fell from 180 to 153 lakhs. The imports of cotton piece-goods show an advance from 145 to 160 million yards in quantity, and from 510 to 528 lakhs in value. The value of exports of manufactured jute fell from 446 lakhs in June to 406 lakhs in July.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

For freight and particulars, apply to:—

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning.

Iraq as a Cotton Region.

Cotton growing in Iraq, some aspects of which were the subject of extended comment in these columns in the issue of The Near East and India of September 9, is dealt with this week by our Baghdad Correspondent, who in a most informative article surveys the results so far obtained and outlines the difficulties which have to be overcome if Iraq is to develop into a great cotton producing region. As he indicates the present yield of cotton is of small significance when measured in terms of world output, but no one looks for miracles even from the most fertile countries, and the important thing is that the initial spade work has been accomplished leaving the way relatively clear for a period of steady development. Of the difficulties he cites the most important is undoubtedly the water problem. It is not a question of a shortage of water supply in Iraq—the country is naturally fortunate in this respect—but rather of an adequate system of control of the water available so that the cotton fields may receive sufficient at the period of their greatest need. The solution of this problem is undoubtedly the key to progress in Iraq. The writer, it will be noted, is a confirmed optimist as to the prospects for cotton growing in the country, but it is a little difficult to share his views completely as to the unlikelihood of a collapse in cotton prices which is in his view the one factor to be feared. The figures for the world's visible supplies this year make startling reading when compared with those of a year ago, and in the last fortnight we have seen a very sharp fall in American on a report of a better crop than was anticipated. It must not be thought from this that I anticipate an unduly prolonged period of low prices, but it must not be overlooked that it is obviously to America's interest to produce all the cotton that she possibly can.

Rain Grown Cotton in the Sudan.

Reference is made by the writer to the extreme conservatism of the Iraquis in regard to a change from their existing crop to cotton. In the Southern Sudan the position is far otherwise. In an article in the current issue of the *Empire Cotton Growing Review* Mr. R. Hewison, Director of Agriculture and Forests in the Sudan, says that the response in districts where the people were already settled cultivators has been almost an embarrassment. "From a region which four years ago produced practically no cotton at all," he says "and very little else that was exportable, a crop of some 4,000 bales of cotton has been obtained this year, and although seed issue has been limited, the estimates of the coming season's crop are put at from 10,000 to 12,000 bales." Here, indeed, it has been a case of cotton production outstripping the arrangements to deal with it. The cotton grown in the Southern Sudan is, of course, of the American long staple type, and the seed is supplied from the irrigated areas in the north, and it is symptomatic of the progress made that Mr. Hewison states that, given the present rate of expansion, further sources of seed supply will be necessary. The special importance to Lancashire of the development of cotton growing in the Southern Sudan needs no emphasis. The estimates of the possible production of that region have been most encouraging, but it was believed that even with the rapid development of transport its realisation would be a slow process. In the light of Mr. Hewison's remarks it is evident that the speedy development of production depends mainly on concentration on the provision of adequate facilities for dealing with the cotton, though, of course, here too we have to take into account the price of cotton. The enthusiasm of the cultivators is born of the fact that cotton is a crop for which cash can be obtained, but obviously a point could be reached when this inducement would fail to operate.

Nizam's Railways Dividends.

The report of the Nizam's Guaranteed State Railways for the year ended March 31 last, which has now been issued, cannot be said to throw any light on the reason for the substantial increase in the dividend. It is proposed, it may be recalled, to pay a final dividend of 6 per cent., plus a bonus of 5 per cent., making 15 per cent., less tax, as against 11½ per cent. for 1924-25. For the past year there was an increase in the gross earnings of the broad gauge system of Rs.6,68,617, but as against this there was an increase in expenditure of Rs.7,47,192, the net earnings in sterling at £446,180, showing a decline of £12,198 on the figures for the previous year. On the metre gauge system gross earnings showed a decline of Rs. 10,17,671 while the expenditure was lower by Rs. 2,70,526, the net earnings in sterling at £288,157 being £55,147 less than before. The company's share from the broad gauge system is £91,293 and from the metre gauge system £84,482, these totals comparing with £103,688 and £116,048. The Nizam's Government can acquire the broad gauge section of the line in 1934 by giving a year's notice, and the proposed increased distribution naturally makes one wonder whether that is likely to happen. Next week's meeting will be associated with special interest as shareholders will want to know what prospects there are for a continuance of the dividend and bonus on its present scale.

A Sudan Contract.

An important contract for the Sudan Government Railways has just been obtained by the Blake Boiler, Wagon and Engineering Company, Ltd., of Darlington. The order is for thirty open wagons, ten bogie brake vans, and twenty bogie tank wagons.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 5.

Business in the Stock markets during the past week has again been fairly quiet, the arrangements of the fortnightly settlement absorbing a good deal of the attention of members of the House. Developments in the coal situation, however, are regarded as distinctly brighter and this accounts for a hardening in prices in certain sections, notably the Home Railway market and in iron and steel and colliery shares, these being the sections likely to benefit to the greatest extent from a general resumption of work in the pits. Gilt-edged stocks have been fairly quiet, but 3½ per cent. Conversion Loan moved up on the announcement of the offer of new Treasury Bonds for those maturing next February, to which some reference is made below. The New South Wales Government 5 per cent. loan issued at 97 was something of a fiasco, underwriters being left with 84 per cent. The State of Hamburg 6 per cent. loan for £2,000,000, issued at 93½, on the other hand, was an immediate success.

Can we Afford to Lend Overseas?

The immediate over-subscription of the Hamburg Loan of £2,000,000 may be taken to usher in the autumn campaign of foreign borrowing in London. If this assumes large proportions it is likely to cause anxiety to our financial rulers. For reasons arising out of the coal stoppage the autumn strain on the sterling exchange position is likely to be more severe than usual. Temporarily our excess of imports in visible merchandise trade has been swollen to such an extent that the country's real trade balance must have become for the time being precarious, and consequently London's margin for lending new capital to overseas borrowers must have been reduced to a low level. Statistics published in the current issue of the *Economist* shows that in the past nine months, London has lent overseas £31,000,000 more than in the corresponding period of last year and not much less than in the whole of 1925. Meanwhile, as a result of the coal stoppage, the real trade balance has moved seriously to our disfavour. Last year, in order to ensure the smooth working of the re-adopted gold standard, the Treasury imposed an embargo on overseas lending, which, although it was unofficial and had no statutory force, made it more difficult for the Dominions and impossible for foreign Governments to float loans in London. If overseas borrowers flock too freely to London in the ensuing months it is quite possible to imagine a situation arising in which the authorities would have again to take action. Embargoes are unsatisfactory, unfair, and unpopular; but the circumstances of this autumn are peculiar, and unless issuing houses impose strict moderation themselves, higher powers may have to step in to protect national interests.

Revenue and Debt.

Two phases of public financial problems attracted attention this week, the revenue returns for the first half of the financial year being issued on Friday, and the Government publishing on Thursday a conversion offer to holders of 5 per cent. Treasury Bonds maturing next February. Holders are offered an exchange into 4½ per cent. 8-year Treasury Bonds on terms that should attract a good response. Money market circles are inclined to regard the offer as an indication of a policy on the part of the Treasury to meet the maturities of the next few years by conversion into bonds of eight to twelve years' duration, and to leave for several years an attempt at a big scale conversion. The whole problem of debt conversion hinges round the huge 5 per cent. War Loan which the Treasury may, if it likes, redeem after 1929. In three years' time it is possible that monetary conditions may be more favourable to the Treasury, and meanwhile the authorities are obviously wise in meeting maturities by means which do not swell the total amounts either of the big War Loan or of the Conversion Loan.

The revenue returns are scanned chiefly for signs of the effect of the coal stoppage. The position disclosed is disquieting, the revenue deficit of £61,000,000 being larger than it should be at the end of the first half of the fiscal year. It is doubtful, however, whether the coal stoppage has been at all largely responsible. Mr. Churchill and the taxpayer are now faced with some fear of a budget deficit this year, while the coal stoppage must have a big effect on next year's yield of income-tax.

Profits from Chilly Days.

The majority of people regret the passing of the summer, but the investor is in a position to obtain some compensation for the approach of winter. The cold weather stimulates the sales of hot beverages, and among those likely to take heavy toll of the public in this connexion is Bovril Limited. Thanks to a policy of attractive and intensive advertising, the Company has so far returned continuously improving results. Thus net profits during recent years have been as follows:—1921, £208,606; 1922, £265,210; 1923, £312,226; 1924, £352,565; and 1925, £362,379. Deferred dividends had steadily advanced until last year, when the rate was 11 per cent., compared with 12½ per cent for the preceding year.

Meanwhile, however, there had been a substantial increase in the issued share capital for 500,000 deferred shares and 750,000 preference shares had been issued. Large sum have been allocated to reserve, £75,000 again being set aside last year, thus bringing the total of the fund up to £825,000. The Company has outstanding £1,000,000 6 per cent. cumulative preference shares, which give a return of £5 10s. per cent. While the results for this year may be affected by the home trade position, a considerable number of deferred and ordinary shares rank for dividend after the preference, so that the latter may be considered a good fixed-interest bearing industrial investment.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Internal Combustion Engines, Etc.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Seru Pumping and Power Station of four internal combustion Diesel alternator groups, three pumps and accessories. January 1.

Steel Iron Gates.—The Inspector of Irrigation, Assiout Barrage Circle, at Assiout, invites tenders for the supply of 113 steel iron gates for Assiout Barrage. December 1.

Second-hand Rails.—Tenders are invited by the Ministry of Finance, Egypt, for the supply of 14,000 tons (about 55,000 pieces) of second-hand rails. November 16. (D.O.T.)

INDIA.

Machine Tools.—The Chief Controller of Stores, Indian Stores Department, Simla, invites tenders for the machine tools and equipment required for workshops at various points on the North Western Railway. October 20. (D.O.T.)

TURKEY.

Copper Stays.—Tenders are being invited by the Anatolian Railway Administration for the supply of 36,500 kg. of copper stays. October 23. (D.O.T.)

Files.—The Anatolian Railway Administration invites tenders for the supply of 4-170 dozen files and rasps. October 21. (D.O.T.)

JOHNSTON LINE
Mediterranean, Black Sea and Danube.
REGULAR SAILINGS from:
Antwerp, Swansea and Liverpool to: Piræus Syra, Volo, Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza, Sulina, Tulcea, Galatz, and Braila.
For Freight and other Particulars, apply:
JOHNSTON LINE, LTD., 6, Billiter Street, London, 9, Mount Street, Manchester.
And FURNESS, WITHY & CO., Ltd., Royal Liver Building, Liverpool

COTTON IN IRAQ.

(From Our Own Correspondent.)

Baghdad, September 15.

As early as the middle years of the War a "Cotton Expert"—actually, an expert agriculture officer of the India Government—was imported into Iraq to examine its cotton possibilities and to select the varieties most likely to succeed here. Three years' patient experiment sufficed him to succeed in the latter task, and now "Meso-white" is the accepted and eponymous variety urged upon the Iraq grower. His estimate of Iraq's future as a cotton-growing country was optimistic in the extreme. The following lines will survey the tangible results so far achieved, and the legitimate hopes for the future.

There was even before the War cotton of a sort grown in various parts of Iraq—but grown broad-cast and unscientifically, used only for such local purposes as the stuffing of mattresses and so forth, and of no value in world markets. The establishment of a branch of the British Cotton Growing Association here in 1920 hinted for the first time at an authentic connection between Iraq cotton and the mills of Europe. Since then the number of bales produced at the B.C.G.A. ginnery in Baghdad West may be taken as representing not only a fair index-figure of the comparative increase of annual output, but also a figure not far from the total output of "Meso-white" and its sub-species. (Exportable cotton is little handled by local merchants, and the indigenous varieties may be ignored.) Now in 1920 60 bags were produced, in 1922 300, in 1923 1,100, in 1924 2,400, in 1925 2,540, and in 1926, according to the best estimates, the figure will be 3,500. The cotton grower of Egypt and America may smile at the insignificance of such consignments: indeed, in a diagram seen recently of the world's main cotton-producing countries and their exports, Iraq does not achieve mention, but may be taken to lie, shyly concealed, among the "also-ran" countries, whose amalgamated total does not vie with the big producers.

Nevertheless, the first step counts. The tedious stage of scientific research is over. Actual observed yields are extremely favourable. The varieties successfully adopted can count upon an excellent price in Lancashire and elsewhere. Moreover, steady propaganda has spread the fame of cotton as a cash-crop, with a yield of rupees per acre many times in excess of existing crops. A number of small-scale but striking successes by small growers have done much to convince their apathetic or sceptical neighbours: and all the time the B.C.G.A. branch, run with intelligence and courtesy, provides an unfailing purchaser for all cotton of the approved strain.

It would be unfair to pass over in silence the difficulties which still separate Iraq from the status of a major cotton-producing country. The first is the ignorance and extreme conservatism of the cultivators, unwilling to abandon their existing cultures for an unknown crop, or to apply to cotton, once started, the meticulous and not unlaborious methods which it demands. Secondly, a number of failures, due largely to the last-mentioned cause and to the incidence of blight which the cultivator is ill-equipped to combat, have restricted the spread of cotton-cultivation even while its successes were encouraging it. Thirdly, by no means all the soil of Iraq is suitable for the crop: salinity is sadly common and fatal to the cotton plant, and it is more likely to grow than decrease if cotton, with the frequent waterings necessary to it, is grown upon land which lacks the necessary drainage. Fourthly, the season of cotton's maximum water-demand coincides with the lowest level in the rivers. It follows that there are few areas where flow-irrigation will suffice for the thirst of the plant in August and September. It must for the most part be grown upon "lifted" water, and this involves all the problems and costs of the irrigation-pump. These, so far, have proved fatal to many promising plantations; but for their continuing to do so there is absolutely no reason. The problem is the problem of fuel-costs, and the solution, in two parts, is at hand—firstly, the substitution of fuel-oil pumping plants for those using kerosine; and, secondly, a very pronounced cheapening of the cost of fuel which the Anglo-Persian Oil Company has definitely promised in the early months of next year, when their Khaniqin refinery is working.

None of the difficulties, then, is insuperable or even alarming, while the proved results, and even the progressive figures of production, justify those who find in cotton one of the highest and solidest hopes of the country. It is not irrelevant to notice, on the one hand, that the Asfar Concessionaires, who are abandoning their Diala project, are likely soon to start business seriously on 60,000 acres of cotton-growing by pump on the Latifiyah; and, on the other, that the demand for riverain lands for the erection of pumps is increasing daily. The writer of these lines can add nothing more emphatic than that he would cheerfully adventure his all in a sound cotton-growing project within 100 miles of Baghdad. The sole feature certainly destructive of such a project would be one highly unlikely—the collapse of world cotton-prices.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended September 23 state:—

Since our last report the futures market has again been very active, but prices have registered a very heavy decline. The week's summary of price movements is as follows:—

Sakellaridis: November, 32.60 dollars, 1.85 dollars down; January, 31.65 dollars, 1.90 dollars down; March, 31.20 dollars, 1.75 dollars down. Ashmouni: October, 21.02 dollars, 1.78 dollars down; December, 20.94 dollars,

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED
Head Office: 41 Lothbury, London, E.C.2

Digitized by Google

1.70 dollars down; February, 21.03 dollars, 1.67 dollars down.

Very contradictory crop reports are current on the market, but our opinion is that, as a result of the recent more favourable temperature, the condition of the crop has improved slightly. The American Bureau Report of the condition of the American crop as at the 15th instant will be published this evening; if the condition figure is bearish, we shall very probably see a further decline in this market. The week's receipts amount to 125,266 kantars against exports 67,352 kantars; the stock in Alexandria stands at 1,147,703 kantars.

Spot: The market was closed on Saturday last for the Jewish festival of Yom Kipur. Total sales mount to about 10,109 bales, of which we estimate 2,700 bales Sakel, 6,900 bales Ashmouni, 250 bales Zagora, 200 bales Pilion, and 50 bales White.

Sakellaridis: There is always a good demand for this variety, all grades being dealt in, but those buyers who were looking for the better grades are now less keen to pay the prices asked, hoping that with the new crop arrivals premiums will drop. Spot differences for cotton below F.G.F. are somewhat dearer.

Ashmouni and Zagora: There has been a very active market for the former variety throughout the week, but during the last two days buyers have been rather more difficult to deal with in the matter of price. The demand for F.G.F. and below, which has been so consistent for many weeks, has somewhat abated, although there are still several buyers in the market. The better grades have been fairly freely dealt in. Spot differences remain about unchanged all round.

Brown: No transactions recorded.

White: A few lots of the better grades have changed hands at about last week's premiums.

Crop, 1926: In Upper Egypt, picking is general and advices received indicate a yield per feddan slightly less than in 1925. In Lower Egypt, the temperature this week has been rather favourable. In some districts the first picking has commenced; the yields vary widely, but on the whole they are inferior to those of last year, both in quantity and quality. Latest news from the Central Delta districts show an aggravation of the pink boll worm attack, particularly in Sakel fields.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended September 29:—

Egyptian Spot.—A further substantial drop in prices has again to be recorded, following the issue of the American Bureau report of the 23rd inst. A very fair inquiry has been witnessed on the whole, but the high premiums over American at which Egyptian cotton stands is still mistrusted by a large section of the trade, with the result that no weight of spot buying has yet been experienced. There is a good deal to be said for this point of view, particularly when one remembers the heavy weight of Sudan Sakellaridis cotton still in stock here. On the other hand, however, it is useless to close our eyes to the fact that Egyptian values, in ten days, have receded 150 points from the top (F.G.F. Sak.), and this, when the scarcity of tenderable Sakel on the spot in Liverpool is unquestioned. This second aspect of the situation has not been entirely overlooked by the trade, as is shown by reports of a somewhat improved c.i.f. business which have been current during the past few days. As yet, however, this improvement is by no means general.

The feature of the local inquiry has been the enhanced interest displayed in American Seed Sudan, a larger proportion of the demand each day being concerned with this style of cotton at from 50 to 350 on. The Sakel inquiry has shown a falling off as regards the better grade cotton, but an increase of interest has been displayed in the grades below F.G.F. Pilion at from 12½d. to 13½d. has been in fair request, whilst Fully Good Fair Uppers have been in good request at about 12d. a lb. The better grades of Upper have again been neglected. Inferior cotton, of any growth, has been in improved request at from 4d. upwards. Sudan Sakel has met with a comparatively good offtake, but, for the most part, the better grades have been moved in small lots only, whilst the bulk of the business appears to have taken place in the lower grades at from pass to 125 on November. Forwardings to spinners for the week ending 24th inst. were returned as 3,846 Egyptians and 1,002 bales Sudan. Estimated sales, 1,500 Egyptians and 2,670 Sudan. Quotations of Sakel have been reduced 85 points and those of Upper 100 points on the week. F.G.F. Sakel to-day, 17.15d. F.G.F. Upper to-day, 12.25d.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, October 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Magdapur for Port Said, Colombo, Madras, and Calcutta (London, October 16).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, October 20).

British India Line.—S.s. Mandala for Bombay and Karachi (London, October 8); s.s. Mantola for Colombo, Madras, and Calcutta (London, October 9).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also Corfu, Gruz, and Ancona if inducement (Liverpool October 16, Swansea October 19); s.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also at Algiers and Volo if inducement (Glasgow October 21, Swansea October 22, Liverpool October 23).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (last steamer of the season for Galatz and Braila) (Liverpool, October 30); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, November 20).

P. and O. Line.—S.s China for Bombay (London, October 8); s.s. Novara for Colombo, Madras, and Calcutta (London, October 16).

Prince Line.—S.s. Scottish Prince for Malta, Alexandria, Syrian Coast, and Cyprus (Manchester, October 6); s.s. Italian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, October 20).

Ellerman and Papayanni Lines.—S.s. Mardinian for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 10); s.s. Algerian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool October 16, Swansea October 16); s.s. Malatian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 23); s.s. Lisbon for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool October 30, Swansea, November 3); s.s. Roumelian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 6). * Subject to sufficient inducement. Transhipments:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT.
Indian Government Vouchers accepted.

Passenger sailing dates:—

*ELYSIA ...	Oct. 14	*ASSYRIA ...	Nov. 9
†CALIFORNIA	Oct. 26	*CIRCASSIA ...	Dec. 2

*First class passengers only. Specially low fares.

† Carries 1st. 2nd and 3rd class passengers, and calls Marseilles Nov. 1.

NOTES FROM YUGOSLAVIA.

(From Our Own Correspondent.)

Liubliana, September 30.

It is not unusual in Yugoslavia to hear that country's political leaders reproached with devoting too much attention to party politics and far too little to economic needs and problems. At the present time the course of events is compelling her politicians to give more and more consideration to economic questions. Yugoslavia's economic factors are looming large in the foreground, and the public is becoming more and more alive to their importance.

Industrial concerns are entering upon the autumn season. Zagreb had its usual International Samples Fair, the largest of its kind in the State, to which visitors and participants are invited from all over the country and abroad. A similar, but smaller, fair was held at Osijek. In Liubliana, where the principal International Samples Fair took place at the end of June, a fresh departure was tried in September in the shape of a Provincial Exhibition, which was in the main an agricultural show, not a large affair in itself but of more than local importance, and a step in the right direction.

The Adriatic Railway Question.

Above all, it is the question of the Adriatic Railway that is occupying public attention this autumn. At the time of the Union, Yugoslavia took over a railway system very inconveniently planned and incomplete. To this day there are no direct normal gauge lines from the interior to the sea. There is the one old normal gauge line to Sushak-Fiume. The new normal gauge line through Lika to Split was opened for traffic only last spring. The central and northern parts of the country are still served only by the old narrow gauge Bosnian system, the cogwheel section of which over the Ivan Pass between Sarajevo and Mostar is now being improved. A longish tunnel is to be driven through the mountain at a lower level, keeping the cogwheel section quite separate. This will facilitate traffic considerably, but nothing can make this narrow gauge line suffice, although it has now for two years been connected with Serbia via Vardishte and Uzice. Therefore it is a matter of first necessity to have a normal gauge line constructed, which would link Belgrade and—through Belgrade—also North Serbia and Vojvodina, the granary of Yugoslavia, by a direct route with the Adriatic, either at Split or at Kotor. But over this very point differences have arisen, viz., should the main terminus be at Split or at Kotor? Should the line pass through Bosnia and Herzegovina or through Montenegro? In the Blair Loan agreement Belgrade decided for the Kotor line, and this decision was duly legalised by the Skupshtina. But now a group of financially powerful South American Yugoslavs, reinforced by British capital, has submitted to Belgrade a scheme whereby the Adriatic line would run from Belgrade via Valjevo-Sarajevo to Split. Negotiations are in progress and successful issue is in prospect, although the advocates of the Kotor line, and the Montenegrins in especial, are doing their best to have the terminus at Kotor.

For the pacification of Macedonia it is important that the newly constructed line from Shtip to Kochane should be opened to traffic. Hereby east Macedonia will be given the Veles-Shtip-Kochane line 85 km.—which will greatly help to develop this region which has remained backward in consequence of the Turkish rule.

The Slavenska Banka.

Another matter which has latterly occupied all interested in Yugoslav economic questions is the grave position of the Slavenska Banka, one of the strongest of the native banks in Yugoslavia which has now got into difficulties. Its collapse is far-reaching and both native and foreign interests—e.g., the Trboveljska Premogokopna Druzba and the Länderbank—are affected. The disaster to this bank should be rightly understood. It is still an echo of the early days after the Liberation and Union, when a policy of inflation and a plethora of ready money encouraged the banks to invest heavily in all sorts of commercial enterprises and credit was only too often extended without due consideration and with insufficient security. Now we are passing through a phase of sudden consolidation of the economic life of the State; the consequences of the rash financial policy of those earlier days are becoming apparent, and banks which cannot weather the crisis must go under. Viewed from a wider angle, the crisis of the Slavenska Bank is only an incident in the process of economic stabilisation and consolidation in Yugoslavia.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended September 25:—

The arrivals of sultanas are estimated at 17,300 tons, and the sales to date are put at 16,100 tons. Closing prices Smyrna, per cwt. c.i.f.: Type 12, 52s. 6d.; type 13, 54s. 6d.; type 14, 56s. 6d.; type 15, 58s. 6d.; type 16, 61s.; type 17, 64s.

The market continues ruling very firm. Prices over the week have advanced slightly. The demand shows less activity, but it is the strength of the position statistically that gives tone to market on this side. About half the crop is reported to have been already marketed.

The arrivals of figs are estimated at 14,185 tons and the sales to date are put at 13,714 tons.

The market has been firm and strong all through the week with heavy purchases chiefly against September engagements which appear heavier than was generally anticipated. Prices have advanced for good quality Naturals. Inferior Naturals are plentiful and are offered cheap. The very highest grades for fancy packs are in short supply and command a big premium in price. The crop is proving short of earlier estimates.

Sir William Crawford Currie has been admitted a partner of Messrs. Gray Dawes and Co., agents for the British India Steam Navigation Company. Sir William is a partner in the firm of Mackinnon, Mackenzie and Co., Calcutta.

THE POSITION IN THE SUDAN.

(*Continued from page 382.*)

Port Sudan.

Owing to the rapid development of the port a post of port manager has been created with the object of co-ordinating under one official the work of the various Departments in their dealings with shipping and the commercial community. The reorganisation entailed by this appointment is now complete, and has already greatly facilitated the operation of the port. The construction of two new quays on Quarantine Island for dealing with coal, and the small extension of the main quays referred to in last year's report, have been put in hand; work was started in April and has made satisfactory progress. The question of additional quays has been receiving careful attention, and schemes for the extension of the main quays northwards to provide two deep-water berths are under consideration. There is no doubt that the extension of the main quays will have to be undertaken in the near future, but the exact date of the extension will depend on the extent of the relief afforded by the transfer of the coal to Quarantine Island and the addition to the main quays now under construction. The adaptation of the east temporary quays will, however, be undertaken on the completion of the work now in progress.

Steamers.

The services on the rivers south of Khartoum have had a very successful year. Expenditure has decreased by £E3,613, while receipts have increased by £E16,464, an increase in the net profit of £E20,077 over that of the previous year. The general manager points out that the increase of £E15,118 (29 per cent.) in revenue gained by the Rejaf service indicates that the reduction in rates and other steps taken to influence traffic to the Belgian Congo viâ Port Sudan and Rejaf, referred to in last year's report, have produced the desired result. The receipts on the Halfa-Shellal reach fell by £E16,502, while expenditure increased by £E1,728, involving a reduction in the net profit of £E18,310. The reduction in receipts is due to the loss of revenue from the Egyptian army and to the fact that a larger proportion of passengers are using the Port Sudan route.

The Government transport service on the Rejaf-Aba road was taken over by this Department on November 1, and is being gradually reorganised. A route between Nairobi and Rejab viâ Torit has been opened up, and a steel bridge is being constructed over the Kinetti River. The question of transport from points off the railway line, particularly in the Central and Southern Sudan, has been under consideration, with special reference to the transport of rain-grown cotton. Cultivation of cotton and other products could be developed in many localities if transport were available, but not in sufficient quantities to justify laying a railway. Some type of mechanical transport is required, but conditions in the various localities vary to such an extent that it is only by careful study and experiment that the best type of vehicle for general utility purposes can be found. A number of different types of cars, including both track and wheeled machines, have been purchased, and an experimental section has been set up in Khartoum North.

Telegraphs.

Funds have been allotted for rebuilding the Port Sudan-Atbara Section, for an additional wire between Port Sudan and Haiya to link up with the new wire along the railway route from Haiya to Kassala, and for a direct wire from Port Sudan to Khartoum for duplex working, the wire being carried on the existing pole route between Atbara and Khartoum. Work was started at Port Sudan in February, 1925, and at the end of the year the rebuilding and extra wiring had been completed for a distance of 354 kilom. It is estimated that it will be finished by April 15, 1926. A new line is being constructed from El Obeid to Talodi, via Abu Zabad, Dilling, and Kadugli. Work was commenced from the El Obeid end on November 25, two wires being run between El Obeid and Abu Zabad, the second of which will eventually connect with the proposed extension between Abu Zabad and Nahud via El Odaiya. Maintenance work was carried out during the year on the Sennar-Roseires and Halfa-Argo sections and in various sections in the Upper Nile, Mongalla and Bahr-el-Ghazal provinces. Cases of wilful damage to the telegraph line and theft of materials were reported from Kordofan and Upper Nile provinces.

Telegrams dealt with numbered 751,085, as compared with 725,604 in 1924. There was a satisfactory increase of 27,546 in the number of inland private telegrams. Revenue earned was £E73,788, as against £E73,940 the previous year. Of this sum, £E6,670, representing the cable share on traffic over the Port Sudan-Jeddah cable, has been placed in suspense account pending settlement of the ownership of the cable.

Wireless Service.

A complete new station was erected at Atbara in May in place of the temporary station, and temporary stations were installed at Roseires and Dilling in July and October respectively. Improvements have been carried out at Port Sudan and Malakal stations, and new buildings and masts have been erected at Mongalla and Wau, where new transmitting apparatus is also being provided. A new transmitter for Mongalla is under consideration. Three valve receivers and two pairs of masts are on order, and other minor improvements have been carried out at various stations. The number of inland messages transmitted was 20,902, as against 17,911 last year, and produced a revenue of £E3,810, as against £E3,000. Port Sudan radio transmitted 7,405 for ship service, as compared with 5,322 the previous year. Receipts were £E2,688, as against £E1,918.

Telephone Service.

During the year three additional operators sections with provision for 160 lines were added to the central exchange, Khartoum. The Khartoum North exchange was abolished, and the subscribers in that town were given direct connexion with the Khartoum exchange; 4.05 miles of underground cable with a wire mileage of 629 were laid in Khartoum and Port Sudan. Reconstruction work includes a new system of cable communication with Khartoum North owing to frequent breakdowns of the river cable in its old position, and the transfer of Port Sudan and El Obeid exchanges to more convenient buildings. During the year twenty telephone connexions, 123 miles of wire and 19 miles of pole route were added to the telephone

Digitized by Google

system in the Gezira canalisation area. Subscribers numbered 746, as against 723 last year, and revenue totalled £E5,960, as against £E5,134.

Forests.

Gum.—There has been a further fall in prices and quantities brought into the markets have been affected accordingly. The records now kept of the district of origin of all gum coming into El Obeid market (referred to in last year's report) show that during the year the bulk came from Bara district. There has been a decrease in the quantities brought into Rahad and Um Ruaba, but a large increase in collection in Darfur Province, and the centre of tapping appears to be moving westwards. The yield per tree was poor, mainly on account of cold weather in the first three months of the year.

Fuel Supply.—In Khartoum, requirements have been met without difficulty, and Government Departments have been supplied by contract from the White Nile. The bulk of the firewood for the public market has come by river from Shendi district. The building of the Sennar Dam has practically stopped the rafting of timber and firewood from the Fung Province, but a certain amount is still coming down from the Rahad. Reduced requisitions for steamer services have eased the drain on the White Nile forests; 197,000 cubic metres of fuel wood were cut by the contractors for the Sennar Dam; this brings the total cut in three years to 425,000.

Afforestation.—Efforts to find land for the establishment of a fuel forest on the White Nile mud flats to supply Khartoum have been unavailing. Further areas of *Acacia arabica* have been sown at Shukaba, Zarzur, Taufikia, and Wankai on the White Nile. On the Blue Nile regeneration work is being concentrated on the areas cleared for the requirements of the Sennar Dam. In Kassala the possibilities of creating fuel forests in the Gash Delta are being examined, and a survey of the forest areas there has been carried out.

Game Preservation.

With the exception of the close season for klipspringer in the hinterland of Suakin, referred to in last year's report, no changes have been made in the Game Laws during the period under review.

In May the Game Warden visited the district south of the Setit River in Kassala Province which was recently made a game reserve. Of the sixteen varieties which inhabit this area, fourteen were actually seen and included elephant, kudu, hartebeest, waterbuck and leopard. A certain amount of damage is done by annual raids of Abyssinian poachers, but game seemed plentiful though somewhat scattered owing to heavy rains, and the Game Warden was unable to ascertain with any accuracy whether there was any appreciable increase since his last visit in 1923. He reports that the natives complain of damage done to local crops by herds of elephant, but considers that they are greatly exaggerated and would not justify any steps being taken on this score to diminish the herds. Game is equally plentiful on the north bank of the river, and the existing reserve between the southern bank and the Bahr-el-Salaam River will accordingly be retained.

(To be continued.)

COMPANY NOTES AND REPORTS.

SOUTH INDIAN RAILWAY COMPANY.

The report for the year ending March 31 last states that the capital expenditure during the year amounted to Rs.88,31,739 including suspense account, and was chiefly incurred on engineering works, etc., Rs.87.84 lakhs, mainly on new locomotive and carriage and wagon workshops, in renewal of track with heavier rails, strengthening of bridges, remodelling of station yards and locomotive depots, provision of crossing facilities and opening of new stations, providing facilities for passengers, and construction of residential quarters for officers and subordinates. The outlay on rolling stock amounted to Rs.13,26,927. There was a reduction of Rs.12.79 lakhs in suspense account, mainly due to restricted purchase of stores to work down stock balances, heavy issues of stores from existing stock, and writing down of values of surplus and obsolete stores to scrap rates.

The gross earnings were Rs.5,23,71,342, the working expenses were Rs.3,04,27,568, and the net earnings were Rs.2,19,43,774. Compared with the previous year, there was an increase of Rs. 27,55,483 or 5.55 per cent. in the gross earnings due to breaches in the previous year; an increase of Rs.34,11,554 or 12.63 per cent. in the working expenses, resulting in a decrease of Rs.6,56,071 or 2.90 per cent. in the net earnings. The company's share of surplus profits for the year 1925-26 amounted to Rs.7,38,272; amount retained in India to meet Indian income tax and super tax for 1926-27, Rs.1,12,230; balance remitted to London, Rs.6,26,042; at exchange of 1s. 5 29-32d. per rupee, realising £46,708 12s. In addition to the guaranteed interest of 1¾ per cent. for the half-year to June 30, 1926, an interim dividend of 2 per cent. from surplus profits was paid, less income tax, on July 1. The board now recommend that, for the year 1926, there be paid from surplus profits, on January 1, 1927, a final dividend of 2½ per cent., making, with the guaranteed interest of 1¾ per cent., a total payment for the half-year ending December 31, 1926, of 4¼ per cent., less income tax. The total distribution for the year will then be 8 per cent. (4½ per cent. from surplus profits, and 3½ per cent. from guaranteed interest).

The contract for building the Belgrade-Pancevo bridge over the Danube has been awarded to a German firm.

Coupons due October 10 of the Ottoman Four per Cent. Loan of 1891, secured by the Egyptian Tribute, will be paid on and after that date at Messrs. Glyn, Mills and Co., 67, Lombard Street, E.C.

EGYPT

A Supplement to "The Near East & India"

The Future of The Sudan

By Sir Murdoch Macdonald, K.C.M.G., C.B.

DURING the greater part of last century the Sudan was an appanage of and governed by Egypt. About 1880 the Mahdi revolted. He and his successor subdued and governed the greater part, if not the whole, of the virile and warlike races which inhabit the Sudan. The reconquest of the country was decided upon by Great Britain and was accomplished by Lord Kitchener, after a long war in which he employed both British and Egyptian troops. Many of the latter were really natives of the Sudan recruited in distinct battalions of the Egyptian Army. After the termination of hostilities an agreement was signed by Britain and Egypt for the establishment of a Condominium between them over the Sudan, and the flags of both countries were subsequently flown side by side from all public buildings.

The system of government adopted was, and still is, entirely an oligarchical one—no other was, or is even yet, possible. It is most beneficent in operation and is giving marvellous results; it is centralised and it regards the Sudan for all purposes as a national unit. The Government was intended to be, and is, a separate institution distinct from the Government of Egypt. It has drafted its own laws and fixed its own taxes and collected them. In the earlier, if not in all, years, Egypt helped financially. In the administration British subjects, mainly Army officers, have held all the senior and Egyptians the other posts. Capable Sudanese have been given minor posts where it has been found possible to employ them. Foreign subjects also have been employed to a small extent.

Egypt was herself under an oligarchical Government acting under the tutelage of Great Britain when the Sudan Agreement was signed, but in 1922 she became independent—with British consent—subject only to the reservation that certain matters not then arranged should be left over for settlement at a later date. One of these was the status of the Sudan. As a result of the action of a few Egyptian officers and other Egyptians serving in the Sudan, who attempted by rebellion to upset the existing régime with a view to securing the immediate annexation of the Sudan to Egypt, the British Government found itself compelled to remove all Egyptians from the Sudan Service, and make the local army officers take an oath of allegiance to the British Governor-General only, and in fact, if not actually *de jure*, it abolished the Condominium.

In the early years of the last century Egypt's interest in the Sudan may have been restricted in the main to a desire to conquer and exploit adjacent territory. The present interest of Egypt is, undoubtedly, based on anxiety for the future of her water supply. Owing to climatic conditions in the Sudan, permanent residence in the country has no attraction for any class of Egyptian, and officials in fact have shown a repugnance to being sent there. The day may come, however, when, owing to the density of population in Egypt, Egyptians may find themselves compelled to go to the Sudan, in the absence of any other obvious outlet for their surplus numbers. The certainty that this state of affairs will ultimately arise is present in the minds of the governing class in Egypt, especially as there is, without doubt, a splendid field in the Sudan cotton areas for the hard-working Egyptian fellah. Great Britain's motive in reconquering the Sudan was to protect Egypt (then under her care) and Egypt's water supply; but she reserved an almost complete control of the Government in the interests of the Sudanese, who in the pre-Mahdi days were badly treated by Egypt or those representing her. In recent years it has been discovered that the Sudan has immense cotton-growing potentialities. The United States, the principal world producer, grows less than she did before the Great War; at the same time there is an increased world demand for cotton, with the result that the annual shortage promises to become so great that Britain considers herself justified in pressing forward the production of cotton in the Sudan. For two cogent reasons, therefore, the British Government finds itself unable to release its hand from the control of Sudanese territory.

How then can the situation of a Condominium, which Britain has virtually abandoned in favour of her own sole control, and the natural anxiety of Egypt to have some command over the territory through which her water supply flows be brought into harmony? It is believed they can be, if the present method of government is somewhat altered.

The impulse given by the existing form of government towards the making of a nation of the Sudan is not an advisable one. The Sudan never was a nation and has always consisted of a collection of the most diverse peoples. These are spread over a vast area of about one million square miles, which is equal to that of the whole of Western Europe, with its many nations and races. The population to-day numbers less than five millions: in pre-Mahdi days there were at least ten million inhabitant

and there can be no doubt that the population is increasing at a great rate as a result of the almost complete cessation of war. The country can, it is believed, easily contain one hundred million people.

If the existing centralised form of government were to be continued indefinitely, the young men trained in the Gordon College, Khartoum, will gradually assert a claim to a share in the administration. It will be no more than their right that they should, when competent, participate, and Britain with her code of justice in such matters is certain in due time to grant the request. Inevitably, therefore, the present condition of affairs in India will one day be repeated in the Sudan. Thus Egypt can envisage a time when British governing officials in the Sudan may be largely, if not wholly, replaced by natives, and she fears that she may see the conditions which held in the Mahdi's time reproduced, when a strong native ruler reigned over the virile and warlike Sudanese, with the added danger of easier interference with her water supply through the existence of great controlling works in the Sudan section of the River Nile.

This situation can be avoided, if Great Britain will regard the Sudan as it really is, as a series of distinct units, and will take the necessary steps now for the ultimate creation of separate administrations in each of them. All these administrations must be, for years to come, oligarchical in character. Young men trained in Khartoum, who are desirous of entering Government service, should be sent back to their own native countries, to assist, and there only, in their own particular Governments. The Senior Staff in each of these local administrations ought to be entirely British, assisted in the lower ranks only by such foreigners to the Sudan as may be allowed to take service there. The various Governments thus formed would slowly change their nature, until they ultimately approximated to those of more highly civilised communities. A controlling body with power over all these nationalities will be required for many decades if not centuries to come. For this purpose the Condominium might be re-established. It must have a British head or Governor-General, who would select the British staff, which would be interchangeable from one nation to another. The British Governor-General would, with the Condominium Council, settle internecine quarrels and be responsible for resisting foreign aggression. The Council would have the power to levy contributions on each country for the maintenance of the Condominium control and to take funds from the richer nations to give to the poorer, until the latter were financially in a position to repay the indebtedness as their material development progressed. These nations will thus reproduce among themselves the conditions prevailing when Egypt in former years helped to finance the Sudan.

Under this system the various Sudan races would have their individuality recognised; they would live without fear of oppression, each would be assisted in developing its own territory, and would slowly rise into more modern forms of government. Egypt would have the Condominium restored in a practical manner, and she would know that, if Britain's hand were at any time removed from the Sudan, she would have the nucleus of control in her own hands. Egyptians consequently would have no fear of a combined Sudan under an oligarchical Government ever sitting astride of her water supply. They would realise that the worst that could happen would be that they should have to deal with a number of small nations; the action of any one of whom the others would have no reason to support. It would be easy indeed for Egypt to deal with such action, if it were detrimental to her interests. Great Britain on the other hand would fulfil her object of protecting the separate nations in the Sudan until they were fit to control and protect themselves. She would also be able to prosecute her desire to aid in producing an adequate world's supply of cotton. Thus all parties, Great Britain, Egypt and the various races of Sudanese, if this suggested arrangement were carried out, could have their legitimate aspirations satisfied and live in amity with each other.

Egypt in England

BUTE HOUSE.

Bute House, the new home of the Royal Egyptian Legation in London, is rich, though curiously uneven, in its historical records. Nor is its tale likely to fail in incident now that it has been converted, so to speak, from a house into a palace; for it will assuredly become one of the most prominent foyers in London, and certainly one of the proudest elements of the historic Grosvenor Estate.

Bute House is actually 75, South Audley Street, at the corner of S. Audley and Deanery Street—an important site. Its garden front has a clear view to Hyde Park, and a portion of the property abuts on South Street, a secondary entrance with carriage way thus being afforded. This portion becomes a valuable adjunct now that the Legation will be required to provide accommodation for the Egyptian Consulate in London as well. From the external point of view, therefore, the convenience of Bute House is at a maximum.

Indubitably Bute House is of the eighteenth century, although the exact date of origin is uncertain; probably it was erected between 1720 and 1730. (One of the floor boards, in so fine a condition that it, with many of its fellows, was preserved in the renovation, bore the date 1796). What it was first called is unknown—its name derives from the unpopular Lord Bute who was living there in 1768 when the house was attacked during the Wilkes Riots. Readers of Horace Walpole's "Letters" may remember the passage:—"At one in the morning a riot began before Lord Bute's House in Audley Street, though illuminated throughout. They flung two large stones into Lady Bute's chamber, who was in bed, and broke every window in the house." But Lord Bute occupied the house until his death in 1792.

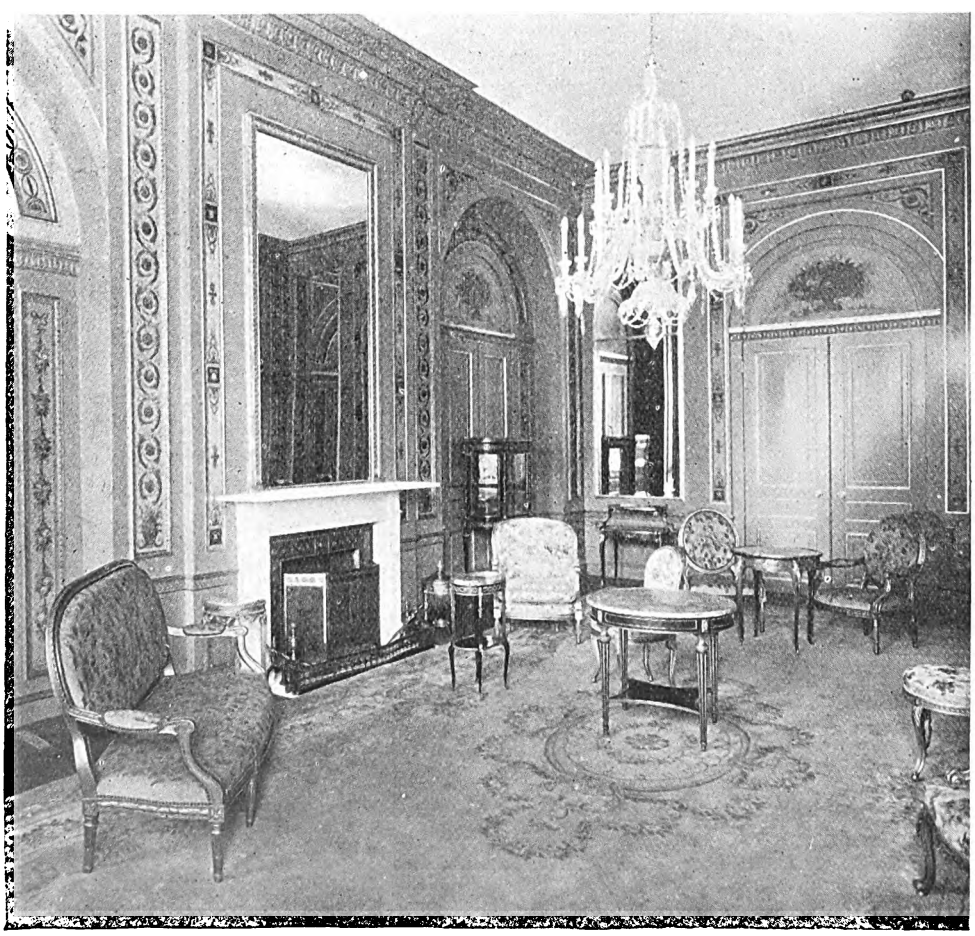
Even the name of the builder of Bute House is not known, although it appears to be generally agreed that its decoration and preparation for Lord Bute's occupation were undertaken by Robert Adam (of whose craft the House still contains some exquisite specimens), who had already built Lansdowne House (sold to Lord Shelborne before completion) and afterwards, and for the same statesman, Luton House in Bedfordshire.

In recent times it was in the occupation of Mr. H. L. Bischoffsheim, who gave to the South Audley Street front its present facing of Portland stone, and from whose daughter, Lady Fitzgerald, it was purchased last December on behalf of the Egyptian Government for use as a Legation. M. Fernand Billerey, the eminent architect (who is also architect to the French Embassy), was called in to advise upon the required alterations, which were found in the end to entail a much larger outlay than the architect had originally provided for or the Egyptian Government had contemplated. Part of the work consisted in the formation of a spacious Entrance Hall with a wide reception staircase in replacement of the old narrow staircase, which was hardly in proportion with the large reception rooms of the first floor. Involved in this was the removal of the front door, which used to be near the corner of Deanery Street, to a more central position. These structural alterations, as a matter of fact, implied practically the rebuilding of the old mansion.

The old back staircase, which was both dark and narrow, and a hydraulic lift of out-of-date pattern, were replaced by a modern electric passenger lift, a luggage lift, and a proper secondary stair from basement to top storey.

Several particularly well-fitted bathrooms were added. Other additional features are the arrangement of a State Suite of rooms for the use of the King of Egypt, of the Minister's Rooms and rooms for public receptions, and of bedroom accommodation for Diplomatic visitors, Attachés, and so on.

In the garden, the defective conservatory which ran the full width of the house was removed, and a wide terrace was formed, with Loggias on either hand (which are to afford communication with the Chancery offices) and a central flight of steps leading to a lower terrace and to the garden. This is a particularly delightful improvement, which will at once impress the visitor.



The Royal Salon, Bute House.

The first thing that strikes one upon entering the building is the spacious entrance hall, paved in Tavernel stone, with bands of *fleur de pèche* forming panels, and the wide easy stone stair (attractive enough to need no covering carpet) also in Tavernel, with a delicate, wrought iron balustrade, in which the Royal Arms of Egypt have with happy thought and form been incorporated. At the time when the details of the new staircase were decided upon it was expected that King Fuad would be coming to London in July, and it was essential that the Legation should be ready in time for his Majesty's visit. The construction of the staircase, therefore, called for considerable rapidity of execution. While the stone steps were being worked in Burgundy, other portions of the stairs were being masoned in Belgium, and the balustrade was being forged in Paris.

Digitized by Google

The walls for the staircase are treated very simply but effectively in stone stucco, and the ceiling is decorated by enriched plaster panels. The spacious first floor landing is paved similarly to the entrance hall, and the walls are architecturally treated with the aid of pilasters, a rich cornice and broad ceiling band forming the decoration of the upper part.

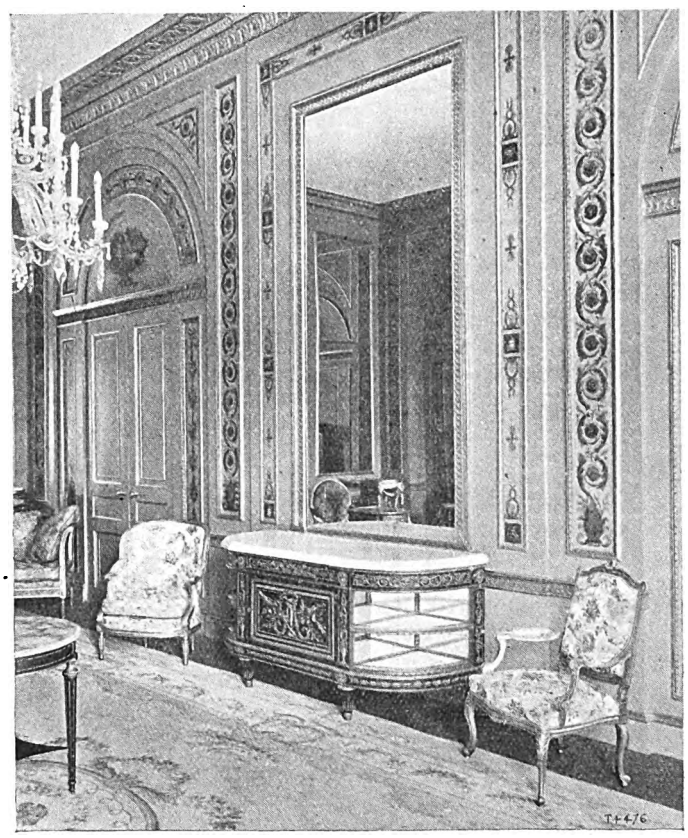
There are two distinct styles of room-decoration in the house, adopted in accordance with the desire of the Egyptian Government. The ground floor rooms, which include the Minister's Library, the dining room, waiting room and so on, have been decorated in the English style; and the first floor, devoted to reception rooms and the Royal Suite of Apartments, in French (Louis XVI) style.

One has spoken of this transformation as a renovation, and so in fact it is. But the architect was too sensitive an artist to cast out all the features of the old. He has, indeed, in his designs for the decorations, made use of the best features which he found in the old house—that is, of course, as far as it was possible. What is more, he was not only a renovator, but a discoverer. During the work of alteration, some of the original cornices of the Adam period were found. These almost priceless works of art have been carefully repaired and retained, as, for instance, in the Minister's own Library, which is possibly the finest, and certainly, according to English ideas, the most comfortable room in the house. This library, from window to ceiling, from floor to wall, is an exquisite room. Again, one of the first floor *salons*, delicately painted (by Pergolesi, it is said) was cleaned and repaired. Moreover, some of the cornices and decorated ceilings introduced into the house when Mr. Bischoffsheim was in possession were also embodied in the decorations, principally the ceiling of the Royal bedchamber, the panels of which are genuine Aubusson. For these rooms, as well as those which were entirely remodelled, M. Billerey's designs were carefully developed and executed by Messrs. Waring and Gillow, upon whom rested the heavy responsibility of carrying out such elaborate work in so short a time with results so eminently satisfactory.

Of the furnishing of Bute House one may simply say that it is exquisite. In particular is to be noticed the French furniture in the Royal Salon in Louis XVI. style. Here the commode is a reproduction of the Marie Antoinette period—the original is to be seen in the Louvre. Again, the settee and two armchairs are in genuine Aubusson tapestry, and the hand-made carpet, in one piece, is of a very beautiful French design.

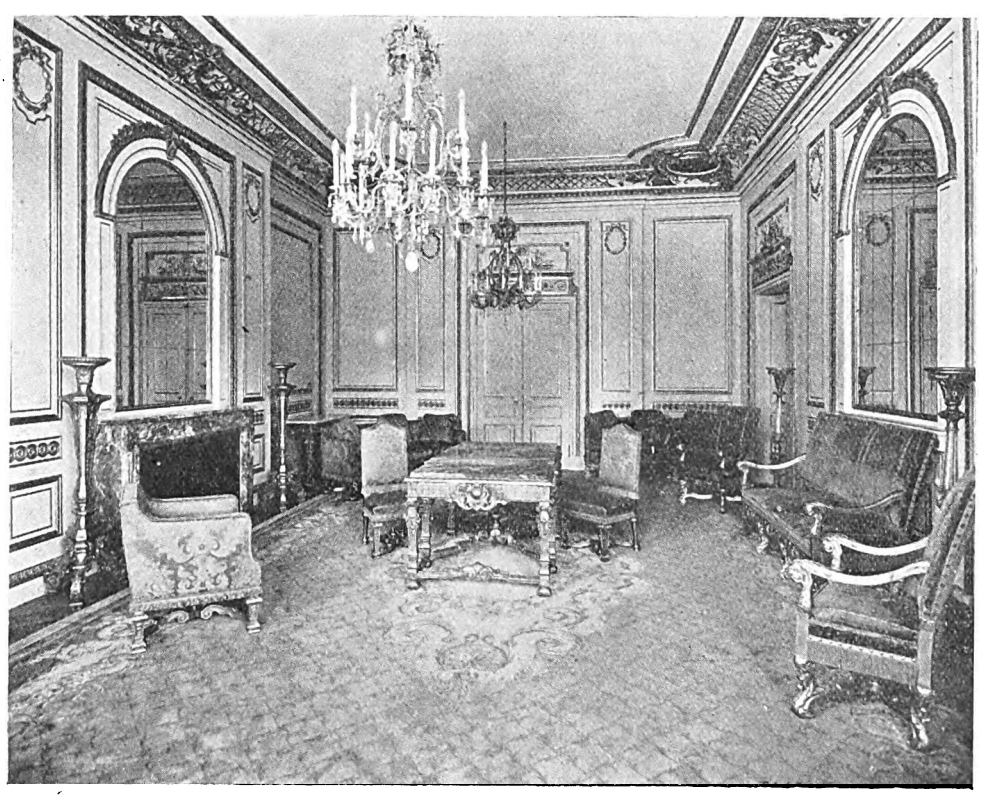
Another thing that will assuredly delight the eye of the connoisseur is the furnishing of one of the reception rooms where the decorations are again of Louis XVI. period. The combination of these with the furniture, which is of an earlier period, gives a most dignified appearance to the whole. The ceiling and cornice are original and have been removed and adapted from the ground floor to the present position. All the furniture was specially designed in the studios of Messrs. Waring and Gillow and was manufactured in their factories. Of the craftsmanship displayed, some idea may be obtained from the centre table.

To take one more example—H.M. King Fuad's bedroom, of which the style is Louis XVI. The original Aubusson ceiling was removed to its present position by Messrs. Waring and Gillow—a wonderful piece of work. The coverings of the settee and chair are in genuine Aubusson tapestry. The carpets have been hand made, and the blending of their colour with the general scheme of decoration is a point which is to be particularly noted.



In the Royal Salon, Bute House.

In sum, it may be said that the whole rebuilding has been a triumphant success. Bute House is fit to hold its own with any other Legation in London; from wine-cellar to linen-store it is constructed on generous and



A Reception Room in Bute House.

Digitized by Google

attractive lines. All its rooms are light; and all its decorations, whether old or new, are extremely artistic, although to the connoisseur perhaps nothing can approach the Adam products. There is in the building no trace of the hurry in which the alterations had perforce to be made, although it is a fact that a job which normally would have taken eighteen months was completed in five.

The general contractors, Messrs. Holland and Hannen and Cubitts, Ltd., worked day and night until the General Strike, in order to complete on time (which was strictly defined owing to the expected visit of the King). All the originally contemplated alterations were executed in little more than 20 working weeks—a result all the more creditable in that, besides the improvements which had been undertaken, a considerable amount of rebuilding and strengthening of the existing structure had also to be done. Nor was the contractors' work confined to structural alterations; they had very delicate work to do, such as cleaning, repairing and moving ceilings. When it was learned that King Fuad would not be coming to London this summer and that the holiday season might delay the Minister's occupation of the Legation, the finishing touches were applied more leisurely and Bute House was not officially ready for Aziz Izzet Pasha and Madame Izzet until September, but Messrs. Holland and Hannen and Cubitts, Ltd., had already prepared for the decorators and other specialists whose own work was scheduled in a carefully planned time-table. The contractors themselves carried out also the electrical work (lighting, bells, telephones, and so on) to the specification of Messrs Lucas and Pyke, Consulting Engineers, and the Sanitary, Heating and Hot Water work to that of the London Sanitary Protection Association.

The following sub-contractors were amongst those engaged on the work:—

Decorations and furnishing to ground floor and first floor rooms (which include the Royal apartments):—Waring and Gillow, Ltd.

Stone stucco decorations and plaster ceilings on staircase:—Gilbert Seale and Son, Ltd.

Main stairs and paving to landings:—Fenning and Co., Ltd. (Tavernel stone supplied by Abel Fèvre and Cie., Paris).

Echaillon stone paving and steps to terraces:—Fenning and Co., Ltd.

Wrought iron balustrade to main stairs:—Bagues, Ltd., of Paris.

Lifts:—Waygood-Otis, Ltd.

Wrought iron lift enclosures, railing to terraces, etc.:—W. Bainbridge Reynolds, Ltd.

Electric light fittings:—Osler and Faraday, Ltd.

Secondary stairs and fire escape staircase:—Haywards Ltd.

Sanitary fittings:— Boulton and Co., Ltd.

Cooking apparatus:—Driffault Range Co., Ltd.

Parquet flooring:—J. F. Ebner.

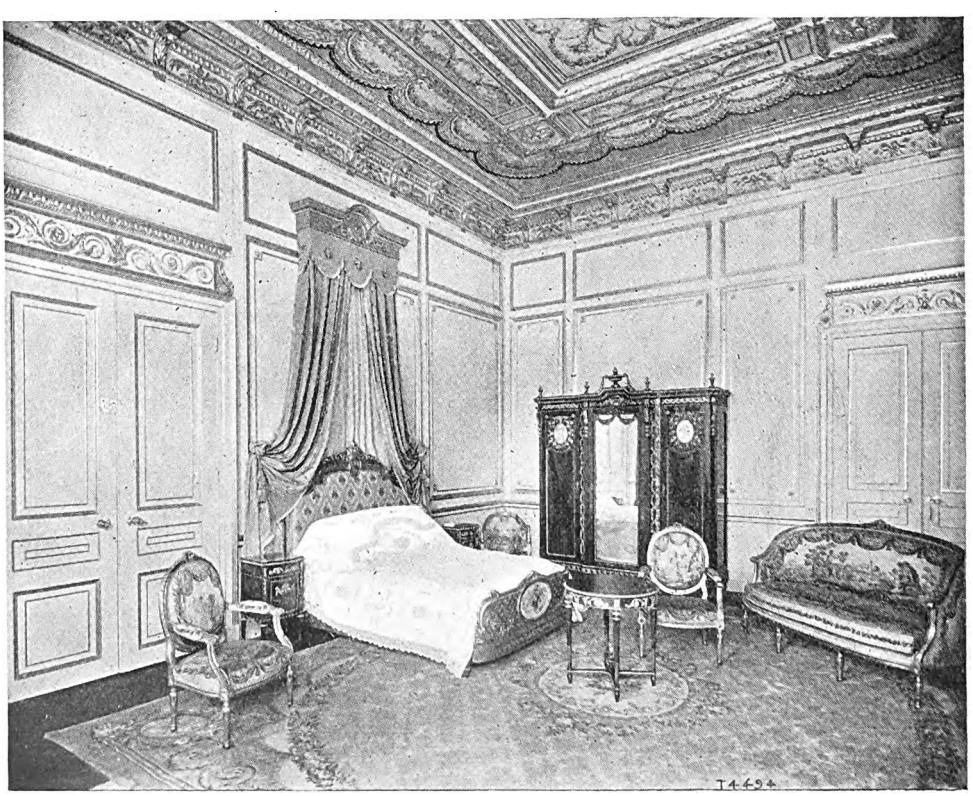
Wall and floor tiling and composition flooring:—Bryon and Co.

Seelwork.—Redpath Brown and Co., Ltd.

Plaster Work:—Clark and Fenn, Ltd.

Ironmongery:—A. Jones Lock Co., Ltd.

Asphalte.—Val de Travers Asphalte Paving, Co., Ltd.



The Royal Bedchamber.

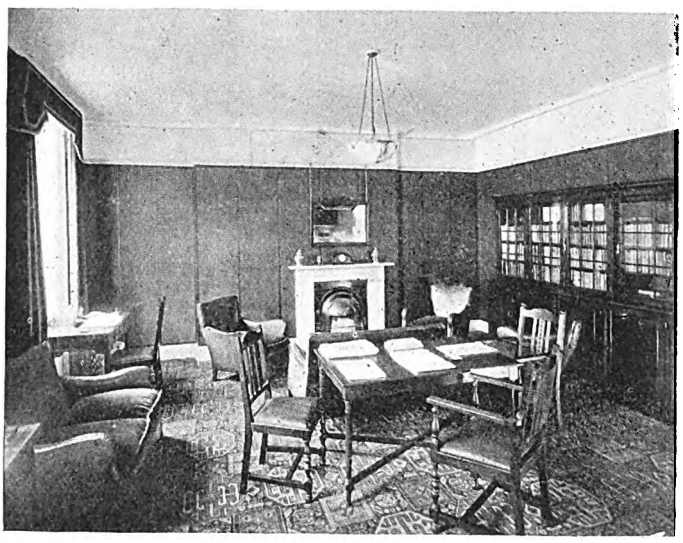
THE STUDENT COMMUNITY.

It will come as a surprise to many people to learn that as many as six hundred Egyptian students are to be found in Great Britain, and that there is some prospect of their number being increased to seven hundred before the end of the year. Some five or six years before the War the Egyptian Ministry of Education established in London, at the request of an influential body of parents, an office charged with the general supervision of young Egyptians who at that time were beginning to come to England to finish their education. The need of a central authority who could act *in loco parentis* or, at least, as friend, philosopher and guide, to the students, was recognised. It was inevitable that some, at least, of them should become involved in difficulties at one stage or another in their educational career, and the absence of anyone to whom they could turn for advice was felt by the students themselves, and was regarded by many Egyptian parents as a serious difficulty in the way of the dispatch of their sons to England. Simultaneously with the creation of the office in London, an Advisory Committee was formed in Egypt, consisting of parents and officials of the Ministry of Education, whose duty it was to advise the Ministry as to the relations which should exist between the students and the Director of the London office, and the amount of authority which the latter should have over the former.

Shortly afterwards the Ministry of Education began to send students to England to be trained at Government expense as teachers for the Egyptian State schools. About ten were selected each year, and by 1914 there were between forty and fifty of these Government students, including a few from other Ministries, in addition to the Egyptians who were being educated in England at their own expense.

After the War, owing to the fact that very few Government students had been sent while the War was in progress, the Ministry of Education increased the number of students sent to England, and the other Ministries began to appreciate the advantage of having in their service men with an adequate technical training. When the Agreement between the British and Egyptian Governments was signed in February, 1922, and the ground was prepared for the ultimate withdrawal of British officials from Egypt, all the Ministries realised that, if their British officials had to leave, there must be a supply of men with similar training to take their place. A considerable increase at once took place in the number of students sent over annually from Egypt at the Government's expense. On July 31 of this year there were 305 Government students in England, of whom 145 were at the charge of the Ministry of Education, and 160 at the charge of other Ministries. Of the students sent over by the Ministry of Education, 25 were being trained as teachers, 25 were studying medicine, 25 engineering, 17 science, 15 arts and crafts, and 1 arts. Other Ministries maintained 64 students engaged in engineering, 18 in military training, 18 in naval training, 16 in agriculture, 12 in science and 11 in medicine. Of the 231 unofficial students, 137 were taking a medical course, 37 engineering, 15 agriculture and 14 economics. There are six girl medical students sent by the Kitchener Memorial Committee. Among the other branches of knowledge or professions for which Egyptian students come to England to prepare themselves are the following: Pharmacy, architecture, commerce, accountancy, law, textiles and dyeing, and astronomy; one student is being trained as a librarian; four in Oriental languages; one is taking a building course and four a nursing course. The total number of women students is between fifty and sixty. As might be expected, the largest body of students—some 200 in all—is in London. There are 60 in Birmingham; Edinburgh, Manchester and Liverpool, have large groups; while smaller gatherings are to be found at Oxford, Cambridge, Leeds, Sheffield, Durham and Bristol. Many of the students are undergoing practical training on railways and in various firms; others are at technical schools and colleges.

In addition to the Government students directly in the charge of the Egyptian Educational Mission in England, which has its headquarters at 39, Victoria Street, S.W.1, there are two categories of students, supervised and unsupervised. Both these are private students staying at England at their own or their families' expense; but those in the supervised category have been placed by their parents under the care of the director. The measure of the control exercised necessarily depends on the individual instructions given. Some are treated in the same way as Government students, their allowances



The Library of the Egyptian Club.

and the cost of their education being paid by the Mission. In the case of others, the director is merely asked to find places of study appropriate to the courses which the students wish to follow. It is, however, the desire of the Ministry of Education that the director should keep in touch, as far as possible, with all Egyptian students in Great Britain, including those who have not been placed under his supervision. In view of the number of students involved, it is evident that the post of director is no sinecure. As far as possible, all students are visited by the director or one of the staff of the Mission once in the course of the year, and a report is submitted to the Ministry of Education in Cairo on each student and his work. The students know to whom they can turn in all cases of difficulty, and it is a tribute to the tactful and efficient working of the Mission that full advantage of this prerogative is taken, even by the unsupervised students, who in their first care-free moments may have spurned the idea that any advantage could be derived from keeping in touch with the Mission.

The Egyptian student community in England is a microcosm of Egypt; the throng of young men and women who surged round Zaghloul Pasha in the rooms of Claridge's Hotel can have suffered nothing by comparison with the most fervid hero-worship accorded to the national hero in Cairo itself. It is, therefore, a tribute to the bearing and good sense of the Egyptian students in England that, wherever they congregate for study, they are welcome guests, who repay the country's hospitality by their adaptability and the correctness of their attitude.

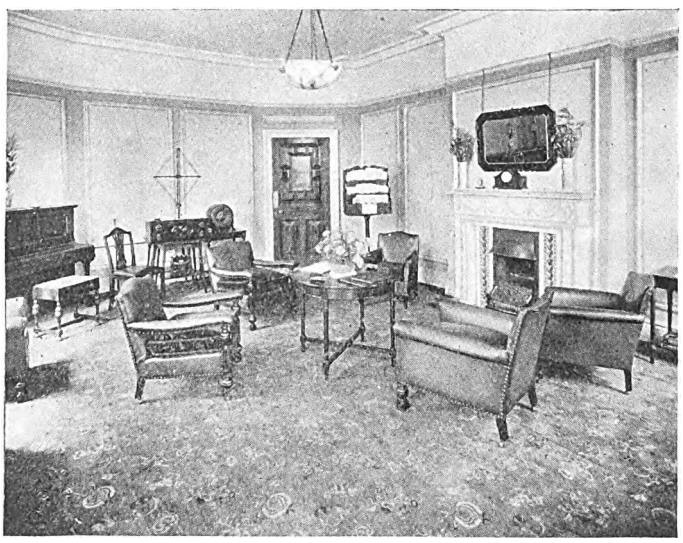
THE EGYPTIAN CLUB.

No reference to the Egyptian student community would be complete without a word on the Egyptian Club in London. In view of the number of students in the British capital it was most desirable that they should have a meeting place of their own. The Egyptian Minister, Aziz Izzet Pasha, interested himself in the matter, and thanks to his initiative and to the generous support of King Fuad the students now have a Club House at 71, Baker Street, which was formally opened early in 1925. The accompanying photographs give some idea of the accommodation provided in the building. It is inevitable that a Club of this kind should not be able to exist solely on the fees paid by students. There can, however, be no question that a country which sends as many as six or seven hundred of its young men to study in England ought to see that they have some common meeting ground. The Egyptian Government realising the importance of the Club promised a subsidy of £1,500 a year, and it is a matter for regret that the Legislative Chamber, probably in the absence of any clear understanding of the usefulness and indispensability of the Club, decided this year to cut



The Lounge in the Egyptian Club.

down its subsidy to £1,000. Better counsels, it is hoped, will ultimately prevail and that the grant will be restored to the former figure.

There are six main rooms in the Club—a Lounge, Library, Dining Room, Card Room, Billiards Room and a Ladies' Room, the furnishing of the whole building being in the hands of Messrs. Waring and Gillow. The two photographs reproduced on this and the previous page are an indication that in regard to comfort and general utility the Club has been well equipped. Members have the advantages of an adequate supply of newspapers, including the Egyptian Press, as well as of a wireless installation. In the Billiards Room are two tables, one English, the other of the Continental (non-pocket) type. The catering is good and inexpensive.

It is possible that Egyptian students arriving in London for the first time might wish that the Club could serve the purpose of a Hostel, where they could find accommodation until such time as they are billeted in permanent quarters. If the number of students in England continue to increase such a hostel will become a necessity. In the meantime the Club supplies a rendezvous not only for students in London, but also for the more numerous section in the provinces when on a visit to the capital.

Egyptian Handicrafts

The wonderful handicrafts of Egypt are awaiting your inspection at our London showrooms. Here may be seen veritable works of art which you can be assured are genuine native productions at prices which will agreeably surprise you.

Here are two examples :—

COLOURED TENTING WORK

Extremely decorative, copied from Cartouches in the Egyptian Temples. Suitable for Mural Decorations, Splashers, Cushions, etc.

Prices : 18" x 18" **2/6** Superior **4/6**

Mystery

The Sphinx stands as a symbol of the riddle of the ages, and Egypt is full of the mystery which attracts and holds the imagination. But perhaps Egypt's greatest secret is the way in which she restores to vigour and vitality those who seek her sunshine in winter, weary of grey skies and chilly mists. In that clear dry atmosphere, which preserves paintings and monuments so miraculously, human ills seem to vanish like the transient haze which follows the afterglow before it fades into the deep blue Egyptian night.

EGYPT

is the land of mystery and modernity, the latter expressed in the luxury of its hotels, and the perfection of its internal transportation facilities.

Season—October to May.

Illustrated Booklet "The Valley of the Nile" obtainable on request.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Administration of the Sudan.

A passage in the recently issued Report on the Administration of the Sudan in 1925 has an interesting bearing on the proposal put forward by Sir Murdoch Macdonald in last week's issue of THE NEAR EAST AND INDIA that in the future administration of the Sudan the country should be divided into its main racial units and that native officials should be employed only in the government of the unit to which they belong. According to the Report, the principle of administrative policy towards the native population is one of decentralised control, and administration is left as far as possible in the hands of native authorities wherever they exist. In pursuance of this policy twenty-four natives now hold the rank of Mamur as compared with six in 1924, the percentage of native clerical staff in the Government service has largely increased, and the numbers of natives sitting as members of magisterial courts are in excess of those of a year ago. At the same time tribal chiefs are being encouraged to accept legal responsibility in petty cases in accordance with the powers conferred by an Ordinance of 1922. It is evident that this decentralisation has not advanced beyond the stage of local application; but if the proposal to regard the Sudan as a group of separate units rather than as a single unit meets with any support in authoritative quarters, it would be well if the principle of confining native officials to their own race as far as possible from the very beginning were put into practice. Every effort is being made to restrict the output of Gordon College to the actual needs of the country. As the years pass, however, the number of natives in Government service steadily increases, and it can be only a matter of time before a situation similar to that which led to the introduction of the Reforms in India is created in the Sudan, unless a clear distinction is drawn between local administrations and the Central Government.

The Indictment of General Pangalos.

General Kondylis' first Minister of Justice, who held his post for a few days or weeks only, but in that short time delivered himself of several unjudicial and injudicious utterances, invited all Greeks who felt themselves in any way inconvenienced by the Pangalos régime to bring actions against the former Government. A more dignified proceeding, it would have been thought, would have been for the new Greek Cabinet to formulate a State indictment against the ex-Dictator on such counts as were of national importance and to leave the matter in the hands of the Court before which General Pangalos is to be arraigned. The indiscretions of the late Minister of Justice, however, have resulted in an orgy of charges against the Dictator, which do no credit to Greece and may do her some harm. The Supreme Court of Inquiry has already disposed of one charge, that brought by the new Minister of Justice, who wanted General Pangalos and his Ministers tried for murder for having, on the strength of a retroactive legislative decree, caused two colonels convicted of embezzlement to be hanged. It has now to decide whether it will order the Dictator and his Cabinet to be tried on a charge of "fraud" for having "for personal reasons negotiated a treaty with a foreign State whereby Greece was to be deprived of part of her sovereign rights over national territory." The formulation of this charge is not likely to improve Greek relations with Yugoslavia, who has already had her misgivings aroused by the postponement of the ratification of the treaty in question. It is possible that much of what took

Digitized by Google

place under the Pangalos régime calls for investigation; but the spectacle of the ex-Dictator having to stand his trial on private writs is not an edifying one. One charge that will attract attention is that of bribery. Both General Pangalos's record and his reputation might be regarded as rendering such a charge unlikely; but report was busy during his dictatorship regarding the activities of his immediate entourage, and if any evidence is forthcoming in support of the allegations, it may be difficult for General Pangalos to convince his judges that the dubious practices took place without his knowledge, even though this may well have been the case.

Political Gestures.

Yugoslavia's Minister for Foreign Affairs continues to live up to the spirit of the office of President of the League of Nations' Assembly to which he was elected at the last session. In conversation as well as by means of a statement issued by his Ministry he has been at pains to correct the impression, which had gained wide currency, that the other Balkan States had joined forces to oppose the Bulgarian Refugee Loan. Yugoslavia, it is now stated, was never opposed to the Loan, but was concerned only to obtain adequate guarantees that the money would be put to a proper use. The distinction may not altogether satisfy Bulgarian susceptibilities, in view of the fact that it is more customary in international relations to protest against what has actually taken place than to impute nefarious designs to other States. M. Nintchitch, however, points out that there was no intention to assail Bulgarian rights; and he added, no doubt for the benefit of home consumption that his exchange of views with the Bulgarian Foreign Minister, had been especially interesting, because it came after the recent exchange of Notes and could have good results, subject to the good will of the Bulgarian Government. In Bulgaria this Yugoslav gesture will be welcomed, although it may be regretted that it was not made before M. Buroff's visit to Signor Mussolini. So long as bitterness and suspicion are allowed free play in the Balkans the different States will feel compelled to take out insurance policies with countries outside the Peninsula. There is no reason to suppose that Italy's activities in the Near East are in any way hostile to Yugoslavia; but with M. Raditch still liable to break out into platform oratory, there must always be the danger of Italian resentment reaching a critical point. The surest way of preventing Italy's economic aspirations from leading to political designs in the Balkans is for the Balkan countries to bring about their own political consolidation on the basis of mutual trust and respect.

Danube Navigation.

Although more than a year has passed since the League of Nations' Delegate submitted to the League's Advisory and Technical Committee for Communications and Transit his Report on Danube navigation, the Economic Conference which is to be summoned to discuss the Report and its recommendations has not yet met. It is satisfactory, however, to learn from the Chairman's speech at the annual general meeting of the Danube Navigation Company that within the last few weeks the various navigation companies in which the British company is interested have established a system of much closer co-operation than has existed in the past. The hindrances that have been placed since the War is the way of trade and traffic on the Danube are an excellent illustration of the extent to which chauvinism has been allowed to override common sense. Before the War the Danube crossed no frontier between Passau and Orsova, a distance of 790 miles. In this section there are now four frontiers and six frontier examinations. Frontier formalities, it is stated in the Report, sometimes entail delay amounting to an entire day; and this when the total Danube fleet is much larger than it was before the War, while the traffic is substantially reduced. British interests in the navigation of the river might have been expected to have used their influence to bring about co-operation between the different States at an earlier date.

THE KING OF EGYPT.

In celebration of the accession of His Majesty King Fuad I., the Egyptian Chargé d'Affaires, Sesostris Sidrouss Bey gave a Dinner Party at Claridge's Hotel on October 8. The guests included:—Their Excellencies the Spanish Ambassador, the Belgian Ambassador, the French Ambassador, the Brazilian Ambassador, the Japanese Ambassador and Baroness Matsui, the Portuguese Ambassador, the Swiss Minister, the Greek Minister, the Hungarian Minister, the Afghan Minister, the Italian Chargé d'Affaires, the Persian Chargé d'Affaires, the Albasian Chargé d'Affaires, the Iraq Diplomatic Agent and Madame Jafar Pasha El-Askeri, Lord Lloyd, High Commissioner for Egypt and the Sudan, and Lady Lloyd, General the Rt. Hon. Sir John G. Maxwell and Lady Maxwell, Lieut.-Col. Sir Henry McMahon and Lady McMahon, Sir Cecil and Lady Hurst and Miss Hurst, Sir Malcolm McIlwraith and Miss McIlwraith, Mr. and Mrs. Hubert Montgomery, Mr. and Mrs. John Murray, Mr. and Mrs. Stephen Gaselee, Mr. J. B. Monck, Mr. F. E. F. Adam, Mr. and Mrs. Nevile Bland, Mr. Philip Nichols, Mr. and Mrs. S. C. Hebard, Mr. J. B. Pownall, Mr. R. D. Blattner,, H. E. Hamed Shawarby Pasha, M.P., and Ahmed Abboud Bey, M.P., and Mrs. Abboud Bey.

THE AIR ROUTE TO INDIA.

At the Royal Society of Arts, on October 20, at 5 p.m., Colonel H. Burchall, D.S.O., will lecture to the Central Asian Society upon "The Air Route to India." Lantern slides will illustrate the lecture, which will be presided over by Sir Michael O'Dwyer.

In continuance of the autumn cruise of the Mediterranean Fleet, the following places will be visited by the ships until the last week of the month, when the Fleet is due back at Malta; Warspite, which left Ayas Bay on October 10, will stay at Alexandria from October 12 to 22, being joined there by the Royal Oak from Jaffa. The Resolution left Famagusta on October 10 for Port Said, where she is staying from October 12 to 21. The Dragon, Dance and Dauntless visit Limasol, Galatz, and Constanza respectively. The Second Submarine Flotilla left Syra on October 9 for Malta, leaving that port afterwards for England. The hospital ship Maine, which left Marmaric on October 6, was at Limassol from October 7 to the 16th.

CROSS-CURRENTS IN THE NEAR EAST.

At the present time the honours for diplomatic activity belong, without doubt, to Italy. The sphere of her recent agreements stretches from Spain to the Yemen, but it is chiefly in the Near East that her policy appears to be following a definite line. She is now linked by treaty with Czecho-Slovakia, Yugoslavia and Roumania; the visit last week of the Bulgarian Foreign Minister to Rome, where he had a long conversation with Signor Mussolini, suggests that in Italian opinion the series of treaties is not yet complete, although the establishment of closer relations between Bulgaria and Italy may not for the moment assume a formal character. As far as the Greeks are concerned, Signor Mussolini has already made it clear that he would welcome a definite understanding, and attempts to revive the *rapprochement* inaugurated under the Pangalos régime may be expected as soon as more settled political conditions have been introduced in Greece. It is difficult to believe that Italy's activities in the Balkans are being prosecuted on any haphazard plan. The practical value of the political treaties in themselves may be problematical; but in the aggregate they represent a resolute intention on Italy's part to have the Balkans well disposed towards her. If they did nothing more than smoothe the way for economic penetration, they would be a sound move from the Italian point of view. A wider significance, however, may attach to them in the light of possible developments in the Near East. In their rivalry for the *beaux yeux* of the Balkans, Italy appears to have outstripped France; not only has the adoption of a definite policy proved more successful than the spasmodic and half-hearted overtures for which alone France has found time in the midst of her other preoccupations, but Italy has also benefited by insisting less on an immediate *quid pro quo* from the Balkan State with which she enters into an agreement. While France has been unable to look beyond the needs of the moment, Italy has been content to lay the foundations of a long-sighted policy. She has, moveover, been more consistent than her rivals: for while France did not hesitate to ally herself with Turkey at a time when the latter's relations with the Balkans were in a state of flux, Italy has made it clear that she retains an open mind as to the part which Turkey will ultimately play in the world scheme.

In the circumstances the Turks can plead some justification for uneasiness with regard to Italian policy. Italy's insistence upon friendly relations with the Balkan States may denote nothing more than a desire to provide economic outlets for Italian goods. At the same time there is for Turkey the suspicion of a ring fence in the way in which Italian agreements in the Balkans are promoted side by side with the obvious determination to improve Italian relations with Soviet Russia. If such thoughts do occupy the minds of Turkey's rulers, the present trend of Turkish policy becomes the more difficult to understand. In the resolve to build up a Turkey that shall be of benefit only to Turks, the Angora Government is riding roughshod over foreign interests in the country. It is not the case of a carefully designed programme, which, operating over a number of years, would provide for the gradual substitution of Turks in positions now held by foreigners. Effect is given to the policy by fits and starts; one day it is a case of restrictions on the foreign mercantile marine, regardless of the consideration whether Turkey owns a sufficient number of ships to take its place; another day all the Chambers of Commerce are to close their doors. In the carrying out of this policy there must necessarily be a constant risk of collision between Turks and foreigners. The incident of the British girls' school in Constantinople would hardly have been closed on the same lines, if it had been an Italian institution. With the precedent of Corfu before them it is a matter for surprise that the Turks, who have already shown a nervousness regarding Italian intentions, should deliberately go out of their way to pick quarrels with the foreign communities in their midst. Italy's Balkan agreements still leave the great problem of her surplus population unsolved. As a matter of national concern the problem becomes more insistent every day, while Asia Minor, lying largely fallow under the short-sighted policy of Angora, remains one of the most attractive fields for Italian emigration. When it comes to a question of fighting, Turkey shows herself virile enough; but the adoption of a foreign policy which courts disaster with a fatalistic indifference argues a lack of mental qualifications which goes far to confirm the claims of those who deny the Turks the capacity to make good.

In the face of the interest that both Italy and France are taking in the Balkans, the apparent aloofness of Great Britain from developments in that part of the world may seem strange at first sight. There can be no question of following the lead of our Allies in this direction. France's anxiety for reinsurance treaties against Germany is not shared by Great Britain, who adopts a more loyal attitude to the Covenant of the League of Nations. If Italy is seeking to secure her land communications, as it were, in the event of trouble with Turkey, that again, is her affair. A Turkish Government capable of a more intelligent appreciation of world forces would make a point of cultivating British friendship at every turn, in order to have an adequate makeweight against possibly high-handed action on Italy's part. As far as the Balkan States are concerned, Great Britain's interests are restricted to seeing them advance as rapidly and as surely as possible towards material prosperity, unhampered by political entanglements which would make them the sport of bigger forces in Europe. It is a matter for regret that more definite encouragement of these interests is not provided by the British Government. There would be no suspicion of an attempt to compete with Italy and France for Balkan favours. Great Britain, indeed, looks for nothing from the Balkans save that they should settle amicably their own affairs and devote attention to their material progress. As the financial centre of the world, however, this country can promote its own interests in the Near East by paying more attention to business openings in the different States. Many enterprises will be mooted that can have no attraction for British firms, but there will be others that offer sound and lucrative investments, and will serve to develop the country in question for further business. As things are, it is to be feared that neither officially nor unofficially do the Balkan States receive much encouragement to turn to Great Britain for assistance. There is too often a tendency to group them all together as unprofitable propositions—a short-sighted view that makes no allowances for their troubles in the past or for their potentialities in the future. Yet the surest way to provide for the payment of past debts, which have fallen into arrears owing to conditions that disturb the financial equilibrium of the whole world, is to help the countries of the Near East to make a fresh start after the devastating results of the War. A lead might be given to this end, if the British Government were to show a more direct interest in the efforts of the Balkan peoples to compose their differences and to come together for the joint promotion of their economic welfare.

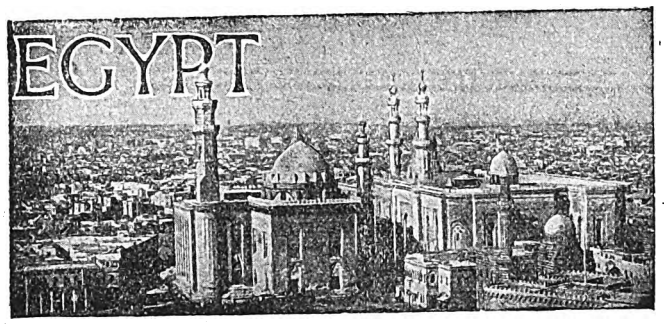
The Near and Middle East*

From Our Own Correspondents.



Cairo, October 3.

The Cotton Crisis.

The cotton market again during the past week has been very erratic, losing nearly two dollars one day and recovering most of the drop within twenty-four hours on receipt of a cable stating that Texas farmers are raising a fund to take a million bales off the market. The general tendency is towards a further weakening, and the local prophets who, as recently as a fortnight ago, were prophesying a big rise in the near future, have been reduced to silence. Not so the growers as a whole, for they are loud in their complaint that present prices involve production at a loss. The Press is busy discussing the present crisis and its causes, and suggests numerous remedies, ranging from still further restricting the cotton area to the formation of a syndicate of growers sufficiently capitalised to take up practically the whole of the present crop and hold it until prices improve. Unfortunately for the prospects of this scheme's being launched, surplus capital is just about the last thing which the majority of landowners can find at the present time. The Egyptian farmer is a thriftless individual as a rule and when times are good does not allow himself to be disturbed by thoughts of the possibility of lean years in store. The larger cotton growers are apt to invest their profits, in years of prosperity, upon trips to Europe, new residences in Cairo and costly motor cars. The smaller farmers turn their savings into jewellery for their womenfolk. Already, as a result of economic stress, fellaheen women have tearfully parted from many of their gold bangles. Unless price levels improve in the near future there are likely to be many luxurious automobiles to be picked up cheaply in the local second-hand market.

It is interesting to note that, in spite of Egypt's economic straits, there are few suggestions that the Government should now enter the cotton market as a heavy buyer. Before rising for the vacation Parliament authorised the Government to buy any quantity of cotton that it might think necessary. But up to the present there has been no sign of a wish to use this permission. Even the newspapers which were at one time the most ardent advocates of Government purchases appear now to be doubtful of the value of such a policy as a means of raising values, and to be chary of risking public money in so speculative an enterprise.

Egypt's Motor Market.

The state of the cotton market is, of course, reacting on business of every kind. This is always a slack season of the year, but it is the general experience that this summer there has been even less commercial activity, excepting in the building trade, than usual. Yet there is no lack of confidence that conditions will soon right themselves. The motor business is an interesting index to the general position, since motor-cars are generally purchased with money that is surplus to requirements for sheer necessities. Motor sales in Egypt during the present year have been good, and it is satisfactory to note that British cars, especially of the £150—£250 (in England) class, are rapidly establishing themselves in popular favour here. Optimistic views are apparently held regarding the future of the Egyptian motor-car market, for at least three big American concerns are making preparations for greatly increased sales. The Ford Company is establishing an erecting plant at Alexandria, so that Fords for Egypt and the Near East generally will in future be assembled here, instead of at Trieste. The Studebaker Corporation has lately been engaged in an extensive advertising campaign and its local agents have just acquired magnificent premises in Cairo. The General Motors Corporation, which handles Cadillac, Oldsmobile, Buick, Oakland, Pontiac and Chevrolet cars, is also making a bold bid for the Egyptian market, having acquired very extensive premises at Alexandria, where preparations have been made to handle a large number of cars simultaneously. These three concerns have all made large assignments for very extensive advertising campaigns during the coming winter, and everything points to their making very big efforts to secure a large share in Egyptian expenditure on automobiles. When it is remembered that Italian manufacturers, notably Fiat and, in increasing degree, Ansaldo, together with the French Citroen and also the Renault, to mention only the most popular, have already secured most advantageous positions in local esteem, it will be realised that the British car manufacturer is "up against" a stiff proposition in attempting to secure big sales in Egypt. Nevertheless, the position from a British point of view, is improving. More and more British cars are to be seen with Egyptians, private owners or chauffeurs, at the wheel. Many Egyptians like a big car, capable of carrying seven persons, at a moderate price, and America gets most of the orders from this class. But it is steadily being realised that, where light cars are concerned, "British goods are best."

An Automatic Telephone Exchange.

Cairo now has an automatic telephone exchange, and the Telephones Administration is watching with some anxiety the success of the experiment. For in this country the telephone-using public is a rather difficult one, from the point of view of the telephone operators. The latter are required to have a knowledge of four languages and, in practice at any rate, to be able to assist telephone users who have no clear idea of the correct way of asking for a number, for in Arabic the usual method is to say "Four and twenty: six and fifty" for 2456, and so on. As many of the callers are illiterate and have no notion

of what those figures look like on paper, it has been anticipated that considerable difficulties will accompany the installation of the automatic system. The exchange, which has been supplied by Messrs. Siemens, of Woolwich, includes 2,000 lines. If the automatic system proves a success further exchanges in Cairo will be converted to the new method.

The "Amir Farouk."

The new Egyptian coastguard cruiser, the Amir Farouk, was taken into commission yesterday, when the Director-General of the Coastguards and Fisheries Service was "At Home" on board. The Amir Farouk, built by Messrs R. and W. Hawthorn, Leslie and Co., is a very handsome vessel, with a speed of 17 knots and is much the finest unit of the Coastguards and Fisheries fleet.

ALBANIA.

Tirana, September 17.

Opening of Parliament.

The Senate and Parliament resumed their autumn session on the 15th inst. The opening took place with great ceremony and display of military force. The representatives of the foreign Diplomatic Corps were present in uniform. There was a military guard round the Houses of Parliament, and two files of soldiers lined the streets from the President's house to Parliament, keeping the streets clear and examining everyone who approached. Gendarmes were posted in upper storeys of houses situated in the street through which Ahmed Zogu had to pass. The precautions taken were extraordinary and without example in Albania's history.

The Municipality had given orders for the whole town to be decorated with flags.

Two Houses.

The President of the Republic wore gala costume and returning to the Salon mounted the tribune and read the opening speech, which is known in Albania as "The Speech from the Throne," a translation of which is as follows:—

"The ceremony of the opening of the Legislative Session is invested with special importance for Tirana, the Assemblies for the first time taking their place in fitting quarters. The small House which has just been formally opened is a modest building. Begun two years ago, it was originally intended to serve as an Officers' Club. The present Government completed it, arranging for it to be used as a House for the Senate. More recently it was decided that not only the Senate, but also the Chamber of Deputies should hold their meetings there."

It must be remembered that Tirana is exceedingly poor in public buildings, and that, with the exception of the Ministry of the Interior, which possesses premises bequeathed by the Turks, all the other Ministries and administrative bureaux have their headquarters in private houses rented by the Government, and are subject to very frequent changes.

Besides the House of the Legislative Corps, the House of the President at Durazzo has been inaugurated. This House should be on the lines of a small villa, which the inhabitants of Durazzo ought to have presented to Ahmed Zogu, the price of which would not have exceeded £500 sterling. Now the original plan having been altered several times in the course of construction, the modest rustic villa has become a small Palace, and the total sum necessary for its completion will, without doubt, exceed a million gold francs (40,000 to 50,000 pounds sterling). The population of the small town of Durazzo being unable to defray this expense, an additional centime has been imposed on goods imported by Durazzo; the revenue from this new tax will be devoted to the completion of the Palace. President Ahmed Zogu has been living at Durazzo for the past three months.

At Home and Abroad.

The President of the Republic in his opening speech commenced by speaking of the good relations existing between Albania and the Great Powers, as well as with her neighbouring States, and emphasised that all the efforts made with a view to drawing the Balkan States closer together would find the best possible reception in Albania.

The President next spoke of the care which will be needed in the relief of agriculture and the organisation of the Army and of the police. Then, realising that there will be a deficit of at least 15 per cent. in the current receipts and expenditure, he announced the necessity of effecting economies in the different sections of the Budget which was voted at the end of last Session.

Disputes over Land.

Article 124 of the Statute states: "The right to rural property in Albania, in whatever title, belongs solely to Albanian citizens."

The clauses in the Statute are clear: foreign subjects cannot acquire property outside the towns. Nevertheless, an Italian company have found a way of becoming owner of an immense farm of 5,000 hectares at Shijak, between Durazzo and Tirana. The three begs who have sold their properties have granted a lease of 99 years, thus slightly disguising the sale. This news has not failed to create a certain impression in Albanian circles.

Another Italian company has been contriving for several months to obtain the lease of State lands in Muzequiée as well as the fishing concession of the whole Albanian coast. Article 117 of the Constitutional Statute of the Albanian Republic provides: "No portion of State landed property can be sold or let for a period of more than 20 years without a law." It is owing to this Article that the Italian company in question is striving to arrange a law permitting it to lease farm land in the plain of Muzequiée and the fisheries for a period of 50 years.

The End of Osman Bali.

A week before the opening of the Chambers a sensational assassination took place at Tirana; the famous Osman Bali was killed before the door of his house. Osman had been for many years the confidant of Essad Pasha Toptani and his faithful instrument in causing the assassination of more than 20 men, among others Hassan Riza Pasha, Governor of Scutari. Under the present régime Osman Bali was appointed Major and became head of Ahmed Zogu's bodyguard. The assassination of Osman Bali was undoubtedly the outcome of a vendetta in connexion with a former crime.

Sofia, October 1.

The Forthcoming Elections.

The political re-grouping which I mentioned in my last letter, is becoming more and more marked as the time approaches for the elections to the General Councils—which will form a prelude to the general elections for the Legislature early in 1927.

This week two remarkable conferences took place of the two Agrarian sections, following upon that of the Liberals during the second half of September and preceding that of the Democrats, who will hold a meeting in three days' time at Sofia in order to examine the political situation and to clear up the present uncertain state of affairs in the party.

The Agrarians are divided into two irreconcilable groups: that of the old leader Draghieff, of Stara Zagora, which indisputably represents the minority, a small minority of the party, but which pretends to comprise the Agrarian *élite*, and that of the majority, led by the former Ministers Tourlakoff and Tomoff, which, although still bewildered and disorganised, is preparing by means of a methodical reorganisation to return to the active political life of the country. Draghieff's partisans, who were hitherto collaborators with rather than adversaries of the Government, have just held their Congress at Sofia, where they approved the agreement concluded with the Radicals, and have decided to enter into pourparlers with the other democratic parties, that is to say, in the first place with the Democrats for the formation of a *bloc* which will clearly place them in the Opposition. On the other hand the leaders of the Tourlakoff-Tomoff group, which represents the large majority and, one may say, the whole Agrarian party, has recently held a series of important deliberations, which terminated in a resolution approving the first pourparlers with the Liberals and with the Democrats, who will be asked to make a formal entente. It was further declared categorically what the Liberals and the Democrats had already declared, namely, that neither the present Government nor any other Government of the same party of the Democratic Entente has the right to conduct the next elections, which ought to be under the direction of a Coalition Cabinet. Thus the chief political parties, in the centre of which are the Democrats, trend more and more in the direction of an anti-entente union. This orientation is causing serious apprehensions to the Government and the Government party.

CYPRUS.

Nicosia, September 28.

End of the Summer Season.

Platres, the fashionable summer resort of natives and visitors, after a season more prosperous than had been expected, is almost deserted by its crowd of frequenters, which has included many Armenians, as well as Europeans and natives of Egypt. This Platres in the first year of the British occupation was a poor, small village of goatherds and a few wine makers, to which the Royal Engineers constructed a road of 31 miles from Limássol; and the R.E. officers who camped there complained that they could not sleep for the nightingales. Now it is a crowded summer rendezvous, a scene of much gaiety, and of many dances, especially in a large new hotel with its Roumanian jazz band.

Visit of H.M. Ships to Cyprus.

Arrangements that were announced for the approaching visit of many vessels of H.M. Mediterranean Squadron, to at least four of the six island ports, have been altered, owing, it is understood, to other calls, especially in connexion with the situation in China. Considerable disappointment is naturally caused. The number of vessels is greatly reduced. According to present fixtures, H.M.S. Resolution and some destroyers will be at Famagusta from October 7 to 12; and H.M.S. Dragon, with a hospital ship, will visit Limassol.

General News.

It is not yet known when Sir Ronald Storrs will take up his appointment as Governor. If the leave taken by Sir Malcolm Stevenson is first to expire, it will not be until November. His arrival is awaited with keen interest.

There has been much malarial fever in many parts of the island, though nothing like what there used to be before the measures taken since the visit of Sir Ronald Ross. It is hoped that some of the areas that still require drainage and tree planting will call for early attention on the part of the new Governor.

Agricultural depression continues, and the prices of all produce are low. The price of caroubs (locust beans) is very disappointing, being under £3 a ton. The demand in England, formerly so large and regular a customer, is very small; while freights are high owing to the coal strike. Spain, which buys largely, has increased her import duty—a fresh blow.

It remains to be seen what the vintage, now approaching, will do for the large wine-producing districts, and how the output of raisins will be affected.

Teheran, September 24.

The New Cabinet.

As expected, Motamen ul Mulk refused the Premiership, and Mustofi el Mamalek was persuaded to resume office, all the parties in the Mejliss having agreed to support him, in order to put an end to the crisis. The new Cabinet consists largely of the same members as the previous one, to which the Deputies objected, with two new Ministers, Ehtesham es Saltaneh, Interior, and Mohtashem es Saltaneh replacing Vossough ed Dowleh, who has exchanged the portfolio of Finance for that of Justice. The Cabinet is, therefore, as follows:—

Prime Minister, Mustofi el Mamalek.
Minister for Foreign Affairs, Moshaver el Mamalek (Ansari).
Minister of Finance, Mohtashem es Saltaneh (Isfandiari).
Minister of War, Zoka ul Mulk (Foroughi).
Minister of Public Works, Mokhberes Saltaneh (Hedayat).
Minister of Public Instruction, Nassir ed Dowleh (Bader).
Minister of Interior, Ehtesham es Saltaneh (Sabet).
Minister of Justice, Vossough ed Dowleh.

Digitized by Google

Minister of Posts and Telegraphs, Moshir Azam (Atabegi).

The Government's programme is a long and elaborate one. In fact, as one of the Deputies very aptly remarked, during its subsequent discussion, it is far too long and much too ambitious to admit of any Government's ever being able to carry it out.

It contains the usual stereotyped list of almost every conceivable (and some rather inconceivable!) reforms and improvements, many of which are, it is true, urgently needed, if only the Government could carry them through. It mentions, among many other praiseworthy aims, the Government's intention to take steps to improve the present economic situation; to construct reservoirs and dams for irrigation purposes (a vitally important undertaking for which numerous schemes have been submitted of recent years, but never launched); to develop the export of raw products such as cotton and silk; to encourage the granting of Concessions to Persian capitalists for the exploitation of the country's natural resources; and to improve means of transport and internal communications. Agriculture is to be encouraged, and for this purpose a high-salaried American expert has been engaged; and the Government proposes to prepare projects for the gradual sale of Crown jewels and properties to provide funds for the establishment of an Agricultural and National Bank, with a pawnbroking establishment. This would probably be the most widely patronised and most profitable part of the proposed Bank, for since the former Banque d'Escompte de Perse closed down after the Russian revolution there has been no properly organised "Mont de Piété" here, and in the present stringency of money the average Persian, high and low, is sorely in need of some such establishment where he can raise cash on anything he possesses of any marketable value whatever.

I mentioned in one of my recent letters the general surprise caused by the announcement in the local Press that the very considerable revenues from the Sugar and Tea Monopolities were to be devoted towards the capital of the proposed Bank. This statement was apparently inaccurate, as Dr. Millspaugh has refuted it in the Press, affirming that as long as he remains in charge of the finances these funds will be reserved solely for the purpose for which they were originally introduced—the construction of railways—unless the Mejliss decides to divert them to other purposes.

The construction of railways of course appears in the programme, and an American expert has also been engaged in this connexion and is on his way out. His salary is not stated, but the papers recently mentioned (whether correctly or not I cannot say) that one of the applicants for this post demanded a salary of 100 dollars a day! It is well to be an American expert or official in the service of the Persian Government these days! Their salaries and allowances are the envy of all other European officials here, whose pay after many years in the country does not approach that of most of the American officials, even those newly out from the States.

General News.

The summer is practically over, and the weather has become quite cool. The Legations and those who were fortunate enough to be able to take summer residences up country to escape the heat and dust of the town are thinking of returning. The numerous motor-buses which have been employed during the summer to convey the thousands of passengers daily to and from Shemran are now to be put on the streets here, and we are at last to have a regular service of these buses, run by a Russian company. This, if developed, should be a great improvement on the ramshackle "droshkies" drawn by miserable, under-fed horses, on which we have at present to rely to get from place to place in the town. Taxis are too expensive to be much in demand, and what few there are are mostly only broken-down Fords, and unless one is well insured one has to be brave indeed to trust one's life to the tender mercies of the reckless native drivers!

Telegraphic communication with Europe "Via Indo" through Russia has been entirely interrupted for the past two or three weeks, the company's employees in Russia being on strike for increased wages.

NEWS IN BRIEF.

The death occurred at Haifa, on October 4, of Rashid Beik Taleelh, a leader of the Druses.

Officers and seamen from H.M. battleship Royal Oak, last week lying off Jaffa, were entertained by the Municipality of Tel-Aviv, and two dances were arranged in their honour.

A message from Athens states that Professor Sotiriades, while engaged on excavation work on the site of ancient Marathon, on October 5, discovered the breakwaters of the actual port where the Persians landed in 490 B.C.

The Queen of Roumania, accompanied by her son, Prince Nicholas, and her daughter, Princess Ileana of Roumania, and their suite, sailed in the Leviathan on October 12 for the United States, embarking at Cherburg.

The King of Iraq landed at Alexandria from Marseilles on October 9 and took luncheon with Mr. Nevile Henderson, the Acting High Commissioner at the British Summer Residency at San Stefano. His Majesty left the following day for Palestine en route for Iraq.

The annual meeting of the Jerusalem and the East Mission was held at the Church House, Westminster, on October 5. The chair was taken by Lord Lamington, and the speakers were Bishop MacInnes and the Rev. Dr. Danby, Canon of St George's Cathedral, Jerusalem.

According to a Central News message from Constantinople, the Anglo-Turkish Mixed Tribunal has rejected the demand of Abbas Hilmi, the Ex-Khedive of Egypt, for the payment by Great Britain of the sum of three millions sterling as indemnity for the seizure of property in Egypt.

Sheikh Abdullah Ajil, of the Shammar tribe, who is reported to have recently raided Jahrah, a village in the territory of Kuwait, carried off a thousand camels belonging to Ahmed Ibn Jabir al Subah, the Sultan of Kuwait. By the agency of the R.A.F. and the Camel Corps most of the camels have been recovered.

It is reported from Baghdad that after four months in captivity in the hands of the Kurdish rebel chief, Sheikh Mahmoud, Flying Officer Denny and his mechanic, Hirst, were returned to the British lines on Friday, looking well and happy. They both declared themselves satisfied with the treatment that they had received in the fastnesses of Kurdistan.

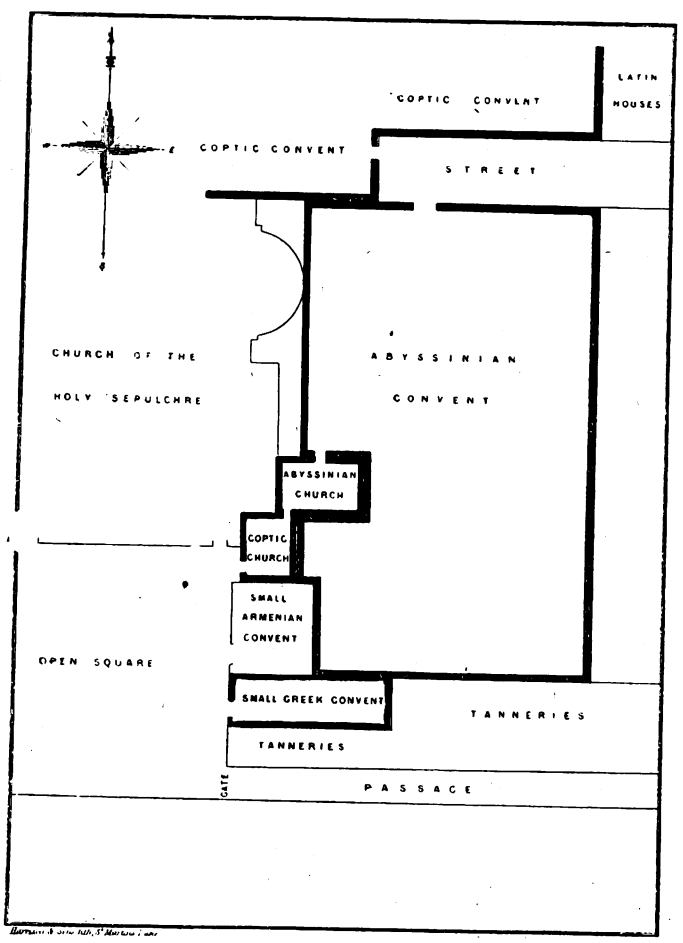
ABYSSINIA AND THE HOLY PLACES.

IV.

By ALEX DEVINE.

Turkish Persecutions.

Consul Finn, however, would not let Sir Henry Bulwer alone: he still kept pegging away. In a dispatch dated June 3, 1862, he informed him that the Copts had lately taken to beating the Abyssinians, both men and women, more frequently, and otherwise ill-using them in various petty ways, besides breaking open the locks of the church. He added that he was unable to obtain any redress for them; for the Pasha was absent on a journey, while the Local Council, to whom he had deputed his authority, refused (by his orders, they declared) to hear any Abyssinian complaint in which the British Consul interfered and in which the complainants did not come into Court as bona-fide Turkish subjects. "As long," he added, "as this question (of nationality) remains unsettled, we are unable to enter into the details of (the



Plan of the Holy Places, published in 1868 by H.M. Government to accompany the White Paper on "The Abyssinians at Jerusalem, 1850-1867."

larger) dispute in order to promote" a settlement of it. This is Mr. James Finn's final appearance in the White Paper. His successor was Mr. Noel Temple Moore, who takes up his parable in a letter to Sir Henry Bulwer bearing the date of September 28, 1863. He announces to the British Ambassador that the long-standing dispute between the Coptic and Abyssinian Communities residing in Jerusalem has broken out afresh, and that, while the Copts have laid their case before the Turkish authorities, the Abyssinians have appealed to him. He tells how he sought an interview with Khoursid Pasha, who met him at once with the inquiry whether there existed in the Consulate any Firman or Vizirial Letter instructing the Governor of Jerusalem to recognise the British protection of the Abyssinians, and how he had to reply in the negative. He then relates that the Pasha told him that in his own general instructions, which he quoted, the Abyssinians were designated as Turkish subjects, and that in these circumstances he could not entertain any representations or admit any right of intervention on the part of the British Consul on behalf of the Abyssinians. The Coptic case was then tried, in the presence of both parties and under the Presidency of the Pasha, before the Mejliss, which decided in favour of the claims of the Copts, allowing, however, the Abyssinians to make use of both the Convent and Chapel under certain conditions. "Not having assisted at the inquiry," remarks Mr. Moore, "I am unable to form an opinion as to the justice of this verdict. It appears that neither party had more than oral testimony to adduce in support of their respective pretensions; but the Abyssinians could add to this the fact of possession. They also allege that their written titles were burnt, purposely, by the Armenians and Copts during the panic and confusion of the plague in this city at the time of the Egyptian domination." It should be explained that in speaking of the time of the Egyptian domination, Mr. Moore refers to that period between 1835 and 1840, during which Mohammed Ali, the Egyptian Pasha, favoured by the French King, Louis Philippe, who wished to make Egypt a second-rate Mediterranean Power dependent on France, overran Syria and secured possession of the Ottoman Fleet. To counter this French move, Viscount Palmerston formed an alliance with Russia, Austria, and Prussia, to drive back the Egyptians and to pacify the Levant. Between September and November, 1840, the British Fleet took Beyrout, Sidon and St. Jeanne d'Arc. Ibrahim Pasha was then forced to evacuate Syria and to retire into Egypt; while Mohammed Pasha was compelled to restore the Ottoman Fleet to the Porte. The Egyptian ruler was, however, granted the hereditary Pashalic of Egypt under the suzerainty of the Sultan.

To return to Mr. Moore and Sir Henry Bulwer. In the dispatch sent by the Consul to the Ambassador, a copy of which he addressed to the Foreign Office, he adds that, when the Abyssinians came to him complaining of the injustice of the decision given by the Mejliss, he advised them to address to him a statement of their case, with all the evidence they could furnish, which he would undertake to submit to Sir Henry's favourable notice. This they had failed to do; and Mr. Moore understood that, following the example already set by their head priest, they were preparing to abandon Jerusalem altogether.

The Abyssinian claims then were again shelved, and two full years elapsed before they became subjects of fresh discussion.

British Relations with King Theodore.

But by that time they had got entangled with the more urgent and serious Abyssinian question of British relations with King Theodore III. A brief space must, therefore, be devoted to an account of the circumstances in which this country became involved in war with Abyssinia. In 1860, as we have already related, Mr. Walter C. Plowden, the British Consul in Abyssinia, between whom and the King there was a strong attachment, was ordered by his Government to return to Massawa. On his way there he was attacked by a rebel named Garred, mortally wounded and taken prisoner. The King gave battle to the rebels and in the action Garred was killed by Mr. Plowden's friend and companion, Mr. J. T. Bell, an engineer, who himself lost his life in preserving that of King Theodore. The King took his revenge for the loss of his friends by butchering or mutilating 2,000 of the rebels, an act which was, of course, a precursor of the madness which eventually overtook him. When the news of Mr. Plowden's death reached England, Captain C. D. Cameron was appointed to succeed him as Consul, and arrived at Massawa in February, 1862. He proceeded to the camp of King Theodore, to whom he presented a rifle, a pair of pistols, and a letter in the Queen's name. In October Captain Cameron was sent home by the King with a letter to Queen Victoria, which reached the Foreign Office,

Digitized by Google

then under the direction of Earl Russell, on February 12, 1863. By some unaccountable lapse of courtesy and good sense this letter was put aside and no answer was returned to it; and to this untoward circumstance in no small degree are to be attributed the difficulties that subsequently arose with Abyssinia. In November dispatches from England arrived in that country, but no answer to the Negus's letter; and this neglect, together with an ill-advised visit paid by Captain Cameron to the Egyptian frontier town of Kassala, where sixteen years later General Gordon, then Governor-General of the Sudan, was himself arrested by a later Abyssinian ruler, King John, greatly offended the always suspicious and irascible King Theodore. Accordingly in January, 1864, Captain Cameron and his suite, together with Messrs. Stern and Rosenthal, were cast into prison. When the news of this outrage reached England the Government resolved, when too late, to send an answer to the King's letter, and selected Mr. Hormund Rossam to be the bearer. He arrived at Massawa in July, 1864, and immediately dispatched a messenger requesting permission to present himself before the Negus. Neither to this nor to a subsequent application was any answer vouchsafed until August, 1865, when a curt note was received stating that Consul Cameron had been released, and that, if Mr. Rossam still desired to visit the Negus, he was to proceed by the route of Gallabat. Later in the year King Theodore became more complacent, and the British party, on arrival at the Royal camp in Darnot on January 26, 1866, was received with all honours and was afterwards sent to Kwarata on Lake Tana, there to await the arrival of the captives. The latter reached Kwarata on March 12, and everything pointed to a favourable settlement of the episode. A month later the party started for the coast; but they had not gone far when they were all brought back and put into confinement. Although detained as prisoners they were not at first unkindly treated: but at the end of June they were sent to Magdala, where they were loaded with chains and suffered from hunger, cold, misery and suspense. And yet it was not till July, 1867, that the British Government resolved to send into Abyssinia an army of 30,000 men under Sir Robert Napier to enforce the release of the captives.

Earl Russell and Consul Moore.

Nearly two years before that decision was arrived at Earl Russell, smarting under the refusal of King Theodore to accept the olive branch held out to him, reopened the question of the Abyssinian claims in Jerusalem, and associated it with that of King Theodore's imprisonment of British subjects by sending a peremptory dispatch to Mr. Moore (September 27. 1865) in which he inquired whether there was any truth in the statement that one of the causes of the ill-treatment of British subjects (by the Abyssinian King) had arisen out of the Consul's failure to afford to Abyssinians in Jerusalem that protection which had been given them by his predecessor, and out of Mr. Moore's having asserted that in thus acting he was obeying the orders of Her Majesty's Government. Earl Russell desired to know to what orders the Consul was supposed to refer as superseding the positive orders given to the Jerusalem Consul by the Earl of Malmesbury on July 10, 1852. In a dispatch dated October 21, 1865, Mr. Moore replied that the statement in question was in both particulars incorrect. The contents of his report, made both to the Constantinople Embassy and to the Foreign Office, showed that he used his good offices for the protection of the Abyssinians to the full extent of the authority given him. "Insistence would have been worse than useless," added Mr. Moore. "It would have led to profitless collision with the Turkish authorities. Khoursid Pasha, the present Finance Minister of Turkey, was peculiarly jealous of Consular intervention in any form: and, although I explained to his Excellency that my interposition was one of good offices, he could not, or would not, see the distinction between that and official interference."

The forcible-feeble "Johnny," who introduced into the House of Commons Reform Bills which he had to withdraw and passed anti-Popery statutes which he could not enforce—he was pictured by Leech in *Punch* as "The Boy who chalked up NO POPERY and then Ran Away"—was the last man in the world who should have rashly attacked a subordinate on the ground that he had not taken sufficiently vigorous action. Still Earl Russell thought that Consul Moore had neglected his duty, and in a letter dated September 27, 1865—the very day on which the angry note to that Consul was written—he unburdened himself on the subject to Consul-General Eldridge in a would-be Palmerstonian letter, from which we make the following extract:—

> "You will see that, instead of carrying out the instructions of Her Majesty's Government he (Consul Moore) offered no remonstrance to objections raised by the Turkish Governor to his interference, nor to the assertion of the Pasha that Abyssinians were Turkish subjects. Mr. Moore's predecessor had rendered good offices to Abyssinians as members of a Christian Church in spiritual communion with the Church of England, and Mr. Moore should equally have remonstrated against the language of the Pasha and the acts of the Turkish authorities. But, if a British Agent submits, without protest at the right time, to whatever may be said to him by a foreign authority and thus leaves the instructions of his Government to be dealt with in a different spirit to that in which they were framed, such Agent becomes practically of little use."

In this same letter, a portion only of which is quoted in the White Paper, Earl Russell seems to have adopted the course of instructing Consul-General Eldridge to go to Jerusalem and to make inquiries into Consul Moore's conduct on the spot. The result of this manœuvre was a complete exoneration of the Consul from blame. But before we give an account of the terms of this exoneration we must note that on October 18, 1865, Viscount Palmerston died at the age of nearly eighty-one, that Mr. Gladstone succeeded him as Leader of the House of Commons, vacating the Foreign Secretaryship in favour of the Earl of Clarendon. Consul-General Eldridge was thereby placed in the fortunate position of being able to report on Consul Moore's case to a Foreign Secretary who was unprejudiced. He writes to Lord Clarendon from Beyrout on January 20, 1866, and says that during a recent visit to Jerusalem he has devoted much of his time to a careful investigation of Mr. Moore's proceedings in regard to the Abyssinians and that, the more fully to

understand the whole question, he has examined with much diligence the correspondence of Mr. Finn from 1850 to 1862. As a result of this investigation and examination he has come to the conclusion that the fatal mistake which has vitiated British diplomacy from start to finish in dealing with the question of the Abyssinian Community in Jerusalem has been the Foreign Secretary's, and Sir Henry Bulwer's, failure to see that the recognition by the Turkish Government of the Abyssinians as non-Rayahs was an indispensable preliminary to any effective protection of this people by the British Government. This was very plain speaking, and perhaps we had better quote the Consul-General's actual words. This is what he says:—

"From this correspondence it appears that Mr. Finn repeatedly represented, both to the Foreign Office and to Her Majesty's Embassy (at Constantinople) that, in order to afford to the Abyssinians any efficient protection against their powerful enemies and oppressors, it would be necessary to procure their recognition by the Porte as foreigners, and as under British protection; foretelling, what has since occurred, that, unless this could be done, they would be deprived of their property in Jerusalem in favour of the Copts, with whom the Turkish authorities persisted in treating them as identical, and in obstinately denying the right of the English Consul to intervene in their affairs. On the other hand, I find that, in answer to these representations, Mr. Finn is referred by Earl Russell's dispatch of May 29, 1862, to the original instructions of 1852, authorising him to use his good offices for the protection of any Abyssinians who may chance to be in Jerusalem, as being members of a Christian Church in spiritual communion with the Established Church of England; and Earl Russell modifies this authority by an injunction to use it *with caution and prudence*. Her Majesty's Ambassador also, when appealed to by Mr. Finn in June, 1862, declines to interfere in the matter. . . . Such appears to have been the position of affairs when Mr. Moore succeeded Mr. Finn. In 1863, when the quarrel between the rival sects . . . . seems to have reached its culminating point, Mr. Moore attempted to use his good offices in behalf of the Abyssinians. . . . But, on being met with the old objection that the Abyssinians are Rayahs, and that he had no right to interfere, . . . he took the *cautious and prudent course* of reporting the circumstances to his superiors, and of awaiting further instructions should it be decided advisable to adopt more formal and energetic measures"

It will be agreed, we think, that the Consul-General displayed a rather remarkable courage in passing this moderately expressed but none the less scathing censure on Earl Russell in a dispatch addressed to the Premier's Foreign Secretary, more particularly if it be remembered that the inquiry which called forth this censure was instigated by Earl Russell himself. Whether Mr. Eldridge, however, was justified in aspersing the conduct of Mr. Finn is a matter not quite so easy to settle. The paragraph conveying this aspersion runs as follows:—

"In regard to the alleged influence of Mr. Moore's conduct upon the treatment of British subjects in Abyssinia, I am more inclined to attribute any blame there may be to the injudicious zeal of his predecessor, who, from his dispatch of June 21, 1858, appears to have informed some Abyssinians of distinction who visited Jerusalem that their fellow-countrymen were, in this country, under Her Majesty's gracious protection, and to have addressed a letter to the King of Abyssinia to the same effect."

In assuring Abyssinians resident in or visiting Jerusalem that they were under Her Majesty's gracious protection he (Mr. Finn) was obviously justified by the instructions which the Earl of Malmesbury gave him in 1852 and which Earl Russell endorsed in 1862. The whole dispute between the Foreign Office and the Jerusalem Consulate was due to the pusillanimity of Earl Russell, who quibbled about the difference between instructing the Consul "to use his good offices for the protection" of Abyssinians and that Consul's action in assuring Abyssinians that they were "under Her Majesty's protection." How was a distinction to be made between actual protection and good offices involving protection?

THE WEEK AT HOME.

London, Tuesday Morning.

The Victors and the Spoils.

Last week the Miners' Federation definitely rejected the Government's final offer in respect of the miners, and actually suggested to the districts that the safety men should be withdrawn and the pits flooded. This, of course, is the end. The Government offer is automatically withdrawn; the pits will not be flooded; the mine-owners' victory, untempered even by Government modification, is complete. District by district must now make what terms it can with the owners, and one by one they will assuredly succumb to the advice which hunger dictates.

With the collapse of central authority among the men, one of the greatest tragedies in Britain's industrial life may be said to be finishing. And yet perhaps it is not an end. For those who believe that the nation has won, this gradual return of the men to the pits may appear as a fresh start to the securing of prosperity and peace. But for those who believe that only the mine-owners have won, it is difficult to understand that a return to work is synonymous with the establishment of peace in the industry. If the owners have realised during the last months of idleness that in the nation's view (or at any rate, in the view of a considerable part of the nation) their responsibilities are greater than those of captains of other industries; if they really attempt to introduce new methods, that is, then all this suffering may not have been entirely fruitless. It may be that they will renounce the political gains which they could indulge from this victory, and concentrate upon the salvaging of their industry. The spoils are there for them to do what they like. We shall see.

The Scarborough Conference.

Perhaps it was on account of their overwhelming position in the country, or perhaps on account of the other Congress, of Churchmen, at Southport, that made the Conservatives in their annual conference at Scarborough

Digitized by Google

seem a little jejune. Two subjects, however, did arouse enthusiasm: the reform of the law pertaining to Trade Unions, and the necessity for the expulsion from this country of the "Reds." With the Prime Minister's speech, which was, of course, the main thing of the Conference, I will deal in a minute.

These Conservatives in conference are rather likeable fellows. Their loyalty and energy are immense, and no one need doubt that they mean well. But it is permissible to state that their resolutions do more credit to their hearts than to their heads. Look, for instance, at the resolution on Trade Unions which was passed unanimously. Having stated that "the present law relating to trade unions constitutes a ménace to national security, while depriving the individual of political and industrial freedom," it urged the Government: (1) to make illegal any strike called without a secret ballot of the members of the trade union affected; (2) to increase the security of the individual worker against victimisation and intimidation on account of his political beliefs; (3) to make mass picketing and the picketing of a man's private residence illegal; (4) to require the national accounts of trade unions to be audited by certified chartered accountants.

Some of these recommendations are, superficially at any rate, certainly reasonable. But on closer examination they present difficulties. The Prime Minister knows well the muddle of thought that was herein displayed, but his followers perceived it not. He knows, if they do not, that it is nothing but paternalism, the action of State Socialists, to dictate to a body of trade unionists what is best for them, demanding that they should vote: he knows what sort of coercion was in the past displayed by Conservative landlords towards their employees without any sort of protest being uttered by the Tory party in favour of the freedom from "intimidation on account of political beliefs"; he knows that the wholesale prevention of mass and private picketing is impracticable without the employment of an army of policemen; and, above all, he knows how staggered the world would be were the accounts of any political party, Conservative, Liberal, or Labour, to be publicly audited. As a matter of fact, Mr. Baldwin has constantly shown, in this matter of altering the laws relating to Trade Unions, infinitely more wisdom than his followers. But the matter will certainly not decline in importance, and it may be that the Prime Minister will allow his inner convictions to be overridden. Hence the length of this comment.

With the other resolution—"The Reds must go"—it is less easy to deal. The trouble here is that, although the Government may have every personal sympathy with the people who demand that "the Reds must be drummed out of England. Mr. Krassin must either shell out or get out," it is cruelly on the horns of a dilemma. It knows that such expulsion would have consequences outside England, for this country is not as it was in the time of Edward I., when the Jews, for instance, could be expelled without much apparent loss. Except in time of war, moreover, the prosecution of men for their political beliefs is a dangerous practice in which to indulge, for in a few years the tables may be turned, even as Zinovieff and Trotsky appear to be finding out in Bolshevist Russia!

The Prime Minister's Speech.

The Scarborough Conference on the whole was, as I have said, rather a fizzle. It provided no "message of fire" for the constituencies. Few Ministers graced it with their effulgent presence. And even the Prime Minister could not assuage its voracious appetite.

His speech, large though it was in some respects, seemed the speech of a disappointed, or at any rate of a tired man. He certainly would not play down to the feelings of his followers by vituperative denunciation of some of his political opponents for the part that they played during the General Strike: Mr. Baldwin has always been something more than the mere party man. On their resolutions concerning trade unions he did not give them much satisfaction; it was a measure of their hunger that they should have applauded his most and laudably guarded references to the subject. For the most part, apart from the usual array of Government "successes," the speech was composed of vague if felicitous generalisations. There seems to be no doubt that the majority of delegates went away dissatisfied. Probably, however, it is only minorities which can confer with any great benefit.

The Church Congress.

Considerable attention has been paid during the last few days, to the activities of our ecclesiastics, not only on account of the Archbishop of Canterbury's remarkable reiteration of his standpoint during the General Strike, but also on account of some most stimulating addresses delivered in the Church Congress at Southport which opened on October 4. It was not, as so often happens, with mere matters of ecclesiastical organisation that the majority of addresses dealt, but rather with the nature of the teaching of modern Christianity, with particular emphasis upon the Holy Spirit as a too often forgotten concept and fact. Speakers really appeared to get to grips with the painful reality that religion in the life of Great Britain to-day, even where it is practised, is too much an affair of Sundays, that the really "spiritual" life is a rarity. An omni-present God the man in the street could understand, but one of the fundamental facts of the Christian religion—the Spirit within men—seemed remote and incomprehensible. In other words, speakers did endeavour to contend with the new paganism of our times.

To judge by the interest which this Conference created, the ordinary man was waiting for some such exposition as this. He is not really content with the materialism of the times, and it may be that the Church (if it moves on the lines suggested in the Conference) will once again capture him to its service.

"A. B. W."

To all readers of London's greatest newspaper, the death last week of Mr. A. B. Walkley, dramatic critic, will have brought grief and a sense of irreparable loss such as can rarely have been felt by newspaper readers towards a writer for the newspaper. "A. B. W.," however, was quite by himself. The Wednesday issue of *The Times* might be the dullest, most ponderous, platitudinous sheet conceivable, yet "A. B. W.'s" article on the theatre page made its purchase imperative. He had wit and learning and precision—a combination which scarcely another critic of to-day combines in so logical a synthesis as he always displayed. Dramatic critics of merit are not, it is true, so rare as music and art critics; nevertheless, Walkley can never be replaced.

Apart from his stylistic qualities one admired most of all the fact that, in an age of shifting criticisms, if not of shifty critics, he knew exactly where he stood. In other words (I think it is true to say), in an age which increasingly tends to depreciate French products, he stood solid in his admiration of the Gallic spirit.

Book Reviews

THE APOSTLE OF THE KURDS.

"TO MESOPOTAMIA AND KURDISTAN IN DISGUISE." By E. B. Soane. Second Edition, with a Memoir of the Author by Sir Arnold T. Wilson and new Illustrations. (London : John Murray. 18s.)

To the superficial observer of the post-War Middle East, nothing is sadder than that much of the magnificent work accomplished by British officers and men before and after the Armistice should apparently have been thrown away. The inevitable reduction of personnel, which, at least in the instance of Iraq, so often involved the return to the Civil Services of India and of the Sudan of most valuable men whose first contact with the East was not the chance of war, seemed often to imply the wrecking of grand hopes, the deliberate neglect of fruitful seeds—in short, the turning back from the plough. And nowhere, perhaps, did this abandoning of the first ideals seem so tragic as in the sphere of Southern Kurdistan, which the author of this work, a classic that certainly will have been cherished by all readers of THE NEAR EAST AND INDIA, had made so peculiarly and courageously his own.

Yet every day it is becoming more and more patent that those early agents of Britain's duty in the days after the War in the Middle East toiled not in vain. Some of them were killed; some left the country in disappointment; and some, like Soane, were dispensed with. But after a lapse of time their work, their ideas, their notes are being freshly and most beneficially used. The true history of the Wilson régime, that hazardous, courageous, whole-hearted attempt to carry out a policy in the face of absent or conflicting orders from a rather febrile Whitehall, has yet to be written. But from the point of view of Southern Kurdistan, at least, it can already be said to have displayed its own justification. It is little exaggeration to say that, on the basis of Soane's unique knowledge of Southern Kurdistan, the future of that province within Iraq is to be built.

This is not the place to detail the various policies towards Kurdistan which the British Government has from time to time fickly entertained. Suffice it to say that in the main Soane's claims on behalf of the Kurds have been endorsed, not only by the British Administrators in Iraq, and subsequently by the League of Nations' Commissioners (although the second are sometimes but wrongly put before the first), but also by the Arab Government itself. That the Kurds' right to a corporate existence (a similar claim to complete independence has probably never been made by them themselves and certainly is not feasible) should now be admitted universally, or at least in all civilised countries, is due as much to Soane's unceasing philological research as to anything else.

Upon "To Mesopotamia and Kurdistan in Disguise" itself it is not our present purpose to comment. Adequate proof of its worth is to be found in the fact that, even in the light of the great increase in our knowledge of the Kurds since the time it was written, it still remains one of the most picturesque and accurate books of travel in the land where "the men walk free and the women go unveiled." That Soane had a weakness for the Kurds may be freely admitted: but what British officer fail[illegible] love and perhaps to idealise the people among whom he is cast? In the main, his defence of the Kurds is sound, and it is a thousand pities that he should not have lived to see the day when Suleimani was re-occupied and the cause of Kurdish freedom within Iraq definitely preferred. (It would have been instructive, too, to hear his cynical comments upon the suppression by the Turks of Sheikh Sa'id's rebellion which broke out last February.)

Concerning this edition, one welcomes the distinguished and fitting introduction by Sir Arnold Wilson, than whom no better exponent of Soane's somewhat enigmatical character could be found. The extra photographs, too, especially one showing Major Soane and his wife with that wonderful personage, the late Adela Khanum, at Halabja in October, 1919, are a worthy addition. But why, oh why, was the proof-reading so slackly done? This defect apart, it is a timely reminder of the greatness of one upon whose singular scholarship and experiences the foundations of the future of that part of Kurdistan which concerns Great Britain are being laid.

No better proof of the uprightness of British intentions towards the Kurds could be offered the world at large than the publication of that philological study of the Kurdish language which, as Sir Arnold reminds one, Soane completed before his death and deposited with the School of Oriental Studies. An official act in this direction would not only help to satisfy an exigent League of Nations; it would cause boundless gratitude to the staunch admirers of Soane when he was alive and to the increasing mourners of his early death. The Soanes and Wyman Burys of our time are not sufficiently numerous that we can afford to neglect even their least considered studies, much less the results of their life-work.

THE BAHA'I MOVEMENT IN ENGLAND.

In connexion with a movement described as "for the world's supreme peace" a meeting of the supporters of the Baha'i movement was held in Caxton Hall, Westminster, on October 7.

Lady Blomfield, who presided and opened the proceedings, said it was a truism to say that peace was the greatest need of mankind at the present day. Religious, social and international peace were indissolubly woven together, and the two latter were impossible without the first. Two years ago a conference of the living religions of the British Empire had met in the Imperial Institute, and after this there had been meetings of representatives of some of the great religions to consider further action that should enrol the spiritual forces of the world on the side of justice, truth and peace by bringing about the fullest co-operation of every man and woman of good will. Christians, Muslims, Buddhists, Hindus, Zoroastrians and others had all expressed agreement with the ideal of universal collaboration for the one object. The present movement was a further effort in the same direction.

Dr. Alexander Irvine said the idea of getting people of all religions to co-operate together in such a movement without abandoning their distinctive creeds, was one that came from the cosmic consciousness. All thinking people everywhere thought alike on this question of the supreme peace of the universe.

Miss Martha Root enumerated some of the teachings of Baha'u'llah, the founder of the movement. These included: (1) the adoption of an auxiliary international language which should be taught in all the schools of the world; (2) equality of men and women and equal education for girls and boys; (3) the combination of science and religion, and (4) a new and spiritual solution of the economic problem. In connexion with this last Baha'u'llah had drawn up a definite plan, whereby the workman would get not only his wages but also a percentage of the profits of the enterprise in which he was engaged. There would, moreover, be a general fund to which all would contribute and from which assistance would be granted to all needing it. Baha'u'llah in Persia in 1844 was announcing the coming of a great world teacher who would teach the unity of all religions. He had been put to death and his followers had been persecuted since. We should blush with shame in the Western world that we knew so little of this great movement.

Mr. A. C. March, Mr. Mountford Mills, and other speakers followed.

The King and Queen of Yugoslavia returned to Belgrade on October 7 from Paris.

PERSONAL AND GENERAL

TO-DAY

October 14, 1926 (New Style).
October 1, 1926 (Old Style).
Rabia II., 6, 1345 A.H., of the Moslem Calendar.
Heshvan 6, 5687 of the Jewish Calendar.

H.H. the Maharaja of Kutch left England on October 9 for India.

The Raja and Ranee of Nanpura left London on October 7 for India.

The Most Rev. W. Alan Goodier, S.J., Archbishop of Bombay, has resigned his See on acount of ill-health.

Field-Marshal Lord Plumer, High Commissioner in Palestine, returned to Jerusalem on October 10 after five weeks' holiday at Sorrento, Italy.

Rev. A. Clark-Barnacle, M.A., L.Th., formerly Missionary at Chanda, C.P., India, has been appointed Itinerary Priest in the diocese of Aberdeen and Orkney.

Lord Ebury and his daughter, the Hon. Betty Grosvenor, who left London for Paris at the end of last week, will sail for India to-morrow (October 15) and will not return until some time in January.

The Maharajadhiraja Bahadur of Burdwan had the honour of being received by the King on October 9. He was received the previous day at St. James's Palace by the Prince of Wales.

On October 18, at 3.30 p.m., Sir Richard Dane will lecture, at the Caxton Hall, Westminster, to the East Indian Association upon "Opium in China and India." Lord Meston will preside.

Mr. P. B. Cadell, Commissioner in Sind, left Karachi on October 7 for England. He is retiring after nearly 35 years' service in the Bombay Presidency, a long period of which was spent in Sind.

As a special mark of the high esteem in which the Australian flight was held, the King has approved the appointment of Mr. Alan Cobham to a Knight Commandership of the British Empire.

Mirza Zafar Ali, Khan Bahadur, Punjab Civil Service, has been appointed a Judge of the High Court of Judicature at Lahore *vice* Mr. Justice Walter Aubin Le Rossignol, Indian Civil Service, retired.

The Earl of Birkenhead (Secretary of State for India) was the principal guest on October 8 at the opening of the eleventh session of the Indian National Council of Y.M.C.A.'s at the Indian Students' Hostel, Gower Street.

On the nomination of the First Lord of the Treasury, the Right Hon. the Earl of Cromer, G.C.I.E., C.V.O., has been elected to the Board of the Suez Canal to fill the vacancy caused by the death of Mr. H. T. Anstruther.

Mr. A. E. Brennan has been appointed general manager of the Pioneer and Civil and Military Gazette, Limited, of India. Mr. Brennan, who was formerly works manager of the Amalgamated Press, Limited, sails for India next month.

Miss Jeppe, League of Nations Commissioner in Syria, who arrived in London last week from Aleppo, has arranged to speak at a big meeting at the Central Hall, Westminster, on October 29, in connexion with the rescue work she is carrying on in Syria among Christian Armenian women and children refugees from Turkey. Miss Jeppe's object is to raise a sum of £15,000, and she will also address meeting, in the provinces for this purpose.

The Marquess of Linlithgow and the other members of the Royal Commission on Agriculture in India, arrived last week at Bombay.

Sir George Rowley, Sir Dawson Miller, Sir Hubert and Lady Carr, and Sir Jagadish Chandra and Lady Bose left London on October 7 by the P. and O. special train to join the Kaisar-i-Hind at Marseilles *en route* for India.

The India Office announces that the Governor-General of India in Council has accepted the resignation by Sir Lancelot Sanderson, K.C., of the office of Chief Justice of the High Court of Judicature at Calcutta with effect from November 6.

Dewan Bahadur Sir T. Vijayaraghavachara arrived in London last week on completion of an important mission to Canada, and will shortly be returning to India to enter upon his work as a member of the newly appointed Public Services Commission.

Mr. Robert Clive was received in audience by the King at Buckingham Palace on October 9 and kissed hands upon his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Teheran. The Hon. Mrs. Robert Clive had the honour of being received by the Queen.

A meeting on behalf of the S.P.G. Medical Missions will be held at Central Hall, Westminster, on Tuesday, October 26, at 8 p.m. The Bishop of St. Albans, the Bishop of Kingston, the Rev. Stacy Waddy, the Rev. Dr. Kennedy (Chota Nagpur), and Nursing Sister Simpson (Cawnpore) will speak.

Sir Charles Wakefield, Bt., will take the Chair at the Annual Dinner of the Czech Society of Great Britain, which will be held at the Criterion Restaurant on Tuesday, November 2. Tickets may be obtained from Mrs. B. Tufnell, 14, Queensberry Place, S.W.7. The Czecho-Slovak Minister and Sir Samuel Hoare, Bt., M.P., will be among the speakers.

The British Broadcasting Company announce that Mr. Eric C. Dunstan, of the headquarters staff, has been appointed general manager of the Indian Broadcasting Company, which has lately been formed. Mr. Dunstan will leave for Indian towards the end of the year, and it is expected that a broadcasting service will be in operation in Calcutta and Bombay on March 1 of next year.

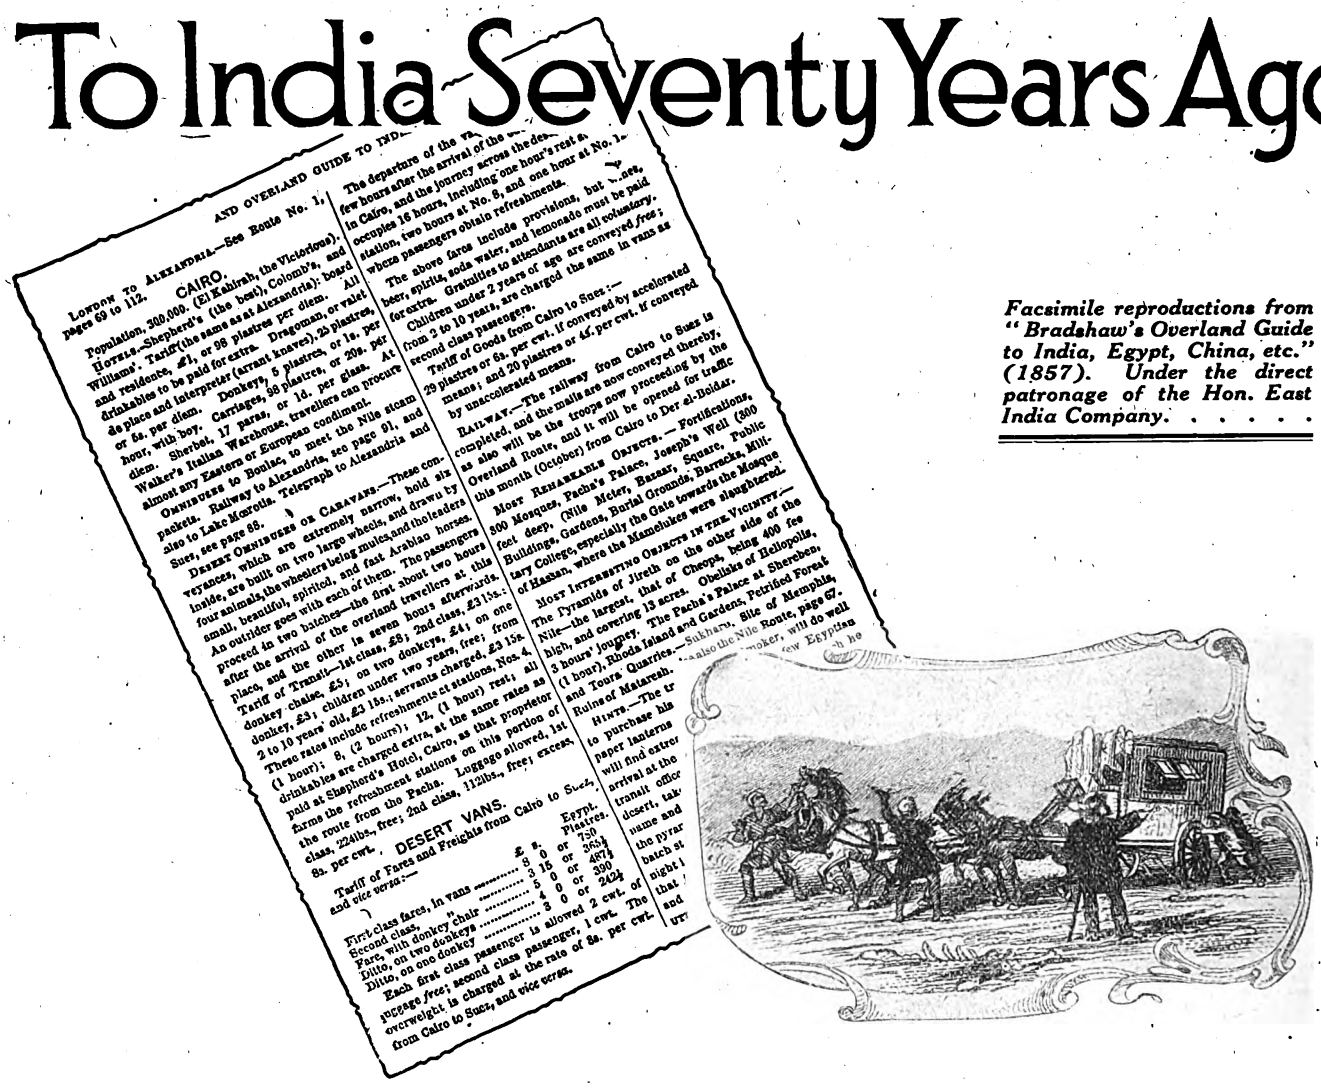
To India Seventy Years Ago



AND OVERLAND GUIDE TO INDIA.

LONDON TO ALEXANDRIA.—See Route No. 1, pages 69 to 112.

CAIRO.

Population, 300,000. (El Kahirah, the Victorious); HOTELS.—Shepherd's (the same as at Alexandria); Williams'. Tariff, £1, or 98 piastres per diem. All and residents, to be paid for extra. Dragoman, or valet drinkables to be paid for extra. Dragoman, or valet de place and interpreter (arrant knaves); board or 6s. per diem. Donkeys, 5 piastres, or 1s. per hour, with boy. Carriages, 98 piastres, or 20s. per diem. Sherbet, 17 paras, or 1d. per glass. At Walker's Italian Warehouse, travellers can procure almost any Eastern or European condiment.

OMNIBUSES to Boulac, to meet the Nile steam packets. Railway to Alexandria and Suez, see page 88. Telegraph to Alexandria and also to Lake Mareotis, see page 91, and

DESERT OMNIBUSES OR CARAVANS.—These conveyances, which are extremely narrow, hold six inside, are built on two large wheels, and drawn by four animals, the wheelers being mules, and the leaders small, beautiful, spirited, and fast Arabian horses. An outrider goes with each of them. The passengers proceed in two batches—the first about two hours after the arrival of the overland travellers at this place, and the other in seven hours afterwards. Tariff of Transit.—1st class, £8; 2nd class, £4; on one donkey chaise, £5; on two donkeys, £4; on one donkey, £3; children under two years, free; from 2 to 10 years old, £2 15s.; servants charged, £3 15s. These rates include refreshments at stations, Nos. 4, (1 hour); 8, (2 hours); 12, (1 hour) rest; all drinkables are charged extra, at the same rates as paid at Shepherd's Hotel, Cairo, as that proprietor farms the refreshment stations on this portion of the route from the Pacha. Luggage allowed, 1st class, 224lbs., free; 2nd class, 112lbs., free; excess, 8s. per cwt.

DESERT VANS.

Tariff of Fares and Freights from Cairo to Suez, and vice versa:—

	£ s.	Egypt. Piastres.
First-class fares, in vans	8 0	or 750
Second class,	3 15	or 363½
Fare, with donkey chair	5 0	or 487½
Ditto, on two donkeys	4 0	or 390
Ditto, on one donkey	3 0	or 292½

Each first class passenger is allowed 2 cwt. of luggage free; second class passenger, 1 cwt. Each overweight is charged at the rate of 8s. per cwt. from Cairo to Suez, and vice versa.

The departure of the [illegible] after the arrival of the [illegible] in Cairo, and the journey across the desert occupies 16 hours, including one hour's rest at station, two hours at No. 8, and one hour at No. 12, where passengers obtain refreshments.

The above fares include provisions, but wines, beer, spirits, soda water, and lemonade must be paid for extra. Gratuities to attendants are all voluntary.

Children under 2 years of age are conveyed free; from 2 to 10 years, are charged the same in vans as second class passengers.

Tariff of Goods from Cairo to Suez:—29 piastres or 6s. per cwt. if conveyed by accelerated means; and 20 piastres or 4s. per cwt. if conveyed by unaccelerated means.

RAILWAY.—The railway from Cairo to Suez is completed, and the mails are now conveyed thereby, as also will be the troops now proceeding by the Overland Route, and it will be opened for traffic this month (October) from Cairo to Der el-Boldar.

MOST REMARKABLE OBJECTS.—Fortifications, 300 Mosques, Pacha's Palace, Joseph's Well (300 feet deep, (Nile Meter, Bazaar, Square, Public Buildings, Gardens, Burial Grounds, Barracks, Military College, especially the Gate towards the Mosque of Hassan, where the Mamelukes were slaughtered.

MOST INTERESTING OBJECTS IN THE VICINITY.—The Tyramids of Jizeh on the other side of the Nile—the largest, that of Cheops, being 400 feet high, and covering 13 acres. Obelisks at Sheybeen (1 hour), Rhoda Island and Gardens, Petrified Forest 3 hours' journey. The Pacha's Palace at Shereben and Toura Quarries.—Sukhara. Site of Memphis, Ruins of Matareah. [illegible] also the Nile Route, page 67.

HINTS.—The traveller will do well to purchase his [illegible] Egyptian paper lanterns [illegible] He will find extreme [illegible] arrival at the transit office [illegible] desert, take [illegible] name and [illegible] the pyramids [illegible] batch start [illegible] night [illegible] that [illegible] and [illegible]

Facsimile reproductions from "Bradshaw's Overland Guide to India, Egypt, China, etc." (1857). Under the direct patronage of the Hon. East India Company.

A copy has come into our possession of "Bradshaw's Overland Guide to India, Egypt, and China; or the Traveller's Manual of How to Reach and How to Live in the Three Presidencies of India," first published under the patronage of the Court of Directors of the Honourable East India Company in 1857. This old-fashioned guide-book, with its attractive flavour of a past age and its obsolete information, makes quaint and entertaining reading. Much has been written, the publishers point out, about the Honourable East India Company's servants becoming involved in debt as soon as they take up their appointments, but "no practical information has yet been published to guide the inexperienced 'griffins,'" as novices in Indian life are termed, "on their début in the land of Vida." They have therefore thought it their duty "to minutely and fully explain in detail how such a state of things may be avoided . . . . and to lay down a system of domestic economy . . . . which will enable the future servants of the Indian services not only to maintain an honourable and independent position in Society but to command the respect of the natives during the entire period of their sojourn in the British Indian Empire." This most praiseworthy object they set out to perform in the course of some three hundred closely printed pages, giving information of every kind for the traveller and future resident and particulars of "the seventeen overland routes to India," by which the public of 70 years ago was tempted to travel. The most detailed directions are given for the guidance of passengers. The proper travelling costume for gentlemen, for instance, is set out as follows:—A light grey suit, consisting of shooting coat, vest (to button closely up), and trousers to match, all of which should be made loose, and of thin cashmere cloth. Waterproof overalls, a light coloured reversible coat, pair of patent leather boots with stout soles, maud shawl to be used as dressing gown in the morning, wrapper by day, and coverlet by night . . . . A plubac (a silk umbrella, covered with white calico, contained in a walking stick), travelling pouch, with strap to sling over the shoulders, which will hold the traveller's keys, passports, bills, cash in sovereigns (to be placed in substantial leather purses), small achromatic telescope, pocket-book, containing pens, inkstand, pencil, knife, scissors, sealing-wax, sticking plaster, pin-cushion, address cards, paper-knife, writing paper, together with a well-filled housewife and a pair of thread gloves." The directions continue at length, all compiled with the same solicitude for the traveller's comfort and inexperience. Ladies are admonished on no account "to omit packing some Eau de Cologne, scented soap (that most essential article never being supplied at hotels on the Continent) and smelling salts." They must provide themselves with a special sort of trunk divided into two unequal parts and having a tray, "in which might be packed about four dresses and two bonnets, in the smaller divisions; the linen, boots, shoes, etc., in the larger compartment, and the laces, handkerchiefs and finery in the tray." A reminder of how times have changed since the publication of this book is the warning that "on no account should the Overland Traveller take either Circular or Bank of England notes . . . . Nothing but sovereigns (not half-sovereigns) should be taken. Letters of introduction are of doubtful advantage. A European presenting such a letter "must not anticipate to be cordially received or to have a *carte blanche* given him to renew his visits . . . . for an old resident in India, though most unbounded in his hospitality, must have some intimate knowledge of an individual—some insight into

Digitized by Google

his habits, character, etc.—ere he fraternises with, or allows a griffin 'to put his legs under his mahogany" whenever he likes. He will be received with marked and studied politeness and then bowed out most courteously." Not until he is well-known "must he look for anything beyond the polite bow or nod of recognition, and perhaps, as a mark of great condescension, an occasional invite." If, however, the bearer of a letter has been overcome by any misfortune not of his own making, then he will receive nothing but kindness. "But if, on the other hand the griffin has been guilty of any *faux pas* . . . . he has nothing to expect at the hands of the resident. So that, in fact," adds the writer with unconscious cynicism, "these credentials are not of much value to any Civilian or European on his entrance into Indian life."

The seventeen overland routes are treated with equal fulness, all the important towns *en route* being described, and their "most remarkable objects" enumerated and any special peculiarities duly recorded. Route No. 1 is by way of Constantinople, a city in which "it is a long time before the traveller can accustom himself to the horde of wretched miserable-looking dogs which he meets in every quarter of the town. They are of a most peculiar breed, very hideous, near akin to the jackal in appearance, and are the scavengers of the city. They are seldom known to go mad so that no fear need be entertained on that account." Nevertheless the traveller is warned to provide himself "with a small gutta percha whip when making perambulations in this town." Dogs are not the only danger to be encountered in Constantinople: there is also a continual dread of fire. "In cases of any conflagration happening in the quarter where the traveller may have taken up his abode, he will quickly be assailed by a knock at the door of his domicile . . . . and if he is obliged to remove his traps let him avoid confiding them to Greeks the most arrant rogues in existence, for they are not to be trusted." The visitor to Cairo is advised to see "the wondrous and everlasting pyramids, which, viewed by moonlight, have a most magnificent appearance; and here it may be as well to premise, that no traveller should ever sleep out in the open air in Egypt in the moonlight, without taking due precaution to protect his sight from that luminary, or he will be attacked with that most painful disease, ophthalmia, and might even lose his sight . . . . It must not, however, be supposed that all the blind persons that are encountered in Egypt have been rendered so by this cause alone."

These were the days before the opening of the Suez Canal. The traveller to India, accordingly landed at Alexandria. There is, after all, some authority for the British tourist of the Continental stage, for under "Hints" we read: "Here the sun is very hot on landing; put on light clothing, wear spectacles and use umbrella. Carry knapsack, travelling rug, and flask, on shore in your hand." His methods are likely to prove to the bewildered native as weird as his appearance. "Order dinner or refreshment at hotel three hours before starting of train, return to hotel exactly at the time the meal is ordered to be ready, take a bath, which bespeak previously, and also alter watch to railway time. By so acting, every object will be seen without the traveller becoming too fatigued," except, we imagine, the meal, if it was a hot one, which has to wait for the bath and the watch-setting.

From Alexandria the traveller proceeded by rail to Cairo, and thence by "omnibus" across the desert to Suez. The Suez to Cairo line, it is of interest to recall, was to be opened in January 1858. Of the desert omnibuses we read: "These conveyances, which are extremely narrow, hold six inside, are built on two large wheels and drawn by four animals, the wheelers being mules, and the leaders small, beautiful, spirited and fast Arabian horses. An outrider goes with each of them." The journey occupied 16 hours, inclusive of four hours' halts at in all, at three stations. If the traveller has sufficient time, "he can hire a guide and donkey, and cross by himself leisurely, taking care to have a desert umbrella, which has curtains to it like those attached to a shower bath, which close quite round him, have two glasses fixed in them through which he can distinctly see every object as he travels along." Many more hints follow for the avoidance of thirst, dew and sand, and our solicitous and candid chronicler continues: "at night the body must be well muffled up and the loins kept warm. The Maud shawl which the traveller has been advised to purchase, should be wrapped round them as the Orientals gird their shawls. We then enter that miserable hole, SUEZ," to continue the journey by steamer.

Before leaving the steamer at Aden, our painstaking mentor warns his traveller, inquiry must be made as to the exact time of the ship's departure. For if he has gone inland and fails to return "ere the vessel steams out of the roadstead, such a mishap would prove most seriously inconvenient to him, as he would of necessity be obliged to remain *in statu quo*, until the arrival of the next mail (a fortnight), in a strange place, without friends, money, or kit—certainly not an enviable dilemna to be placed in under any circumstances (especially if sickness should overtake him), however beautiful or interesting the locality may be." If he reads his guide-book carefully before reaching Bombay he will have learnt on landing in India, much useful information about the country and receive ample warning of the pitfalls that await the guffin. Let him on no account have anything to do with that "rapacious, unprincipled, astute, cunning, crafty, deceptive, subtle, tergiversating, intriguing, deep, and vindictive being, the Indian money-lender, a character who should be most carefully shunned and avoided." Even in minor matters he must be constantly on his guard. He should make a rule to keep his own bazaar account and to make his butler tell him how he spent the sum entrusted to him. "Under no consideration whatever should a balance of a single pie be left from one day to another unaccounted for; and if that domestic cannot at once account for the sum satisfactorily, hesitate not to cut his pay; that is stop the deficiency out of his month's wages." Extracts of this kind might be multiplied indefinitely. The ordinary reader, if he takes up this book, will find plenty to entertain him and the student of India and the East much that is of deeper significance.

SALESMANSHIP.

Commenting on Lord Winterton's address to the Sheffield Chamber of Commerce, in particular on his suggestion that "it is not enough to say, these are British goods, to dump them down in the country and expect them to sell," the *Statesman* writes, "Methods are better than they were, but it is still true that the British trader too often relies on quality and neglects that art of salesmanship which has been made a subject even in the Universities of America. He is pained when the nations whom he offers to supply do not at once realise that he is making a superior article which is worthy of their buying, and too often retires in disgust from a market that he has not really tried. It cannot be too often insisted that India is a great buyer and will become an even more profitable market to those who have the wit to realise what she wants, and to supply it. Great Britain is looking for new markets, and is giving credits to those who will exploit them. Let her not forget that in India she has the largest market within the Empire, and that intelligent cultivation of its possibilities may yield richer and more certain returns than in the past." The paper contrasts British methods with those of Germany, whose practically complete recovery of her lost trade with India, not to speak of the strides she is making towards its enlargement, is "due to a very real effort to understand the requirements of her Indian customers, and to intensive propaganda."

Remarks of this kind have been made so often that they are in danger of being dismissed as platitudes: which is, after all, to a great extent what they really are. But, none the less, they deserve to be emphasised, even if only on the "importunate widow" theory. Any British manufacturer will laugh at stories of the refusal of his commercial brethren to meet particular demands from foreign customers, but will steadfastly cherish the beam in his own eye while ridiculing the mote in that of others. One of the typical instances is the well-known egg-cup story: how it was represented to a large British exporter of egg-cups to India that they were too large for the Indian fowl's egg, and that there was a great demand for cups of smaller size. The answer was, that there is a standard size in egg-cups and that it was merely perverseness on the part of India to pretend to want a different one—that those supplied were the best possible article for the price asked and, if there were any people so foolish as to want something different, they might go elsewhere for it. An enterprising manufacturer of egg-cups in Germany saw the point, and sent to India a consignment of small size cups, to fit the average Indian egg, with permanently satisfactory results to both sides. One heard a somewhat similar story only last week, though the market was not in India, but in China. Before the War, Germany did a great trade with China in needles of soft metal and rather large size, which would bend rather than break, and could be straightened again if they did so. A British merchant, home from China on leave, conceived the idea of capturing this trade, and went to a number of British manufacturers in order to try to arrange matters; but absolutely failed to do so. All he could get was the offer of the kind of needles that the firms already made; which, as they were careful to point out, were far superior to the article about which he was inquiring. He offered to guarantee a monthly order of an almost incredible number—to the best of one's recollection, a thousand gross of packets; but all to no purpose. So he returned to China without effecting anything, in this particular deal: and no doubt the Germans have quietly restarted the trade. It is, of course, quite true that the Chinese tailor ought to want the best, when he sees it; but the point is that he doesn't—he wants what he is accustomed to, and insists on having it. Skilful propaganda and well-devised methods of advertisement would, very likely, convince the Eastern customer of his error; but these are not made use of either. The average British manufacturer seems to consider that the undoubted excellence of his goods is advertisement enough—if the Chinese are so foolish as to prefer needles of soft metal, or the Indian hens so perverse as to lay small-sized eggs, that is their affair: and, so far as he is concerned, it is only right that they should suffer for their folly until such time as they should come to the unaided realisation of it. It is no part of his business to go out of his way to educate them to a juster appreciation of their error—it is there for them to see, if they will only take the trouble to do so: and, if they won't, so much the worse for them.

Sir Robert Horne's remarks about the "ignorant, insolent error" of trying to impose our own political forms on people whose genius lies in an entirely different direction, mentioned in last week's issue of this paper, are, indeed, applicable to the British commercial attitude also. Englishmen in India are apt to speak scornfully of the Indian habit of doing things hind side before—the tailor who sews back-handed, the door that you must open with your left hand unless you want to bark your knuckles, for instance: they forget that the Indian was doing these things in that particular way when the Briton had no clothes to sew and no doors to open. And so it is with the Indian's material wants: association with Western civilisation has introduced him to a number of new things and is slowly altering his ideas about the old ones; but he still prefers to do familiar things in his own way, and, in so conservative a country as India, it will take him a long time to realise that there is a better. The British manufacturer could do a great deal if he would only abandon his superior attitude and try to look at things as they are. If he would study his market, and make a real effort to meet the wants of his customer, he could at the same time, by judicious advertising properly directed, lead the customer to a better appreciation of what he ought to want. Successful advertising is no easy matter in India: advertisements in the vernacular Press are almost entirely confined to quack medicines and aphrodisiacs, and these are about the only sort that seem to pay. A wider appeal is necessary, and for this skilled agents are needed—men who will really study the conditions and adapt their methods to meet them. There is

Digitized by Google

a great field for the advertising expert in India, but he must be one who has studied his job on the spot, who is ready to discard preconceived notions and to suit his methods to his public. He must, in fact, do what the British manufacturer also ought to do, but so often does not do—find out what his customer really wants, and produce that: and, in addition, without being merely content to stress what his customer ought to want, also find out the proper way to bring it home to him—in the American phrase, to "hit him where he lives." If a really effective scheme of advertising could be evolved in India, it would produce the most satisfactory results not only to the advertisement expert, but to the merchant who is enterprising enough to take advantage of his skill. All of which brings one back to the original platitudes—study your market, and advertise: but do both with understanding and sympathy: making due allowance for the ignorance and apathy of your public, and taking trouble to find the best means of educating it first to appreciate, and then to demand, the things that are better.

CURRENT TOPICS.

The Cinematograph in India.

Our Calcutta correspondent's scepticism, expressed in his letter printed last week, regarding the reported Indo-British cinema-film combine, financed by a number of Indian Princes, has been fully justified by the disclaimers issued at Simla on September 30. That the story should have proved to be inaccurate is certainly remarkable, since it was given out with apparent authority, and also "with circumstance and much embroidery": and it is difficult to avoid the belief that there must have been some foundation for it, even if the details were incorrect. Our Calcutta correspondent's objection, that the demand for cinematograph shows is already fully met by existing organisations in India, would not, even if it were strictly correct, wholly meet the case—the underlying idea was less the multiplication of film houses than the presentation of desirable films: for many of those shown in existing circumstances certainly cannot be so described, when the quality and intelligence of the audience are considered.

As a matter of fact, one would suppose that there is room in India for a much larger number of film houses than that at present existing. It is true that most of the towns of reasonable size have one or more cinema theatres; but the Indian "man in the street" is a great patron of the pictures, so long as they are cheap and tell a story that he can follow with interest; and there is room in India for a considerable extension in the number of cinematographs on those two conditions. That a cinema show can be made to pay on a very low charge for admission is certain, and was abundantly proved at the time of the introduction of the movies into England: the marked rise in the price of seats is largely due to the alleged demand of picture-goers for "super-films," the production of which is enormously costly. The provision of British films, produced on a more modest scale, and free from the features which too often render the super-film unfitted for presentation in India, would doubtless entail some financial loss at the start: and this is where the alleged subsidy by the Princes would have come in. But, once fairly started, there is no reason to suppose that such a venture would not become self-supporting, and even produce a satisfactory profit, in a short time after its inception.

If the report is not true now, it may be hoped that it will shortly become so; for there can be no doubt that such a venture would be a most important and valuable contribution to the education of India in a matter that counts for a great deal to-day—the better understanding of British character and British institutions. And it is not too much to say that the cinematograph has, so far, had a very considerable influence in the opposite direction and has been responsible for much misunderstanding that can only be removed through the same agency. A programme that would set itself first to counteract the evil effects already produced by an injudicious use of the film, and then to foster the good results which can certainly be achieved by its judicious use, would deserve the support of all interested in the progress of India towards the status of a British Dominion—prince, politician and peasant alike.

Encashment of Cash Certificates.

The Calcutta correspondent of the *Economist*, in an article on Indian currency reform, makes an interesting suggestion regarding the introduction of a gold currency into India. He writes "as on offset to the demonetisation of the sovereign and half-sovereign, it is urged that postal cash certificates, whose sales average about seven crores per annum, should be payable in gold mohurs—equivalent to 20 rupees (30s. at the 1s. 6d. exchange)—minted at Bombay, where all the necessary equipment and staff are already available. The alternative proposal, put forward by the Commission, of certificates repayable in gold bars would afford too much opportunity for fraud in the form of 'sweating' and other abuses, and is therefore not likely to be adopted. Issued only in payment for cash certificates of not less than three years' maturity, gold mohurs would not obstruct the operation of the proposed bullion standard. At present, cash certificates find a sale chiefly in the large cities: it is certainly desirable to give them a wider basis of popularity: and it is urged that their exchangeability for a specially minted gold coin would assist realisation of this aim."

Writing on this point two months ago, one said that, if it was intended that the holder of cash certificates could only demand their redemption in gold if he held enough to claim a full bar of 400 oz., this would knock out the small holder: and that, if not, such a provision would seem directly calculated to defeat the main object in view—the discouragement of hoarding. If the suggestion of the Calcutta correspondent of the *Economist* is anything more than a *ballon d'essai*, it would appear that this contingency has been overlooked. It is undoubtedly true that it is desirable to give cash certificates a wider basis of popularity, but the special reason for this is to encourage the habit of investment and to discourage the habit of hoarding, particularly in the case of small investors. So long as cash certificates are only redeemable in gold if not less than an entire bar of gold bullion can be claimed, that encouragement ought to prove effective; but, if investment in cash certificates means the possibility of redemption, of every individual investment, in gold coin after three years, it may be expected that many small investors would buy them with that express object, and that the system would produce a habit of "deferred hoarding" only less objectionable than the present hoarding habit. The *Economist's* correspondent says that the "hoarding habit" is a very misleading term, as it is the direct product of inadequate banking facilities. But, in fact, it is much more than this—it is an ingrained habit of centuries, which can be removed only by education: assisted, of course, by improved banking facilities, without which the necessary education could not hope to be effective. What is needed is first to inculcate the habit of investment: when this has once been done, encashment of small investments in gold coin would be a desirable addition; but not before.

Indian Physique.

The Bombay correspondent of the *Morning Post* says that one of the leading insurance companies has, as the result of detailed examination spread over ten years, established the conclusion that the Hindu of the Punjab has the best all-round physique among Indians. Hindus of the United and Central Provinces, and Hindus of Bengal, show little difference in the matter of physique up to 35 years of age, after which the Bengal Hindu is inclined to run to fat. This latter characteristic is said frequently to characterise Europeans in India, except the Scot, in whose case it is suggested that "careful upbringing leaves its influence on his character throughout life and prevents his figure from filling out to rotundity, as

Digitized by Google

often happens to the people of other European countries resident in a tropical climate."

It is odd that the report only refers to Hindus, and makes no mention of Mohammedans. One understands that, in the United States, the term "Hindu" connotes a native of India, without regard to religion; but this is unlikely to be what the correspondent means in this case. Perhaps the Mohammedan, whose religion strictly forbids all forms of gambling, considers life insurance to come under the ban, and is not a client of the Insurance Companies; though this seems unlikely also. It would be interesting to know what is the relation as to physique between the two religions. The ordinary European in India, if asked the question off-hand, would probably give the preference to the Mohammedan; and one would like to know whether statistics bear out this opinion or not.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 23.

The Cotton Deputation.

We read with much interest of the coming to India in the cold weather of a deputation from Lancashire to study the Indian piece-goods market upon the ground. We note that it will be led by Mr. Tom Shaw: and, if reports are to be trusted, we may look forward to a much more rational outlook from this deputation than has been the case with other recent pilgrimages. In the meantime, Bombay manufacturers are doing their best to take the fullest advantage of the proposed one and sixpenny rupee by claiming that this is equivalent to a bounty in favour of Lancashire manufacturers of 12½ per cent. in the Indian market. The *Statesman* devotes a leading article to proving conclusively to its own satisfaction that the ultimate factor in the matter is gold value and that, no matter what the sterling value of the rupee may be, Lancashire only receives one pound gold for one pound's worth of goods. Government, however, has already granted a bounty to the steel trade to compensate for the rise in exchange, and everything points to their doing the same in regard to cotton. Certainly the political influence of Bombay is now predominant in the Central Legislatures, and the future outlook of Bombay is very cloudy if, by hook or by crook, some method of reviving the cotton trade is not discovered.

Communal Riots and Political Animosity.

The *Tribune*, a Lahore extremist paper, has some interesting comments on the lately expressed view of Sir Srinavasa Sastri that communal riots and political animosity are not related in any way, and that the riots are due entirely to an excess of animal spirits. While the *Tribune* considers that it is the communal leaders who are mainly responsible for the present situation, it blames the British Government for playing into their hands by introducing a franchise on communal lines and partially communalising administration. The article goes on to say that it is undeniable that the political animosity which inspires certain fanatical communal leaders has steadily filtered down and now impregnates the masses, and it is this which is chiefly responsible for the present riots. This is also the conclusion of most sober onlookers, and it is a point which will have to receive most careful consideration from the 1929 Commission.

The Communal Clash at the Elections.

Hindu-Moslem differences are in the limelight more acutely than ever at the moment, as Sir Abdur Rahim has issued an election manifesto setting out the Moslem policy, and the Hindu extremist Press is engaged in tearing it to rags for a dozen different reasons. The situation, with three Moslem and four Hindu parties, all quarrelling, is eloquent of the political chaos that the Reforms have produced in Bengal. Sir Abdur Rahim disclams any selfish or purely communal intentions, and particularly refutes the charge of conspiracy to combine with Government and run the Reforms in exchange for the sweets of office and patronage. He is disbelieved by all shades of Hindu opinion, and hardly one will admit even the possibility of his being sincere. Not only are his policy and programme attacked, but he is condemned personally as a traitor for having joined in the Government conspiracy to "forge the fetters of bureaucracy" permanently on the country by stirring up and maintaining communal differences. The *Statesman* sees no harm in communal electorates and thinks that, the more Hindus and Moslems can learn to fight out their differences in the Council Chamber, the less they will want to fight them out in the streets and villages. *Forward* appears to us to be much nearer the truth. "Those who believe that the communal spirit, onces roused, can be kept strictly confined within the four walls of a Council Chamber must be fools who want to be blind to the reality. Whenever political interests of the two communities will come into serious clash in the Council hall, the repercussion will be heard throughout the country and will not be without its influence in awakening the religious fanaticism of the masses, with results that may be easily guessed."

Cobham and the Monsoon.

Cobham has met the real monsoon and it has made him mark time, and no short time either. He was detained for some days at various places on his way up from Singapore: and his last enforced stop, before reaching Calcutta, was at Akyab. He intended to fly right through to Delhi from there, only stopping at Calcutta for petrol, but he had to stop for a day instead. Since leaving us he has been held back another day at Allahabad, and he will be very glad when this menace is behind him. It is good than an aviator of his courage and experience should be able to speak with authority upon the subject of the monsoon and its relation to regular flying services; for, if commercial flying is to be possible here, it must be established on a *pukka* basis from the beginning. Nothing will set it back so much in the eyes of the Indian as a bad beginning, and trouble is inevitable if a start is made on the principle of trusting to luck in regard to unknown factors. The proposed Cairo-Karachi services will be affected for a substantial part of the year by monsoon conditions; and, if Cobham's experiences have done nothing else, they have shown the necessity for the establishment of meteorological stations throughout the route as well as ample facilities for landing and, if necessary, waiting till the clouds roll by. It will be far better to suspend the service for a time than to court disasters by undue optimism.

Men and Things.

The death is announced of Dr. H. M. Crake, Medical Officer of the Calcutta Corporation, whilst on leave at Ryde, Isle of Wight. Dr. Crake took leave in the early part of this year, immediately following the death of his wife, and he would have been returning to duty in the ordinary way within the next month. In spite of the fact that he has been an efficient officer, he has been a popular one, and he has been fearless in speaking out in regard to the prevalence of tuberculosis in the city, particularly amongst the *parda-nishin* women. Added to this, he has shown great personal courage in dealing with plague and epidemics at various times, and he has set a high example to the Indian who is certain to be appointed to succeed him.

Another good fellow has suddenly passed out in W. B. Kirkwood, who came out to Calcutta in October 1920 as an Assistant Collector of Income Tax. He was seconded from the Home Service for the unpopular task of tightening up the income tax administration, and his quality as a man is sufficiently indicated by the fact, having done his work well, his passing leaves a sense of personal loss to everyone who has met him. He was a prominent Freemason and clubman, and his death, at the early age of 44, is something of a tragedy.

Digitized by Google

The Governor has withheld his consent to the Bill recently passed by the Legislative Council for the separation of the two recently added suburbs from the municipal area. In the memorandum it is stated that the Bill was unworkable, for reasons which have already been stated in this column. The promotors have therefore achieved their end; they have passed the Bill and so impressed the electors, they have been saved from their own folly by the inevitable action of the Governor, and they are now able to talk of the unreality of the Reforms and of the refusal of the Bureaucracy to give effect to the popular will.

Mr. Walter Gregory, who has been an Acting Judge for the last eighteen months, has been re-appointed to act for Sir Ewart Greaves during his cold weather leave. Everyone working in the Courts is glad to see the announcement, as Mr. Justice Gregory has an enviable record for perfect courtesy to all who come before him. The South African deputation, which is to see things for itself in India, is arriving in Calcutta during the week, and a very full programme awaits them for the few days that they are here. It is difficult to see what they can expect to gather from the feeding and speaking which are to occupy almost every moment of their stay.

Better news is to hand in regard to the position in China. The keenest interest is taken in the Chinese position which, apart from its effect upon trade, ties up money and completely dislocates the normal financial arrangements of firms which operate throughout the East. Until the Chinese situation clears up, there is little prospect of things becoming normal here.

The Trivial Round.

Racing at headquarters last Saturday was a mixed pleasure, with the weather as trying as one has ever known it and winners coming home for the most part at short prices. The crowd was obviously smaller, due to the fact that everyone who can is getting away to the hills to escape a thoroughly bad September.

The Rugger Cup games are being fought with a remarkable keenness in the circumstances. All the civilian teams have now been knocked out, although the Scottish and Calcutta only lost by the narrowest of margins. Military rugger, as we have seen it this year, rather suggests a state of war in some of its aspects and mixed refereeing has not improved matters. The winners should be found between the Gloucesters, the Welch and the 82nd (Prince of Wales Volunteers) who are stationed at Barrackpore. We are hoping for good luck for the last, who are under the handicap of having been in the plains all the year, a real disavantage when it comes to fighting games.

Tennis has never stopped at the jute mills, where it has attained a remarkable popularity amongst the assistants. Nearly every mill now has one or more *pukka* courts, and these are never empty when there is a break in the rains. The draw has already taken place for an inter-mill league which is to start in a few weeks' time.

The Revue Company struggled on through last week at the Empire, in spite of the fact that nearly half the company went down with fever. The present attraction is a small company of Italian opera principals who are giving some remarkable vocal displays which are much to the taste of the middle of the house.

Markets.

The official estimate of the jute crop for 1926, amounting to 10,888,600 bales, constitutes a record; but its effect on the market has been negligible, as this figure was round about the amount anticipated by the market, and rates have already been discounted. The revised figure last year was nine million bales. This market, together with the gunny market, closes unchanged with business at a minimum. A still better feeling has been noticeable in the piece-goods market during the past week, but prices show little alteration on balances. Dealers continue to consider that Home prices will fall further in view of weak cotton, and are therefore anxious to reduce their holdings even at lower prices.

In contrast to the London market, which is reported as steady except for common kinds, the tea sale here showed a firmer tendency for all descriptions, and prices were in many cases between 3 to 6 pies better. In regard to outturn, no official information is to hand; but rumour has it that the crop for the first half of this month is one million maunds in excess of that for the same period last year.

On the Stock Exchange, Government Securities have been quiet with the exception of 3½ per cent. Paper and 4 per cent. New Loan, both of which are a shade easier. Jutes are steady, with a slightly easier feeling in the more speculative group. Coals are unchanged; but tea shares have been more in demand, in sympathy with the better prices obtained at the recent local tea sales. Rubbers and teas continue in an upward direction, especially the latter, for which there is little scrip on offer. The Exchange market has been very dull and featureless; money continues unlendable at ½ per cent.

CORRESPONDENCE.

THE INDIAN FABIAN SOCIETY.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I am interested to read in your issue of September 30, that Mrs. Besant has decided to start an Indian Fabian Society. The Indian Fabian Society was started whilst I was in India last cold weather, and I had the honour of delivering the inaugural address in Madras on January 12, 1926.

At a General Meeting held on April 2 last, Dr. Besant was elected President of the Society. Dr. Besant is, of course, a very old member of the Fabian Society in this country and one of the Fabian Essayists.

The Indian Fabian Society is not in any way linked up with the Swaraj Party and, so far as I know, there is no Swarajist at present amongst its members—although there is no reason why they should not join if they wish.

The Vice-President of the Society is Mr. N. M. Joshi, M.L.A., General Secretary of the All-India Trades Union Congress.—I am, etc.,

D. GRAHAM POLE.

THE INDIAN MAIL.

Social Amenities.

The question of the attendance of members of the Swaraj party at social entertainments given by Government officials is being debated with some heat in India. Pandit Motilal Nehru has explained that his party had decided "to eschew all functions of an official or semi-official nature, even when accompanied by appropriate social amenities." Thus those invited were obliged to decline an official invitation to meet Their Excellencies the Viceroy and Lady Irwin at an afternoon party; but those who received an informal letter "beginning with Dear Mr. . . . and ending with Yours sincerely . . ." found no reason to refuse because the invitation was "to meet Their Excellencies"—whose presence, says the Pandit, "made the evening all the more enjoyable, as the human element in them rose much higher than their high official position." He suggests that the disapproval, voiced by some members of his party at his acceptance of this invitation, was due to disappointment that they had not themselves been invited—a suggestion which, though there is probably a good deal of truth in it, is not likely to commend itself to the dissentients.

It is fortunately the case that, in spite of acute political divisions, personal relations between individuals of all parties are, with few exceptions, most cordial at Simla and Delhi. When members of the Swaraj Party feel themselves obliged to decline official or semi-official invitations, their absence is a source of genuine regret to their would-be hosts: and, no doubt, to themselves as well. It is

Digitized by Google

cheering to find them ready to take advantage of any reasonable excuse for avoiding a refusal to meet their political opponents on the common ground of social functions. What is most needed in India now is not the establishment of friendly relations between political opponents, for this largely exists already: it is an opportunity for European and Indian each to try to understand, and to make allowances for, the other's point of view. On both sides, there is a decided tendency to treat the other side as unreasonable: and this is much more marked in the case of official than in that of non-official Europeans. Not the least important role of the non-official European members of the Legislatures is to act as interpreters of the conflicting views of the two races: and there is evidence that they are already doing valuable work in this direction, and that its importance is coming to be realised and appreciated.

False Cases.

Widespread interest has been aroused among Europeans in India by what is known as the Spence case, on which our Calcutta Correspondent commented in his letter printed in the last issue of this paper. Kipling has said that, in India, it is possible to buy a murder case, corpse and all, for fifty-two rupees: and, though the general rise in prices has doubtless increased the cost of this particular commodity in recent years, the statement still remains substantially true. Mr. Spence was tried, three times in all, on a charge of having caused the death of an Indian labourer whom, so far as could be made out when the evidence was thoroughly sifted, he had never even set eyes on. It is considered probable that the charge was brought by persons desirous of escaping the implication of having taken part in a fatal communal riot: but, however this may be, it has been definitely established that Mr. Spence was not in any way connected with the man's death.

The case brings to mind a very remarkable one of a good many years ago, when a European official was tried for his life on a charge of having murdered an Indian villager by shooting him. The prosecution story was, that the European, when out shooting, had molested a woman villager and had shot dead a man who attempted to protect her. The defence was that the European had been the the object of an unprovoked attack by villagers, probably under the impression that his presence near the village might portend danger to some of them from a chance shot: that he had not fired his gun in the course of the fracas, but that the villagers had taken it away from him and had beaten him severely when doing so. The corpse was brought in, and medical examination disclosed the fact that about a quarter of a pound of mixed shot, from snipe shot to swan shot, had been fired into the body at close range; in the opinion of the medical officers, some considerable time after death had occurred from natural causes. The European's remaining stock of cartridges was examined in Court, and the gunmaker who had loaded them gave evidence that he had done so with No. 4 shot only: and the verdict was, that a large charge of miscellaneous shot had been fired, from a "gas-pipe" gun, into the corpse of a man already dead, in order to sustain a counter-charge against the European who, it was expected, would make a complaint about the assault by the villagers. Incidentally, no doubt, the accusers had a hope of money being paid in compensation for the alleged crime—either to avoid a trial on the capital charge, or as a result of it in case they should be able to convince the Court of the truth of their case.

A Miracle Worker.

The *Bombay Chronicle* of September 8 prints a story contributed by an Indian gentleman who writes B.A. and LL.B. after his name: of how, on a visit to a village in the Bharatpur State, he was "taken to a cave where he saw a Sadhu in plain clothes. His head was unusually large. In body he was lean." The Sadhu said that he was able to control Self, and through Self the whole universe: and his interviewer said that, if so, he must be able to control the sun and moon. The Sadhu replied that there was no difficulty about this and that, if his visitor would stay until moonlight, he would show him how it was done. The story proceeds: "It was evening. We waited hardly one hour, when moonlight appeared. The Sadhu sat in the maidan, and asked us to look on him. He said that moonlight will not fall over him. Hardly had he uttered these words, when we saw his face dimming. In about five minuets, we saw that no moonlight was falling on him. He was sitting as if in shade. He said that that was controlling the moon's rays.

"Next day, we went to him at about eight o'clock in the day. He appeared this time to be unusually charming. We looked at him rather attentively, and presently we saw some dimness on his face. This dimness increased so much that his whole head appeared to be a small spot. In the next two minutes, that small spot also disappeared, and we saw a headless figure in front of us. We were rather frightened at this phenomenon, but our host, who has seen greater things than this, encouraged us very much. Now his body began to get shorter till it totally disappeared. Then his legs began to disappear just as his head and body had done. Finally, there was no Sadhu in front of us! We were taken by surprise, and began to talk about this wonderful disappearance. How this ether served as a barrier between the Sadhu and ourselves was a problem before us, when, to our great surprise, we saw the Sadhu approaching us headlessly. In a few seconds there appeared the head too. We prostrated ourselves at the Sadhu's feet. To us this Mahatma seems to be a great prophet of the age. While we were with him, there was no anxiety of any sort confronting us. We enjoyed perfect bliss in his company."

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning.

Greek Currants.

For the second year in succession the Greek currant crop is of the bumper variety so that one can well understand why it was thought advisable to initiate a publicity campaign over here to widen the market for the commodity. Not that that was the only reason. The Australians set the ball rolling, and while it has been suggested that the Australian campaign is in favour of the Greek currant owing to the small amount of Australia's exports it is perhaps not without significance that it has been deemed advisable to follow her example, or to be more correct, to resume the pre-War practice, for prior to 1914 Greece devoted very large sums annually to popularising currants. The actual estimate of the crop is 150,000 tons and the retention has been fixed at 50 per cent. Supposing that the whole amount was available for export, which is not the case, it would mean that the crop was roughly almost twice the amount required. It may be mentioned in passing that it is provided by the Currant Administration that any surplus there may be at the end of the season will be purchased at the price of £3 13s. plus 1,000 drachmae per ton.

High Retail Prices.

Prices this year are at present just about the same as last season. The demand, I am told, centres mainly round the better qualities, shade dried Vostizza making 50s. to 58s.. The lower qualities realise prices much below this level, Gulf being 37s. to 39s., Patras 34s. to 35s. and Amalias 32s. A point that has been raised in this connexion, and one that is now without interest, is that while these prices show only small changes on the pre-War rates the retail prices are still at a high level. That this should be so is probably an explanation why the demand for currents fails to expand. I gather that the difference between the import price and the retail price is very considerable, Vostizzas, for example, which cost the importer 6d. retailing at 10d. per lb. I do not suggest that the shopkeepers are to blame. It is more probably the middlemen who are responsible But whoever it may be is immaterial; the fact undoubtedly at issue is that the present retail prices are indefensible and their reduction is the surest way to enlarge the demand for currants.

Improving Trade with Egypt.

Mr. Homan Mulock's review of the position in Egypt is one of the most encouraging reports from the trade point of view that has been forthcoming for a considerable time. For some time British trade with Egypt has been at a low ebb, but last year Egypt's imports from Great Britain showed an increase of £667,000. "As this result has been achieved," says the writer, "in spite of the fact that three of the countries with depreciated currencies are among the United Kingdom's most formidable rivals, it is to be hoped that the tide has turned at last." The actual figures for the United Kingdom were £14,660,664 out of a total of £E58,224,895, and the total. trade for the British Empire was £E21,281,800 The value of Egypt's exports was £E59,198,662, and of this total the United Kingdom was responsible for £E26,167,972. As the United Kingdom is, and has been, Egypt's principal customer it is only natural that we should expect something in the nature of reciprocal treatment in the matter of imports. At the present time Egypt has a large trade balance in her favour as regards the United Kingdom, and while this country does head the import list by a substantial margin it cannot be maintained that the present position is by any means saisfactory from our point of view.

The Cotton Policy of Egypt.

Cotton, of course, comes in for a good deal of attention in the report, and Mr. Mulock deals in detail with the attempts of the Government to support the falling market during the period under review. In every previous year Government intervention in the market has resulted in a profit, but the result this time is very open to doubt. The Government's purchases in the past financial year have amounted to more than the total of their purchases in previous years, and Sakellaridis now stands considerably below the average price paid for it. It is impossible accurately to foretell the course of the market in a commodity so variable as cotton, and in regards to which so many different factors have to be taken into consideration, but it would seem obvious that, if the Government purchases are not to result in a serious loss, some time will probably elapse before the cotton can be resold, and, of course, the longer it is held the higher must be the selling price to avoid a loss. The root fact at the moment is that the world's visible supplies are far more than enough to provide for current consumption—there will, indeed, be a superfluity of cotton if the largest estimates of the American crop are realised. While American and Sakellaridis fill different rôles in the cotton industry American tends to influence the price of the principal Egyptian cotton to an increasing extent, while all the time the production of Sakellaridis outside Egypt is growing. In the light of these factors it will be realised that an attempt to sustain prices is likely to be a very uncertain undertaking. So far, at any rate, it has failed of its purpose, though it is open to argument, of course, that the cotton would have declined much lower than it has but for the Government action. COMMENTATOR.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 12.

The rejection by the miners of the Government's tribunal proposal, the threat to withdraw the safety men, and the stormy opening of the Labour Party Conference have all acted as influences in restraint of activity on the Stock Exchange. But, generally speaking, the range within which quotations moved in most sections was a narrow one. The new capital market recently has been more interesting than the markets for existing securities. The campaign of new borrowing is developing considerable intensity. Following on the huge over-subscription of the Hamburg Loan came a similarly striking reception of a £6,000,000 loan by the City of Tokio. These two events in themselves prove beyond all question the existence of a greedy appetite among the British investing public for attractive foreign securities, and the Tokio success, although part of the huge sum raised was not new money but for replacement purposes, gave point and liveliness to the discussions current in financial circles as to how much London can safely lend abroad under the peculiarly difficult circumstances of this autumn, to which reference has previously been made in this column. There are clearly two ways in which the authorities could, if they deemed it necessary, check the flow of new capital into foreign securities. One is a re-imposition of the embargo on foreign loans, and the other the lifting of Bank Rate. Both are *per se* undesirable, and the choice between them is not easy. But the best City opinion seems to be inclining to the conclusion that, if one weapon must be used, the use of Bank Rate is preferable.

Among recent events of importance have been a further rise in the price of tin, the publication of the long-awaited settlement offer to the holders of Canadian Northern debentures (which is likely to be accepted), renewed buying of Imperial Tobacco shares on the rumour that the much-talked-of bonus distribution is near at hand, and a weakening in Courtaulds owing to the depression in the textile trade.

Motor Shares and the Show.

With the approach of the Motor Show at Olympia towards the end of the month the attention of investors is naturally directed towards the merits or otherwise of the shares of British motor manufacturing companies. Unfortunately, while the motor industry as a whole is in a flourishing condition so far as output and sales are concerned, the financial position of the majority of the companies is still far from satisfactory. Financial reconstruction has been the order of the day, and many concerns have not yet reached the stage which can be described as one of robust health. Quite a number, indeed, are not within sight of a dividend payment and should be left alone for the present in the absence of special information. One of the few concerns to come through the slump unscathed is Rolls Royce Ltd., whose ordinary shares, on the basis of the 8 per cent. dividend paid for 1924-25, give a yield of just under 4½ per cent. a figure which can hardly be called attractive. A distinctly larger return is obtainable on the 7½ per cent. cumulative preference shares of Morris Motors Ltd., issued some three months ago. A dividend for three months is payable at the end of this month and the shares, which are now fully paid, can be acquired at a shilling or more under their issue price, making the yield, over 8 per cent. The figures given in the prospectus showed that the preference dividend on the basis of recent earnings is very amply covered.

The Stock Exchange and Bucket Shops.

An alteration recently made by the Stock Exchange Committee in one of its rules to the effect that a broker may not share his commission with an agent who advertises in the Press for business or who issues circulars, is of considerable importance. It has doubtless been drawn up with a view to protecting the public from the attentions and allurements of bucket shops and outside brokers of no standing. The best known agents for Stock Exchange business are the banks, and they undoubtedly have the interest of the public at heart as much as the Stock Exchange itself. The new rule, which has this end in view will undoubtedly have their ready support. It will act as a powerful safeguard to that section of the public which most needs protection. How far it will curtail the activities of the bucket shop brigade remains to be seen; unfortunately, their business is so lucrative that they will doubtless make every endeavour to circumvent the new legislation.

Tin and Tin Shares.

During the past week the price of tin has risen to over £318—a new high level since the post-War inflation period, when it went to nearly £420. Allowing for the difference in the purchasing power of the pound sterling, the current price actually sets up a record. Yet there is by no means the anxiety that might have been expected on the part of the public to purchase the shares of tin-producing companies. One explanation doubtless consists in nervousness regarding the possibility of a sharp relapse at any time. Another is that the dividends of tin companies, generally speaking, have failed fully to reflect the advance which has taken place in the price of the metal during the past twelve months. In some cases a portion of the additional earnings has been devoted to the purchase of additional property, or the installation of new plant. In others, difficulties have been experienced in connexion with one or more of the dredges used. Contingencies of the last-named character have of course, always to be envisaged. As against the former, the benefit of the procedure followed will be felt in the future, and especially in the event of the price of tin being well maintained, that benefit will prove substantial.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at July 31, 1926, published in conformity with Article 8 of the Statutes. Banking Department, Liabilities.—Share capital (300,000 fully paid shares of £10 each), £E2,925,000; Reserve Fund: statutory reserve, £E1,462,500; special reserve, £E1,023,750; current deposit and other accounts, £12,506,028: Egyptian Government, £E19,753,662; Sudan Government £E144,371; Mixed Tribunals, £E1,586,869; bankers' accounts, £E253,292; cheques and bills payable, £E260,577; sundry other accounts, £E858,202; £E40,774,251. Assets: Government securities and securities guaranteed by the Egyptian Government, £E25,567,934; sundry securities, £E329,727; advances on merchandise, £E623,479; advances on securities, £E2,366,641; advances otherwise secured, £E473,343; sundry other advances, £E895,863; bills of exchange, £E1,758,658; local bills discounted, £E409,011; buildings and furniture, £E129,962; money at call and at short notice, £E1,062,750; bankers' accounts, £E4,931,078; sundry other accounts, £E190,733; cash: notes, £E1,465,693; gold, £E116,063; silver, nickel, etc., £E453,316; £E2,035,072: £E40,774,251. Issue Department: notes issued, £E27,000,000; £E27,000,000. Gold, £E3,339,576; *British Treasury Bills, £E10,160,424, £E13,500,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £1,356,092; British Treasury Bills and National War Bonds, £E12,143,908, £E13,500,000; £E27,000,000.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

Steaua Romana (British), Limited, are advised that the production of the Steaua Romana Company, Bucharest, for September was 40,090 tons.

British Consular Reports

III.—EGYPT.

A most satisfactory feature in the report of Mr. E. Homan Mulock, British Commercial Secretary at Cairo, on the Economic and Financial Situation of Egypt for the period ended June, 1926, which has just been issued, is the reference to the substantial improvement in British exports to that country in the past year. We give the following extracts from the report:—

In spite of the set-back in cotton prices which has characterised the 1925-26 cotton season—so far as that period is covered by this report—the prosperity of Egypt and the flourishing condition of public and general finance, so far from being adversely affected, have been generally enhanced. The decline in cotton prices does not appear to have affected the purchasing power of the country, the strength of which is indicated by an increase in the value of imports, which exceeded the total of the drop in exports by nearly £E1,000,000. Further, in spite of these conflicting factors, and a decrease of £E200,000 in re-exports, the net result is a favourable trade balance of £E2,243,941, and a total foreign trade of £E118,693,731.

Budget Surplus.

To turn to State finance, the Reserve Fund has swollen from £E24,000,000 at the end of the 1924-25 financial year, to an estimated figure of over £E30,000,000 on March 31, 1926; the budget surplus thus indicated being accounted for, partly by an excess of actual revenue over estimated receipts of £E3,868,000, and partly by actual disbursements having fallen short of estimated expenditure to the extent of £E2,800,000. Owing to a variety of causes, chief among which are the delay in sanctioning the budget, and the non-initiation or non-completion of new works, the excess of estimated over actual expenditure has averaged £E3,294,250 during the four financial years ending with that of 1925-26; while the average surplus of normal revenue over normal expenditure over the same period has been £E5,483,000.

Speaking generally, the attitude towards commerce and industry of the Cabinet which was in power during the period under review was dictated by the desire to encourage and assist Egyptian industries as far as possible, and to invoke the aid of foreign enterprise for development schemes which local firms could not undertake but which would eventually benefit Egypt at large.

Government and Cotton Market.

For the fifth year in succession the Government has entered the cotton market as a purchaser. Operations began on October 31, 1925, as the result of pressure from the General Agricultural Syndicate, who were alarmed at the decline of the price of Spot Sakel from 50½ dollars on September 1, the opening day of the current season, to 42½ dollars on October 25, the date on which the Government announced its intention of buying spot cotton. By the end of 1925 the Government had bought about 5,000 bales (38,750 kantars) mostly F.G.F. Sakel, but in spite of these operations, the object of which was supposed to be the stabilisation of prices, the price had fallen from 38¼ dollars on October 31 to 33⅜ dollars on December 31, 1925. On January 13, 1926, up to which date they had bought about 6,000 bales (46,500 kantars) at an average price of 35 dollars per kantar, they yielded to further pressure by the Syndicate and decided to increase their purchases up to a total of half a million kantars, fixing as their purchase basis a premium of Sakel over American of 75 per cent., and endeavouring to maintain a minimum price of 36 dollars per kantar. By the end of the financial year 1925-26 Government purchases of cotton had totalled 350,496 kantars (45,225 bales), involving an expenditure of £E2,364,061*, or an average of 33.72 dollars per kantars, which consisted of Ashmouni.

Whatever the ultimate result and object of this unproductive and costly holding up of pure Sakel may be, it has failed of its immediate object and sole *raison d'être*, viz., the maintenance of prices. On March 17, 1926, Spot F.G.F. Sakel touched the lowest price recorded during the current season up to May 31, viz., 28⅞ dollars, since when it has hovered round 30 dollars to 32½ dollars; while the effect on contracts has been equally depressing. New Crop reached its highest level for the current season, i.e., September 1, 1925, to May 31, 1926, on September 17, when it stood at 46.58 dollars. From that point it declined steadily until March 17, when it touched its lowest level, viz., 28.70 dollars, since then hovering round 30 dollars.

It should be noted that the financial argument in favour of Government intervention in the cotton market in previous years has been that the Treasury has invariably recouped itself handsomely by subsequent selling on a rising market. It must, however, be borne in mind, when considering the eventualities of the Government's latest experiment that, by the end of the financial year 1925-26 they had already purchased more than the total volume of all the previous four years put together, viz., 246,033 kantars (of which 174,350 were bought in 1921), and had already spent nearly a million more than the total cost of those four years' purchases, viz., £E1,435,410. During the four cotton seasons 1921-22 to 1924-25 inclusive they made a total profit, by subsequent disposal in small quantities at remunerative prices, of £E500,000; but it is obviously a very much easier matter to dispose, at a profit, of a yearly average of 61,508 kantars, than of a quantity which is already more than five times as large, and which by the end of the season may well prove to be more than eight times as great, and to whose initial cost must be added the recurrent expenditure involved by storage and insurance.

Imports.

A noticeable feature of the increase in imports in 1925, which amounted to nearly £E7,500,000, is the considerable part played therein by foodstuffs of various kinds. Thus wheat and maize flour accounted for £E1,176,000 of this increase; wheat for £E687,000; sugar, raw and refined, £E396,000, and rice, £E374,000. The other most notable increases in particular commodities were chemical manures, £E673,000; gold bullion, £E500,000; cotton piece-goods, £E458,000; coal, £E211,000; wood for building, £E172,000; and cement, £E169,000.

* By June 12 total purchases had risen to 404,957 kantars and expenditure to £E2,792,148.

FOREIGN EXCHANGES.

Country.	Method of Quoting.	Parity of Exchange.	Latest Quotations.
Alexandria	Piastre to £	97½	97½

Digitized by Google

There was an increase in every main category of imports except dyestuffs, etc., and tobacco, and the bulk of the total increase occurred in cereals, flour and agricultural produce; metals and metal-ware (which includes machinery of all kinds); yarns and textiles; chemical and medicinal products; and wood and coal.

British Trade.

It is satisfactory to note a really substantial increase in imports from Great Britain in 1925, amounting to £E667,000, and as this result has been achieved in spite of the fact that three of the countries with depreciated currencies are among the United Kingdom's most formidable rivals, it is to be hoped that the tide has turned at last.

Nearly 75 per cent. of the total imports from the United Kingdom are accounted for by the following:—Cotton piece-goods, £E5,729,000; coal, £1,748,000; machinery, £E1,096,000; iron and steel goods (manufactured), £781,000; woollen piece-goods, £E517,000; copper and brass sheets, £E245,000; gold bullion, £445,860.

The most notable increases, either actual or proportionate, have taken place in ammonium sulphate, anti-friction metals, boots and shoes, coal, cotton hosiery and yarn, electric copper wire, gold and silver bullion, iron and steel goods (miscellaneous), linseed oil, lubricating oils, machine belting, machinery (agricultural, textile, etc.), motor vehicles and vessels, pipes and fittings (wrought iron or steel), power pumps, rail and road locomotives, scientific instruments, spare parts for motor cars and cycles, stationary engines, telegraph and telephone material, tin ingots, bars or slabs, tin plate, wheat flour and woollen yarn.

Empire Trade.

The increase in imports from the United Kingdom contributed appreciably to the rise of nearly £2,750,000 in the share of the British Empire, for which British India and Australasia were also largely responsible. In the case of the latter, wheat and wheat flour were the principal contributory causes, while in the case of British India, rice must be added to the two above-mentioned commodities as the chief factors in the total increase. Imports from British India increased by about 67 per cent., and consisted for the most part of empty sacks and bags, £E621,000; rice, £E508,000; wheat, £405.000; wheat flour, £E311,000; cotton yarn, £E226,000; and tea, £E114,000. Imports from Australia increased by about 50 per cent. and attained a total value of £E2,440,000, of which wheat flour accounted for no less than £E2,035,000, and wheat £E323,000.

The principal items of the total imports from other British Possessions in the Far East consist of tea, £E264,000, and coconut oil, £E144,000, from Ceylon; mineral lubricating oils and greases, £E22,000, from British Borneo, and £E35,000 from Straits Settlements; and £E31,000 worth of pepper from the last-named. It is satisfactory to note that the import of mineral lubricating oils in 1925 from British Borneo is four times as great as that of 1924, while supplies from Straits Settlements have more than trebled. Imports from the British West Indies, which consisted of bitumen from Trinidad, increased slightly in volume and value to 5,487 metric tons worth £E39,832.

Exports.

The decrease of £E6,535,273 in exports in 1925 was, in the main, due to the drop in cotton prices, and the slow marketing of the crop during the first four months of the 1925-6 cotton season, which also adversely affected the export of cottonseed. Exports of raw cotton in 1025 decreased in volume by 830,000 kantars and in value by £E4,900,000, the only countries which increased their purchases being U.S.A. by 142,000 kantars and Japan by 86,000 kantars. The value of cottonseed exported decreased appreciably, the difference of £E155,000 less than the export of 1924 being chiefly due to reduced purchases by the United Kingdom. The remainder of the total decrease was accounted for by cane sugar, refined, to the extent of £E318,000; metallic ores, £E116,000; and eggs, £E105,000. The decrease in eggs was due to restriction of export imposed at very short notice by the Egyptian Government during the first three months of 1926, and removed too late (i.e., April) to affect the exporting season.

Agricultural and Industrial Exhibition.

This Exhibition, the twelfth of its kind, which was held in Cairo from March 1 to April 20, 1926, was organised by the Royal Agricultural Society under the patronage of His Majesty King Fouad, and was materially assisted in many ways by the Egyptian Government.

The Exhibition was divided into two sections, Egyptian and Agricultural Industries. The Egyptian industries section consisted of 170 exhibits and stands, of which 138 represented manufactures of carpets, cigarettes, copperwork, embroidery, foodstuffs, furniture, jewellery, leather, matting, metalwork, mineral waters, perfumery, printing and office equipment, textiles, tiles, and turnery work. The agricultural section included a large area occupied by stands containing exhibits of machinery and implements primarily for agricultural purposes, but including also fire engines and fire fighting appliances, ice-making machines, spray painting apparatus, safes, etc. It was this part of the Exhibition that was naturally of the chief importance and interest to British trade, since it was only there that overseas exhibits could be included.

The machinery section comprised 68 stands. Although only five of them were occupied by local British engineering firms, whose exhibits were either solely or largely of British manufacture, those occupied by seven of the principal non-British engineering firms in Egypt also included a large proportion of British machinery.

The range of agricultural machinery and implements of British manufacture was very extensive, and, whether exhibited in British stands or not, was shown to the best advantage. The British stands in particular were most attractively and harmoniously arranged, and four out of the five exhibitors obtained gold medals.

Most of the machinery in the principal stands was kept running during visiting hours, so that potential buyers could see the various motors, engines, pumps, threshing machines, etc., in operation. The advantages of this active and actual demonstration of British agricultural machinery as an advertising medium, and as propaganda for British goods in a country where so many potential customers cannot understand catalogues and are unimpressed by an immobile machine in a showroom, cannot be gainsaid, however divided opinions may be as to the efficacy of this particular exhibition as a selling medium.

Two explanations of the fact that several exhibitors of machinery complained either of selling nothing at all or of having only booked orders from existing customers who would have patronised them in any case, have been put forward, and appear to be reasonable. Firstly, that the Exhibition was held at the wrong time of the year for selling agricultural machinery, since by March landowners and cultivators have already purchased their requirements, and are busy getting their cotton planted and their land irrigated; secondly, that it coincided with Ramadan. In view, however, of the fact that, in spite of these adverse conditions, one of the British exhibiting firms sold every machine in their stand, it is sincerely to be hoped that British manufacturers of all the kinds of machinery for which there is an actual or potential market in Egypt will in future make the most of every possible opportunity of having the actual operation of their products demonstrated, whether to Government departments or to private consumers.

Cotton and Cotton Goods.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended October 6:—

Egyptian Futures.—Sakel Contract.—With influences of a decidedly "bearish" character in full operation, this market has been under pressure for the greater part of the week, and in spite of a display of increasing resistance and a reactionary tendency during the past two sessions, values to-night show a decline of 91 to 93 points for near and 94 to 98 points for distant deliveries since we last wrote. Briefly, and in sequence of importance, the causes of the decline may be summed up as follows: lack of adequate trade support to offset the growing crop movement, the almost demoralised state of the American markes owing to the continued raising of production estimates and the growing probability of a 17,000,000 crop should the present open weather hold, and, lastly, better crop reports and favourable climatic conditions for our own cotton. Aggressive short selling has been in evidence, and the downward movement has at times been accentuated by the uncovering of stop-loss limits; in addition, some heavy straddle selling against purchases of Americans has been in progress. With regard to the latter, the present difference, i.e., 665 points, January/January in the respective markets, certainly appears attractive but those committing themselves must bear in mind the relative smallness of our crop and its particular susceptibility at the present level to respond to any improvement in the offtake; also there is always the danger of Government interference, as 28 dollars might be regarded as a reasonably safe basis to start a holding movement. As far as the local trade is concerned, the decline so far has only brought about a very slight improvement in the offtake, both spinners and manufacturers evidently finding the movement too rapid; all sections from the producer to the overseas buyer of the finished article appear to be holding their hands in anticipation of a still lower range under the weight of the full crop movement.

Upper Contract.—Values in this option have continued to be ruled by the prevailing lines in the American markets and sympathetically have declined 85 to 95 points on the week. Rather more trade support has been in evidence, but the present differences with other growths will have to narrow in to attract business of importance.

Egyptian Spot.—A fair inquiry has been witnessed in this department under conditions similar to those ruling during the preceding week. Under the influence of better crop news from Egypt, and higher estimates regarding the American crop, prices have continued to sag, and although the level ruling to-day, both for Sakel and Upper cotton, is undoubtedly attractive, fears of a further decline are keeping buying in check for the time being. The "buying point" cannot be far away, however, and should Friday's Bureau report prove to be even mildly "bullish" in character, we shall not be surprised to find buyers operating on a much freer scale than has been the case hitherto. The local spot inquiry has shown little change. In Sakel, Good Fair and Fully Good Fair have again attracted the bulk of the business, whilst the better grades have received only moderate attention. Inferior Sakel at from 8.00d. to 12.00d. has continued in fair request by bargain hunters, and this market has now been thoroughly combed within the above limits. Fully Good Fair Uppers, at about 11.25d. to 11.50d., have been in good request, but the more expensive cotton still remains comparatively neglected. Pilion at from 12.50d. to 13.00d. has been in fair request, but the resulting business has been only moderate in extent. In Sudan cotton, trading, compared with last week's figures, has been light, but on the whole, interest has been well maintained, particularly in the American seed cotton at from 75 to 150 on. C.i.f. business has remained quiet, but here and there has been observed signs of a dawning interest in new crop cotton. Forwardings to spinners for the week ending 1st inst. were returned as 3,816 bales Egyptian and 1,079 bales Sudan. Estimated sales for the week, 1,400 Egyptian and 1,100 bales Sudan. Quotations of Sakel are 105 points lower and those of Upper 80 points lower. Fully Good Fair Sakel 16.10d. Fully Good Fair Upper 11.45d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report dated September 30, state:—

Since our last report the futures market has been very active but rather weak. The week's summary of price movements is as follows: Sakellaridis: November, 29.70 dollars, 2.90 dollars down; January, 29.30 dollars, 2.35 dollars down; March, 29.15 dollars, 2.05 dollars down; May, 29.10 dollars, 1.60 dollars down. Ashmouni: October, 19.95 dollars, 1.07 dollars down; December, 20.00 dollars, 0.95 dollars down; February, 20.18 dollars, 0.85 dollars down.

The weak undertone mentioned in our previous report became accentuated on the publication of the American Bureau Report on the 23rd instant; this report gave the condition of the American crop at 59.5 per cent. with a prospective yield of 15,810,000 bales against 53.8 per cent. and 13,931,000 bales respectively at the same date last year.

The demand from abroad has been fairly good and we think that the decline has induced spinners to buy on fairly large lines. The bullish enthusiasm created as a result of the recent pessimistic reports on the crop is gradually fading away, especially as the climatic conditions ruling during the past week have been favourable, so that the second picking is expected to turn out better than was anticipated only a few days ago. However,

one must not lose sight of the fact that the Sakel crop is late and with contract cotton in such small supply it is improbable that the November premium will narrow very much more. Liverpool interests are said to be still very short of November, having covered but very little on the recent drop.

Parliament went into vacation last week, but one of the last things they did was to give the Government a free hand to intervene in the cotton market as and when they thought fit. Under these circumstances, further Government intervention is a possibility in the event of a further decline in prices. The stock at present held by the Government amounts to about 500,000 kantars, bought at prices considerably higher than those at present ruling.

The week's receipts amount to 175,958 krs. against exports 62,215 krs.; the stock in Alexandria stands at 1,261,446 krs.

Spot.—During the week under review we have had more active markets at Minet el Bassal and there has been an improved demand from spinners, especially for Uppers Egypt. Sales amount to about 15,700 bales, of which we estimate 4,850 bales Sakellaridis, 9,500 bales Uppers, 700 bales Zagora, 500 bales Pilion, and 150 bales White. The interior movement is fairly big in Upper Egypt and cotton is arriving freely, but the crop in Lower Egypt is not yet moving in quantity. The majority of arrivals from the Delta is Zagora, and Sakel is not yet offering freely.

Sakellaridis.—Has been in improved demand for all styles and a fair business has transpired. There is a fair demand for the top qualities, but the really good staple cotton has not begun to arrive in quantity as yet. Low grade cotton of desirable style is also scarce. Spot differences for Good and better are inclined to ease, for the medium qualities they are steady and unchanged, and for the lower grades they are dearer.

Ashmouni and Zagora: have been in good demand and have absorbed the greater part of the week's business. All qualities have been dealt in. Spot differences are without much change but inclined to ease under the weight of arrivals.

Pilion.—A good business has been done, mainly in the better qualities. Spot differences are without much change with the exception of Fully Good, which is somewhat dearer.

Brown: is neglected and no business is reported.

White: has been in moderate request. Quotations are nominal and generally easier, except for Fully Good which is dearer.

Crop 1926.—Latest news from both Upper and Lower Egypt is, in general, rather more optimistic; the temperature during the past week has been fairly high and this improves the prospects of the second picking. The pink boll worm attack is still heavy in many of the districts of Lower Egypt. In Upper Egypt the ginning factories are working full time, but in the Delta the movement of the crop is not yet heavy enough to keep the factories busy. The Lower Egypt crop movement is about two weeks later than usual.

KALLINE TEA.

The Kalline Tea Company has been registered as a public company with a capital of £60,000 in £1 shares, to acquire the Kalline Tea estate in the district of Cochar, Assam, India, to carry on the business of tea, coffee, and rubber planters, etc. No directors are to be appointed in the first instance, but the subscribers form a provisional committee of direction with all the powers of direction. The subscribers are:—Viscount Inchcape, 122, Leadenhall Street, E.C., shipowner; Hon. Kenneth Mackay, 122, Leadenhall Street, E.C., East India merchant; Hon. Alexander Shaw, 122, Leadenhall Street, E.C., East India merchant; George F. Hotblack, 122, Leadenhall Street, E.C., East India merchant. William F. Reynolds, 117-118, Leadenhall Street, E.C., East India merchant; George A. Harvey, 117-118, Leadenhall Street, E.C., merchant's clerk. The registered office is at 117-118, Leadenhall Street, E.C.3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. California for Bombay (Birkenhead, October 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Magdapur for Port Said, Colombo, Madras, and Calcutta (London, October 16).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, October 20).

British India Line.—S.s. Margha for Colombo, Madras, and Calcutta (London, October 23); s.s. Manela for Bombay and Karachi (London, October 29).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also Gruz and Ancona if inducement (Liverpool October 16, Swansea October 19); s.s. Cypria for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Glasgow October 21, Swansea October 22, Liverpool October 23).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (last steamer of the season for Galatz and Braila) (Liverpool, October 30); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, November 20).

P. and O. Line.—S.s. Razmak for Bombay (London, October 15); s.s. Novara for Colombo, Madras, and Calcutta (London, October 16).

Prince Line.—S.s. Italian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, October 20); s.s. Algerian Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, October 20).

Ellerman and Papayanni Lines.—S.s. Griqua for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 16); s.s. Algerian for Algiers*, Malta, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool October 16, Swansea October 16); s.s. Malatian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 23); s.s. Lisbon for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool October 30, Swansea November 3); s.s. Roumelian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, November 6). * Subject to sufficient inducement. Transhipments:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

Mr. William Heard Shelford, of Paterson Simons and Co., has been appointed a director of the Mercantile Bank of India.

The will of Mr. James P. Wilson (72) of Glengarry Road, East Dulwich, S.E., late of Lahore, Punjab, India (net personality £6,097) has been proved at £6,127.

THE MOTOR CYCLE SHOW.

(From Our Own Correspondent.)

If British motors are not yet playing the part they should in the world markets, and in many of the Near Eastern centres are indeed rather conspicuous by their absence, the same happily cannot be said of British motor cycles. They are prominent in nearly every outlet, they can hold their own against all comers, and they usually fill a leading role in competitions abroad, which fact naturally has conduced to no small extent to the growing demand for them wherever motor cycles are used. It is significant of the position that some of our foreign competitors have been led to admit that while they may be able to produce bodywork of equal worth to that of our makers, their customers insist on having British engines. Needless to say the British motor cycle industry has not achieved its present high renown in a day. It has been the result of years of ceaseless and most painstaking endeavour for better things, years of more and more arduous tests which have evolved incomparable machines. There has been no standing still, and there will be none, in the industry, and therein is crystallised the secret of its success and, be it emphasised, the promise of its future contribution to British trade expansion. For the world demand for motor cycles is still in its infancy, and as there is a recovery in purchasing power the industry will rapidly feel the benefit.

These facts lend a special interest to last week's Motor Cycle Show at Olympia, where were to be seen a bewildering variety of the latest products of this progressive industry. It seemed a portent of the initiative that our motor cycle manufacturers have displayed that youth was predominant at Olympia during the week. It was, in fact, the show for the young man and, be it whispered, youth of the other sex who will presently be accompanying him on one of the latest machines on a whole-hearted adventure along our delightful English lanes. The unsightly beret was there, of course, in plenty, and more interesting were the ties which suggested the presence of representatives of most of the colleges at the universities, and brought forth visions of the chaos in the narrow roads at the old universities when everyone who is permitted to do so owns a motor cycle. Crossing K.P. or the High, a difficult problem sometimes to-day, will become a veritable Odyssey, and one shudders to think of a passage across the Cury or, worse still, Silver street a quarter of an hour before the games begin.

It would be impossible in a short review of the exhibits to do anything like justice to the many features of the Show that deserve notice and I propose to confine my comments to about half a dozen of the more important stands. B.S.A. Cycles, Ltd., who were not represented at last year's Show, had a most interesting stand, containing a large range of motor cycles and sidecars, to say nothing of a number of their well-known bicycles. I would take the opportunity here of saying that I am purposely abstaining on this occasion from making other than passing reference to ordinary bicycles for the very good reason that, while their value as a medium of foreign trade is obvious, what British manufacturers can do in this direction is well known, and there is therefore no point in stressing it. But the market for motor cycles is just beginning to develop, and for that reason therefore I shall restrict my comments to them. To return to the B.S.A. exhibits, the motor cycles shown range from the 2.49 h.p. sports model to the 9.86 h.p. de luxe model with a sidecar. It may be noted that the range of the B.S.A. motor cycles has been redesigned for the 1927 season, many improvements having been introduced. In this connexion mention might be made of the lubrication systems. The sight feed in the single-cylinder models forms part of the pump unit on the timing cover, and a special trough is fixed under the spout so that the drops of oil can be seen by the rider. The rate of flow can be varied by a control knob. A spring loaded hand pump is mounted on the tank for emergency use and to supply oil to the engine when stationary. Then as regards brakes the 1927 models have internal expanding hub brakes on the front and rear wheels. The smaller models have a 5½ in. front brake, while a 7 in. brake is fitted on the 4.93 de luxe machine and upwards. The rear brake on the 2.49 h.p. machine is 5½ in., but on all other machines it is 7 in. Of the various machines shown special mention may be made of the 4.93 h.p. O.H.V., which seems an ideal machine for sporting purposes and the 7.70 h.p. B.S.A. with sidecar. But all the machines are excellent, and they require to be seen to be appreciated.

The stand of Rudge-Whitworth, Ltd., contained a number of attractive machines, and special mention may be made of their 4.99 h.p., special model, and their 4.99 h.p., sports model. The former, a particularly fine-looking machine, is admirably finished It has shock absorbers in the forks, while it is fitted with a steering damper to avoid wheel-wobble. The sports model, which also has this damper, which is a feature of all the machines produced by this company, is guaranteed to be capable of 80 miles per hour., and it is worth noting that silencing has been the matter of special attention. There is mechanical pump lubrication and the machine has four speeds.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended October 2:—

The arrivals are estimated at 20,400 tons, and the sales to date are put at 18,600 tons. Closing prices, Smyrna: per cwt. c.i.f. London/Liverpool, type 12, 52s. 6d.,; type 13, 54s. 6d.; type 14, 56s. 6d.; type 15, 58s. 6d.; type 16, 61s.; type 17, 64s.

The market has ruled steady through the week The demand has been slightly more active than last week, but prices show no variation. Exchange has been steady at between Ps. 940 to Ps. 950 per pound sterling.

The arrivals of figs are estimated at 17,484 tons and the sales to date are put at 16,541 tons.

The market is unchanged except that a visibly firmer undertone is developing. Indications point to a higher level of prices being attained before long for good quality Naturals or anything better. Inferior Naturals appear to be in abundant supply.

Company Meetings

SOUTH INDIAN RAILWAY.

Distribution Maintained.

The ordinary general meeting of the South Indian Railway Company, Ltd., was held on October 6 at the offices, 91, Petty France.

Mr. Alex. Muirhead, C.I.E. (chairman and managing director), said that the revenue account showed the satisfactory increase of 27½ lakhs of rupees in gross earnings, compared with those of the previous year, when disastrous floods so seriously interfered with the company's operations. Against the increased earnings, however, they had a large increase of 34 lakhs in working expenses, chiefly owing to expenditure on renewals, work on which had been delayed by the floods of the previous year, and also to the expenses of the earlier year having been reduced by the money received in refund of Indian Customs duty. The net result was a decrease of Rs.6,56,071, or slightly under 3 per cent. in net earnings, which amounted to Rs.2,19,43,774, and which, in the circumstances, they had reason to be satisfied with.

The board, therefore, thought they were justified in again recommending a final distribution for the year 1926 of the same amount as last year—namely, 2½ per cent. from surplus profits—making with 1¾ per cent. guaranteed interest 4¼ per cent., less income-tax, for the half-year, and a total distribution for the year of 8 per cent., less tax.

They had, as usual, been informed by cable of the approximate results of working for the first half of the current year. The gross earnings for that period were less by Rs.0¼ lakhs than those of the corresponding half of last year. The working expenses were less by 11½ lakhs, and the net earnings were therefore about Rs.5 lakhs more, and the company's share of surplus profits for that period was estimated at Rs.5,06,000, compared with Rs.4,98,902 for the corresponding period of 1925.

With regard to the differences which had arisen between the Secretary of State and the company in respect to the method of treatment of the capital of the Secretary of State and that of the company and the effect on their surplus profits, he said that the question had not yet been settled, and the point at issue was to be placed before an arbitrator acceptable to both parties.

The report and accounts were unanimously adopted.

NIZAM'S GUARANTEED STATE RAILWAYS

Increased Distribution.

The ordinary general meeting of H.E.H. the Nizam's Guaranteed State Railways Company, Limited, was held at Winchester House, Old Broad Street, E.C.2, on October 12, the Chairman, Lt.-Col. George Huddleston, C.I.E., V.D., presiding.

The Secretary (Mr. F. Adams) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said:—On the broad gauge we did quite well, but on the metre gauge traffic receipts were a little disappointing. Taking the two together, the net results in sterling were well up to the average of the past five years. On the broad gauge the gross earnings were higher than they have ever been previously. We carried an exceptionally large traffic in general merchandise, especially oil seeds, chiefly castor, and there was a fair increase in minerals. Passenger traffic was much the same as in the previous year, the numbers carried being somewhat lower and the earnings a little higher; a fall in short distance suburban traffic accounted for this.

As I have indicated, the earnings on the metre gauge did not come up to expectations. Heavy rain at the wrong time resulted in a partial failure of the cotton crop. This led to smaller receipts both from raw cotton and from cotton seed, the latter being also affected by a poor market. Linseed traffic also was reduced by a partial failure of the crop. At the same time there were good local crops of grain and pulses, so that imports were much restricted. Trading being poor, less money was spent on travelling. This, coupled with an unfortunate recrudescence of plague, resulted in a falling off in coaching earnings. Traffic fluctuations are natural; we cannot always expect records, but looked at broadly the gross earnings on the metre gauge are nothing to complain about. What we are apt to look on as a poor year now would have been a record a few years back.

The effect of the reduced earnings on the metre gauge was counteracted to some extent by reduced expenditure. On the other hand, the working expenses on the broad gauge were greater than in the preceding year, partly because the comparison is with a period in which they were exceptionally low and partly owing to necessary renewals of locomotive boilers, repairs and maintenance of track, and various other unavoidable causes which I need not trouble you with.

With the net earnings lower than they were last year, some of you may wish to know why the Board recommend an increased dividend and bonus. This is a natural question and I am glad of the opportunity of saying a few words on the subject. Put in a nutshell, the value of our reserves has greatly appreciated and has now reached such a figure that the board do not consider it necessary to add to them so rapidly as heretofore.

Last year I mentioned that we were in a strong position. After payment of last year's dividend and of taxation dues, the market value of our largest reserve, known as the surplus earnings fund, stood in round figures at £780,000. After paying the dividend shortly to be proposed and providing for taxation it will stand at about £824,000.

Ten years ago the market value of the investments constituting this reserve was under £108,000. In recent years we have added to it considerable sums from revenue and our policy in doing so has, I believe, been to your advantage. It is reflected to some extent in the present price of your stock and it has enabled your board to form the conclusion that it is no longer necessary to add to it the same, or similar, large annual sums from revenue as in the past. Naturally your board cannot see into the future. They do not know whether the railways now entrusted to them to work will be taken over by the Government at the beginning of 1934, when the present contract is liable to termination, or whether the State will then leave the working in their hands. The option lies with H.E.H.'s Government and I am not going to attempt to prophesy what will happen, but I will say this, the strong reserve in the surplus earnings fund has, in the opinion of the board, placed them in a position to face any eventuality likely to arise or that can be foreseen.

You may wish to hear about the other large reserve fund, No. 5, on page 8 of the report. This reserve, after providing for taxation, had a market value on March 31 last of nearly £564,000. It is maintained mainly for a specific purpose, namely, to augment the sinking fund shown in Statement 20, page 17, of the report, formed for the redemption of one and a half million 4 per cent. debentures due on December 31, 1936. If the Government do not terminate the present contract on January 1, 1934, these debentures must be redeemed by us. If they terminate the contract in 1934 the reserve fund will be left with us, though the sinking fund will become the property of the Government. I may say that this reserve, together with the sinking fund, the two together being valued at over a million, should be ample by 1936 for the redemption of the debentures referred to, but obviously until we know the intentions of Government as to the contract, or are nearer the time when it may be terminated, we cannot say how this reserve fund, or any part of it, will be disposed of ultimately. For the present your board intend their policy to be to carry on in respect to this reserve as though the contract would not be terminated in 1934.

There is another matter I wish to mention here. There is now and there has been for some years past a great disparity between the interim and final dividends. The last interim dividend was at the rate of 4 per cent., and the final proposed, with bonus, is at the rate of 11 per cent. Your board feel that a more even distribution in the future would be welcome to you and hope to be able to arrange this. I wish, however, to make it clear beforehand that a larger distribution of an interim dividend, if made, should not be taken as an intimation of what the final dividend may be.

As regards prospects of traffic during the current year, you know that an important factor in India is the rainfall, but I am glad to say that on the whole this has been satisfactory in H.E.H. the Nizam's Dominions. The rains broke late, but the condition of the crops is very favourable and unless something unforeseen occurs the prospects during the current year are good.

The report and accounts were unanimously adopted.

Mr. John Innes, of London Road, St. Leonards, formerly of Cachar, India, tea planter, who died on July 25, left estate of the gross value of £34,306, with net personalty £34,060.

Lord Lytton, Governor of Bengal, arrived at Bombay on October 8 on his return from leave in England, proceeding thence to Calcutta.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Yugoslav Cabinet Crisis.

Like those of Bret Harte's Heathen Chinee, M. Raditch's ways are dark, but whether his tricks are equally vain is open to question. He has once again succeeded in bringing about a Ministerial crisis in Yugoslavia. The more spectacular cause of the resignation of M. Ouzunovitch's Cabinet was an outburst on the part of the Croat leader on the occasion of the visit to Zagreb of a party of Czecho-Slovak Members of Parliament. The details of the incident as recorded are not germane to the matter; suffice it to say that M. Raditch, on the station platform, contrived to be rude to the Yugoslav officials and insulting to their Czecho-Slovak guests. The Croat leader, however, is not a Minister, and his peculiarities by now must be as well known to the Czecho-Slovaks as to other people. Consequently it would hardly seem necessary for the Cabinet to resign on the strength of the Zagreb episode. It has, therefore, to be supposed that M. Raditch out of office can prove no less embarrassing than when in charge of a portfolio. A fortnight ago M. Nikitch, Minister of Mines and Forests, resigned. He was a Dissident Raditchist, and his withdrawal represented an effort on the part of the Prime Minister to make a concession to M. Raditch's Party. It would seem to have been of no avail; the Ministerial Raditchists were evidently not prepared to disavow their titular head, whatever they may have thought of his actions in the presence of foreigners, and last week the Coalition Government resigned. After lively negotiations it has agreed to resume office. M. Raditch has had no difficulty in pointing out once more that he had been incorrectly reported. A more potent factor in healing the breach has been, no doubt, the discovery that the help of the Slovene Clerical Party under Dr. Koroshetz would not be sufficient to provide a Government majority in the Skupshtina, if the Raditchists joined the Opposition. King Alexander too has again played a statesmanlike part in keeping the two elements of the Government bloc together for the moment, and if room can be found in the Ministry for Dr. Koroshetz, there may yet be a real Coalition Government of Serbs, Croats and Slovenes for the King's Coronation.

Hungary and the Little Entente.

It is typical of the state of flux in which Near Eastern politics are at the present moment that a possible *rapprochement* between Yugoslavia and Hungary should be discussed openly with approval in both countries. In certain Hungarian quarters it is confidently believed that negotiations for an arbitration treaty between Yugoslavia and Hungary will shortly be concluded, and that the terms will give the agreement to all intents and purposes the same effect as that of the treaties which link Yugoslavia to Italy or, for that matter, to either of the other parties to the Little Entente. At the same time, it is stated, there is to be a commercial-political agreement, which will give Hungary a free port on the Adriatic. It is to be hoped that these optimistic forecasts will be realised. Insurance and re-insurance pacts in Europe are now being so dovetailed into one another that, if war should unhappily arise, some countries would run the risk of being expected to fight on both sides. More happily, a closer examination of the agreements may reveal the fact that they admit of a different interpretation, and that neither the supporters are expected to fight nor are the protagonists really more in earnest than the Tweedledum and Tweedledee of romance. The *reductio ad absurdum* would assuredly come, if Hungary, as is seriously being canvassed in some quarters to-day, should be invited to join the Little Entente, which is directed, or was originally,

Digitized by Google

solely against her. Before that happens, however, some more natural and more practical, because more constructive, combination of States may be expected. A possible drawback to promiscuous treaty-making is that, when policies and interests are more stabilised, some countries may find themselves prevented from concluding advantageous alliances by previous commitments which prove to be of little practical use to them. A Yugoslav-Hungarian Pact might drive a nail into the coffin of the Little Entente on its original lines; but it might also postpone the only pact that can respond to the real and permanent interests of Yugoslavia and neighbouring States—a Balkan Confederation.

A Royal Ambassadress.

Queen Marie of Roumania has devoted her whole life far too strenuously to the service of her adopted country to allow any journey of hers to count as nothing more than a well-earned relaxation or indulgence for a hard-worked Sovereign. Frequently since the Armistice Her Majesty has been pressed to pay a visit to America, but it is only now that she has been able to accede to these solicitations and has accepted an invitation from President Coolidge. Only a very courageous and self-sacrificing spirit would prompt anyone endowed with the majesty of a Queen-in-office and the personal attraction of Queen Marie to boot to entrust herself, in the unrestricted acknowledgment of her royal prerogatives, to American hospitality, American enthusiasm and American inquisitiveness. If Her Majesty were actuated only by a desire to see the United States, she might well have quailed before the ordeal; but she knows that her journey must bring Roumania, her country, more prominently before the Americans. Cheerfully, therefore, and, no doubt, in high hope she has undertaken a new mission as Roumania's royal ambassadress. Her tour will take her right across the United States, from New York and Washington to San Francisco and Seattle. That it will fulfil all American expectations—including even those of the journalists who are not likely to be pen-tied by warnings of non-interviewability—may be taken for granted; that it will transcend Roumanian hopes would seem to be equally certain, for it has been begun under the happiest of auspices—a reconciliation in Paris with Prince Carol, to whose renunciation of his rights of succession a devoted country has shown no signs of reconciling itself.

Abyssinia and the Powers.

Admission to the League of Nations has galvanised Abyssinia into considerable diplomatic activity, and it is to be hoped that the epistolary efficiency shown by Ras Taffari's Government will be equalled, with or without the same guidance, by a corresponding improvement in administrative capacity. As far as the incident which has provoked the communications to the League is concerned, all parties seem to have liquidated it to their satisfaction. Italy has roped Great Britain to her Abyssinian chariot, Great Britain has shown Abyssinia that there are limits to official patience, and Abyssinia is presumably reassured, after a prolonged *pas seul*, under Belgian or French direction, in the limelight. Her next reappearance on the international stage may be expected in connexion with the inquiry into the adjustment of claims to the Holy Places in Jerusalem. The origin of the Abyssinian claims is being set out in a series of articles that we are publishing on the subject. The well-documented story written by Mr. Alex. Devine explains the close links between Abyssinia and Great Britain in the matter, and this aspect of the case we trust will not be lost sight of in Addis Ababa when the Lion of the Tribe of Judah is tempted by his mentors of the day to indulge in the time-honoured pastime of twisting another, more up-to-date, lion's tail.

The Greek Electoral Campaign.

The stage is now set in Greece for the General Election on November 7. Both of the two main parties will take part in the contest in full force, for the Royalists have decided to fall into line behind their leaders, General Metaxas and M. Tsaldaris, and the Venizelists, or Liberals, realise that the fate of the Republic depends on their success at the polls. M. Venizelos's contribution to the struggle has taken the form of a long statement in a Greek newspaper in which he sets forth his own position and his views on the political situation in Greece. He expresses the hope that the united Republican parties will secure an absolute majority over the Royalists, as the victory of the latter "would endanger the peace of the country so long as there is no understanding as to the manner in which an eventual change of régime should be effected." The reservation is interesting, and Venizelists in Greece may not be altogether pleased that their leader has gone more than half-way in meeting the Royalist case. In spite of his hopes, M. Venizelos is not able to ignore the strength of the Royalist cause in Greece, and his statement amounts virtually to an appeal to the Royalists not to force the position prematurely, partly because the Army was responsible for the overthrow of the Dynasty and may be expected to resent a change. The Republicans, he points out, must admit that, if the Greek people showed a clear, constant and unmistakable desire to change the régime, that change should be recognised as legal, if a strong majority voted for it. He, therefore, recommends the insertion in the Constitution of a clause making provision for a change of the régime if a two-thirds majority of the Chamber and Senate should vote in favour of one twice in succession within three years. For the rest M. Venizelos advocates a genuine Coalition Government, and expresses the belief that one is possible, if an understanding is reached on the regulation of the question of the régime. Whether the Royalists will accept a scheme rather heavily weighted against them in view of the manner in which the Monarchy was changed remains to be seen. It is evident, however, that Greece is in urgent need of political stability.

Prince Eugène de Ligne, Secretary of the Belgian Embassy in London, left Brussels on October 11 on a motor tour across Europe, Asia Minor, the Middle East, and India. He is accompanied by a few friends in three motor-cars. The journey is expected to occupy six months.

The death occurred suddenly on October 12 of Major-General Cavan Berkeley, C.I.E. The general, who was in his 88th year, joined the Indian Army in 1857, and entered the Political Service in 1862. He was British Resident at the Gwalior, Kashmir, and Nepal Courts, and later Agent to the Governor-General at Baroda.

THURSDAY, OCTOBER 21, 1926.

TURKEY AND THE WEST.

From an article that has recently appeared in a Turkish semi-official paper from the pen of a Deputy, who is a close associate of the President, it has to be inferred that the Turkish Government has again been taking stock of its foreign policy. The subject is one which would seem to be frequently discussed at Cabinet Meetings in Angora, and one of the reasons why Turkish foreign policy is liable to considerable fluctuations is supposed to be the alternating ascendancy of the pro-foreign and anti-foreign schools of thought into which the Government is divided. In the opinion of Mahmud Bey, the writer of the article, the League of Nations has become much stronger since Germany has been admitted to membership. He is of opinion that the object of a State in joining the League is to safeguard its own interests, and that in future only a member of the League can hope to take part in any European political grouping. Turkey, he points out, has never been hostile to the League in principle and there is nothing to prevent her from entering it, provided that she is granted a permanent seat on the Council. Mahmud Bey was careful to add that so far Turkey has taken no official nor unofficial steps to gain admission to the League, but has retained her liberty of action in this respect and will act only when the time is opportune. The rest of the article gives the Turkish reading of contemporary history. Turkey desires to maintain friendly relations with the Great Powers and her Balkan neighbours; but in the face of the system of ententes, alliances and security pacts into which Western European nations are entering, to the complete ignoring of Turkey, the Angora Government has had no alternative to turning to her Asiatic friends and concluding treaties with Russia and Persia. These treaties, however, are not directed against other countries and do not prevent Turkey from entering into similar arrangements with the nations of Western Europe. In view of the standing of the writer, the article has a considerable interest. That it is meant as a *ballon d'essai* seems to admit of no doubt. This method of procedure is held in favour in Angora, where it is still supposed that the science of diplomacy consists largely in saying what you do not believe and in asking for what you do not expect to obtain.

It is all to the good that Turkey should have her attention directed to the changing conditions of European politics. The sweeping generalisations that have hitherto served as her reading of the international situation will clearly not stand investigation, and as her rulers fight shy of candid discussions with the representatives of the Great Powers, the launching of tentative overtures through the Press may serve as a preliminary step towards the goal in view. As far as can be judged from the statement in the semi-official *Hakimiet-i-Millie*, the Turkish Government has still some way to travel from its Angora Cloud-cuckooland to the level plains of common sense, where alone a possible meeting ground with Europe is to be found. In the first place—to take the points mentioned by the President's friend—there are few illusions in Europe regarding the League of Nations. Its value and its limitations are equally recognised. The adherence of another Great Power adds to its strength; the attitude of a minor State towards the League is more a matter of convenience than of importance, as some of them stand to discover. Turkey will be welcomed as a member, not because her inclusion will be a source of strength to the League, but because the change of mind on the part of the Turkish Government entailed by the step will contribute to the smoother working of the world's international machinery. The idea that a permanent seat in the Council would be a reasonable price to pay for Turkey's willingness to enter the League is not likely to be entertained anywhere outside Angora, and the suggestion reflects just that atmosphere of aloofness from realities and practical politics in which the Angora Government still moves. With regard to the recent ententes and pacts to which the semi-official organ refers, it would have been passing strange, if they had not completely ignored the country that has refused to have anything to do with Europe and has pursued in its everyday affairs a crudely anti-foreign policy. No surprise has been felt that Turkey has turned towards the Orient instead of to the West; the surprise has been reserved for her repeated declarations that she is modelling the Republic on Western lines, while she is setting her face all the time against Western peoples and courting disaster by allowing the Soviets, with whom the West can have no real relations, to gain a hold in Turkey.

When the time comes for Turkey to make a genuine application for admission to the League of Nations, no country is likely to support her candidature more sincerely than Great Britain. So long as the Turks remain outside the League the term New Turkey is a misnomer. Criticism of the Republic is not prompted, as the Turks affect to believe, by hatred, malice or uncharitableness, but merely by the fact that the declared intentions of the Turkish Government are belied by its general policy and everyday acts. The opinion expressed by Mahmud Bey that in future it will be impossible for a nation to take part in any political grouping, unless it is a member of the League, reflects a curious confusion between cause and effect. If there is hesitation on the part of a country to group itself with Turkey, it will not be because Turkey is outside the League, but because her general attitude towards the world makes her, so long as that impossible attitude lasts, undesirable as a partner. It is true that a number of pacts and alliances are being contracted between various States, and Turkey must judge for herself whether any of these agreements can affect her in the event of her anti-foreign attitude embroiling her with some Power. No country outside Russia, the value of whose support is at least problematical, is likely to commit itself to the Turkish side in a quarrel of Turkey's own seeking. If, therefore, the Angora Government is anxious to safeguard the Republic against unprovoked attack, it must satisfy potential Allies that it has abandoned its aggressively anti-foreign policy and does propose in future to conform to the accepted standards of good faith and reciprocity which constitute the basis of membership of the comity of nations.

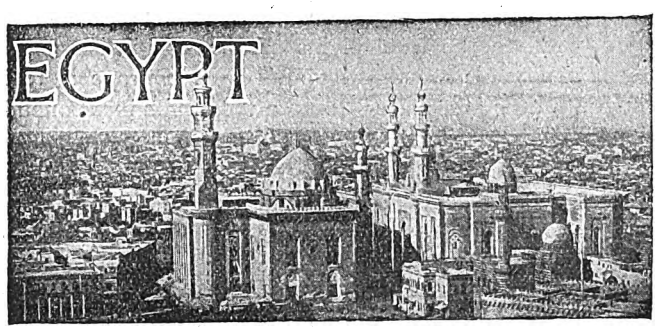
The Near and Middle East*

From Our Own Correspondents.



Alexandria, October 10.

Alexandria's Display.

Alexandria spent £E4,000 on illuminations to celebrate yesterday's ninth anniversary of King Fuad's accession and, whatever may be thought of the advisability of such lavish expenditure at a time of economic depression, the result certainly justified the outlay. The whole city last night was a blaze of light, and many of the designs were conceived and carried out with much artistic skill. The portion of the main harbour in which are situated the water front of Ras el Tin Palace and the principal yacht and boat clubs was very effectively lit up. But I thought that the finest view of all was of the sweep of the Eastern Harbour, from Mazarita right round to Kom el Dik fort. The innumerable "casinos" and restaurants facing the harbour had joined their private efforts to the Municipality's illuminations and the result, duplicated in the glassy waters below, was magnificent.

King Fuad and Zaghloul Pasha.

Earlier in the day there had been the usual receptions, this year attended by larger numbers than ever. Saad Pasha Zaghloul was not present, preferring to remain on his estates at Mesguid Wassef. One of the Wafd newspapers reported that he was unwell, and therefore could not attend the reception, but whether this was the real explanation of his absence is not known. The Unionist Party's newspaper, *Al Ittehad*, declared that the reported indisposition was imaginary and that the Wafd leader's failure to attend was due to other reasons, and took Zaghloul Pasha very severely to task for this "lack of respect towards the Throne." Which of the reports represents the facts it is impossible, at this distance from Mesguid Wassef, to say.

Alexandria's Water Supply.

After numerous reports have been made, by experts of varying eminence, no two of whom are entirely agreed, the Alexandria Municipality has decided that the city's water supply is not of the purity which is desirable, and has informed the Alexandria Water Company that the intake will have to be moved from its present situation at the head of the Mahmoudieh Canal to a point higher up, where there is less fouling of the canal by occupants of barges and feluccas. The decision has been taken on the advice of a commission appointed by the Department of Public Health. The transfer will be a very expensive business for the Water Company, and there appears to be some difference of opinion on what proportion of the cost should be borne by the Company and what part by the Municipality. Incidentally, it is interesting to note that the commission recorded its opinion that the prevalence of typhoid in Alexandria is not due to causes connected with the water supply, but rather to the low standards of sanitation maintained by a large section of the population.

Alexandria and Mr. Aldous Huxley.

Alexandria during the past week has been agitated by a rather foolish controversy. When Mr. Aldous Huxley's book "Antic Hay," reached the Alexandria Book Club some three years ago it was taken out and read by a number of subscribers, a majority of whom seem to have disapproved of its contents. Their comments were reported by the librarian to the committee, two or three of whom read the book, after which it was, apparently withdrawn from circulation among the Club's subscribers. All this happened so long ago that it had been forgotten until the news of the committee's action was reported in the London Press. Comments by British newspapers, including a leading article in the *Referee*, have been reproduced by the *Egyptian Gazette*, whose correspondence columns, ever since, have been filled with the warnings of the *Pro* and *Ante*-"Antics." As usually happens in such disputes, all manner of irrevalent observations have been made, and much feeling has been aroused. Anything more futile than some of the views expressed it would be difficult to imagine. But that the interest aroused has been real may be gauged by the fact that a Cairo bookseller informed me that in three days he had received orders for six copies of "Antic Hay."

Cotton.

The cotton "crisis" continues to be the country's depressing obsession. Last week-end it seemed that there might be a further decline, but substantial buying from abroad proved a stabilizing influence, and on Monday there was a feeling of greater confidence. This seems to have oozed away during the week, and the local newspapers are full of suggested solutions of the problem of how to restore cotton prices to profitable levels, while the Ministry of Agriculture holds frequent conferences with leading growers and others principally interested. Everywhere there is the cry of *mafeesh filons*, and it is to be feared that unless a substantial improvement sets in soon business of all descriptions will be bad in Egypt this winter. A pleasing exception to the pessimists is provided by the tourist interests, which are expecting a "record" season.

British Men-o'-War.

H.M.S. Warspite and Royal Oak are expected at Alexandria this week, and H.M.S. Resolution at Port Said. As always happens when any British men-o'-war enter Egyptian ports, the British community is preparing entertainments on a considerable scale. The Army is, of course, taking a leading part in the entertaining, and the 2nd Bn. Royal Scots, at Ismailia, will meet the Resolution's teams at football, boxing and hockey, while the Cairo Brigade and the Royal Air Force squadrons at Heliopolis and Helouan will be pitted in various branches of sport against sides from the Warspite and Royal Oak. The civilian British community of Alexandria will entertain the naval officers to dinner and a dance at the Hotel Cairo San Stefano on Thursday.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey Palestine, Iraq, and Persia.

Liubliana, October 13.

Czecho-Slovak Deputies' Visit.

The visit of the Czecho-Slovak Members of Parliament has been the most important recent event in Yugoslavia's public life. Representatives of the House of Deputies and Senate, representatives of all political parties in the Republic of Czecho-Slovakia, proceeded to Yugoslavia in order to return the visit paid by members of the Serb-Croat-Slovene Skupshtina, who were the guests of the Parliament in Prague in 1923.

This visit from the allied Republic roused the keenest interest throughout the country. It went off most successfully, developing into a spontaneous and general demonstration for the friendship and alliance which exists between the two countries.

The Czecho-Slovak M.P.'s entered Yugoslavia by way of Subotitza and Novi Sad, where they were enthusiastically received by the chief officials and the public. In Belgrade the arrangements for their cordial welcome were in the hands of the Skupshtina, and a joint sitting provided the occasion for a great and enthusiastic demonstration by members of both Parliaments. Various speeches were made, which revealed in unmistakable fashion how sound are the foundations upon which rests the friendship and alliance between Czecho-Slovakia and Yugoslavia. Most strikingly was this expressed by a Czech speaker, who said that although Czecho-Slovakia and Yugoslavia had failed to secure a territorial corridor to link their two States, yet the spiritual corridor of most sincere friendship and brotherly love was still theirs, the strongest bond of all between two States or two nations.

Recipients of ovations wherever they went, the Czecho-Slovak deputies then travelled through the interior of Serbia as far as Skoplye. On their way back they were received by the King, after which they visited Zagreb and finally Liubliana. Their reception in the capitals of Croatia and Slovenia was as cordial as anywhere else in the kingdom, by officials and public alike: so that the whole tour was like a triumphant progess—one prolonged demonstration of friendship and friendly feeling between Yugoslavia and Czecho-Slovakia.

The visit of the Czecho-Slovak M.P.'s has shown once more that the close alliance between these two members of the Little Entente is bound to be one of the leading factors in the shaping of the political situation in Danubian Central Europe. It is a friendship based on the best of traditions. Czechs and Slovenes, Istrian and Dalmatian Serbs and Croats were for a long succession of years firm allies in the struggle against the Austrian Government and the German majority in the Vienna Parliament of pre-War Austria. The Czechs were several decades ahead of the Yugoslavs with their national revival, and their influence, both political and ethical, upon the latter was correspondingly great. Nowhere does this show more clearly than in the cultural and political development of the Slovenes. But the Croats of the old military frontier were also strongly influenced by the Czechs. It was among the Czechs and Slovaks that the idea of Slav solidarity first took shape, this idea which reacted so powerfully upon the Serbs and Croats—on the Slovenes, of course, as well—that the consequence of it was nothing less than an entire national *resorgimento*. For some time past, many students from all parts of Yugoslavia have gone to Prague and there learned much that is good, especially a practical appreciation of life and politics. The whole modern policy of the Serbs and Croats of the now ex-Austro-Hungarian territory of Yugoslavia was for several years after the opening of the twentieth century entirely inspired by Prague. Dr. Masaryk has many devoted disciples throughout the kingdom.

And apart from brotherhood and alliance, and mutual diplomatic support during the world War, Serbia, too, is bound to the Czechs by many precious memories. When Austria in 1909 staged the notorious High Treason Trial of Serbs and Croats in her southern provinces, and based her charges upon documents produced by her Legation in Belgrade, it was Masaryk who came forward, proceeded to Belgrade and proved that the principal incriminating documents were forgeries. With this revelation, whereby the Habsburg Monarchy was seriously discredited, Masaryk became known to the Yugoslav public, and the sympathies he won were extended to the whole of his nation.

Thus it is intelligible that the Czecho-Slovaks throughout their triumphal progress everywhere encountered friendly traditions. Their visit confirms the assertion that the friendship and alliance between the Czecho-Slovak Republic and the Kingdom of Serbs, Croats, and Slovenes offers the most stable of bases for the political situation in Danubian Central Europe.

The Newest Crisis.

Scarcely has the political season reopened than the Government is in the throes of a fresh crisis. Officially, the immediate, though indirect, cause of it is a lapse on the part of M. Stepan Raditch, who indulged in some ecentric speaking at the public reception of the Czecho-Slovak M.P.'s at the station in Zagreb. But, as has been duly remarked, M. Raditch has made many eccentric speeches which have failed to provoke a crisis. So the true reasons lie deeper. It has long been public property that relations between the two Government parties were none too cordial, and that there was much mutual distrust. On the whole, if there was to be a crisis, it is as well that it has come at once, because it will be settled all the sooner. At present M. Ouzounovitch has tendered his resignation with that of his Government. Up to the time

of writing this has not been accepted, and the situation is far from clear.

Meanwhile there are many serious tasks waiting for the Skupshtina. There are the delicate problems of the equalising of taxes and the unification of the kingdom's laws. There is the question of the Nettuno Convention, which is bound up with the orientation of Yugoslavia's foreign policy; there are internal economic problems, such as the Housing Law, and the distress caused by the recent disastrous floods. The present crisis, fortunately, has no disquieting elements. It will doubtless be on one or other of the old lines, and it is highly improbable that it will produce any notable change in the political situation as a whole.

IRAQ.

Baghdad, October 7.

Pleasant Autumn.

The mild and tolerable summer of 1926 has now turned into a pleasant autumn. The less hardy are already descending from their roofs, and those remaining aloft for the night need three blankets before dawn. With the heat definitely passed and the rain still at least a month distant, the best period of the year has opened. Many resorts frequented by the opulent and convalescent of the world have fewer climatic advantages to offer than Iraq in autumn and winter.

Return of Officials.

It is no coincidence that these conditions have brought back both Iraqi Ministers and British officials from their sojourns in Europe. The Minister of Justice, Naji Beg al Suwaidi, left the King in Switzerland and returned a fortnight ago. Subih Beg, Minister of Finance, followed closely. His fellow-traveller from Europe was Yasin Pasha, Leader of the Opposition. The last-named, by the way, is one of several prominent politicians who threaten (or promise) to abandon politics in favour of agriculture, and have applied for the allotment of lands whereon to grow cotton. How far these bucolic aspirations may be connected with the elusiveness of portfolios, is a question for the cynical. Among senior British officials, Mr. Corwallis, Adviser to the Interior, has returned from a flying visit to Cyprus, Mr. Vernon from his deputation to London; others have either resumed their duties or are *en route* to do so. The High Commissioner, who is due to start in a few days to Europe to attend the session of the Mandates Commission of the League, has meanwhile been struck down by a completely incapacitating, but one hopes short-lived, attack of lumbago. King Faisal is expected back in the middle of the present month. He must have been annoyed, one fears, by some confusion in the English Press between his own movements and those of the Emir Faisal of the Wahhabi ruling house.

The House Problem in Iraq.

A question brought into prominence by the return of the foreign community from temporary absence is that of house accommodation. Neither the architecture, nor the execution nor, generally, the location of the existing Iraqi-built houses is wholly suited to European requirements—though it would be absurd, of course, to pretend that real hardship was involved in living in them. The rents charged, however, suggest that something much more adequate might be expected for the money, and the something could be provided, on commercial lines sufficiently tempting, if sites and capital were available. It does not suit the political flavour of the hour for the Iraq Government to invest its money in erecting house-property for foreigners to occupy; the Banks and other possible builders hesitate to put their money into bricks and mortar in a country where the short view is often the wisest; and Iraqi investors pause before erecting a type of house at least as unsuited to local taste as is the local type to ours. Add to all this that, as coincidence will have it, nearly all the most likely building-sites up and down stream of the City are subject to the claims (if not to the ownership) of Auqaf, a department with which it is usually folly, and is apt to become madness, to attempt to do business on twentieth-century lines. In fine, the houses remain unbuilt, and European families in dozens continue to hire at high rents unsuitable and ill-situated residences.

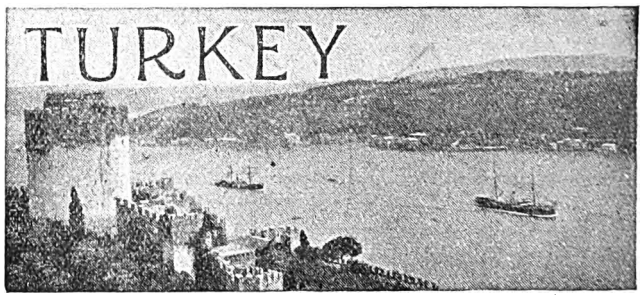
Political Moves.

The two Houses of Parliament assembled on October 1. So little politics is in the air at the moment that it is hard to foresee what will be the ruling lines of the new session. The Government party still commands a useful majority, though it is uncertain to what extent this may have been diminished during the recess by individual defections and by the rumoured formation of a Centre Party grouping itself around the late President of the Chamber of Deputies, Rashid 'Ali. Strong rumours were heard a few days ago that the latter contingency was likely to be met by offering Rashid Beg a portfolio, and thus opening a door by which his lambs could be shepherded back into the fold of the Progressive Party. Of this there is no confirmation. These things apart, it seems probable that the present Cabinet will hold their position for some months, especially if strengthened by an influential Minister of Defence, which position is now vacant. The Prime Minister maintains his personal popularity; indeed there has been some popular indignation at the comparative mildness of the sentence passed upon his recent assailant, to whom the Court of Sessions, under British presidency, awarded two and a half years' imprisonment.

General News.

Of last year's session it was an unsatisfactory feature that little or no legislation was laid before the Chamber in the early month, with the result that measures appearing towards the end of its life were elbowed aside by the all-engrossing Budget discussions. This year, therefore, not only will the Budget itself be submitted earlier, but many draft bills have already been passed by the Council of Ministers to the Chamber and await the oratory of the Deputies from the first hour of their meeting.

An event of the last few days has been the formation of a Chamber of Commerce in which all communities, local and foreign, are represented.



Constantinople, October 12.

Problem of Ottoman Greeks.

The return to Turkey of Ottoman Greeks who left the country with Turkish passports has already started to create difficulties. Certain of those who have arrived here find that their estates, notwithstanding the fact that their status as established or non-established Greeks was only recently decided upon, have been classed as "abandoned property" and have consequently been seized. The administration dealing with abandoned property is, therefore, now confronted with a question of no little importance and, finding itself unable to cope therewith, it has demanded instructions from the Ministry of Finance. As there appears to be no doubt that property belonging to these Ottoman Greeks cannot be considered as coming under the category of "abandoned property," the Turkish

Digitized by Google

authorities will now be constrained to compensate these people. Much, therefore, remains to be done before the question of the return to Turkey of Ottoman Greeks can be considered as having been really settled.

Paper for Aviation.

Further proof that "necessity is the mother of invention" is afforded by the somewhat novel method of acquiring aeroplanes from scrap paper and old rags which has been instituted by the Aviation League authorities. At present Government Departments are, instead of consigning their waste paper to the town's rubbish heaps, handing it over to a company who has undertaken the collection of this material and who are sharing half and half with the Aviation League the proceeds realised thereon. In the near future house-to-house visits will be made, when householders will be requested to save up such odds and ends mentioned above for regular days of collection, and by this means it is estimated that the Aviation League will make 100,000 liras per annum. Indubitably, where there's a will there's a way, and such a measure demonstrates enterprise which merits the admiration of even the most grudging.

The Caesarea Aeroplane Factory.

October 6 was a very proud day for Turkey, as it marked the inauguration of a completely new industrial departure; that of the construction of aeroplanes. At the instigation of Rejeb Bey, Minister of National Defence, a society comprising the German firm Junkers has been formed and their first factory, which is situated at Caesarea, was opened last Wednesday. It is, however, improbable—for twelve months at least—that anything other than repairs will be executed, as the installation of machinery has not yet been completed.

General News.

Hussein Jahid Bey, whose sentence to perpetual banishment at Chorum was abrogated at the Angora Trial in August, has been unable to leave Chorum owing to the illness of his daughter. He is expected, however, to arrive at Constantinople about the end of next week.

On Friday night last a great fire completely destroyed the 120 houses and one mosque comprising the poor quarter of Maltepe, an Asiatic suburb of Constantinople. Owing to this village not coming under the district served by the Constantinople fire brigades it was only two hours after the outbreak of the fire that help arrived. The inhabitants of this quarter are now living under tents supplied by the Red Crescent.

A scheme for the erection, by the State, of 2,000 flats at Angora will come up for the approval of the Grand National Assembly immediately the new session opens. This project, which will extend over five years at an annual expenditure of £T200,000, provides for the installation of all modern conveniences such as electricity and central heating, but the most astonishing part of the report of the scheme is that which states that the rents will be as low as from 15 to 25 liras per month. In the event of this improvement Angora will certainly have an advantage over the ex-capital, where the smallest flat equipped with central heating costs at least £T80 per month.

ROUMANIA.

Bucharest, October 8.

The Italian Treaty.

The attacks made by the Liberal journals upon the Government on account of the signature of the Treaty of Friendship with Italy still form the subject of discussion in the daily Press and, irritated, as he says, by the injustice of these attacks, M. Mitilineu, Minister for Foreign Affairs, has made a long declaration to the Press in which he defends the Treaty, contending that the omission of any mention of the Bessarabian question cannot be regarded as a sign of bad faith on the part of Italy, who consented along with the other Great Powers to the annexation of Bessarabia to Roumania, and appended her signature to the relative convention. The ratification of this convention, M. Mitilineu states, will be made by Italy at a more opportune moment, when its advantages to Roumania will be much greater than they would be at the present time.

The Nationalist—Peasant Party.

The chief event to record on the field of internal politics is the fusion at last effected, at least outwardly, of the National Party and the Peasant Party (Tsaranists). The new Nationalist-Peasant Party, however, has been born with much travail and, in view of the internal disorders by which it is beset in its infancy it seems doubtful whether it is not doomed to an early death. Two of the leading members of the former combined National Party for Transylvania and the Old Kingdom, M. Iorga (the well-known historian of Roumania) and M. Argetoianu (a distinguished expert on finance and political economy) have withdrawn from their positions as leaders of the new Party and have publicly expressed their lack of confidence in its constitution.

The fact is that the Peasants' Party under M. Mihalache has most reluctantly consented (without conviction) to abandon its favourite scheme for a further expropriation of land, while the Nationalists under M. Maniu have promised their constituencies that no further expropriation will take place under their régime. The Nationalist Party is, therefore very apprehensive of leaving too much power in the hands of the Tsaranists. Thus the fusion can not be said to be founded on like convictions, but rather upon a common distrust of the Liberal and pro-Liberal parties, and its main object is to form a party strong enough to overthrow the latter when the time is ripe.

Sofia, October 7.

The Democrat Conference.

Whatever uncertainty in the present political situation in Bulgaria may have existed has been dispelled by the great conference which the Democratic Party has just held in Sofia. This party has recovered from the plight into which it was thrown three years ago by the constitution of the Democratic Entente, at the time of the *coup d'état* in June, 1923. That event caused a deplorable scission, one section of the party, under M. Liaptcheff, forming itself into a new political group, while the other section, remaining loyal to their chief, M. Alexander Malinoff, set to work to restore their thus weakened organisation. The crisis that was hereby provoked, far from destroying the Party (as was thought probable in Governmental circles), only strengthened it, in forcing it to go for extra strength to the masses of the population, in which, as a consequence of the untoward events in the country, numerous elements found themselves bewildered, not knowing whether to choose the way of revolution (the Communist way) or the constitutional way as favoured by the political chiefs. The Democrats, leaning thus towards the Agrarians, exercised a salutary influence on these latter. And so there was formed an Agrarian-Democrat affinity which manifested itself in a remarkable fashion at the Conference last Sunday.

The Conference was opened with a notable speech of M. Malinoff, who, in denouncing the Government, made

Digitized by Google

an appeal to national unity. In explaining the bad internal situation of the country (made worse by irresponsible factions) M. Malinoff suggested a *rapprochement* of the various parties, which, he said, alone could direct the people, and he insisted upon the formation of a large political body to conduct the elections and to make an end to the persistent political crisis. The country had need, he said, of a Government which was strong enough both to put everyone in his place, to demand from the nation sacrifices necessary to its economic and financial rehabilitation, and to undertake a foreign policy which should insist upon Bulgaria's rights being recognised. Such a body could not be formed from one party, but only from a group of parties. M. Malinoff did not precisely define this body, but he excluded from it no constitutional party, not even the Democratic Entente, agreement with which, however, appears to be more and more improbable.

Subsequent speakers at the Conference tried to take up this point of their Chief. First the Agrarians must be brought in, then the Liberals. It was often said that the Stambolisky Administration was a Class (peasant) Government; M. Malinoff asserted that the Governments which succeeded it under Dr. Tsankoff and M. Liaptcheff were equally Class (military) Administrations. It was, he said, necessary to make an end of this fatal system, and to put the whole political forces at the service of the State instead of persecuting them, as the present Government was doing. Otherwise there could be no health in the State.

The resolution with which the Democrats closed their deliberations is very characteristic of the time. The Conference states:—(1) that the political crisis has not been solved by the change of Ministers on January 3 last, the Liaptcheff Cabinet not having been able to secure the return to normal political life in the country by the suppression of the dominant "occult forces"; (2) that the country is in the throes of an economic crisis to remedy which appropriate measures have been taken too late; (3) that the external position of Bulgaria is still, despite recent improvement, insufficiently consolidated; (4) that the present Sofia Government lacks prestige and the confidence of the people, causing it occasionally to use violence towards its opponents; (5) this state of things is true equally of the Sobranye, which does not represent the real will of the nation. The Conference then declared that the Democratic Party saw in social peace, assured by a power endowed with force and authority, the indispensable premise of progress and security in the State, the obtaining of which demands imperatively the collaboration of all the political groups in the country. Finally, on the basis of these statements, the Conference demands:—(1) the complete re-establishment of constitutional liberties; (2) recourse to fresh general elections, so that a Government may be created enjoying the confidence of the people; (3) proportional representation; (4) the inauguration of an active foreign policy of peace and loyalty towards the Powers and the neighbouring States, alleviation of Bulgaria's burdens and the carrying into effect of her rights guaranteed in the Peace Treaties; (5) the reform of the fiscal system and the adoption of a policy of retrenchment, (6) and finally, "the Democratic Party, having in view the moral and political cleansing of the nation, the security of the State and the well-being of the population, addresses an appeal to the masses to support its action and to the parties of order and social progress to unite their efforts towards the formation of the necessary political Government to which the Bulgarian people will be able to commit with full confidence the direction of its destinies."

This grouping is not yet formally constituted, with agreements signed between the heads of the parties; but it already exists in the country, and it will manifest itself in the election of November 14 for the General Councils, when the Democrats, Agrarians, and also the Liberals will array themselves against the Democratic Entente. This will be the preliminary skirmish, before the elections in the spring for the Sobranye.

November 14 will, therefore, be a decisive day for Bulgaria.

ANGLICAN AND EASTERN CHURCHES.

(From a Correspondent.)

On October 13 was celebrated the sixty-second anniversary of the Anglican and Eastern Churches Association. In the morning a service was held in the Russian Church of St. Philip, Buckingham Palace Road, when the Russian Liturgy was performed. For this purpose three Orthodox Bishops had assembled with numerous Anglican Churchmen; and the ritual was made the more memorable by the presence of the Don Cossack Choir. The magnificence of the Eastern rites was heightened by the noble, even thrilling singing of these men; nor did the fact that most of the congregation were Russians in exile rob the occasion of its solemn glory and majesty. Particularly one remembers a moment when the sun, shining through the southern windows, illumined the heavily incensed air just by the Cossacks, so that they were seen, as they accompanied, seemingly with *ferme bouche*, the grand intoning of the priest, like unearthly beings in a mist. So profoundly could these immemorial rites and unaccompanied choristers move one.

The Dean of Salisbury, after prayers had been given for many notable people, including the Patriarchs of Constantinople, Alexandria, Antioch and Jerusalem, dwelt on the aims of the Anglican and Eastern Churches Association in promoting the unity of Christendom. He emphasised rather the devotional oneness than the political concord existing between the Church of England and the Orthodox Churches of the East. In conclusion he bade those Oriental Christians now being persecuted not to lose hope, but, basing their lives upon the Gospel, to continue to trust in the ultimate triumph of the true religion.

Subsequently a Slav Archbishop said that that congregation, worshipping in a Western Church but with an Eastern rite, was in a sense oecumenical, and indicative of the unity to come.

In the evening of the same day the Annual General Meeting of the Association was held at Sion College, Victoria Embankment. Sir Ronald Storrs presided, and the speakers included the Rev. B. J. Kidd and the Archbishop of Finland.

THE PALESTINE EXPLORATION FUND.

The Quarterly Statement for October of the P.E.F. contains particularly interesting articles on "The P.E.F. Map of Ophel," by Commandant R. Weill, "Beit Jibrin and Tell Sandahannah," by Dr. E. W. G. Masterman, and "Ramallah. Signs of the Early Occupation of This and other Sites," by Professor Elihu Grant. There are also the usual valuable "Notes on Excavations."

His Majesty's battleships Warspite and Royal Oak arrived on October 12 at Alexandria and the Resolution at Port Said for a week's stay, during which there has been much entertaining at both ports and in Cairo. The Commander-in-Chief of the Mediterranean Fleet, Admiral Sir Roger Keyes, and Lady Keyes are the guests of Mr. Nevile Henderson, the Acting High Commissioner for Egypt, at the summer Residency at San Stefano.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum.

Book Reviews

A SCULPTRESS ON TURKEY.

"A TURKISH KALEIDOSCOPE." By Clare Sheridan. (London: Duckworth, 15s. net.)

Was it Voltaire or Balzac who said that on serious subjects women always talked nonsense, but what charming nonsense it was? One is reminded, not quite impertinently, of the saying in these days of Rosita Forbes and Dorothy Mills and Clare Sheridans, for about these adventurous travellers there is an undeniable, even though it be a superficial, charm, which is often lacking in the more considered reports of their male voyagers. In a sense, Mrs. Clare Sheridan was peculiarly qualified to judge of a country like Turkey, which was attempting to mould itself nearer to the heart's desire, for with the fashioning of beauty out of inanimate things she herself is, of course, mainly occupied. It is good, too, to have her enthusiastic description of the loveliness that abundantly resides (and can scarcely be destroyed) in Anatolia; she gives us, indeed, a glimpse or two of scenes impressed deeply into her plastic memory which are, perhaps, worth more than all her political moralisings on the new Turkey. For it must be admitted that, with all her lack of prejudice, her free and receptive mind, and her shrewd instinct, there were in this observer such elements of ignorance as to cause suspicion heavily to cloak her readers.

At times, however, she hits the nail of truth hard and resonantly. Beginning with Constantinople, for instance, she sees at once its essential character: "Constantinople is still a centre—but only of the Levantine race." Again: "Péra is not Turkey, it is an ulcer in the side of Turkey." And once more: "Everything that the Levantine touches is tarnished."

This, it may be said, is a good start. Obviously Mrs. Sheridan realises what Kemalist Turkey is after and what it has to contend with. But instead of solid dish we have charming *hors d'œuvre* after *hors d'œuvre*, so that one longs for something a little more lasting than journalistic *réchauffé*, however entertaining it may have been at the time it was penned.

But occasionally the mouth waters for the very entrancement (heightened by magnificent photographs) of the course. In her chapter on Broussa, for example, Mrs. Sheridan is at her happiest and most limpid. Its mosques and waters and sunsets and shadows are things that were and are of pre-Kemalist and post-Kemalist enchantment.

For the rest, this impulsive limner's representations of towns upon the Black Sea Coast, such as Zongouldak, Ineboli, Samsoun, Ordu, Kerasond, Trebizond, Rise, Khope, and Sarp, are just good occasional writing—which presumably is all that the author of "A Turkish Kaleidoscope" would claim for them.

The sum of these impressions, which have been set down much more for the general than for the special reader, appears to be that the new régime in Turkey will not last, and that more important than any reforms that it has accomplished is the resurrection of Turkey. Mrs. Sheridan is, however, convinced, or at least states dogmatically, that "Turkey's place in the future, whether it be large or small, prosperous or penurious, is unimportant."

IMHOTEP.

"IMHOTEP, THE VIZIER AND PHYSICIAN AND AFTERWARDS THE EGYPTIAN GOD OF MEDICINE." By Jamieson B. Hurry. (Oxford University Press. 7s. 6d.)

We can well understand that the composition of this essay on the first medical man known to history was "a most enjoyable and interesting task" to his colleague of these latter days. Dr. Hurry modestly disclaims any original research, but he must have devoted many of his leisure hours to Egyptology and shows himself eminently capable of undertaking this little work of love.

Imhotep was one of those rare persons who seem to excel in everything they set their hands to. Not only was he a great scholar, but also an adept in magic and a notable physician. He was King Zoser's Grand Vizier and, last but not least, he was the King's Chief Architect. In the last capacity it seems fairly certain that his was the genius which revolutionised the Egyptian art of Temple and Tomb building by abandoning the use of brick and boldly using hewn stone. There seems to be little doubt that the wonderful "Step Pyramid" of Sakkarah is his work. Unfortunately his own tomb has not so far been discovered, so that we know practically nothing more of him and of his life and work.

He lived, more or less, 5,000 years ago. Breasted makes it a little less and the authorities of the "Cambridge Ancient History" make it a century or so more. After his death, he was worshipped by the people as a kind of demi-god of healing. It was once thought that he had to wait 1,500 years for this honour. Apart from the extreme improbability of this supposition, we are now aware that there was, in Greek times, a definite tradition that he was worshipped as early as the reign of King Menkaure, which brings us close to the probable date of his death. Many centuries later, in the sixth century B.C., we find him regularly installed in the Egyptian Pantheon and identified by the Greeks with Asklepios. So it may be said that he lived on till the Turks rooted out the remains of the ancient Egyptian beliefs. Truly a long life and one that shows how deeply his memory had sunk into the minds of the people. Will his modern counterpart, Mr. Addison, live so long?

The book is well illustrated.

THE C.A.S. "JOURNAL."

Volume XIII., Part IV. of the *Journal* of the Central Asian Society is an unusually interesting number. Not only does it contain the full text of Mr. Philby's lecture upon the Wahhabis and of the speeches made at the Annual Dinner (both reported in THE NEAR EAST AND INDIA), but also there are valuable articles upon "Reflections on the Mosul Problem," "The Hadendowa Tribe of the Anglo-Egyptian Sudan," and "The Development and Waning of the Forces in Palestine, 1922-1926." Nor is this all. For, in addition to the always instructive reviews of books, there is an article by Mr. H. C. Luke upon "The Old Man of the Mountains," and Miss A. S. Beveridge continues her account of "The Khaibar Pass as the Invaders' Road for India." Altogether it is an admirable publication of an admirable institution.

The death is reported from Geneva of M. Edouard Naville, the eminent Egyptologist. He was particularly interested in checking the Old Testament with archæological research.

The death occurred in London on October 15 of Sir Robert Hay Drummond-Hay, C.M.G. Sir Robert, who was 80 years of age, had seen considerable Consular service in the Near East, notably in North Africa and in Syria, and in later years was a familiar figure in Cairo.

PERSIAN SELF-TAUGHT

(In Roman Characters).

By SHEYKH HASAN.

Containing the Persian Alphabet, Transliteration and Pronunciation; Outline of Grammar with Persian Characters; Classified Vocabularies and Conversations; Travel Talk; Trade and Commerce; Persian Handwriting; Money, with English and American Values; Weights and Measures; Illustration of Persian Coinage.

THE EMIR FAISAL.

Prince Faisal, son of the Sultan Ibn Saoud, made a half-hour flight over London on October 6 in an Imperial Airways liner. He was accompanied by members of his suite and Air Vice-Marshal Sir W. Sefton Brancker. In the course of the flight Prince Faisal left the cabin of the machine and sat in the seat next the pilot, and for a time he operated the controls of the aeroplane. On October 8 he was taken by Sir Theodore Cook to Crabbet Park, where Lady Wentworth showed him the Crabbet Arabian stud. He saw about 100 Arab horses, the direct descendants of stock brought from Nejd by Lady Wentworth's father, Mr. Wilfrid Blunt. The Prince expressed great appreciation of the stud, and said that he had enjoyed looking at it as much as anything he had seen in England.

On October 9 he visited the King at Buckingham Palace to bid farewell to His Majesty, who made him an honorary Knight Commander of the Order of St. Michael and St. George. The insignia of the Order was handed to the Prince in a jewelled case.

The Prince, together with Dr. Abdullah Damluji and the members of his suite, left London for Holland on October 12. Among those at the station to bid him farewell were Mr. Victor Malet, representing the Secretary of State for Foreign Affairs, Mr. A. R. Dard, Imam of the Mosque at Southfields, and Mr. St. John Philby. The Prince was accompanied to Folkestone by Mr. Jordan, British Consul at Jeddah, and by Mr. Beare, of the Government Hospitality Bureau.

A MESSAGE FROM EX-KING HUSSEIN.

We have received the following telegram (referring to our "Notes of the Week" on September 30) from ex-King Hussein. It is dated Nicosia, Cyprus, October 17. "Gratefully satisfied with your article, and with your championship of truth and justice. This further trial is unable to shake our confidence in British nobility and fair play.—Hussein."

The Emir Faisal was received by Queen Wilhelmina on October 14 at the Palace of Het Loo, when her Majesty conferred upon his Highness the Grand Cordon of the Order of Orange-Nassau.

A decree has been issued excluding from candidature at the election General Pangalos and thirty-four of his Ministers and Under Secretaries since September 30, 1925, when he dissolved the National Assembly.

Mohamed Ahsan Khan, commanding the Afghan Air Force, and Sayad Abdullah Shah, Commandant of the Kabul forces, together with an assistant of the Afghan War Office and Major Dods, Military Attaché to the British Legation at Kabul, arrived at Karachi on October 11 from Quetta. The following day they visited the R.A.F. Depot and inspected the workshops.

It was announced last week that the colours of the 1st Battalion of the Royal Fusiliers (City of London Regiment), which will shortly arrive in England from India, will be carried through the City to the Tower on Armistice Day, escorted by a guard of honour, with bayonets fixed and drums beating.

The City of London Corporation have acquired for the Guildhall Art Gallery a picture by Mr. G. P. Jacomb Hood, entitled "The Raising of Jairus' Daughter," which is to be hung with a suitable inscription. Mr. Hood went to India for the Durbar in 1911 as a member of the Royal suite, and painted many interesting pictorial records of the Indian State functions. He is shortly visiting India again, at the invitation of Sir Prodvat Tagore, to paint portraits of several Indian nobles; and he has just finished a state portrait of Lord Lytton, to be hung in the Victoria Hall, Calcutta.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

LOVE AND THE WORLD.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Speculators on future life, scrutineers of Holy Writ in strife, go easy!

Love's a terrible thing, save thine heart, my friend, love is not easy.
The one afflicted with it,
Chose it not, while in his senses.
So live free, for love's peace is a torment,
Its beginning is a disease
And its end is slaughter!
But as for me, to die with love,
is the very life indeed.
I have warned thee, according to my experience of love, not according to my own feeling, about it.
But make thine own choice.
The truth is, if thou wishest to live happy, be a love's martyr.
Love is divine, give it freely,
No cent. per cent. affair,
It is divine, it is fair!

Thus sang about 700 years ago, in Cairo, the Syrian Sheikh, Omar ibn-el-Farid, who in another poem says:

If the Quran be bright
Gospel and Taurat are no less right.

The inference is, that these books are set for mere religious exercise, but what matters is Love.

Consequently there can be no merit in any act which is done for fear of Hell, or hope of Heaven. Love does not bargain, nor speculate on rewards forthcoming, nor is it love, unless outwardly manifested. Hence loving words and deeds are the essential concomitants of noble piety and attributes of . . . . Love Divine, being all that concerns humanity in the constitution of any individual or State; all else can be mean, foolish, or diabolical, and is purely selfish rot.

Have we evolved much in this direction since that Arabian Muslim sang of love Divine?

I doubt it, although there may be more of it perhaps among present-day rulers of a few countries. Church and Science, however, keep their age-worn controversies, when concentration on love is all that is any good.—I am, etc.,

ANGLO-SYRIAN.

The Basra-Mohammerah road is now declared to be safe again as the result of the capture of three brigands by Persian patrols. Two of the brigands have been executed.

Owing to a partial strike of printers for a 30 per cent. increase in wages, Athens newspapers appeared on October 14 as half-sheets, produced with the assistance of Government printrs.

In a letter published in the Hebrew Press, Rabbi Taub, leader of the Orthodox Jewish farmers in Palestine, asserts that Arabs threw stones at some Jews while praying at the Wailing Wall in Jerusalem, and the Chief Rabbi of the Ashkenazim, the Most Reverend Abraham ha-Kohen Kuk, joins in the protest, declaring that this is not the first instance of the form of assault.

According to *The Times* Baghdad correspondent Sir Henry Dobbs, High Commissioner for Iraq, who will appear in November before the Permanent Mandates Commission of the League of Nations in Geneva to furnish information about Iraq, is coming to London to consult the British Government. Sir Henry arranged to leave Baghdad on October 19, and will return there by way of Constantinople, the Anatolian Railway, and Aleppo. During his absence Mr. Bourdillon will again act as High Commissioner.

THE WEEK AT HOME.

London, Tuesday Morning.

Lord Oxford's Resignation.

At last the dissensions within the Liberal Party have had their inevitable effect: the resignation of the Party's leader. To anyone less tolerant than Lord Oxford the existence of Mr. Lloyd George's personal fund alone would have been sufficient to impel either excommunication or resignation, but the veteran statesman allowed the dissensions to continue even to a flirting by the Welsh politician with Labour and the profession of heretical principles during the General Strike. Desertion during the Strike, however, was the last straw; and, finding Mr. Lloyd George unwilling to budge from his leadership in the Commons, Lord Oxford has perforce been compelled to resign himself.

This step has been treated as momentous in practically every newspaper, whether Conservative or not. But as far as I can see, it will have no effect at all, either on the Liberal Party itself or on the nation. What there is of the Liberal Party can very well manage without a leader—it cannot, in fact, be led. If one may be allowed to take a purely theoretical comparison, this divided Party no more needs a leader than Islam needs a Caliph. Nor can Lord Oxford's resignation accentuate the existing lack of unity. And it is difficult to feel that political life will be robbed, by this renunciation of leadership, of any of those few occasions on which real dignity could be expended. Lord Oxford is not lost to public life, and while he remains, Liberal comments in the Upper House will always conserve a certain stateliness and courtesy, even if they appear meaningless or redundant to our modern time. No one really can conjure up the ghost of the nineteenth century for which, in our heart of hearts, all of us have considerable liking, so certainly as the man who has just proclaimed that co-operation in a party with Mr. Lloyd George is a thing impossible, at any rate for a Liberal.

His final advice to his followers was to "keep straight on," as if to the Promised Land. And some of his followers talk about the necessity of the Party's turning over "a new leaf." Is it not true, however, that that Land is a mirage, and that the one leaf the Liberals have is all their claim to distinction? Cast that away, and are they not naked, aimless wanderers?

Mr. Lloyd George.

But if Lord Oxford represents the solemnity of an older time, Mr. Lloyd George is seen more and more to portray the restless, principleless opportunism of the present age. He is trying to trim his sails to every wind. The most notable thing about him, apart from the personal magnetism which he undoubtedly still exercises, is the way in which he mixes up good and bad ideas. At the speech which he made on Saturday at Barnstaple, for instance, he insisted that in Lord Oxford's statement of the circumstances of his retirement it was an error to infer that he (Mr. George) had not unequivocally opposed the General Strike.

That sort of excuse will deceive no one who supported the Government during the Strike, for the conception is now unalterably entertained that whereas most Liberal leaders unhesitatingly refused to attempt to make party capital out of the General Strike, Mr. Lloyd George's hesitation, if indeed it ever existed, was most strangely expressed.

For the rest, this ex-Prime Minister just casts about for fresh abuse of the Government. Some of his criticisms are patently not without basis; others are merely expressions of personal animosity. In other words, he is still that odd and unresolvable mixture of the wizard and the quack.

To all appearances he stands no chance at all of gaining the leadership of the Liberal Party. There is no telling, however, what may happen if a sufficient interregnum is procured. It may be that during such a time the Asquithian Liberals will be welcomed by the Tory Party; in which case Mr. George would be free to command the residuum. But it will be surprising if he does not make one more of his (subsequently denied) moves to capture the more "reasonable" section of the Labour Party.

The Labour Conference.

It was remarked in these columns last week that only political minorities can confer with benefit, not only to themselves but to the observing nation outside them. The truth of this was strikingly exemplified in the Conference which the Labour Party have just held at Margate. That Conference, one can say, has provoked twice as much general comment as the Scarborough Conference provoked, and mainly, it may be presumed, because the speakers were dealing with the realities of human affairs from a broader standpoint. At any rate, at Margate many more types of mind than one were represented!

The first surprise lay in the wholesale denunciation of the General Strike by the President, Mr. Robert Williams. As was natural, this has been widely interpreted as nothing but an attempt both to be wise after the event and to capture the "constitutional" section of anti-Tory thought. However that may be, this Conference proved that Labour for the moment is going on the constitutional tack, for the Communists got short shrift here.

The destructive side of Labour thus being pushed away from the public gaze, increased attention had to be given to the constructive measures of the Party. As far as could be gleaned from the Press reports, however, nationalisation, whether of mines or of land, was the sole solution of our present distress. It is possible, of course, that this academic solution will one day be forced upon the country; but then it will be for the really practical men of the country to discover a solution that is not merely a paper solution. As a whole, however, the country has shown no sign whatever that it likes the idea of nationalisation, for the disbelief of the average Englishman in all State-run enterprises is founded deep.

Trade Union Law.

Already the wiser heads in the Unionist Party have discovered that the ebullience of the Scarborough Conference on the subject of alteration of the laws pertaining to Trade Unions was more hearty than cerebral. A very broad hint has now been promulgated to the faithful that the secret ballot, for instance (which would, of course, have to come before both the beginning and the end of a strike) will be omitted from the Bill which is going to be presented to Parliament. Probably this Bill will be restricted to

picketing, although the Government may attempt also to raise a hornet's nest by demolishing the present immunity of trade union officials and funds from legal process. One has the feeling that the Prime Minister, unlike some of his Cabinet colleagues, is distinctly unhappy at the prospect of passing legislation which, although it may have many points of justification, will assuredly be dubbed class-legislation, and will, therefore, tend to preserve that spirit in industry which it has been his constant endeavour to eradicate.

Clerical Peers.

It is difficult to say how widely shared among Free Churchmen is the suggestion, made by the Chairman of the Congregational Union of England and Wales on October 12, that Noncomformist Ministers should be admitted to the House of Lords. "Let lawn sleeves," he said, "and Geneva gowns sit together. Let twenty Free Churchmen be called by the King to this important position."

This idea can find justification only on the theory of proportional representation. The Bishops' privileges date, of course, from the time when the clergy, often great land-owners, were one of the main factors in the State. But is it seriously contended that the Bishops put their heart and soul nowadays into the work of the Upper House? Is not the tendency of the time, in fact, all against representatives of powerful organisations? One thinks it would be easier to abolish the Bishops' privileges than to create fresh ones for the Free Church.

Of the man who made this suggestion, the Rev. F. W. Newland, of Claremont, Pentonville, it can at any rate be said that his present work far exceeds in importance and in achievement anything that he might accomplish through assisting in the Upper House.

Anglo-Catholics in Congress.

The Congress which the Anglo-Catholics have just been holding in Manchester was one more proof, if proof were needed, that increasing alarm is being felt at the hodiernal tendency to separate religion from the practice of normal life. A remarkable number of speakers, including Bishop Gore, the Bishop of Manchester, Dr. Chandler, Canon Donaldson, and so on, made it abundantly clear that the Anglo-Catholic conception of life is to cause religion to pervade every particular. Not for these enthusiasts can there be any such talk about "sticking to their lasts" as was recently indulged in against the ecclesiastics who attempted to stem the tide against the miners. They made straight for the prevalent evils of to-day, both moral and social.

Coming to the narrower platform on which the Anglo-Catholics are generally recognised as such, one found them insisting on more discipline and organisation in the profession of the Christian religion. "The majority of religiously minded persons did not practise religion corporately at all. . . . Again, the majority of the baptised in the Church of England had abandoned the practice of Church going." And the solution of the evil appeared to lie in the restoration of the significance of the Sacraments.

The Guards' Memorial.

At last, on the Horse Guards' Parade, the Guards' Memorial has been unveiled. Myself, I have not yet seen Mr. Gilbert Ledward's conception of what was most fitting to commemorate the death of nearly 15,000 Guards; nor was I at Saturday's ceremony, which obviously impressed deeply the assembled multitudes. But no one who was in the War is likely ever to disparage the incomparable Guards—the word is fairer than "matchless." It is true that they, like the kilted and the Irish regiments, may have had more journalistic publicity and have appealed more widely to the non-military mind; it is also true that in the earlier years of the War they may have been largely spared, in preparation for big shows, the drudgery of the trenches which the obscurer Line regiments had to go through. That, however, is nothing against the Guards. And in that last year, 1918, when I had the fortune to be much among them, they certainly had, and excelled in, all kinds of fighting. There cannot have been a finer Corps than the VIth Corps of the Third Army.

It is very good to know that the heart of the people is still with those who died and with those who suffered. The sad (but perhaps inevitable) thing is that it should need so magnificent a ceremony as the unveiling of this Guards' Memorial to remind us of the fact.

The Trustification of England.

It is now a commonplace that the tendency of all capitalist countries is towards the formation of greater and more trusts: one sees it, for example, in such huge concerns as newspapers or banking or railways. The small man tends, or rather, is forced, more and more, to disappear. Now in towns the tragedy of this disappearance is often observed, but in the country it still is a matter of regret.

Recently I have been through many miles of country to which the railway has not yet penetrated, but even there I noticed the dismal thing in process. Houses of call which years ago proudly boasted the inspiring words "Free House" are now irrevocably tied to some brewer miles away. To an old-fashioned person like myself it seems abominable that an inn, say, in Orford should be forced to sell only Southwold ales, or one in Cley only Norwich beer, or one in Cromer only Yarmouth swipes. Week by week, however, the free houses become fewer and fewer. A plague on the all-victorious brewers!

Road and Rail.

The rivalry of road and rail has not died down yet; in recent months, indeed, the railways seemed to put forth new efforts to regain their old ascendancy. But for any enterprise that they may indulge, the motor people have two schemes up their sleeves. On short routes, of course, the bus is, generally speaking, considerably cheaper, and, in fine weather at any rate, more pleasant; but long distance journeys are also becoming increasingly common. For many months now there has been a daily service between Hammersmith and Bristol, but a still longer service is being run now between London and Leeds. Each omnibus on this new route takes twenty passengers.

Industry and Fashion.

Everyone is aware of the tyranny of fashion. Many a cropped head or a Russian boot has been the alleged cause of a disturbing of the waters of conjugal bliss. But its upsetting effects are seen to extend from the home to the nation. In an interesting report which the Stationery Office has recently issued, Sir Gerald Bellhouse, Chief Inspector of Factories and Workshops, tells the story of last year's decline of the hairpin industry, of the decrease in the demand for buttons, hooks, and eyes, of the revival of felt-hat making for women's wear, of the artificial silk boom, and of the activity in the hosiery trade.

The Blight of Bungalows.

No visitor to England can fail to have been depressed by the vast stretches of this fair land which have in recent years been defaced by blocks of bungalows. This building activity has not, moreover, been confined to the neighbourhood of large towns: it has spread and is still spreading to the untouched country, from Cornwall to Suffolk, from Sussex to Yorkshire. All round the English coastline, in fact, has broken out what Sir Arthur Quiller-Couch has just called "the eczema of cheap bungalows."

It is time that Government stepped in to check the growth of these "eyesores in Paradise," whose construction has nothing whatever to do with the necessity of more houses, but is prompted almost solely by speculators in property. Often enough, too, these vile edifices are being erected on the common-land of England—a form of "enclosure" that has not even the merit of aesthetic beauty to recommend it. Could not our Commission of Fine Arts do something about it?

PERSONAL AND GENERAL

TO-DAY

October 21, 1926 (New Style).
October 8, 1926 (Old Style).
Rabia II., 13, 1345 A.H., of the Moslem Calendar.
Heshvan 13, 5687 of the Jewish Calendar.

The Agha Khan left London on October 16 for Paris.

Lady Willoughby de Broke leaves London to-day for Egypt.

Sir Atul Chatterjee, High Commissioner for India, has returned to London from Geneva.

Lord Lloyd, High Commissioner for Egypt and the Sudan, is leaving England on October 26.

The Maharaja of Nawanagar and the Maharaja of Kutch left London on October 14, on their return to India.

Lady Wilson, wife of Sir Arnold Wilson, on October 14, gave birth to a daughter at Wynches, Much Hadham, Hertfordshire.

The Maharaja of Alwar, who has returned to London from Scotland, will leave England on his return to India about November 4.

Mr. Reynold Alleyne Nicholson, Litt.D., has been elected Sir Thomas Adams's Professor of Arabic at Trinity College, Cambridge.

The Prince of Wales received Lord Lloyd (His Majesty's High Commissioner for Egypt and the Sudan) at St. James's Palace on October 11.

Lord Ebury and the Hon. Betty Grosvenor left London on October 14 in the P. and O. special train *en route* for Marseilles, to join the Razmak for India.

The King has approved the appointment of Sir George Claus Rankin to succeed Sir Lancelot Sanderson, as Chief Justice of the High Court of Judicature at Calcutta.

Viscount Halifax, who is 87, has now decided not to carry out his intention of visiting his son, Lord Irwin, in India, as he fears that the voyage might entail too great a strain on his health.

Major-General Sir Courtenay and Lady Manifold gave a luncheon party at the Ritz Hotel on October 14. Among their guests were the Gaikwar of Baroda and the Yuvaraja of Mysore.

The Marquess and Marchioness of Reading left 32, Curzon Street last week, to stay with Sir Benjamin Faudel-Phillips at Balls Park, Hertford. They will return to London at the beginning of November.

Colonel D. Forster has been appointed Deputy Military Secretary and Secretary of the Selection Board at the War Office, in succession to Colonel G. C. Williams, on appointment as Brigade Commander in India.

Among passengers by the P. and O. Bombay express which left London on October 14 for Marseilles to join the s.s. Razmak were Lady Warren, the Hon. Venetia Baring,, Sir C. A. Tigart, Sir J. Vijayaraghava Acharya, Lady (H.C.) Wilson, Countess Bodenham, and Sir P. C. Mitter.

The Right Hon. Sir Ronald Lindsay was received in audience by the King at Buckingham Palace on October 11, and kissed hands upon his appointment as His Majesty's Ambassador Extraordinary and Plenipotentiary at Berlin, when the King invested him with the Insignia of a Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George.

Sir George Clerk was received in audience by the King at Buckingham Palace on October 12, and kissed hands upon his appointment as His Majesty's Ambassador Extraordinary and Plenipotentiary at Constantinople.

Sir Ronald Storrs was, the same day, received in audience by the King, and kissed hands upon his appointment as Governor and Commander-in-Chief of Cyprus.

Mr. H. St. John B. Philby left London on October 16 for Arabia. After spending a few days in Paris with the Emir Faisal he is proceeding direct to Jeddah.

Abdel Khalek Pasha Sarwat, Egyptian Minister for Foreign Affairs, last week arrived in London from Paris and stayed at Clardige's Hotel. His Excellency had the honour of being received by the King at Buckingham Palace on October 13.

Aziz Izzet Pasha, Egyptian Minister to London, who is at present in Paris, is expected to spend the greater part of the winter in Egypt, as the health of Madame Izzet will not allow her to face an English winter this year.

Sir Ronald Storrs, Governor Designate of Cyprus, who is returning to Jerusalem before taking up his new post, leaves England to-morrow (Friday). He will break his journey at Rome, where he will have an audience of His Holiness the Pope. He is accompanied by Lady Storrs.

Mr. Alan Cobham had the honour of being received by His Majesty on October 11, when the King conferred upon him the honour of Knighthood and invested him with the Insignia of a Knight Commander of the Most Excellent Order of the British Empire (Civil Division). Sir Alan will be the guest of the Foreign Press Association at luncheon at the Café Royal to-morrow (Friday).

Sir Chimanlal Setalvad gave a dinner at the Hotel Metropole on October 11 to meet the Maharaja of Nawanagar. The guests included the Aga Khan, Viscount and Viscountess Chelmsford, Lord Sinha, Lady (Lawrence) Jenkins, Sir George Rankin, Sir Prabhashanakar Pattani, Commander C. B. Fry, Sir Mancherji Bhownaggree, Sir Stanley Reed, Sir Lallubhai Samaldas, Mr. S. N. Mullick, Colonel O'Meara, Mr. P. P. Graves, Mr. and Mrs. H. S. Polak, Mr Stuart Hodgson, Mr. F. H. Brown, Mr. and Mrs. Das Gupta, Mr. Durgaprasad, Mr. and Mrs. K. T. Gajjar and Mr. Spittama Cama.

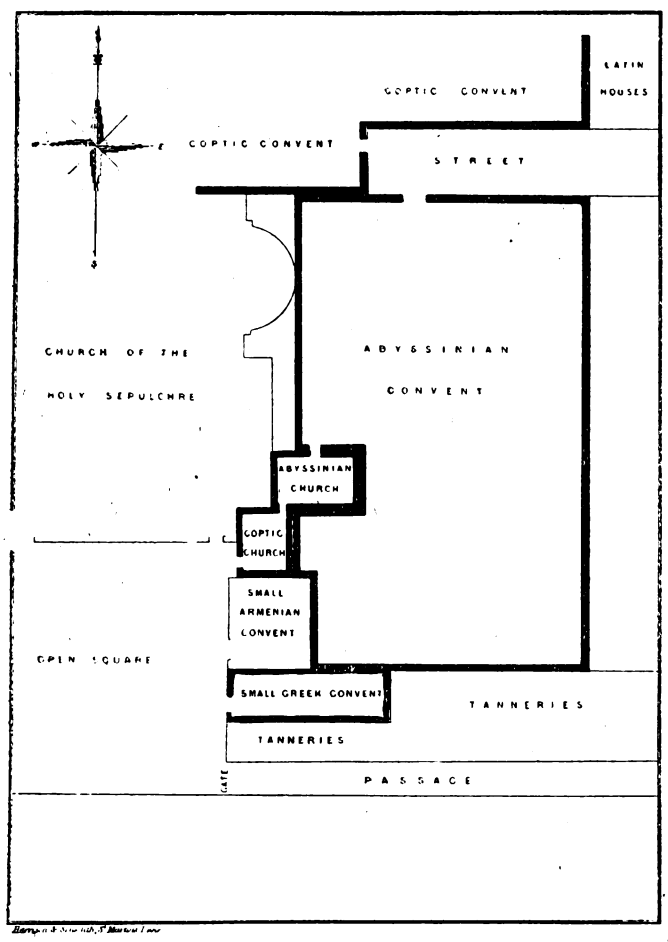
ABYSSINIA AND THE HOLY PLACES.

V.

By Alex Devine.

The Sultan's Visit to England.

It will not be amiss at this stage to take a brief glance at the political situation in England. Early in 1866 the Liberal Government introduced a new Franchise Bill which they subsequently amalgamated with a Bill for the Redistribution of Seats. The Conservative Party opposed those Bills, and on June 18 an amendment proposed by Lord Dunkellin, making the qualification for possessing a vote depend not on a rental but on a rating value, was carried against the Government in the House of Commons by 315 to 304. Earl Russell and Mr. Gladstone consequently resigned, and the Earl of Derby and Mr. Disraeli succeeded them as leaders of a Conservative Government without dissolving Parliament. On February 11, 1867, Mr. Disraeli introduced into the House of Commons his "Resolutions" for Reform. But dissensions soon arose in the Cabinet; and on March 4 the Earl of



Plan of the Holy Places, published in 1868 by H.M. Government to accompany the White Paper on "The Abyssinians at Jerusalem, 1850-1867."

Carnarvon, General Peel and Viscount Cranbourne—subsequently the Marquis of Salisbury—resigned office because their proposal for a £6 rental had been rejected. On May 18, to the general surprise, Mr. Disraeli laid before the House as the considered measure of the Cabinet a Reform Bill which practically granted Household Suffrage. This Bill, however, was saddled with so many conditions, including provisions for a double vote, that the Opposition challenged it as unworkable. Eventually, thanks to the attacks of Mr. Gladstone, most of these conditions were abandoned and the Bill, thus completely transformed, passed into law, involving the consequent necessity of making an appeal to the country. The Dissolution of Parliament, was, however, unexpectedly postponed. The immediate causes of this postponement were British relations with Abyssinia, which, owing to the obstinacy shown by King Theodore in refusing to release the British subjects whom he had imprisoned, had now reached such a critical stage that the Government had no alternative to backing their demands by armed intervention. A British Expeditionary Force was accordingly sent out to Abyssinia under Sir Robert Napier in the autumn of 1867 and involved the necessity of summoning Parliament for a Winter Session. On February 17, 1868, the Prime Minister, the Earl of Derby, was taken seriously ill and eight days later he resigned office. On February 27, Mr. Disraeli succeeded him as Prime Minister.

Another circumstance which rendered 1867 a year memorable in our relations with the Near East was the visit then paid to this country and to Queen Victoria by "The Father of the Faithful." Never before, we believe, had a reigning Sultan of Turkey reached our shores; and it might reasonably have been expected that a pro-Turk like Mr. Disraeli would have seized the opportunity of his Majesty's presence in this country to persuade the Foreign Secretary to make some attempt to interview the Sultan and to obtain from him in person that recognition of Abyssinian independence which would have enabled the Abyssinian Community at Jerusalem to re-open and to prosecute to a successful issue their claims against the Copts. If such recognition had been extorted from the Government King Theodore's obduracy would probably have been softened and the British captives would have been released. Nothing, however, was done in this matter, and the Sultan left England still claiming authority over the Negus's subjects.

Memorandum of the Rev. W. H. Malet.

In what sort of a state the Abyssinian pilgrims were at this time can be gathered from the "Memorandum" of the Rev. W. H. Malet which contains an account of a visit paid to Jerusalem from June 1 to June 20, 1867, during which time the Vicar of Ardeley, Herts, became acquainted with the heads of the various Christian Communities there, namely, Greek, Latin, Armenian, Syrian, Coptic, and Abyssinian. The only new fact in connexion with the Abyssinian claims which Mr. Malet gives us is contained in the statement that these claims went "before the Court at Constantinople, where they were rejected because the Copts had bribed the responsible authorities and because the claimants had no one to speak for them." The memorandum is worth quoting, however, for the affecting pictures which it gives of the state of material and spiritual impoverishment to which the Abyssinian pilgrims had been reduced:—

> "Their convent consists of miserable huts and caves adjoining the ruins of the hospice of the Knights of St. John, a site inherited, they say, from the Queen of Sheba, to whom King Solomon gave it. It is close to the Great Church of the Holy Sepulchre and to the well-built convent of the Copts. In this community of Abyssinians there are now seventy-one members, four of whom are priests. For four years past they have not been able to have their "Eucharist," or Holy Communion, on account of being without a place of worship, i.e., a chapel and altar in the Church of the Sepulchre. Father Saleeb, their Superior, was much hurt at this, and said "it was taking life from men." Till four years ago, for a long time, they had used the same chapel and altar as the Copts, who had now obtained exclusive use of them. . . . King Theodore had been informed of the whole matter; but he was so engaged in war (with independent or rebellious chiefs) that he could not send anyone to plead for them."

On June 19 Mr. Malet met Benjamin, a Greek, a Professor of the Theological Seminary at the Green Convent and College of the Holy Cross, two miles outside Jerusalem, who, while admitting that the Abyssinians had been hardly treated, gave it as his opinion that the continuance of the captivity of the English prisoners by Theodoras (that is King Theodore III.) had been caused by this treatment, which the Negus attributed to the supineness of the British Government, which had first

Digitized by Google

defended the Abyssinian pilgrims and then deserted them. Professor Benjamin said that the best thing to do would be to get the Coptic Patriarch at Cairo and the Greek Patriarch at Alexandria to intercede with Theodoras, and at the same time to induce the British Government to treat with the King and to offer, by way of ransom, to supply the Abyssinians in their convent with the same amount of food as was then given them by the Armenians, who, being relieved of this obligation, which they had borne for 160 years, might be induced to give up, for the purpose of constituting an Abyssinian Chapel, part of the vast space they had in the Great Church of the Holy Sepulchre. This suggestion that the British taxpayer should be blackmailed into paying £3,000 a year for the feeding of seventy-one Abyssinian "religious," who, if they could not support themselves, ought to have been supported by their own Government, is characteristically naive. But it must not blind us to the fact that at this time the corporal needs of the pilgrims were as pressing as their spiritual wants. Of these needs Mr. Malet gives the following account:—

> "The Armenians supply the Abyssinians daily with two large casseroles of soup and seventy-five small loaves of bread at the cost of about forty piastres or ten francs per diem. . . . The custom began in 1707, when the Abyssinians were starving and when to obtain this allowance of food they gave up to the Armenians all that space in the Church of the Sepulchre which is now occupied by their (that is the Armenian) Convent in the precincts and their Chapels, reserving only a small chapel for themselves and the Copts in common, their worship being the same. I saw the poor Abyssinians wandering about the vast courts and passages of the Church (of the Holy Sepulchre) as if broken-hearted, urging their prayers and reading their Bibles against the stone walls. Their patience and devotion is worthy of a better fate, and their poverty is deserving of pity from the British nation."

Mr. Malet concludes his memorandum, which is addressed from the Phœnix Club, St. James's Place, on July 22, 1867, by expressing his willingness, should the British Government see fit to make use of his services, to return to Jerusalem in November and to enter into negotiations with the Armenian Patriarch at the Convent of St. James on Mount Sion. He also makes the more reasonable and more practical suggestion that the Sultan of Turkey, who was then visiting England, should be directly approached in regard to the Abyssinian claims.

The Abyssinians, it must now be added, found the Turkish refusal to do them justice the more galling owing to the fact that, unlike all the other Christian Communities in Jerusalem, the Greeks, the Latins, the Syrians, the Copts and the Armenians, whose countries had frequently been in armed conflict with the Turks, Ethiopia had never been involved in war with the Ottoman Empire. On this account right down to 1827 and 1838, when Egyptian troops occupied Syria and Palestine, the Sultan was always very careful to see that Abyssinian rights in the Holy City were duly respected. When disputes arose he would issue a Firman safeguarding Abyssinian claims, which he would dispatch to the Governor of Kharar, a province of the Pashalik of Egypt, the frontiers of which bordered on Abyssinia. The Governor of Kharar would then send this Firman not directly to the Negus at Gondar but to the Ethiopian Church in Jerusalem. Indeed up to 1853 the Abyssinians' claim to their own Church adjacent to the Great Church of the Holy Sepulchre was not seriously contested. But two facts must be borne in mind. Ever since 1707 they appear to have commuted their rights to large spaces in the Great Church of the Holy Sepulchre for a daily supply of food furnished by the Armenians; while the mere circumstance that, outside the Great Church, they shared a small church in common with the Copts, who were their spiritual overlords and who possessed the keys of the Church, which as we know they had stolen in 1838, might in some respects be held to weaken their claims to independent control of the church in question.

(To be continued)

VISIT OF H.E. SARWAT PASHA.

H.E. Sarwat Pasha, Egyptian Minister for Foreign Affairs, arrived in London at the beginning of last week and made a stay of ten days before returning to Paris on his way back to Cairo. The visit was of a personal character. During a long official career Sarwat Pasha has made a very large number of friends among British officials and others who have been in Egypt, and he took advantage of a holiday on the Continent to pay his first visit to London. His time was almost entirely occupied in paying and receiving visits. His Excellency was received by the King on October 13 and in the afternoon of that day had a long conversation with Sir Austen Chamberlain. On October 14 he was the latter's guest at lunch at the Ritz Hotel, among others present on that occasion being the Earl of Birkenhead, Lord Lloyd, Sir Laming Worthington-Evans, Sir Samuel Hoare, Sir William Tyrrell, Sir Ronald Lindsay, Sesostris Sidarouss Bey (Egyptian Chargé d'Affaires), Sir Victor Wellesley, Sir George Schuster, Mr. Locker Lampson, Mr. John Murray and Mr. H. Lloyd Thomas.

One purpose of the visit, it goes without saying, was to see Bute House, with a view to giving a personal report on the Egyptian Legation in London to Government and to Parliament. Sarwat Pasha spent some time at the Legation, going fully into the question. As was to be expected, he was considerably impressed with the house and its appointments, and is understood to have readily conceded that the Legation was in every way worthy of Egypt. On the subject of the possibility of incorporating in Bute House the Egyptian Consulate as well as the Legation Chancery, Sarwat Pasha, there is reason to suppose, satisfied himself that the existing accommodation would be inadequate. On the other hand, structural alterations to that part of the property which faces South Street would enable the Legation to house both the Consulate and the Egyptian Educational Mission. A report on the whole question has been called for from Mr. P. M. Tottenham, the Egyptian Government's Chief Engineer Inspector in London, who will submit plans for such further alterations as may be necessary.

Sarwat Pasha was the guest at lunch of Sir Eric Geddes, who had placed at his disposal the aeroplane by which he travelled from Paris to Croydon, and took tea subsequently with Sir Samuel Hoare. On Friday there was a luncheon party at Claridge's, where His Excellency stayed, to which a number of prominent people in the world of business and finance were invited. What was in the nature of a farewell luncheon was given at Claridge's Hotel on October 18, when Sarwat Pasha entertained the following guests:—Sir Austen Chamberlain, Viscount Cave, the Earl of Cromer, Field-Marshal Lord Allenby, Lord Lloyd, Sir Laming Worthington-Evans, General Sir John Maxwell, Sir Eric Geddes, Sir William Tyrrell, Colonel Sir Henry McMahon, Major-General Sir John Hanbury-Williams, Sir Malcolm McIlwraith, Sir William Brunyate, Major-General Sir Philip Nash, Sir Gilbert Clayton, Sir George Schuster, Sir Victor Wellesley, Sir Edmund Wyldbore-Smith, Sesostris Sidarouss Bey, Mr. John Murray, Mr. P. M. Tottenham, Mr. S. C. Hebard, H.E. Borton Pasha, Mr. H. Lloyd Thomas, Mr. H. T. Montague Bell, Major Owen Tweedy, Mr. J. Beatty Pownall, Ahmed Abboud Bey, Faid Sabit Bey, Moustafa El Sadek Bey, Abdul Rahman Fikry Bey, Mr. Soliman Sabet, and Ismail Saroit Bey.

THE CENTRAL ASIAN SOCIETY.

Captain G. J. Eccles, I.A., will lecture to the Central Asian Society on October 27, at 5 p.m., on "The Sultanate of Muscat and Oman." The lecture, which will be presided over by Sir Michael O'Dwyer, and also illustrated with lantern slides, will be given at the Royal Society of Arts, John Street, Adelphi.

SIR RONALD STORRS.

A luncheon was given by the Royal Colonial Institute on October 18 in honour of Sir Ronald Storrs, Governor-Elect of Cyprus. Lord Stanley of Alderley presided, and among those present were Lord Lloyd, the Hon. W. G. Ormsby-Gore, Sir Percy Cox, Sir Godfrey Lagden, Sir George Foster, Sir John Shuckburgh, Sir Hamar Greenwood, Major Hubert Young and Messrs. W. Bevan, G. M. Boughey, A. S. Bull, Montague Bell, B. F. Conigrave, W. Chamberlain, Robert Calver, H. Hely Pounds, F. J. P. Richter and E. Salmon.

The health of Sir Ronald Storrs was proposed by Lord Stanley of Alderley, who referred to the experience that the new Governor of Cyprus had had in Egypt and as "Procurator of Judaea," in Palestine. Both Egypt and Cyprus had, as far as Great Britain was concerned, anticipated the Mandated Territory system, and even now, as a Crown Colony, Cyprus retained something of the system in view of the character of the population, but without the "questionnaire." While differences of administration existed between the different units of the Empire, the basic principle remained the same, the promotion of the interests of the people of the Colony or Dominion, and the interests of Cyprus would be Sir Ronald Storrs' chief care.

In the course of his reply Sir Ronald Storrs stated that while the general policy on which Cyprus was being administered must be British, it was impossible to lose sight of the fact that the culture and sympathies of the people were largely Greek and for this reason development could but proceed to some extent along Greek lines. From the Imperial point of view it would be his task to see that Cyprus products were utilised in the Empire and Empire products in Cyprus. Although it ill became him to pose as a bagman before he reached the Island, he could not help pointing out that Cyprus was one of the few parts of the Empire which produce cigarettes and the only one which produces brandy. Both had the merits of good quality and cheapness. The chief significance for him of the transfer from Palestine to Cyprus lay in the fact that he was exchanging the improvisation of the Mandatory system for the settled and precedented experience of the Colonial Office. It was his duty as Military Governor of Jerusalem in 1917 to attend to the details of taking over the administrative machinery and he recalled an early visit to the Municipal Offices, where the Mayor received him and showed him over the building. In response to an inquiry regarding the Treasury he was taken through a glass door, with the glass broken, to a small room on the floor of which lay bundles of Turkish notes, some nickel and a larger amount of copper. He asked how much there was there, and the Mayor called someone to count it. To the question how a check was kept when any money was taken away or added to the store the reply was, "We count it." Sir Ronald suggested that it might be better to keep the money at a bank and draw upon it when it was needed. To this the Mayor replied that he regarded such a suggestion as an aspersion on his personal honour and must at once hand in his resignation. On Sir Ronald's saying that he accepted it, the Mayor promptly replied, "In that case I withdraw it," and he remained to help the new Administration for several years. In regard to Cyprus it must be realized that it was not enough that the Island merely should belong to the Empire. The people could not be expected to go into ecstacies over that circumstance; but it was our duty to help the commerce of the Island and perhaps to give financial help, so that the people could have specific and tangible advantages to assist them in appreciating the new ties. It was a case not so much of *do ut des*, but *sto ut stes*.

The King has approved the appointment of Lieutenant-Colonel Francis Stanley Jackson, M.P., to be Governor of the Presidency of Bengal in succession to Lord Lytton, G.C.S.I., G.C.I.E., whose tenure of office will expire next March.

NEWS IN BRIEF.

M. Ponsot, the new French High Commissioner for Syria, reached Beyrout on October 12.

The Crown Prince of Afghanistan arrived last week in Paris from Italy.

The Government of India has cancelled five crores (£333,333) of securities in the Paper Currency Reserve.

Communication with South Russia, Iraq, Persia, India, and the Far East by the Indo-European Telegraph Company's route has been restored.

Stark, the Soviet Envoy to Afghanistan, has returned to Moscow in connexion, it is stated, with the proposal to conclude a Soviet-Afghan Trade Agreement.

Mr. Vithalbai Patel, the first elected Speaker of the Indian Legislative Assembly, in conformity with British parliamentary tradition is being returned unopposed for Gujarat.

It is reported in Constantinople that the three Bulgarian Communists who recently escaped from the Turkish police in Eastern Thrace, have been recaptured and arraigned before the Tribunal of Independence.

Two missionaries of the Church Missionary Society died suddenly in India recently. They are the Rev. Joseph Redman, who retired from active service in 1922, and the Rev. Donald Stainer Harper, of Haidarabad. Both were connected with the Society's work in Sind.

At Guildhall on Friday, October 22, the Lord Chancellor will preside at the combined Colonial dinner to the Prime Ministers and Delegates of the Overseas Dominions and the representatives of India attending the Imperial Conference.

It is announced at Simla that the conference on the Indian problem in South Africa, which the Government of the Union of South Africa has agreed to enter into with representatives from India, will open in Cape Town on December 20.

Field-Marshal Lord Plumer, the High Commissioner for Palestine, was on the station platform with his staff and a guard of honour on October 11 to welcome the King of Iraq, who arrived at 5 o'clock in the morning. His Majesty, after visiting the Supreme Moslem Council and lunching at Government House, left by car for Amman to visit his brother the Emir Abdullah. King Faisal returned to Baghdad on October 17. He was officially received by Sir Henry Dobbs, High Commissioner, the Air Officer Commanding, Cabinet Ministers and Members of Parliament.

Viscount Inchcape and the Hon. Elsie Mackay gave a luncheon party on October 13, at 4, Seamore Place, to meet Sir Alan and Lady Cobham. Among the guests were the Marquis and Marchioness of Reading, the Countess of Eglinton and Winton, Lord and Lady Plunket, Lord and Lady Lloyd, Sir Montague Barlow, Sir Robert Horne, Sir Thomas and Lady Carey-Evans, Sir Sefton Brancker, Sir Claude and Lady Jacob, Admiral Mark Kerr, Lieut.-Colonel and Mrs. McGrath, and the Hon. Kenneth Mackay.

Under the auspices of the Indian Tea Association, Sir Ronald Ross, director-in-chief of the Ross Institute and Hospital for Tropical Disease, Putney Heath, S.W.15., will leave England by the Rajputana on October 29 for India, in order to inspect malaria control measures on plantations in India and the Federated Malay States. While in the Federated Malay States he will be the guest of Sir Malcolm Watson, M.D. Sir Ronald Ross will unveil a commemorative tablet in his old laboratory at the Presidency General Hospital, Calcutta, and will lecture at the Calcutta School of Tropical Medicine.

THE BOMBAY RECLAMATION SCHEME.

The witnesses before the Bombay Back Bay Reclamation Inquiry Committee may be divided into four classes—official, professional, political and non-official. The first three of these classes all have their own particular view, and it is the opinion of the fourth class that is likely to count for most when the time comes for the Committee to record its decision. The official witnesses are all enthusiasts for the scheme, though, with notable exceptions, inclined to blame the professionals for its failure to achieve the immediately expected results. One of these exceptions, and the most notable of them all is Lord Lloyd, in whose evidence there were two passages in particular that make most refreshing reading. The first is, "I am very proud of the scheme, and I desire to see it carried through." The second, in reply to a question as to which Lord Lloyd conveyed the opinion that it should not have been asked, and which contained an innuendo that he evidently considered improper, but which, having been asked, could not remain unanswered, was that he had given his support to all who worked for him, that they had done so loyally, that he had the greatest regard for them, that he was grateful to them for their loyal support to himself, that until it was proved to be undeserved he would continue to give them his full confidence, and that he took full responsibility for what his officials did during his time as Governor. By one who, like the writer, has had some personal acquaintance with Lord Lloyd and his work in India, this answer is only what was to be expected; but one cannot help feeling that there have been other official witnesses from whom a similar answer might have been expected also, though one looked for it in vain. One of Lord Lloyd's *obiter dicta* was also pleasing: when he said that "the engagement of experts to report on the schemes of their predecessors must terminate some time." With Lord Lloyd at the helm of affairs, such a termination is apt to come early; but this is a characteristic that he does not share with the Government of India; whose regular practice it has always been to pile Committee on Committee and expert on expert. When a Committee reports to Government, its usual procedure has been to assemble another—usually much less influential—to consider the report of the first: after which, it is the habit of the Central Government to consult the Local Governments, each of which, as often as not, appoints a Committee of its own to suggest a reply which, with this assistance, is forthcoming in due course. The Government of India then appoints a third Committee, to consider the replies of the Local Governments: even sometimes a fourth, to coordinate the report of the third with that of the second: and finally formulates proposals of its own, usually quite different from those of any of the antecedent Committees: after which it settles itself comfortably down to argue with any authority, either at Home or in India, that may be interested, until the matter originally under discussion has become so much out of date that it is either dropped or taken up *de novo*, by the same process.

The professional witnesses appear mostly to have adopted the attitude of the schoolboy who said, "Please Sir, no Sir, it wasn't me Sir, it was t'other boy Sir." The political witnesses have played their invariable part, by the imputation of bad faith, and not infrequently of personal corruption, against every official who had any hand in the carrying out of the scheme. The non-official witnesses have, so far, been few; but one particularly welcomes the robust optimism of Sir Stanley Reed, lately editor of the Bombay *Times of India*, when he said that it was as certain as that night followed day that the reclamation scheme would be completed and that he would see it if he lived another ten or fifteen years. One believes that this is the view that commends itself to most Europeans not only in Bombay but throughout India: as well as to a large number of Indians who are able to look beyond the present disappointing position and to take a long view. It is worth remembering that the cost of the new Capital at Delhi was originally estimated at four million pounds, while the latest estimate is just two and a half times as much. The construction of the new Capital may justly be represented as a great Imperial work which, once it had been started, India was bound, in expediency as well as in honour, to carry out when experience showed that the cost had been greatly underestimated; but, even so, its appeal is almost entirely sentimental. The reclamation scheme in Bombay is a good deal more than that. Allowance should properly be made for the disappointment that followed the discovery that the work was not going to be the immediately and enormously remunerative proposition that was at first confidently claimed for it: and it may even be admitted that, in the circumstances, it was not unnatural to look round for a scape-goat; while the financial failure of the scheme offered a heaven-sent opportunity to the small but vociferous Indian class whose sole object in life appears to be the vilification of the British in India—an opportunity which they have eagerly seized. But it is practically certain that all sober opinion in Bombay, Indian as well as European, recognises that the reclamation scheme is a great work boldly conceived in the interests of the city and its inhabitants, the ultimate effect of which will endure long after the present recrimination and bitterness are forgotten.

It is worth remembering that Governor Hornby, from whom the great "Vellard" takes its name, encountered great opposition and incurred a severe reprimand for carrying out an even greater scheme 150 years ago. The rampart that he built united the southern boundary of Warli Point with the northern limit of Cumballa Hill, a distance not far short of 2½ miles. Its effect was to shut out the sea from the central portions of the island, and to render the wide stretch of flats, as reclaimed, available for cultivation and settlement. Events have abundantly justified the far-sighted sagacity of Governor Hornby—for what would be the position of Bombay now if his "Vellard" had never been built? It is doubtless too much to expect that the opposition will admit it now: but it is beyond question that future generations of the inhabitants of Bombay will, in years to come, gratefully remember Lord Lloyd as the man to whom they are

Digitized by Google

indebted for a great scheme, worthy of a great city, on which it conferred a lasting benefit of enormous value, even if at a price that seemed excessive at the time.

CURRENT TOPICS.

The Indian Film Project.

It is not easy to know what to make of the so-called "explanation" of the recent developments in the matter of the Indo-British film combine. The original statement was quite definite, and went into considerable detail, even going so far as to specify the sums of money guaranteed by several named Indian Princes. Their prompt disclaimers left one wondering where the mistake had occurred: and it is now stated that, in the case of one of the alleged guarantors, the Maharaja of Alwar, who had been credited with a promise of £100,000, the "error" was due to what, without offence, may be described as a characteristic piece of optimistic miscalculation. A statement has appeared in the newspapers, on the authority of an unnamed person, but apparently carrying the imprimatur of Dr. Niranjan Pal, the author of the film "The Light of Asia," who was responsible for the original incorrect announcement. The "person" says that, in an interview with a number of Press representatives, he told them that the project had very influential backing, and that the Maharaja of Alwar was one of its principal supporters. The statement proceeds, "Unfortunately our Press manager had heard previously that His Highness had sent us a contribution, and the sum of £100 which was actually sent to us by His Highness, he took that to be £100,000."

It is further explained that the gift actually made had nothing to do with the project; but was merely a contribution in response to an appeal for help to enable the "Light of Asia" film to continue its run. The communication now made to the Press also mentions that the Aga Khan, who was stated to have guaranteed £25,000, has also contradicted the statement: and one is left to suppose that he also responded to the appeal on behalf of the "Light of Asia," and contributed £25 for that object: which "our Press manager" took to indicate willingness to subscribe £25,000 for the Indo-British film project, later on. It seems, therefore, that what actually happened was that Dr. Niranjan Pal sent round the hat for his present film; that the result was so encouraging that he envisaged an ambitious scheme to follow: and that the unnamed but imaginative "person," engaged in floating the project, started it by the simple process of multiplying the subscriptions by a thousand and deciding that this was what might reasonably be expected to accrue when the time came for the scheme to materialise. And there one must leave it—with regret; for there can be no doubt that, if the cash were forthcoming, it would be money well spent; and little doubt that, in the end, the investment would, if properly handled, prove a profitable one.

Lord Lloyd's Evidence.

Lord Lloyd's evidence before the Bombay Reclamation Inquiry Committee, comments on which appear elsewhere in this issue, was notable for a number of *obiter dicta* that deserve to be put on record.

"You must end the taking of expert opinion some time."

"I have only handled a coal shovel on board ship. I have never handled a clay shovel."

"Anyone who commits the crime of action in the East commits a great crime. If I have committed the crime of trying to get something done I am not ashamed of it, I am proud of it."

"Bombay is the first city in India and the second in the Empire."

Calcutta, please note.

Colonel Jackson.

The assumption of office by Colonel F. S. Jackson in Bengal will take place too late for him to assist the Indian cricketers to do battle with the M.C.C. team. The present writer's infrequent returns to England in the course of a long residence in the East did not, unfortunately for him, happen to coincide with the period during which "Jacker" was at the height of his cricketing fame in England; but one of his most abiding memories is of batting, as a small boy at the preparatory school of Lockers Park at Hemel Hempstead, against the bowling of a schoolfellow named Jackson, already showing signs of the great prowess he was to achieve in later years, and hearing, as he flukily edged away a ball through the slips, the bowler's encouraging shout of "You little moke!"

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 30.

Weather.

There is a holiday spirit in the air this week, but a very different meaning attaches to the phase in the plains in India. September in Calcutta is generally the most unpleasant month and this year it has contrived to be even more trying than usual. Statistics do not explain why at certain times a particular combination of humidity and temperature persisting for a few weeks produce an atmosphere in which mere existence is almost intolerable for Europeans and Indians alike; but every year we have one or two of such spells and this year we have certainly had half a dozen, of which the present is the longest. For us, who have to work through all weathers, it means greater discomfort than usual, a greater percentage down with fever, more fraying of the nerves and the edges of the temper, and ever and always more of that petty torment, prickly heat. Hence the holiday spirit becomes a universal feeling that one must get out of it for a time, or go mad; but most do neither. There is little danger in it all, "discomfort" having displaced "danger" as the bane of the European in the East nowadays, life for ten months out of the twelve being more or less uncomfortable, and generally more. Improved sanitation, good water, the electric fan, and saner living have abolished the extra premiums on life assurance even if they do not make it any less pleasant to live for three-quarters of the year with your clothes wet through. They have also made life easier and safer for the Indian of means; not only the Westernised barrister, who speaks glibly of not being able to stand "the Plains" in which he was born and bred, and talks of Home as a necessity every two or three years; but for all the host of clerks and petty traders who make up the Bengali middle class and half the population of Calcutta.

The masses, the coolie and labourer, have been almost unaffected by what has been nothing less than a revolution, and the great mainstay of the country, the agriculturist has been untouched by it. His life is still ruled by the weather.

And Race.

It is well to reflect at times and remember that it is weather—climate and temperature—that is responsible for our presence here, that has made the Indian what he is, lethargic, and that has made the British the energetic, interfering, organising, trading race that it is. It is said that every nation gets the religion it deserves, or needs, and if the weather makes the nation it is responsible for the religion. How comes it then that such vastly different religions as Hinduism and Mohammedanism exist side by side over the greater part of India? Hinduism is the indigenous system and the Mussalman and his creed are invaders. The one is based upon acquiescence and contemplation, the other upon aggression and activity; and one has a multitude of gods, idols and images and decorates its temples with a fantastic conglomeration of freak naturalism, the other calls on one God and one Prophet and imposes a vigorous austerity upon the

Digitized by Google

builders of its mosques and *id-gahs*. Both permeate every part of the daily lives of their adherents to a degree that would astonish the average Christian and the connexion between religion and the social system is of the most intimate character. Hinduism is an aristocratic and autocratic society, but the Mohammedans are strongly democratic.

And the Reforms.

These are the two elements, fundamentally opposed, and differing from their very bones upwards, that the Reform Scheme sets out to weld together, and one of its first inevitable results is communal organisation, the demand for communal appointments in the Ministry and the reservation of communal posts throughout Government service. Time has seen the Hindu absorb his conquerors again and again, and it is only the influx of new blood that prevents him from absorbing the European—it is painfully easy to "go native," especially in the second generation. The Hindu was slowly but surely digesting the Mussalman; in other words the weather, the climate, was wearing down the aggressor and making him like the great inert mass of the conquered. Now we have awakened him; the giant has stirred from his sleep and the rumblings of his voice are the low thunders of a coming storm. Pathetic contentment is a dangerous thing to disturb.

The Election Ramp.

Forward's present election policy, if that term can be applied to twenty lines of action and a hundred lines of argument between which you switch daily before your opponents gather what you are talking about, is to claim that only the Congress Party, or what is left of it, is working for unselfish and true nationalism, and all others are traitors, Hindus and Moslems alike. Its creed is simple, and can be written in a sentence—"Hate the Government, which is always wrong." If there is one universal trait in the Bengali it is indiscipline, personal and communal, and the Congress creed makes an immediate appeal to it. This is the explanation of the strength of the Congress position in the Bengal elections; all others are seeking to place their party into power, says *Forward*; communal parties in the Councils simply play into the hands of the bureaucracy, and the only hope for true nationalism is for all communities to sink their differences in the Congress chamber behind closed doors and to combine to smash Government and drive the foreigners from India. "None but idiots can believe that any community in India can rule over another in the event of the last British civiliar and the last British soldier leaving these shores." No explanation is offered as to why communal differences in Congress will not have their repercussion outside: the Congress method of dealing with them, however, has the merit of simplicity, for they are simply "not to be discussed." And still not a word of constructive policy or programme. Let us be frank; the Congress party is shrewdly exploiting anarchy in Bengal, in order to secure absolute power for a group of lawyer-politicians who have neither experience nor capacity for Government and who are equally unprincipled and irresponsible.

The Open Anarchists.

We are still being reminded of the existence of a revolutionary party in spite of the detention of the principal members of it under the Bengal Regulation III. Reference was recently made in these columns to the murder of a Bengali Police Superintendent in Alipore Jail, and to the proceedings before a Special Tribunal against the gang of men concerned. It is now almost invariably the practice for appeals to be lodged against the decisions of Criminal Courts: and, in due course, an appeal against the decision of the Special Tribunal was heard here by the High Court, which decided that two of the men are to be hanged while the sentences on three others have been reduced to transportation, which is the fate of the majority of those convicted. Some of the accused have been discharged. Another case is that of a wretched youth, who was discovered with bombs and explosives in an out-of-the-way house near the City, and has been sentenced to three years' imprisonment. He confessed that he had been inspired with ideas of self-immolation by others, and claimed that he was only looking after the materials of murder for a friend; but the Court felt that a youth of seventeen or eighteen must be held to be responsible for his actions, and sentence has been passed accordingly. A bomb manufactory has also been discovered in Chittagong, and the Chief Inspector of Explosives was unable to prevent the explosion of two of the bombs during his investigations; fortunately all necessary precaution had been taken. It is an unhappy business.

Men and Things.

Cobham has left Karachi and hopes to be home in a week. He has had a rough journey across India and we all hope he will have good luck for the rest of the journey.

Darjeeling is having something of a season where the Acting Governor, Sir Hugh Stephenson, is beginning his farewells before taking leave preparatory to taking over the Governorship of Bihar. He goes to Kalimpong to visit Dr. Graham's great orphanage there during the week.

The Brighter Sermons discussion was carried a step further on Sunday in the Cathedral when Archdeacon Godbar held that the sermon was no part of the essential ritual and stated that he never objected to people leaving before it began. It will be interesting to see what happens now.

The Trivial Round.

The M.C.C. team is on board and we see that Gilligan is optimistic as to the prospects of his side; so are we! Anyway, they rightly anticipate a good time, in more ways than one, may we say.

So another heavy-weight has gone the way of all flesh. Tunney sounds big and heavy and he seems to have made a nasty mess of Dempsey.

Another hot and unpleasant afternoon at the races on Saturday, and nothing particular to record beyond discomfort. The heat and exodus have almost cleared Tollygunge of golfers, but the "Royal" course is still covered at week-ends.

The Rugger tournament goes on, and it says a good deal for the stamina of the teams that they can stand the

pace they put up in such a temperature. It will be a military final.

In the annual match Scottish and Light Horse the former did more or less as they liked, and won 22—3. Better at forward and with a class half in Batty, they had the cavalry on the defence throughout, but it was a bright show with no apologies.

The last chamber concert was given at the Saturday Club on Monday when, in spite of a somewhat stereotyped programme, the attendance was well maintained. The Friday dinner-dances are also keeping up their popularity and it is a case of capacity so far as tables are concerned. Congratulations are due to the Teales who are most efficient secretaries.

The Roman Singers, a group of Italian operatic principals, are drawing good houses to the Empire nightly with an attractive, if mixed, programme. Their *ensemble* work is first-class, but the bulk of the house seems to prefer imitations of the pink label records.

Markets.

The revised figures of the final jute forecast estimated by the Director of Agriculture and published to-day divulges an increase of only a nominal amount over the figure given last week, and no effect on the market has resulted. Little business was done earlier in the week, but sellers are now showing more disposition to come to terms. However, buyers are determined to await still lower prices. Gunnies have followed this market and close quiet and easier. The piece-goods market has slumped considerably on account of the recent reaction in the prices of cotton and dealers are very chary about entering into fresh purchases. The bright market of the week has been the tea market, both here and in London where the tendency has been strong and active, prices at a sale here showing increases up to 6 pies over the last week.

In the Share Market Government Securities have been firm with a particular demand for the New Loan which has been marked up to Rs. 88/10. Jutes have been barely mentioned with the exception of a few of the popular stocks some of which show slight increase. Coal shares have been very dull, but tea shares are coming into their own again and, with a more general demand for most of the good stocks on the consistent steadiness of the commodity market, may be anticipated that prices will continue to go in favour of holders. To a small extent, similar remarks may be made with regard to rubber shares in which market investors here have been taking considerably more interest and a number of rises have been recorded. The Exchange Market has been very dull and featureless with ready T.T. unchanged at 1s. 5 15-16d.: money remains very easy with call and short notice quoted nominally at ½ per cent. and one month ¾ to 1 per cent.

THE INDIAN MAIL.

The Indian Electorate.

The *Statesman* of September 9 contains an analysis of the votes cast in the elections of 1920 and 1923 for the Provincial Legislative Councils and the Central Legislative Assembly. From the figures given, it appears that the percentage of provincial votes cast, to the total number of electors, which was only 30.5 at the first Indian general election, improved to 46 at the second. In the former, the highest percentage was 39.7 in Bihar and Orissa, and the lowest 22.5 in the Central Provinces: in the latter, the Central Provinces rose from the bottom of the list to the top, with 57.7 per cent., while the lowest percentage was that of Madras, 36.3. The figures for the Burma provincial election are not given; but, in the 1923 election for the central Legislative Assembly, hers was the lowest percentage, 23.3; while the highest was that of Ajmer-Merwara (which has no Provincial Council) 74.5, followed by the Punjab with 60.3. The percentage of votes cast, throughout the whole of India, for the Assembly was 42. Detailed figures are given for the election of 1923 in Bengal, from which it appears that the percentage of votes cast for the European commercial representatives was 91.2—a figure that effectively disposes of the charge of apathy sometimes levelled at the European voter in India. The percentage of votes cast by rural voters was markedly lower than that of their urban confrères: that of the former being 37, and of the latter 50. The Bengal landholders polled 83 per cent. of their possible votes, and the Universities and Indian commerce each 77. The percentage of votes cast by women in the provincial elections of Bombay and Madras, at the 1923 election, does not suggest that the recent extension of female suffrage is likely to have much effect on next month's returns: the general percentage in Bombay being 18.3 and in Madras 11.4, while that of the Mohammedan rural female voters was no more than 7.2 in Bombay and 1.7 in Madras. The number of qualified female voters is not given, which is a pity; for it would be interesting to know what proportion it bears to that of the males.

One hears a good deal about the education of the Indian electorate; but evidently, before they can be educated to exercise their voting power in an intelligent manner, it will first be necessary to persuade them to exercise it at all. At the time of the first general election, the non-co-operators claimed that it was in response to their policy that the percentage of voters polled was so small; but they could not advance any such argument at the second election, and still less will they be able to do so at the third. It will be interesting to see whether there is any marked improvement in this respect, next month. If there is, it will certainly be a matter for gratification; but also, one must confess, for surprise.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*

Turkish Reparations.

This week, or in a few days' time, the Inter-Allied Commission for the payment of reparations to Allied nationals for losses incurred in Turkey will begin the payment of advances to claimants. The Commission, whose headquarters have been in Paris, has been at work for two years. Only last week representations were made by the Association of British Chambers of Commerce to the Government in regard to the delay that has taken place in the settlement of claims. No doubt to the claimants, who will have had to wait some twelve years for the recovery, in part, of their losses, the lapse of time seems inexcusable. In fairness to the Commission, however, it must be pointed out that the mass of claims and the necessity for strictly impartial judgment in the case of each one have imposed an arduous task on a body, handicapped in the first place by its international composition. Visits have had to be made to Constantinople and Smyrna; the total amount of money claimed exceeded by many times the sum available for distribution, and it was not a case of merely fixing a percentage that could be applied to all claims. Each claim had to be examined on its own merits, and an attempt made to adjust its merits to those of the other claims; there was a further difficulty in the fact that the national point of view on the general subject of claims varied as between French, Italian and British adjudicators. It is satisfactory, however, to know that a start will at last be made in meeting the claims, for in many cases the delay has entailed hardships. In the more serious instances, it will be recalled, the British Government made preliminary grants on account several years ago.

An Iraq Agricultural Bank.

Among the various questions discussed during the recent visit of the Iraq Minister of Finance to London was the project of the formation of an agricultural bank. I understand that while the project was the subject of prolonged discussions, it would be correct to say that little more progress was made towards the formation of this institution than to approve of the idea in theory. In any case, the report that the working capital of the bank is to be £250,000 may, I think, be ignored. Such an amount would be far too small for the purpose. When the bank is formed, and it is to be hoped that its establishment will be found to be feasible at no distant date, for it would serve an invaluable rôle in furthering the economic development of the country, it will presumably have a much larger capital than that.

An Iraq Currency.

Hitherto Iraq has depended on the Indian rupee for its currency, but the desire for a native currency is strong and it is now stated that proposals are to be laid before the Iraq Chamber of Deputies for a national currency. The gold dinar is to be the unit of the new currency, and its value will be 10s., and it is proposed to issue the notes in exchange for rupees taken out of circulation. As I have already indicated in these columns apropos of another young country the desire for a country on the verge of its development to have a currency of its own while praiseworthy is not altogether judicious. When the existing currency is as satisfactory as that which is in use in Iraq at the present time it would be better to leave well alone until in a few years the progress of the country really justifies a departure of this importance, for it has to be remembered that the value of a currency rests on a country's credit. In the case of Iraq the position is complicated by the fact that it is not a case of replacing a national currency by a new one, a simple operation, and rupees will still be used for the time being along with the dinars. It is the opinion in the City that this dual currency while it exists may lead to complications, and the result may be that the dinar may fluctuate as against the rupee. Incidentally, I cannot help wishing that Iraq would choose a different monetary unit, for we already have the dinar in the Near East, and now to the many varities of francs we shall have to add two of the dinar.

The Anglo-Persian Dividend and Bonus.

It verges on the commonplace to emphasise again the value of the British Government's investment in the Anglo-Persian Oil Company, but one cannot help remarking that it becomes more evident each year that the decision to participate in this oil enterprise before the War must rank in importance with the similar move in regard to the Suez Canal. The announcement of this year's proposed distribution of the Anglo-Persian was made last week. The final dividend is 12½ per cent., making 17½ per cent. for the year ended March last, which compares with 12½ per cent. for the previous year. Further, it is proposed to capitalise £4,475,000 of the general reserve fund which will result in the ordinary shareholder receiving one bonus share for every two held. The Government's holding of the ordinary capital is £5,000,000 out of £8,950,000, so that its holding will be increased to £7,500,000. For the full details of the year's working we must await the report, but in view of the fact that the allocation to the various reserves is substantially larger than last year and that the carry forward, afer payment of the increased dividend is no more than £117,349 less than was brought forward, it is obvious that the year's working must have yielded greatly improved results.

Restrictions on Trade.

Yesterday saw the issue of an important document signed by the leading bankers and business men of this country, of Europe, and of America, appealing for the removal of the restrictions which now hamper trade so seriously. The document outlines the difficulties arising from the War settlement. "It is difficult to view without dismay," it is pointed out, "the extent to which tariff barriers, special licences, and prohibitions since the War have been allowed to interfere with international trade and

Digitized by Google

to prevent it from flowing in its natural channels." It is urged that "there can be no recovery in Europe till politicians in all territories, old and new, realise that trade is not war but a process of exchange, that in time of peace our neighbours are our customers, and that their prosperity is a condition of our own well-being. If we check their dealings, their power to pay their debts diminishes, and their power to purchase our goods is reduced. Restricted imports involve restricted exports, and no nation can afford to lose its export trade. Dependent as we all are upon imports and exports, and upon the process of international exchange, we cannot view without grave concern a policy which means the impoverishment of Europe." It may be hoped that this timely appeal, emanating from so weighty a source, will have the desired effect, and that the result will be a general improvement in trade conditions, which, as they are at present, place any general revival of commerce out of the question.

Burmah Oil Dividend.

The Burmah Oil Company has declared an interim dividend of 2s. per share as compared with one of 2s. 6d. a year ago. This time, however, the distribution is on a capital one-third larger than last year, so that the present really represents an increased rate of distribution.

Sudan Cotton Prospects.

The estimate of the coming season's cotton crop in the Sudan is 484,238 kantars of Sakelarides and 90,745 kantars of American, or a total of 574,983 kantars. That yield would mean an output of roughly 147,290 bales, and would mark an appreciable advance on the figures for 1925-26. Viewed in relation to the world's cotton production, the Sudan figures seem relatively insignificant, but when it is remembered that for 1918-19 the Sudan's production was only 15,997 bales, while for 1924-25 it was no more than 44,912 bales, it will be realised that the real importance of the figures lies in the very great advance that has been made recently owing to the completion of the Makwar Dam. One would like to see more rapid progress in the output of American in the Sudan, but that will come in due course, though if American is going to be round about 6d. per lb. for any length of time it is bound to have a retarding effect on developments in the Southern Sudan and elsewhere.

(Continued from page 400.)

Cement.

There are two large cement works in Egypt, viz., "The Société des Ciments d'Egypte," whose factory is situated at Masara between Cairo and Helwan, and the "Fabrica di Cemento," whose works are in Moharrem Bey, Alexandria.

The Massara Company was established in 1900 with a capital of 2,300,000 francs. The raw materials used are all obtained in Egypt. The yearly output is from 40,000-60,000 tons. The Alexandria Company was formed in 1911 and has a capital of £36,000. The raw materials used are imported from Dalmatia. The factory can produce 24,000 tons of cement annually.

In 1925 191,000 kgs. of cement were imported into Egypt, valued at £E169,000.

Sornaga Works: Tiles, Bricks, Pipes, Etc.

The factory of Mr. Sornaga, situated on the eastern bank of the Nile at el Wadi, opposite Kafr el Amar, Giza Province, is an up-to-date establishment in every sense of the word and employs some 500 hands. The factory was established in 1905 and at that time employed some 50 operatives. The factory turns out bricks of all descriptions, tiles, lime, plaster, earthenware pipes and sanitary ware. A special section is engaged in the manufacture of ceramic art pottery. The work turned out by this factory is of a very high standard and is at least equal in quality to similar articles manufactured in Europe.

Engineering Works.

Engineering works have greatly developed in Egypt during recent years. The principal centres are Alexandria, Cairo, Port Said, Mansura, and Birket el Sab. Spare parts can now be manufactured in the country which until recent date had all to be imported from abroad. Very large numbers of motor cars, lorries, etc., are now in use all over Egypt, and motor repair workshops exist all over the country. The Khedivial Mail Steamship and Graving Dock Co., Ltd., own a dry dock in Alexandria.

Pottery.

The centre of the pottery trade is at Qena, the capital town of Qena Province, where vast numbers of Goullahs" and "Zirs" are baked from locally found clay. These water containers are transported by river and sold in every town in Egypt. In Qena Province over some 3,000,000 pieces of pottery are produced in a year and over 500 workmen are employed in the trade. Potteries also exist in Rode-l Farag, Shubra, Old Cairo, Tura, Kafr el Zayat. These factories turn out earthenware articles of all descriptions of a somewhat crude nature.

Confectionery.

The Egyptian has a very sweet tooth, so in order to satisfy his demands a very considerable number of sweet factories have been established all over the country.

The majority of these factories are owned by Egyptians, but there are a few factories owned by Europeans, who turn out superior lines, such as preserved and crystallised fruits, caramels, fondants, Turkish delight, and boiled sweets, mainly in Cairo and Alexandria. Owing to the high price of sugar, large quantities of glucose are used in the manufacture of sweets and "Halawa." There is one chocolate factory in Egypt.

Ginning Factories.

A considerable proportion of the ginning factories in Egypt are owned by the Associated Cotton Ginners of Egypt, Ltd., with a capital of £360,000. There are also a number of privately owned factories, several of them being owned and managed by Egyptians.

The chief ginning centres are Damanhour, Kafr el Zayat, Mansur, Zagazig, Bonha, Wasta, Beni-Suef,

Maghagha, Minia and Mallawi. The cotton ginning season usually begins in November and ends in April.

Other industries worthy of mention are rubber making, glue, jam, macaroni, brass and copper work.

The Bureau of Commerce and Industry has done a great deal to prepare the way for industrial development according as the conditions of the country permit. It has instituted a permanent Exhibition representing all local manufactures, which was opened officially by H.M. the King Fouad I. on December 30, 1920. This Exhibition is situated in 12, Sharia Fahmy, Cairo, adjoining the main entrance to Bab-el-Iouk Station and is open from November to April from 9 a.m. to 12 noon and from 2.30 to 5 p.m. on Monday and Thursday afternoons. During the remaining months the Exhibition is only open in the mornings.

The Trades Schools throughout the Provinces under the Department of Technical, Industrial and Commercial Education are training skilled manual workers.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, October 8.

New Danube Bridge.

The new bridge across the Danube from Belgrade to Panchova, which the Yugoslav Government has decided to construct (according to the Roumanian Press) will provide a direct railway route between Bucharest and Belgrade, the lack of which hitherto has caused great inconvenience to travellers both to Yugoslavia and Greece from Roumania. At present the most direct route to Belgrade from Bucharest is by air, and those not wishing to "risk their lives" in this way travel by train to Orsova or Turnu Severin and there take boat to Belgrade. Many travellers will look forward to the time when there is a direct train from Bucharest to Belgrade, and even more so when direct communications are established between Roumania and Greece. The sea route from Constantza to Piræus, of course, is a beautiful and a comfortable one, but it is long.

It is reported that the contract for the building of the new bridge has been given to a combine of five large German firms. A German firm has just finished an important tunnel on the Roumanian railway system and is said to be negotiating for other important contracts in this country. Must we already regard Great Britain as the old man retiring from business and leaving new enterprises to the younger generation?

Repair of Roads and Bridges?

A serious proposal is on foot to appeal to the Government for a grant for the purpose of repairing the roads and bridges in Roumania. In view of the rapidly increasing motor traffic an improvement in the condition of the roads all over the country is a crying necessity, for at the present time motor touring in Roumania is a very mixed pleasure and most damaging to the springs and other parts of cars. In fact, only cars with a high clearance are practicable in this country. During the War the roads were subjected to unusual strain, and since the Armistice there has been no money to effect the necessary repairs. The annexation of Bessarabia has entailed heavy expenditure, as very few stone laid roads exist in that province, the majority being merely mud tracks (as they are all over the south of Russia where stone is scarce and would have to be carried from a great distance) which, uneven at all times, become impracticable in the wet seasons for anything but oxcarts.

Motor Car Trade.

During the last five years an enormous increase is noticeable in the motor car traffic and in spite of complaints on all sides that money is scarce the daily sale of motor cars is steadily increasing. American cars, such as the Ford, Buick, Chervolet, Cadillac, and Chrysler appear to be the favourites, though the F.I.A.T. has increased its sales fourfold in the last two years and in point of numbers probably now comes next to the Ford. Very few British cars are to be seen as yet, but the Morris Motor Company has recently established an agency in Bucharest which has sold a considerable number of cars within a very short time. There is a good demand for small cars of the less expensive types, but any British firms selling cars to Roumania would be well advised to keep a stock of spare parts if possible at different points in the country, as the lack of spare parts has hitherto been one of the great disadavntages felt by the owners of British cars in Roumania.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Sofia, October 1.

The Ratification of the Geneva Protocol.

The Sobranye has ratified the protocol of the League of Nations, signed by M. Molloff, Minister of Finance, on September 8 at Geneva, which lays down the terms on which this institution authorises the issuing, under its auspices, of the loan for £2,250,000 sterling for the settlement of Bulgarian refugees.

This ratification was the subject of an important debate which could have greatly increased the prestige of the Bulgarian Parliament, but which was made little of owing to the influence of the pending elections. As a matter of fact the protocol was only approved by means of the Government majority, to which two small opposition groups joined themselves, namely, the Radicals and the Socialists

The Democrats, the Liberals and the Agrarians refused to approve the preliminary terms of the loan, declaring that they were too heavy, that there were not at all clear, that they infringed Bulgarian sovereignty, and that they were going to burden the country with new taxes instead of lightening those they were already bearing. It was urged that it would be better to renounce the loan and to ask for a reduction or a moratorium on the reparation payments, so that the money thus liberated could be devoted to the establishment of the refugees, or even to demand the restoration of these latter to their native homes.

The Minister of Finance defended the loan. He stressed the advantages of the protocol, in the same way that all the opposition speakers only emphasised the disadvantages; unexpectedly linking the question of the installation of the refugees to that of Bulgaria's healthier financial position, which could not be effected by her own resources, M. Molloff maintained that the granting of the loan by the League of Nations was a mark of undisputed confidence not only in the country which is little by little reinstating itself in the eyes of the world, but especially in the present Government.

As well as the ratification of the protocol the advance of £400,000 sterling by the Bank of England to the National Bank of Bulgaria has also been approved.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 19.

Developments in the financial world have been rather perplexing during the past week. The monetary situation has been such as to induce talk of prospects of a higher Bank Rate, but nevertheless one of the features of the Stock markets has been the strength of gilt-edged securities. While this is attributed by some to the cessation of a steady flow of sales of 5 per cent. War Loan from important quarters, it is nevertheless evidence of the strength of the technical position. The recent demand for this loan has perhaps been stimulated by the fact that in the early part of the week the price was attractive because in a fortnight it will be marked ex-dividend, and at 101⅜ the real price is under par. In other directions in the Stock Markets business has been on a restricted scale, though the activity in tin shares has revived with the further rise in the price of the metal. The oil market revived on the increased dividend and bonus distribution announced by the Anglo-Persian Oil Co. Rubber shares are at the moment neglected. At the end of the month the next quarter's export quotas will be announced, and as the price of rubber for the current quarter looks like being below 1s. 9d. per lb. there is every probability of a cut of 20 per cent. from standard. This will be in favour of producers, but the part likely to be played by the use of export coupons held in abeyance has to be borne in mind. At the same time there is nothing in the outlook to suggest any serious weakening in the price of rubber in the immediate future, and at anything over 1s. 6d. per lb. the majority of producers can earn substantial profits.

The Trade Balance and the Monetary Outlook.

Although the September returns of overseas trade are perhaps not quite so bad as gloomy prophets foretold, the trade balance, thanks to the prolongation of the coal dispute, continues to move against us in disconcerting fashion. August and September have between them yielded a merchandise import excess of over £85,000,000, which is £42 millions greater than the figures for the corresponding period of 1925. This growing tendency will not cease until the mines have resumed their full output and the industrial position generally becomes more normal. One would naturally have expected that the publication of these figures this week, and a realisation of their possible effects on sterling exchange, and through sterling exchange upon money rates, would have caused Government and other high-class fixed-interest stocks to become depressed. But, as we show above, the opposite has been the case. For this apparently illogical event there are several contributory explanations. The slowing up of the industrial life of the nation releases for high-class investment funds that normally would be employed in financing current production. Secondly, the competition from attractive new issues has been less intense than last week; and finally the latest news from expert observers in New York suggests that a rise in the Federal Reserve's official rate, which had been looked upon as a distinct danger, is now quite improbable in the near future.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise.

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED
Head Office: 41 Lothbury, London, E.C.2

Industrial Company Profits.

The accounts of industrial joint stock companies may be expected during the next twelve months to bear the marks of the industrial troubles of the past six months. But considerable time is frequently allowed to elapse after the close of the company's financial year before the presentation of the accounts, and for this reason the quarterly statistics prepared by the *Economist* cannot be expected to show the extent to which earnings of industry have been affected by the coal stoppage. During the past quarter the net profits disclosed by 256 companies amounted to £24,060,000. Included in this are 58 rubber companies, whose profits rose by £1,901,000 or 134.8 per cent., and if these and the figures of eight tea companies, which are in a similar category, be eliminated there is a decrease of £1,150,100 or 5.4 per cent. For this the textile group with a decline of £783,400 and iron, coal and steel companies, with a decline of £189,400 are mainly responsible. Shipping companies, on the other hand, showed an increase of £116,600 or 9.6 per cent. Total net profits were divided in the proportion of 65.6 per cent. to ordinary shareholders, 17 per cent. to preference shareholders and 17.4 per cent to reserves, either as distinct appropriations or in the form of additions to balances carried forward. The average rate of ordinary dividend worked out at 10.5 per cent. as compared with 9.9 per cent. a year ago and an average of 10.3 per cent. for the year 1925. Many of the individual groups show a reduction in the average rate of ordinary dividend, but rubber companies are a prominent exception with an increase from 11.4 to 23.4 per cent.

European Reconstruction Loans.

The latest overseas trade returns lend fresh emphasis to the adverse effects of the prolonged coal stoppage upon British industry. While there is no desire to paint the picture in too sombre colours, no good purpose is served by imitating the ostrich. Therefore, the average investor and particularly the small investor, may deem it advisable to leave industrials alone for the time being. If so, he will find the European reconstruction loans an excellent medium in which to place his surplus funds. These include the German 7 per cent. Sterling Bonds of 1924, the Hungarian 7½ per cent. Sterling Bonds of 1924 and the Austrian 6 per cent. Guaranteed Sterling Bonds.

The German bonds are a direct and unconditional obligation of the German Government chargeable on all its assets and revenues, and there is additional specific security. The amount of the bonds outstanding exceeds £11,000,000 and the return is approximately £6 14s. per cent. As to the Hungarian Bonds, these likewise are

Digitized by Google

a direct and unconditional obligation of the Hungarian Government, while principal and interest is well secured on specific assets. Some £7,600,000 of the bonds are available, and at the current price give a yield of approximately £7 10s. per cent. The Austrian Bonds are guaranteed as to principal and interest by the chief countries of Europe, including Great Britain, to the extent of 24½ per cent; and other safeguards are provided. An amount in excess of £13,000,000 is outstanding, and the bonds give a yield of £6 1s. per cent.

THE PALESTINE ECONOMIC CONFERENCE.

The Palestine Economic Conference, which was held under the Chairmanship of Sir Herbert Samuel at the Central Office of the Zionist Organisation from October 10 to 13, considered among other matters the conditions of agricultural colonisation and industrial development, the existing financial institutions, and suggestion for further developments. It adopted the following resolutions:

The Palestine Foundation and Land Funds.

This Conference is of the opinion, in view of the facts that (a) the greater part of the Jewish immigrants should be engaged in agriculture and industry, and (b) a large percentage of the immigrants have not sufficient private means and must, therefore, be assisted in their establishment in agriculture and industry, that the Keren Hayesod, apart from its important function in the social and cultural domain, will have to play a large part in providing the indispensable foundation for these economic undertakings for a considerable time. In particular, the Keren Hayesod is called upon to supply the first pre-requisites for such institutions as help to furnish credit on an economic basis. The Conference, recognising the paramount importance of the establishment of a large agricultural population, also places the utmost emphasis upon the value of the Land Fund, the Keren Kayometh. The Conference accordingly considers a constant increase of the resources of the two funds to be an essential pre-requisite of the economic upbuilding of the Jewish National Home.

Agricultural Colonisation.

1. Agricultural Bank.—The Conference is of the opinion that for the furtherance of Jewish colonisation in Palestine it is desirable to create an agricultural bank, which shall give secured credits to settlers already established in the country. Before the bank is established, however, it should be ascertained (a) whether there is a possibility of the share capital of the bank, amounting to at least £200,000, being provided partly by the Keren Hayesod and other Jewish institutions and partly by bankers to be interested in the sale of the bonds of the bank; (b) whether there is a possibility of placing the bonds of the bank with the assistance of bankers abroad; (c) whether there is a possibility of the Government of Palestine being prepared to grant annually from its budget during a period to be determined, a sum as a long-term loan to the bank. Such loans, of, say, £200,000 annually, would enable the bank to start business at once on a larger scale, even if the proceeds of the sale of the bonds would only provide a moderate sum during the first few years.

The claim that the Government should afford financial assistance to the agricultural bank can be justified by the fact that the increase of the Government revenue during the last few years is due mainly to Jewish immigration, colonisation, house-building, and reclamation of land, which have had the effect of considerably augmenting the receipts from customs and land and house taxes. Similarly, the revenue of the Railways and of the Postal Department has also been derived to a very large extent from the Jewish inhabitants. Hence by assisting the bank and thus furthering Jewish colonisation, the Government would help in creating new sources of taxation and of other revenue in the future. The Government should be invited to exercise an appropriate measure of control over the administration of the bank. The Conference does not regard it as within its province to express an opinion as to the claim of any other section of the population upon the Government for assistance in respect of agricultural credits.

2. Taxes.—The Conference recommends the Zionist Organisation to make suitable representations to the Government of Palestine with a view to obtaining taxation facilities for new agricultural settlers, who should not be required to pay, during an initial period of about 15 years, a higher amount as Vergho and Osher than that paid to the Government previous to the new settlement.

3. Orange Plantations.—The Conference is of the opinion that the success of orange growing in Palestine has been sufficiently proved to justify it in recommending that the extension of orange plantations should be furthered by all appropriate means.

4. Government Lands.—The Conference recommends the Zionist Organisation to make representations to the Government of Palestine with a view to the appointment of a committee on the State lands, in which the Organisation shall be represented. This committee should examine all State lands, as referred to in the Palestine Mandate, with reference to their suitability for close settlement by Jews, and with a view to all such lands as may be found suitable being made available for Jewish colonisation.

Industrial Credits.

The Conference attaches the greatest importance to the development of industries by the independent efforts of industrialists. Those efforts should, however, receive the support, usual in other countries, of credit facilities; such facilities are at present insufficient in Palestine. The Conference draws the attention of the Keren Hayesod, the Palestine Corporation of London and the Palestine Economic Corporation of New York to the desirability of a strong institution, or department of an existing institution, being established for this purpose.

The Loan Proposal.

The Conference is of the opinion that under the conditions at present existing there is no possibility of a large loan being raised by the Zionist Organisation, since this body does not possess sufficient assets to form the basis of such a loan. The Conference agrees that so far as agricultural credits are concerned, they should be provided by the proposed agricultural bank, whilst credits for other purposes, if they can be sufficiently secured, should be obtained through the issue of bonds or otherwise by the various institutions established or to be established for specific economic purposes.

The Chairman, Sir Herbert Samuel, in view of his having occupied the position of High Commissioner for Palestine, reserved his opinion on all proposals that would involve action by the Palestine Administration.

THE MOTOR CYCLE SHOW.

(Continued from page 439.)

(From Our Own Correspondent.)

A stand which interested me particularly was that of A. J. Stevens and Co., who showed a most attractive selection of motor cycles. The A. J. S. motor cycle should be well known in the Near East, for a 3.49 h.p. A. J. S. has won the premier award in the Roumanian Cup Trials three years running. The exhibits shown comprised four 3.49 h.p. models, including a special racing machine, three 4.98 h.p. models, and two 7.99 h.p. motor cycles. Of this selection the 4.98 h.p. standard sporting machine calls, perhaps, for special mention. This machine has three-speed gear and all-chain transmission, and it is fitted with internal expanding front and rear brakes. There is mechanical lubrication, a feature which is common to all but one of the machines, and twist grip control.

The stand of the Raleigh Cycle Co. was, of course, one of the features of the Show. I said last week that I had decided in my comments to make no reference on this occasion to the ordinary bicycle. Were I to change my mind I should have to devote special attention to the display of the well-known products of this company. The motor cycles shown ranged from a 1.74 h.p. model to one of 7.98 h.p., the intermediate h.p.s being 2.48, 3.48, and 4.98. The 1.74 h.p. machine, which has engine and gearbox combined, is a very serviceable machine. The 2.48 h.p. model, which is made in four types, is fitted with internal expanding brakes on both wheels. The 4.98 h.p. model has a three-speed gearbox, internal expanding brakes on both wheels, and mechanical pump lubrication, there being a reserve hand pump. This hand pump serves the very useful purpose of acting as an indicator with regard to the mechanical pump, for if it is pulled up it will not return to its position unless the mechanical pump is in operation. A feature of the Raleigh machines is their extremely fine appearance, and the motor cyclist who cannot find what he desires in the range of the company's productions would indeed be hard to satisfy.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended October 9:—

The arrivals of sultanas are estimated at 22,200 tons, and the sales to date are put at 21,300 tons. Closing prices Smyrna, per cwt. c.i.f. London/Liverpool: Type 12, 56s.; type 13, 58s.; type 14, 60s.; type 15, 52s.; type 16, 64s.; type 17, 66s.

The market closed firm and prices show a substantial advance on last week's level with a strong undertone owing to the visibly diminishing supplies. Sultanas reached the market a fortnight earlier than last season, prices opened at a moderate level, and consumption, judged by the extent of shipments, has been stimulated and is well ahead of last year. On the other hand, stocks available for export are materially less than the comparative figures twelve months ago and the statistical position of what remains may be approximately summarised as follows:—Stocks in shippers' hands at date, 2,000 tons; stocks unsold in the country, 9,000 tons; total, 11,000 tons. The position must consequently be regarded, statistically, as very strong and likely to lead to a higher level of values before the end of the season.

The arrivals of figs are estimated at 21,050 tons, and the sales to date are put at 19,431 tons.

The market is firmer. Prices show a decided advance over last week's level. Some fresh orders for prompt shipment have been received for American account which have absorbed a substantial portion of the better quality figs available. Prices for good sound quality have reached the highest point touched this season. Inferior qualities are plentiful and comparatively inactive. Indications point to a gradually advancing level.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, November 4). (For passenger sailings and dates see advertisement).

Anchor Brocklebank Line.—S.s. Manaar for Port Said, Colombo, Madras, and Calcutta (London, October 30).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, October 27).

British India Line.—S.s. Manela for Bombay and Karachi (London, October 29); s.s. Morvada for Colombo, Madras, and Calcutta (November 6).

Cunard Line.—S.s. Phrygia for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also Corfu, Gruz, and Ancona if inducement (Liverpool November 13, Swansea November 16); s.s. Pavia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Glasgow November 18, Swansea November 19, Liverpool November 20).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (last steamer of the season for Galatz and Braila) (Liverpool, October 30); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, November 20).

P. and O. Line.—S.s. Rajputana for Bombay (London, November 5).

Prince Line.—S.s. Sailor Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, November 10).

Ellerman and Papayanni Lines.—S.s. Malatian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 23); s.s. Lesbian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool October 30, Swansea November 3); s.s. Dido for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 6); s.s. Roumelian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, November 6); a Steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, November 15); s.s. Flaminian for Algiers*, Malta, Smyrna, and Constantinople (Liverpool, November 20). * Subject to sufficient inducement. Transhipments:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

A CORRECTION.

In the first part of the article on "Egyptian Industries," which appeared is the issue of THE NEAR EAST AND INDIA of October 7, reference was made in regard to rugmaking to the Bedouin Industries. As a matter of fact, these have been closed down by the Government as they were carried on at a loss to the State.

The Bank of England are prepared to receive the coupons due November 1 of Egyptian Unified Bonds.

Digitized by Google

British Consular Reports

III.—EGYPT.

(Continued from page 435.)

The imports of footwear wholly or mainly made of leather increased from 401,601 pairs in 1924 to 466,134 pairs in 1925, but prices showed a tendency to decline during 1925, partly as a result of liquidation of old stocks, and partly owing to cut prices asked by Continental firms, often accompanied by extended credits. Out of a total import from all countries of 466,134 pairs, valued at £E210,356, the United Kingdom supplied 165,697 pairs, worth £E71,539, or about double the quantity delivered by France, her nearest competitor. The latter's share was, however, high in value in proportion to her supplies, mostly as a result of comparatively high prices asked for ladies' footwear. Italian competition increased steadily throughout the year, and to a lesser extent Swiss and Czecho-Slovakian also. German and Austrian competition, on the other hand, weakened considerably. The volume and value of the total imports from all countries increased by 64,513 pairs and £E30,264 respectively, and it is satisfactory to be able to record that, apart from the material increase in United Kingdom supplies of men's footwear, British manufacturers have also gained a position in the trade for women's wear.

The imports of cement increased from 124,000 tons in 1924 to 191,000 in 1925. The proportionate increase of German cement in particular, and in a lesser degree of the Belgian and French products, are very much greater than the increase in British imports, appreciable though this is. Yugoslavia retained the premier position with roughly 40 per cent. of the total trade. In spite of the fact that locally produced cement has been used a great deal in building operations, which have continued to increase during the year under review, such large quantities will be required for the many new works projected for the immediate and near future that there is no reason to anticipate any falling away in imports of cement. The extent of the demand in 1925 is indicated by the fact that prices kept high, rising to as much as P.T.224 per ton, as compared with P.T.209 in 1924.

Continental manufacturers, chiefly Belgian, Austrian, Czecho-Slovakian and German, swept the market for chinaware, porcelain and earthenware, and also glassware of all descriptions, owing to their very low quotations compared with those for superior articles of United Kingdom origin. As the total value of imports of glass goods during 1925 reached the respectable total of £E484,863, it is to be hoped that British manufacturers will watch the market closely this year, and make the most of any opportunity afforded by an upward tendency in prices, since in many lines of glassware there is always a preference for the British article provided that prices are competitive.

German and Dutch competition in the Egyptian market for ammonium sulphate has encroached appreciably upon British trade in this commodity, since out of a total import amounting to 9,565 metric tons, valued at £E121,220, 5,512 metric tons, valued at £E69,307, came from Germany and Holland, the remainder being supplied by the United Kingdom. In view of the steadily increasing market for ammonium sulphate, it is to be hoped that United Kingdom producers will make every effort to recover the bulk of the trade. While Germany, France, Belgium and Holland have been the strongest competitors in the supply of all kinds of chemicals, leads and zinc oxide, it is nevertheless, a matter for some satisfaction that the United Kingdom has been able to make any headway at all in the face of cut-throat prices asked by the majority of Continental rivals.

Machinery.

The improvement in the engineering business in 1925 as compared with 1924 was, in spite of a certain restriction in out-payments, considerable. The proportion of imports of machinery supplied by the United Kingdom (other than material for the Egyptian State Railways, motor cars and tractors) remained almost constant during the two years under review, averaging about 43 per cent. of the total trade. The increases in total imports, and also in the United Kingdom's share, are most marked in machinery used for agricultural and irrigation purposes.

For electrical and industrial machinery the sources of supply are more numerous, and the share of the United Kingdom of the total trade was consequently less, being only about 18 per cent. of the electrical and 33 per cent. of the industrial plant. Out of the total value of imports from all countries of electrical machinery and parts amounting to £E165,354, the United Kingdom's share stood at £E30,526, whereas that of France, the largest supplier, amounted to £E.51,824, while those of Germany, Holland, and Italy were £E28,628, £E15,724 and £E12,256 respectively.

Egyptian Government contracts for electric power installations were more evenly distributed than in 1924, and British firms were successful in obtaining some fairly important contracts. Although a Swiss firm secured an important order for power equipment for one provincial town, the three large alternators supplied were of British manufacture, while a well-known British firm was successful in obtaining an order for the supply of an electric power installation elsewhere in the provinces. French firms were the most successful in obtaining municipal orders for power distribution, as their prices were very low.

Apart from the Egyptian Government orders for railway material secured by United Kingdom firms, to which reference has already been made, several equally important contracts for other Government departments were secured by British firms in spite of strong foreign competition. Among the most important of these was the contract for the supply of pumping machinery for use in connexion with the main drainage of Cairo. The plant is to consist of three main pumping units, each of 550 h.p., and one smaller unit of 330 h.p. The pumps of centrifugal type will be driven by Diesel engines, and the contract includes the supply of 30 kw. electric generating sets, automatic measuring apparatus, and fuel storage and distribution. Other British firms secured sundry orders from the Egyptian Government for the supply of smaller plant of different kinds, ranging from power plant to water installations and filters, and irrigation work.

Foreign competition, particularly Central European, was, however, very strong, German firms being successful in obtaining, at cut-throat prices, an order for a provincial water installation and the first of two contracts for pumping plan, the second being secured by a Hungarian firm. Other government and municipal contracts were secured by Continental firms, in each case solely owing to the low prices asked. German competition in public works contracts for electric power plant and other electrical gear fell away during 1925. American firms secured orders for tramway equipment, but the majority went to Belgium.

Although United Kingdom imports of stationary internal combustion engines increased appreciably during the year under review, French, German and Swiss competition was increasingly strong. The great bulk of this trade is in low-powered engines, for the most part cold starting horizontal 4-cycle engines of up to 50 h.p., for use in connexion with artesian well in Upper Egypt, and also to a lesser extent vertical 2-cycle engines. The market for high-powered engines is naturally limited to the Egyptian public services and a few large estates, owing to the water control. The usual strength of the medium-powered engines is from 150 to 300 h.p., and a certain number of these are purchased by business firms, such as hotels, industrial concerns, etc., The total imports of internal combustion engines in 1925 amounted to 2,656, valued at £E649,675, of which the United Kingdom furnished 1,757, of a value of £E371,488. Her nearest competitors, as in 1924, were Switzerland, with 234 valued at £E135,257, and Germany, with 574, worth £E122,589. Belgium and Austria have now entered this market, but so far their sales have not been very important. French supplies remained more or less constant, but Italian competition declined somewhat.

The United Kingdom still predominated in the supply of power pumps, and again doubled her trade, but France, Germany and Switzerland also competed very strongly. American competition weakened considerably, and a few sales were made by Austrian and Italian firms. The total import amounted to 3,981 pumps, valued at £E111,136, of which the United Kingdom's share stood at 1,809, worth £E52,196; that of France 502, valued at £20,821; Germany 967, valued at £E16,728; and Switzerland 300, worth £E13,897. The U.S.A. supplied 163 (mostly small pumps), valued at £E2,733. The total import of hand pumps more than doubled in volume during 1925, amounting in all to 24,615, valued at £E19,101. The U.S.A. and Germany were by far the largest suppliers, obtaining between them over 80 per cent. of the trade.

Motor Cars.

Total imports of motor vehicles and chassis increased from 2,968, worth £E481,404, in 1924, to 5,491, valued at £E764,423 in 1925. The U.S.A. retained pride of place with a total import of £E299,744, but Italy was a very good second with £E220485, France coming third with £E154,171. Although the value and volume of British trade in motor vehicles, viz., 302, worth £E73,618, in 1925 was more than double that of 1924, the fact that the British proportion of the total volume has only risen from about 5 to 5½ per cent., and of the total value from about 6½ to less than 10 per cent., shows that there is considerable leeway to be made up before United Kingdom manufacturers can hope to compete successfully with the powerful organizations of the U.S.A. and the Continent. An indication of America's determination to consolidate her already strong position in the Egyptian motor market is shown by the recent decision of two of her largest companies to establish assembling and distributing depots at Alexandria.

Cotton and Cotton Goods.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended October 13:—

Egyptian Futures.—Sakel Contract.—After an initial period of steadiness, values in this contract developed renewed weakness, in sympathy with a further rapid decline in the American markets, following the publication of the Bureau report last Friday. Relatively, the Alexandria market has shown a firm tendency throughout the week, with the result that they have again established a substantial premium over the local option.

The official preliminary crop estimate just published gives the total of 2,749,000 kantars of Sakel, but a conservative private source cables to-day anticipating a yield of 3,100,000 kantars. The Alexandria Produce Association monthly report for September was rather unfavourable, with picking 15 to 24 days later than the average Rather more activity has been witnessed in trade circles, and spinners have shown more inclination to enter into forward commitments; the turnover, however, can still be termed unsatisfactory for this period of the season. On account of the lateness of the crop, the arrivals so far, have not been of sufficient weight really to test the market.

Upper Contract.—Under the influence of a large buying order, probably a temporary cover against forward sales of actual, values in this market have advanced 5 to 10 points on the week. The Government's preliminary estimate of growth apart from Sakel gives a total of 4,087,137 kantars, against private reports estimating 4,000,000 kantars.

Egyptian Spot.—Business in this department has been comparatively quiet. Last Friday's Bureau report has definitely put an end to all "Bull" propaganda for the time being, and the change of sentiment has been further strengthened by increased crop estimates issued by the Egyptian Government, estimates which are regarded in various quarters as being of a distinctly conservative character. Sakel prices have continued to droop, and buyers' confidence in current rates has been sadly shaken, with the exception of a few bold spirits who appear to be working on a "buying down" policy. Purchases have continued to be made in small lots for the most part, but it is satisfactory to be able to record that an increased amount of interest has been displayed in cotton for forward delivery.

The inquiry for Sakel cotton has been of a fairly general character, with a rather noticeable tendency towards the "good" quality at from 250 to 300 on November. In the lower, and especially in the so-called inferior grades, prices are very irregular, and what look like very cheap purchases have been reported from several quarters. Uppers from 10½d. to 11d. have been in good request, and although this market has remained very steady throughout the week (F.G.F. 11.35d.), it is extremely difficult to obtain anything in excess of the higher figure. Brown, Pilion and White have all found a place in the inquiry, but with very meagre results. Sudan cotton has again been in fair request at steady rates.

Forwardings to spinners for the week ending the 8th instant were returned as 4,720 bales Sakel and 988 bales Sudan. Estimated sales for the week, 1,400 bales Egyptian and 850 Sudan.

Quotations of Sakel have been reduced 35 to 55 points, whilst those of Upper are 10 points lower. F.G.F. Sakel to-day, 15.75d. F.G.F. Upper to-day, 11.25d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended October 7, state:—

Since our last report the futures market has been very active and excited, but prices show a further decline. The week's summary of price movements is as follows:—Sakellaridis: November, 28.32 dollars, 1.38 dollars down; January, 27.70 dollars, 1.60 dollars down; March, 27.60 dollars, 1.55 dollars down; May, 27.50 dollars, 1.60 dollars down. Ashmouni: October, 18.17 dollars, 1.78 down; December, 18.35 dollars, 1.65 dollars down; February, 18.55 dollars, 1.63 dollars down.

Exporters still show very little interest in the market. The demand from abroad has been relatively poor and what orders have been mostly for prompt shipment; we do not think that spinners have bought very much for forward shipment. Rumours of further Government intervention in the near future have been going round the market; up to now there is nothing official on the subject, although it would appear that the question of intervention is under discussion. We are strongly of opinion that any such intervention may in the long run prove prejudicial to the interests of the country, but we shall not be astonished if the Government do decide, sooner or later, again to ente the market. These rumours of impending intervention are responsible for a widening of the difference between November Sakel and October Ashmouni, which stands to-day at 1,015 points against 975 a week ago. It is reported that much of the short position in November for Liverpool interests was switched into January when the difference between these months fell to 42 points.

Although the interior movement is less active than at this time last year, it is fast developing and the arrival figures in Alexandria show daily increases. On the whole, we consider the position rather heavy; in spite of the recent decline the demand from spinners is poor, whilst, on the other hand, the crop movement is growing heavier daily. At the first October tender, 1,500 kantars dockets were issued.

The week's receipts amount to 234,357 kantars against exports 99,643 kantars; the stock in Alexandria stands at 1,396,160 kantars.

Spot: During the past week we have had an increasing demand and greater activity at Minet-el-Bassal. Sales amount to about 20,700 bales, of which we estimate 6,400 bales Sakellaridis, 12,500 bales Uppers, 900 bales Zagora, 800 bales Pilion and 100 bales White. Cotton is moving freely, though we have as yet hardly begun to receive the weight of the Sakel crop, which should, however, arrive in increasing quantities from now on.

Sakellaridis: Has been in fair request, mainly for the medium and good qualities. Spot differences are without much change with the exception of the grades above Good, which are dearer, due to a very fair inquiry for these qualities and to the fact that the grade of this year's Sakel crop does not seem very good generally. Really extra staple cotton is not yet offering in any quantities.

Ashmouni and Zagora: Have met with a good demand for all qualities. Spot differences generally are without much change and the demand has been sufficient to maintain parities.

Pilion: Continues to attract spinners' attention and a good business has been done, chiefly in the better grades. Spot differences, however, have eased a little.

White: A moderate business has been done without much change from last week's spot differences.

Crop, 1926: The weather during the past week has, on the whole, been rather favourable, but the results of the pickings confirm the relatively serious nature of the crop damage mentioned in our previous reports. It is extremely difficult to determine the exact extent of the damage as it varies enormously from field to field. Another factor which makes it very difficult—not to say impossible—to estimate the yield of the crop is the uncertainty of the area planted in cotton this year. To what extent the law which fixed the area to be planted under cotton at one-third of the total cultivable area has been observed it is impossible to say and, under these circumstances, we are unable for the present to give even an approximate estimate of the crop.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Politics in Roumania.

Nothing has happened in Roumania since the present Government took office last March to dispel the self-complacency of the Liberal Party. Parliament stands prorogued until November 14, so that, save for a brief session of three weeks, which opened towards the end of June, General Averescu will have governed the country for practically nine months without any parliamentary check on his policy. His main achievements during the period have been in the domain of foreign affairs. The treaty with France was signed on June 10; another with Italy followed in September. The latter has done nothing to strengthen General Averescu's position, as very wide exception has been taken in the country to the failure to secure in or through the treaty Italy's ratification of the international Agreement of 1924 which recognised the union of Bessarabia with Roumania. It is probable, therefore, that the Government will meet Parliament in a fortnight's time with its hold on public opinion already impaired. The fusion of the Nationalists of Transylvania with the Peasant Party (or Tsaranists), which derives its strength mainly from the Old Kingdom and Bessarabia, has not proved as formidable as it might have been owing to the abstention of Professor Jorga on the one side and of Dr. Lupu on the other. The former appears to have appreciated the difficulty of drawing up a joint programme which would satisfy the land theories of the Tsaranists and at the same time would not alarm more Conservative opinion in Transylvania. When Parliament meets, therefore, the Opposition will still be unable to offer a united front; but General Averescu may not have a very convincing account of his stewardship to render. The Liberals on the other hand can still claim to be the only properly organised party, and as such entitled to take office again, if the Government should find popular dissatisfaction too strong for it. For the present they will probably not want to bring matters to a head, as some uncertainty must surround the question of leadership, if M. Ion Bratianu's health should entail his withdrawal from an active part in politics.

A Constitutional Dictator.

General Kondylis still finds the path of constitutionalism in Greece beset with many pitfalls. Immediately after the abolition of the Pangales dictatorship, when he was emphasising the necessity of a return to constitutional normalcy, the politicians were unkind enough to remind him that his own position was quite unconstitutional, and that, if he wished to prove himself sincere in his support of constitutionalism, the first thing to be done must be for him to resign. General Kondylis, however, had satisfied himself of his own indispensability and succeeded in stilling the uncomfortable voices of the politicians. Failing to profit by this warning that Greece was bent on a genuine return to constitutionalism, he has dropped into the easy habit that proved the undoing of General Pangalos—government by decree. A Ministerial Order, or Constituent Decree, was promulgated forbidding any of the Ministers in General Pangalos's Administrations, thirty-three in all, to stand at the approaching elections. The validity of such an order has been challenged in the courts and the verdict, it is not surprising to hear, has been against the Government. That General Pangalos himself should be a candidate for election would, no doubt, be an anomaly, and inasmuch as he is actually under arrest, his case presumably comes, or could be brought, under an existing law. Unless there is sufficient evidence against his subordinate Ministers to warrant their arrest, they would seem to have the right of being regarded as free citizens of the Republic and, therefore, not liable, until

Digitized by Google

convicted of some offence, to have their liberty of action curtailed. The fact that General Kondylis sought to prevent them from being candidates at the elections shows how imperfectly he has understood constitutionalism. As his Government has been unwise enough to override the decision of the Courts (it suspended the magistrates at once, and appointed others more amenable to pressure), it has exposed itself to the charge of being quite as unconstitutional as the Dictatorship, and even more vindictive.

The British Mandates.

In his review of Great Britain's overseas responsibilities and interests before the Imperial Conference last week the Secretary of State for the Colonies spoke on the Mandated Territories of Palestine and Iraq. By the critics of British policy in the countries his remarks may be held to have been perfunctory and colourless; because they will miss any suggestion that the British people has reason to be in any way dissatisfied with the progress of these countries. Mr. Amery's dispassionate statement conforms very closely to the matter-of-fact position in which Palestine and Iraq find themselves. Their past difficulties are known to the world; they were inherent in the circumstances in which the two States were brought into being. The only standard by which British trusteeship can be judged at this particular stage is that of whether a reasonable all-round improvement can be recorded. In the case of Palestine Mr. Amery claimed "a great improvement in the political situation." The Arabs, though still, through their political leaders, very critical and opposed to the Balfour Declaration and the establishment in Palestine of a Jewish National Home, have come to realise that their fear that we were embarking on a policy of displacing the native population by a horde of Jewish immigrants was without ground. They are realising, too, that the influx of Jewish settlers with capital has contributed to the growth and prosperity of the Arab population in equal measure as it has contributed to the growth and prosperity of the Jewish community. The increase of the Arab population, as a result of settled conditions and of attention paid to hygiene and sanitation, has been actually greater than that of the Jewish population. There would, therefore, seem to be some basis for the hope that Arab political non-co-operation would gradually come to an end. It would probably not be far from the mark to say that it would have ceased before now, had it not been for the efforts of a handful of leaders to justify their existence. In regard to the financial position, Mr. Amery was quite explicit. Palestine to-day no longer receives any grant from the British Exchequer for the purpose of its administration; it is self-supporting and more than self-supporting. The British Government, however, continues to pay for the small detachment of the Royal Air Force stationed there and to make a grant jointly with the Palestine Government for the force responsible for the defence of Transjordan.

Conditions in Iraq.

Owing to the dispute with Turkey over the Mosul frontier Iraq has had less time in which to settle down and get on with its work than Palestine. It is free from the particular difficulty—Arab non-co-operation—with which Palestine is confronted; but until its relations with Turkey had been satisfactorily adjusted it could not take even the first steps towards promoting material development. Iraq, accordingly, has hitherto been able to do little more than mark time. It could not hope to obtain the capital required for the irrigation works essential to its progress until it could show some measure of stability, and there could be no stability so long as the Mosul dispute lasted. In marking time, however, the country has had something to show which should afford particular satisfaction to the British public—the successful application in practice of the peculiar relationship between Great Britain and Iraq. In Mr. Amery's words, "on the political side the co-operation between the British officials who, in the Army and in civil administration, are helping the Iraq Government has been one of the closest. We are building up in Iraq something in the nature of a new element in Imperial relations, a country self-governing on its own lines, but being assisted in finding its feet by the co-operation of a band of enthusiastic British officials, who take an immense pride in the fact that . . . they are helping the people, once a great people, equals in civilisation with the Western world, to renew their own old civilisation, and to bring themselves on to a level with that Western civilisation behind which they have fallen in the last six or seven centuries." Translated into terms of relief for the British taxpayer, this fortunate state of affairs must surely mean something even to-day, if we recall the position in 1920 and the present situation in the neighbouring mandated territory of Syria; in its bearing on the future of the British Empire, which must always rely as much on moral prestige as on material force, the value of the Iraq experience may well be incalculable.

The Sudan Appointment.

In selecting a new Governor-General of the Sudan the British Government has gone outside the ranks of those who have first-hand knowledge of the country, and its choice has fallen on a distinguished ex-member of the Indian Civil Service. Sir John Maffey brings to his new post not only the ability that characterizes that Service and a record of successful administration in India, but also a personal reputation that marks his appointment as a particularly happy one. Endowed with a "presence" above the average of his race and generation, he combines tact and a kindliness of disposition with a sense of humour and the patience of a fisherman. All these qualifications will stand him in good stead in the Sudan at an important stage in that country's history. Supported as he will be by a Civil Service second to none for keenness of interest in its big task, Sir John Maffey may be expected to bring a freshness of outlook on the problems of the Sudan.

H.M.S. Dahlia, which has been selected to relieve the Cornflower in the Red Sea Division, Mediterranean Fleet, will commission with a new Chatham crew in time to arrive at Suez on December 1. Commander C. C. B. Vacher, D.S.O., will commission the Dahlia, which has recently been serving as a temporary drillship of the R.N.V.R. at Newport. The Cornflower Commander E. T. Wickham, O.B.E., will turn over to the Dahlia at Suez, and the former ship will return home under Commander Vacher for survey.

THE FUTURE OF ARABIA.

It would probably be extravagant to say that signs of stability are at last manifesting themselves in Arabia. True, certain men and schemes therein have prospered, as others have failed or been abandoned, but it is early yet to suppose that the lines of the future development of Arabia are unmistakably laid down. There are, of course, many observers who believe in the permanence of the European experiments being made there in fostering independent States; there are, again, those who aver that the mandated territories of Iraq, Transjordan, Syria, and Palestine must inevitably revert to the Turks; and finally there are those (a smaller number) who see all the purely Arab lands of the Middle East ultimately under a Wahhabite hegemony. For the moment, however, we ourselves will forbear from prophecy, and. instead, briefly examine the existing conditions of the component parts of Arabia. Let us take first Iraq, which probably holds out, of all the "propped up" States, the most immediate promise. From any impartial or, rather, unbiased point of view Iraq must be acknowledged to be a success, alike in British and Arab consideration. Every week the Iraqis (as distinct, perhaps, from some of Iraq's "disponible" politicians) realise the good fortune that has linked their destinies up with Great Britain. Admittedly, certain unsolved problems, such as that of self-defence or that pertaining to Southern Kurdistan, remain prominent; but in the main Iraq can be said to be justifying both those who put faith in the Arabs and those who have accepted the temporary tutelage of Great Britain. At the forthcoming meeting of the League of Nations, the High Commissioner will surely have a promising tale to unfold concerning his charge. To westward, the land is perhaps not so bright. In Transjordan, the Emir Abdullah can scarcely be said to have developed those high Arab traits of independence and sovereign governance which were hoped for by those who carved out, in the name of Arab independence, this buffer-State to Palestine. Its future, for all the talk of its Constitution, is by no means predictable, and there are fears that it may sink into being a mere strategical outpost for the country which is to contain "a National Home for the Jews." But even in Transjordan developments have been made; progress, in the smaller or material sense, is definitely visible therein. In Palestine political progress is slow but sure. Arab co-operation with the Administration continues to approach practicability, and the dual aim of the British Government is being steadfastly pursued. Of Syria this is an inopportune moment to speak. No human being can forecast its future; so much depends upon the domestic situation in France. Talk is rife of prolonged resistance on the part of the Druses and Syrians, but against this is to set a patent increase in tranquillity, as evidenced, for instance, in the inclusion by the Nairn motor service of Damascus in its desert route. To the south of the mandated countries, King Ibn Saoud has, it would seem, gone from strength to strength. Certainly there is no symptom of a diminishing in his authority, and it were well, in these circumstances, that the disputed possession of Maan and Aqaba, upon which, incidentally, the Dominions Secretary in his recent speech to the Imperial Conference cast little light, were settled quickly and bi-laterally. Estimates of the relative permanence of the Wahhabi régime in its present form may be left for the moment to the prophets: suffice it here to say that, as things are, Ibn Saoud is probably the greatest factor in the immediate fashioning of the polities of Arabia. And, for the point now being discussed, we may leave out of account the lands to the south of the Najd and the Hijaz.

As far as is observable from actual happenings there would appear to be no common chord uniting these various parts of Arabia. The day of the "pan-Arabs" seems, indeed, to be over, the notorious dichotomy of the Arab lands to be a chronic fact. But it would be folly to disregard the sentiments existing in the countries beneath the surface. It may be an improbable hypothesis, but it is at any rate a possibility, that European withdrawal from the Middle East may soon be accomplished: in which event it is difficult to resist the conclusion that to this vacated area Turkey would descend, at least as far as incorporating Southern Kurdistan, and that the Wahhabis would ascend, to the extent of proclaiming their rule over the Arab lands. While Great Britain and France remain, the mandated countries are safe from foreign invasion, but he would be a bold prophet who supposed that without the presence of the R.A.F. the States belonging to the Sharifian family are safe to develop along their present lines. This, however, is a vast supposition, and it is sufficient for the time being to rest quiet in the knowledge that the words of Ibn Saoud and of Tewfik Rushdi Bey, as laid down in the Clayton Treaties and in the Treaty of Angora, may be trusted. The task in hand is, not to attempt to belittle the Wahhabis and the Turks but rather, trusting in their pledged word, to secure the harmonious combination of the Imperial schemes of development in the Middle East with the fulfilment of the wishes of, and of the promises to, the local population. It is an immense policy, the very magnitude of which makes the success that can be chronicled so far all the more encouraging. If Great Britain perseveres in her present intentions of friendliness towards Turkey and towards Najd and the Hijaz, there is assuredly little ground for despair.

In the more optimistic aspect, therefore, we may envisage the possibility of seeing the various Arab States linked up in a federation under the aegis of Great Britain, in a form similar to that in which certain European States are bound with, but independent of France. Which shall be the most prominent of such States is, of course, purely a matter for the Arabs themselves to solve, although it would be surprising if the King of the Wahhabis did not succeed in asserting his claims to leadership. Granted that in many directions the influence of religion upon politics is declining, yet it can scarcely be denied that its force in Arabia at any rate is illimitable. Now it is certain that Ibn Saoud has as much in view the revival of Islam as a religion as the revival of a Muslim Power: and in his control over the Holy Places of Mecca and Medina he has a means to this end. It is possible, however much observers in the West may scout the idea, that religious movements may inform new political entities; at any rate it would be stupid to neglect the possibility. But, lest it may be assumed that such a movement would inevitably be directed against Europe—particularly Great Britain—it is well to remind oneself of the old saying that, geographically, and dividing the world into two halves, Islam and Christendom are together, of the West. The antiquated conception of their permanent hostility is fast dying, and it is permissible to hope that in their co-operation, which might well be attained through the formation of a federation of Arab States under the aegis of this country, largely lies the peace of the world. In that sense, then, the future of Arabia is of universal interest and importance.

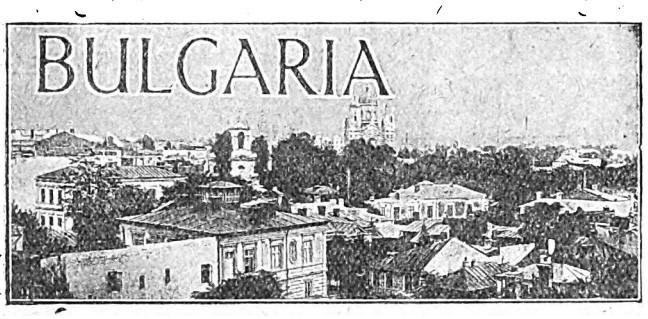
The Near and Middle East*

From Our Own Correspondents.



Sofia, October 20.

Græco-Bulgarian Relations.

The Yugoslav-Greek dispute over the non-ratification of the treaty of friendship and its relative conventions at Salonika has now resulted in a happy, although possibly a dangerous repercussion on Græco-Bulgarian relations. This repercussion is all the more important as Bulgaro-Yugoslav relations, which were very strained at the time of the Balkan Allies' Collective Note to Sofia of August 11 last, but have appreciably improved since then, are still in a state of uncertainty, in spite of the repeated efforts on the part of France to effect a Yugoslav-Bulgarian entente.

The Yugoslav-Greek conventions grant extensive rights to Yugoslavia in the port of Salonika, at the expense of Greek commerce and even of the sovereignty of the Greek State. These rights, the granting of which by President Pangalos contributed largely to the Dictator's downfall, the new Government at Athens would like to limit. Such appears to be the view of the whole nation, and General Kondylis, who is in charge of the matter, has postponed the ratification of the Treaty and the conventions until the new Government is able to deal with the question. The election to the National Assembly has been fixed for November 7. The new Government will wish to introduce several modifications before presenting the matter to Parliament, and, as the Yugoslav Minister for Foreign Affairs, M. Nintchitch, has already declared that Belgrade would not agree to any modification in the signed texts, these latter will be null and void, and it will not be long before there is a new crisis between Yugoslavia and Greece.

To strengthen her position, in view of this coming crisis, Greece is seeking to ally herself to Bulgaria. In this desire for a *rapprochement* a sincere realistic policy cannot be denied, all the more so because it rests on an intelligent understanding of the large interests common to the two countries, whose commercial transactions with one another are becoming daily more and more important. As a result the Governments of Sofia and Athens are being pressed to start negotiations for the conclusion of a commercial treaty which will form a sound basis for their material relations. And this policy manifested itself in a remarkable manner at the Salonika Fair, organised by the Greeks, in which, with the help of the official organs of the respective countries, Bulgarian industrialists and producers took an active part, in contrast to the attitude of Yugoslavia, who did not allow any of her products to be exhibited. Yugoslavia's abstention from participation enhanced still more in the eyes of Greece both Bulgaria's co-operation and the Bulgarian delegation which visited Salonika accompanied by a group of Bulgarian journalists, who were literally *fêted* there. For the first time since the Bulkan War Greeks and Bulgars were seen fraternising together. The fact is worthy of mention. The Bulgarian journalists were even invited to extend their journey to Athens, where most elaborate banquets were held in their honour. They were received by the President of the Council and by all the leading politicians, with whom they had interviews. The necessity of strengthening Græco-Bulgarian relations and the inauguration of an era of general collaboration in the Balkans was strongly emphasised, this being the sole means of avoiding private differences.

This exceedingly warm reception has been deeply appreciated by the Bulgars. They fear, however, that it was directed against Yugoslavia, and they would strongly resent it were the latter country to be under the impression that they had become friendly with Greece at the cost of alienation from Belgrade, as though Bulgaria were exploiting the Yugoslav-Greek dispute.

Græco-Bulgarian Emigration.

Another event which will contribute to the progessive improvement of relations between Bulgaria and Greece is the approaching liquidation of the work of the Græco-Bulgarian Emigration Commission. The duty of this Commission, formed by virtue of a special convention annexed to the Treaty of Neuilly, is to facilitate the emigration of Bulgars to Greece and Greeks to Bulgaria, at the same time looking after the disposal of property belonging to the emigrants. This is an enormous task, which at any moment, owing to the delays of the Commission and to the obstruction, possibly more apparent than real, of the Greek delegate, threatened to embarrass relations between Sofia and Athens. Each emigrant leaving the country of his accord having his dossier, the Commission has now more than 35,000 dossiers to examine and to liquidate. All these dossiers relate to the people owning property in the country of their origin and who, owing to the delay in settlement, are put to great inconvenience and sometimes misery, and as a result they are often impatient and protest to both Governments that they do not take the emigrants' interests sufficiently to heart.

The Commission is composed of a Greek delegate, a Bulgarian delegate and delegate appointed by the League of Nations, the last presiding. It sits in turn at Athens and at Sofia, where it has formed, in addition, sub-commissions, the latter also having been set up in several other towns, notably at Salonika and at Gumuljina. The Commission has just returned to Sofia after an absence of one year in Athens. It at once strengthened its personnel and is hard at work, its new President, M. Regnier, who was elected only a few months ago, wishing to complete the work within a year, that is to say by the autumn of 1927. This achievement will remove an important source of Græco-Bulgarian friction, since it will have made the valuation on the basis of which Bulgaria and Greece will compensate their former subjects who are leaving the one country to set themselves up in the other.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

BRITAIN AND THE BALKANS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Since the inception of the policy of Italo-British political co-operation, a great chance for the spreading of British influence and friendship with the Balkan States —surely a useful factor in maintaining European peace— has been thrown away. Signor Mussolini is now endeavouring to realise his ambitions of expansion in the Adriatic by rigging up the Balkan States in an Italian orientation designed to bring pressure upon Yugoslavia by the simple process of ensuring her political isolation in the Balkans. French diplomacy, on the other hand, has replied in the form of M. Briand's move at Geneva to bring about a Yugoslav, Hungarian, Bulgarian *rapprochement*, based on the old Gladstonian principle of "The Balkans for the Balkan people," and meaning in effect the frustration of the Duce's plan for the Italian hegemony of the Balkans.

Britain, finding it convenient to her general European policy to cultivate the friendship and co-operation of one strong Power like Italy in preference to a number of smaller States like those of the Balkans, appears to be more or less indifferent to Italy's Balkan ambitions. It has been left to France—whose motives are mixed ones—to carry out the policy which was begun in principle in England at the time of Gladstone. In these circumstances it is idle to complain, as so many Britons do complain, that the smaller European States are in the French orbit of influence. We have only ourselves to blame if, for reasons of practical policy best known to the Foreign Office, we have let our own opportunity slip into the hands of the Quai d'Orsay.

At the same time some good is coming out of it all. M. Nintchitch, the conciliatory Yugoslav Foreign Minister, whilst maintaining friendly official relations with Italy, is exploring carefully and cautiously the best avenues for a *rapprochement* with Hungary and Bulgaria. Official Sofia and Budapest desire such a *rapprochement*, although it is doubtful if intransigents like the Macedo-Bulgar-*komitajis* and the Hungarian awakening Magyars will let the politicians move very quickly.

Still, it seems a pity that the British Government has not been more alive to the good opportunities for co-operation in building a permanent peace which it seems, for the present at least, to have lost.—I am, etc.,

J. MAHONEY-SHEALANLOR.

7, Stanhope Terrace, Regent's Park, N.W.1.

THE DEVELOPMENT OF CYPRUS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Well aware of the systematic interest taken by your esteemed journal in everything that concerns the advancement and welfare of the countries in the Near East, I deem it necessary to make through your columns a suggestion, in which I summarise the main points of a conversation I recently had with a leading merchant from Cyprus.

It is really surprising that, despite the sustained efforts made in the direction of exploiting the resources of the British Empire, no proper consideration has yet been given to the prospect of putting on a better and more satisfactory basis the fruit industry of Cyprus. It is a well-known fact that, in addition to the other Cypriot products, the various fruits of the Island are of the most select and delicious nature. To say nothing of its incomparable grapes, its apricots, caishas (the famous sweet-stoned white variety of apricots), oranges, cherries, peaches, quince, figs, dates and the various kinds of plums and prunelles, might form the basis of an extensive and most profitable jam industry for British markets, provided that the necessary plants existed in the Island.

For the time being, the Island gets its jam supplies from abroad, and I am reliably informed that thousands of pounds of money go to America.

The point of my informant is that the establishment in the island of British factories for the jam industry would not only result in a thorough exploitation of the Cyprus fruit, but would also help to prevent English money from going to America and in providing British markets with fruit preserves much cheaper, more delicious and of much higher qualtty than those now obtainable.

It is fortunate that Sir Ronald Storrs is going to the Island as its new Governor. Everyone who knows his sterling administrative qualities and his keen and zealous interest in the industrial and cultural progress of Cyprus feels sure that a proper solution of the above problem will come from his enlightened initiative.—I am, etc.,

C. S. HOURMOUZIOS.

34, Northumberland Place, W.2.

The aviation gold medal of the Institute of Transport was presented by Mr. R. H. Selbie at the Institution of Electrical Engineers on October 19 to Sir Alan Cobham in recognition of his distinguished services to the development of British Empire air communications.

The Ministry of Health announce that the King has appointed Mr. Herman Cameron Norman to be a member of the Royal Commission on Local Government in succession to Sir Arthur Myers. Mr. Norman has had considerable diplomatic experience, having served in, among other places, Cairo and Constantinople. His last post, it will be recalled, was that of Envoy Plenipotentiary and Minister Plenipotentiary at Teheran.

NEWS IN BRIEF.

General Kondylis announces a mission of M. Venizelos to London, before the elections, for the regulation of the Greek debt to England.

The Amir Faisal, Viceroy of Mecca, arrived in Paris on October 19 from The Hague. He is reported to be suffering from bronchitis.

Four former members of the Macedonian Revolutionary Organisation have been killed by a Bulgarian patrol while trying to cross the frontier from Yugoslavia.

It is reported that 11,000 Jews in Palestine have contributed to the Keren Hayesod, or Palestine Foundation Fund, during the last Jewish year of 5686.

The death was announced last week from Bucharest of Dr. Victor Babes, Professor of the faculty of Medicine and director of the local Institute of Bacteriological Serotherapy.

M. Liaptcheff, the Bulgarian Prime Minister, in an electoral speech on October 24, appealed to all parties for moderation and warned extremists that the Government would defend law and order at all costs.

The British Minister in Athens on October 25 informed the Greek Foreign Office that the British Government had agreed to send a new Naval Mission to Greece at the request of General Kondylis, the Prime Minister.

Several Persian officers have been killed and two wounded near Damavend by the explosion of a motor-car full of bombs and ammunition which was escorting the Pahlavi Shah during his progress through the mountains of Mazandaran.

King Fuad was the guest of Admiral Sir Roger Keyes at a luncheon on board H.M.S. Warspite at Alexandria on October 21. The other guests included the Acting High Commissioner.

The Government of Bombay have accepted an offer from the Aga Khan to provide a statue of the Prince of Wales for the city. The Government will hand over the statue to the Municipality for maintenance, and the site chosen is at the junction of Mayo Road and Cooperage Road in the Fort.

Lady Budge, wife of Sir Ernest Wallis Budge, who was for more than 30 years Keeper of Egyptian and Assyrian Antiquities at the British Museum, died on October 18 at 48, Bloomsbury Street. She was married to Dr. Budge in 1883.

M. Ponsot, the new French High Commissioner for Syria, has been visiting Damascus and its oasis the Ghuta, proceeding thence to the Jabal Druse from where he was expected to pass through Rashaiya and the Southern Lebanon on his way back to Beyrout.

An ex-Servicemen's clubhouse to serve as a memorial to Jewish soldiers who fought in the War, but especially to Jews who served in the three Jewish battalions of the Royal Fusiliers in Palestine, is to be erected in Jerusalem by the Menorah Club, founded by Jewish demobilised men in Palestine.

A new daily newspaper, the *Indian National Herald*, edited by Mr. Benjamin Horniman, made it appearance in Bombay on October 23. It announces that it will advocate the cause of Indian freedom and the equitable distribution of the wealth of the country among the people producing it.

A meeting will be held in support of the Oxford Mission to Calcutta and the Universities' Mission to Central Africa in the Examination Schools at Oxford, at 8.15 p.m. next Sunday. The Vice-Chancellor (Dr. F. W. Pember, Warden of All Souls) will preside, and the speakers will be the Archbishop of York, Mr. Ormsby-Gore (Under-Secretary of State for the Colonies), and the Bishop of Masasi.

Sir Edwin Grant-Burls, C.S.I., of Thornlea, Shortlands, Kent, late Director-General of the Stores Department of the India Office, deputy-chairman of the Bengal Iron and Steel Company, who died on September 10, aged 82, left estate of the gross value of £33,828, with net personalty £33,493.

Earl Winterton, Under-Secretary of State for India, in a written reply to Brigadier-General Brooke, M.P., who, before the House rose in the summer, asked for information on Communal rioting in India, states that during April, May, and June of this year 154 deaths and 1,369 other casualties occurred as a result of such rioting in Bengal alone. In the Punjab for the same period the figures were 19 killed and 122 injured.

It is stated in *The Times* that, urgent demands having been made for the establishment of a Legislative Council for the Transjordan from notables and tribal shaikhs, the Amir Abdullah last week summoned two representatives from each district to meet at Amman to prepare an electoral law for such a Council. The Amir has recently authorised the publication of an independent semi-weekly newspaper in addition to the weekly official organ.

Major-General Sir Charles Ryan, who was returning to Australia from England, died on board the liner Otranto at Adelaide on October 23. Sir Charles, who received his medical training at the University of Edinburgh, was Consul-General for Turkey, and spent two years (1876-8) in the Turkish Army as surgeon. He served through the Serbian and Russo-Turkish Wars, and through the sieges of Plevna and Erzeroum. In the Great War he was A.D.M.S. 1st Australian Division, in Gallipoli and France.

According to a Central News message from Angora an important archæological discovery has been made at Sinope, formerly the capital of Mithridates. During the laying of the foundations of a match factory a small villa paved with beautiful mosaics was discovered, and further digging revealed copper and earthenware vases. The excavations are to continue under the direction of the Minister of Public Instruction.

THE AIR ROUTE TO INDIA.

"The Air Route to India" was the subject of a lecture which Colonel H. Burchall, D.S.O., delivered before the Central Asian Society at the Royal Society of Arts on October 20. Sir Michael O'Dwyer, who presided, referred to the lecturer's war service, in Egypt, the Middle East, and Salonika, and incidentally expressed his belief in the prolongation of the Cairo-Karachi route to Australia.

Colonel Burchall began by referring to the general position of flying in the world to-day. He showed, for instance, that whereas Germany (who by the peace terms was not allowed to develop her aerial weapon) was operating 40 lines, Great Britain was working on three. All the great countries had long views in regard to aviation: the Dutch, for instance, proposed in 1928 to establish a line to the Dutch East Indies. The lecturer proceeded to explain that, as things are at present, the aeroplane is about twice as fast as the ship (which, of course, travels day and night). The safety of the aeroplane, manifested by the amount of bullion carried thereby, was increasing, and on the route to India a percentage of reliability of 95 was expected.

Colonel Burchall, who illuminated his remarks not only with lantern slides of the parts of the De Havilland aeroplanes which are to be used in this Imperial flight, but also with graphs and charts, then described the various stages of the flight from Cairo to Karachi—Port Said (where no aerodrome could be laid down owing to political considerations), Gaza, Ziza (which was much preferable to Amman), Rutbah (of whose blockhouse, recently constructed, he showed a drawing), Baghdad, Basrah, Bushire, Bunder Abbas, Lingeh, and Charbar. At present, owing to the limited subsidy given by the British Government to the Imperial Airways, the line stopped at Karachi, but it was confidently hoped that, with further help (possibly from the Government of India) the route would be completed to Australia, where already long-distance flights had been very successfully undertaken. Colonel Burchall concluded his description of his great undertaking by referring with gratitude to the assistance given by the Secretary of State for Air, the Director of Civil Aviation, Sir Sefton Brancker, and the magnificent R.A.F. in the Middle East.

In subsequent discussion Captain Acland spoke of the enormous care with which the ground organisation was built up: the actual flying was in a sense the least difficult part of this Imperial route.

NEW GOVERNOR OF THE SUDAN.

The following announcement is made by the Foreign Office: The King of Egypt has signified his intention, on the recommendation of his Britannic Majesty's Government, of appointing Sir J. L. Maffey, K.C.V.O., C.S.I., C.I.E., to the Governor-Generalship of the Sudan. Sir John Loader Maffey, who was born in 1877, entered the Indian Civil Service in 1899, and transferred to the Political Department in 1905, gaining the medal, with clasp, for his services with the Mohmand Field Force in 1908. He acted as Political Agent in the Khyber from 1909 to 1912, and then as Deputy Commissioner at Peshawar until 1915, when he was appointed Deputy Secretary in the Government of India's Foreign and Political Department. As Chief Political Officer in Afghanistan he went in 1919 with the North-West Frontier Field Force. In 1920 he was made a C.S.I. He acted as Chief Secretary to the Duke of Connaught during his Royal Highness's visit to inaugurate the new Indian Legislature and the Chamber of Princes, and was created a K.C.V.O. For three years he was Chief Commissioner on the North-West Frontier Province, and retired in 1924.

The Turkish Government has authorised the British Academy to excavate in the Atmeidan, the site of the ancient Hippodrome of Constantinople.

EGYPTIAN EXPEDITIONARY FORCE DINNER.

The eighth annual dinner of the R.A.S.C. Egyptian Expeditionary Force was held in London on October 23, at the Trocadero Restaurant. Field-Marshal Viscount Allenby and General Sir Edward Bulfin were the guests of the evening. Members of the dinner club and private guests included:—Lieut.-General Sir Walter Campbell, Major-General G. F. Davies, Brigadier-General C. P. Scudamore; Colonels A. B. Robertson and J. S. Matthew; Lieutentant-Colonels R. H. Andrew, G. E. Badcock, W. Elliott, A. Gillibrand, J. H. Morris, J. Needham, E. R. O'Hara, and J. Cross-Brown; Majors K. M. Beaumont, E. S. Baring-Gould, T. E. Bayne-Jardine, L. M. Clark, L. W. Cox, F. J. Campbell, A. D. Dodgson, A. E. Dunstan, H. A. Fox, A. W. Noot, G. M. Reynell, J. Sewell, W. V. Sloan, Blanco-White, R. C. Haddon, C. White, and F. R. Way, Captains G. Aitchison, F. S. Butler, A. M. Borton, E. Cawston, G. K. Congreve, R. G. Goslett, W. E. Green, P. G. Grinling, G. H. Gill, D. B. Hardy, A. Handley, E. J. Lockwood, A. W. Martin, L. marriage, G. V. Misken, C. E. Mott, C. R. Morriss, F. Marriage, G. V. Nicholson, G. R. Rowe, G. P. Stratton, E. Upton, R. J. Williams, H. G. Holland; and Messrs. H. W. Halley, C. B. Kershaw, A. Kinross, A. Hopkins, D. W. Musselwhite, E. H. Potter, W. R. Prior, W. E. Purcell, H. Price, J. Robertson, R. G. Rees, J. Sewell, D. H. Thomas, A. H. Wale, C. Wagstaff, and G. Shepherd.

Field-Marshal Sir Arthur Barrett died on October 20 at his residence, Sharnbrook, Bedfordshire, at the age of 69. In the Great War he was in command of the early operations in Mesopotamia, and was G.O.C. of the N.W. Frontier Force in the Afghan War of 1919. A memorial service was held in the chapel of the Royal Hospital, Chedsea, on October 23, the Rev. H. J. Fleming, chaplain to the hospital, officiating. The King was represented by Field-Marshal Viscount Allenby, the Duke of Connaught by General the Hon. Sir Neville Lyttelton, Governor of Chelsea Hospital, the Secretary of State for War by Lieutenant-General Sir David Campbell, the Secretary of State for India by General Sir Claud Jacob, and the Army Council by Colonel the Earl of Onslow. Others present included Mr. G. Haye (brother-in-law), Mr. James Haye, Mr. Frank Carpenter, Miss Winifred Carpenter; Brigadier-General the Hon. Charles and Mrs. Bruce, General Sir Malcolm Grover, Sir Michael O'Dwyer, General Sir Havelock Hudson, Lieutenant-General Sir Raleigh Egerton, Colonel Sir Arthur Dick, General Sir Frederick and Lady Campbell, Major-General Sir Ivor Philipps, Major-General Sir James Stewart and Colonel Evatt (representing the 5th Gurkhas), Colonel Sir West Ridgeway, Lieutenant-General Sir Charles Dobell, General Sir Edmund and Lady Barrow, Brigadier-General Holditch, Mr. Pitt, General Bateman-Champain, Colonel Mathews, Colonel H. E. Weekes, Colonel Wilson Johnson, Colonel C. M. Wagstaff, Brigadier-General M. E. Willoughby, Mrs. Conyers Alston, Colonel H. St. G. Scott, Major Macpherson, Miss Mitchell, Mr. Mitchell, Mrs. Millar, Mrs. C. B. Lawrence, Colonal Larking, Major Elliott, Colonel Nation, Major Stewart Blacker, Major John Shearer, Major A. E. Lawrence, Major R. Neave (representing the Essex Regiment), Lieutenant-Colonel C. W. Alston, Colonel Hawkes, Major-General Hugh Sutton, Major Leathes, and a number of Chelsea Hospital pensioners.

The German steamer Olga Siemens (3,347 tons), moored off Basrah on October 22 and flew the police flag, and an officer who landed stated that members of the crew tried the previous night to murder the captain and repeated the attempt that day. Iraqi police went on board and arrested two men.

MOORISH RELIGION AND MAGIC.

"RITUAL AND BELIEF IN MOROCCO." By Edward Westermarck Professor of Sociology in the University of London. (London: Macmillan and Co. 50s. net.)

Professor Westermarck has won distinction as a sociologist, and is the leading authority on the marriage usages of all nations. Owing to his scientific training and known sympathy with primitive communities, he received a liberal travelling scholarship from the Helsingfors University, which enabled him to test theory by prolonged experience. Since the close of last century he has paid twenty-one visits to Morocco in order to study the archaic beliefs which prevail in that region. The fruit of his researches has now appeared in two handsome volumes, profusely illustrated, which deal exhaustively with the religion and magic of the Moors. North-Western Africa has been for ages immemorial the habitat of a race known as the Berbers, who are distributed in five groupings from the coast to the Atlas Mountains. The tribal organization of primitive society survives in full force amongst them, with the result that internecine warfare is endemic, and the infiltration of European influence has been achieved in the teeth of immense difficulties.

During the eighth century of our era the Berbers succumbed before the all-conquering sword of Islam. The Arab invaders imposed their religion, language and culture on the aborigines; but these remain as a thin veneer; pre-Islamic superstitions abound, nor is there any love lost between Arab and Berber.

Professor Westermarck begins his inquiries by defining the distinction which exists between organised religion and the magical observances which may be said to take its place in Morocco.

In his view:

> Religion is a belief in and a regardful attitude towards a supernatural being on whom man feels himself dependent, and to whose will he makes an appeal in his worship. In magic, on the other hand, he utilises supernatural energy without making any such appeal at all. In Religion he attempts to influence supernatural agents by natural means, such as prayers, offerings, abstinences and so forth: in magic he attempts to influence natural or supernatural objects or persons by supernatural means, which act mechanically.

The Professor hastens to add that his definition of religion is incomplete. None of the world's creeds is free from observances which are in their essence magical. Orthodox Moslems believe that the Arabic words of the Quran work miracles, and Christians that sin is washed away by the mechanical action of water.

Having thus cleared the ground, Professor Westermarck proceeds to discuss the idea which lies at the root of magical practices in Morocco—that *baraka*, sc. holiness, is inherent in certain persons and things. Baraka is inherited by the Sultan of Morocco, but there is a holier than he in the person of the Shaikh of Wazzan, who commands the same veneration as did our medieval popes. It attaches to the touch of saints, and to an immense variety of other objects, from which it may be derived by contact and prescribed magic. The converse, of course, holds good. Many persons and things are unlucky, and the cause of ill-fortune to all who approach them. Moroccans firmly believe in the Evil Eye, the efficacy of charms, and the ubiquity of witchcraft. They live in constant dread of evil spirits. Jnuns, familiar to readers of the "Arabian Nights" as "genii," Afrits, and the archfiend Sitan must be kept at a distance with the help of magic. Equal importance attaches to the curse: the "swearwords" current in Europe seem innocuous as compared with the long list of imprecations given by Professor Westermarck. The oath is a curse which a man calls down upon himself if what he states be untrue. Perjury, however, in not legally punishable; and the rules of evidence current in Moroccan law-courts differ widely from our own. Oaths may be taken by both parties; and it is open to a defendant to clear himself of an accusation by adducing "compurgators," or friends who swear to his innocence. The notion that certain persons and things are constitutionally infected with evil is very widespread. Women are considered to be unclean; their inferiority in point of understanding is an accepted canon; and the extremely low status of the fair sex has a pernicious influence on Moroccan society.

Considerations of space forbid any detached reference to the rites which are associated with every action in North-Western Africa. Very many superstitions which are found in that region linger in Western Europe. Have such survivals a common origin, or do they represent the inevitable reaction of natural phenomena on primitive intelligence? Professor Westermarck leaves this question unanswered. His researches reveal a state of society akin to that of our own forbears seven or eight hundred years ago. It cannot long resist the fierce impact of material civilisation. Morocco is widely advertised as a tourist centre by its French overlords. But nations unhappily learn little from each other but vice: and industrialism is by no means unalloyed with evil. John Stuart Mill was forced to admit that it did no more than permit "more people to live more miserably." It is allowable to doubt whether motor cars, mammoth hotels and factories will prove more conducive to human happiness than the picturesque superstitions which Professor Westermarck has rescued from oblivion. F. H. S.

MURDER!

"THE VERDICT OF YOU ALL." By Henry Wade. (London: Constable and Co. 6s. net.)

There must be something radically wrong with the mind of a man who does not enjoy a good "Detective Story," and so we conclude that our readers will be glad of an indication of where their wants in this direction can be satisfied.

This story is, undoubtedly, one of the best of its kind which has appeared this year. As is gradually becoming the mode, the "star" parts are taken by officials of "the Yard," but a pleasing novelty is introduced by making them rivals and sending one (whom the reader confidently follows) on a false scent.

Contrary to our experience in most examples of this class of fiction, the ending, with its triumphant surprise, is the best part of the book. More we dare not say without the risk of spoiling the feast.

We note that the publishers are selling the book at a rate well below the conventional 7s. 6d.

We regret that, in the review on our last issue headed "Imhotep," "Dr." Addison should have been described as "Mr." Addison.

On November 25 the Cambridge University Press will publish the late E. G. Browne's early work, "A Year Amongst the Persians." This book was first published in 1893 and, like Doughty's "Travels in Arabia Deserta," with which enthusiasts consider it comparable, it fell stillborn from the Press. In the Memoir, with which he introduces the re-issue, Sir Edward Denison Ross writes: "Having by the present re-issue obtained, as it were, a new lease of life, it will, we hope, at last take its place among the great Classics of Travel."

ITALY AND THE YEMEN.

The following is the text of the Treaty recently signed between Italy and the Yemen:—

H.M. Victor Emmanuel III, King of Italy, and H.M. the Imam Yahia, Emir El-Mumenin, King of the Yemen, desirous of rendering closer and more durable the friendship between the two States and anxious to develop economic relations between the two countries, H.M. the King of Italy, through his representative Jacopo Gasperini, Governor of Eritrea, and H.M. the King of the Yemen, Imam Yahia, Emir El-Mumenin, have mutually agreed as follows:

Article 1.—The Government of H.M. the King of Italy recognises the full and absolute independence of the country of the Yemen and of its sovereign, H.M. the Imam Yahia. The Italian Government will not intervene in the affairs of the kingdom of H.M. the King of Yemen in any manner contrary to the first paragraph of the present article.

Article 2.—The two Governments mutually undertake to facilitate commercial relations between the two countries.

Article 3.—The Government of H.M. the King of the Yemen declares that it is desirous to import from Italy supplies, technical implements and material, which can advantageously help the economic development of the Yemen. The same applies to technical personnel. The Italian Government declares that it will take every measure in regard to forwarding technical implements and material, and sending personnel, in the most convenient way for quality, price, and compensation.

Article 4.—The stipulations contained in Articles 2 and 3 do not in any way restrict the liberty of both parties with regard to trade and the purchase of goods.

Article 5.—Merchants of the two States shall not be permitted to import and sell goods prohibited by the Government in the respective countries. Each of the two States shall have the right to confiscate goods that are being imported into the respective countries in spite of the prohibition of importation and sale, after the prohibition has been duly made known.

Article 6.—The present treaty shall not enter into force until the ratification of H.M. the King of Italy shall have been received by the King of the Yemen, Imam Yahia.

Article 7.—The present treaty shall remain in force for a period of ten years from the date of ratification mentioned in Article 6. Six months before its expiry, the two parties shall decide whether it shall be cancelled or renewed.

Article 8.—In witness whereof, H.M. the King of the Yemen, Imam Yahia, and Cav. Jacopo Gasperini, in the name of H.M. the King of Italy, have signed the present treaty, drawn up in two copies absolutely conformable, in the Arabic and the Italian language, the discussions relating to the present treaty of friendship and commercial relations between the two parties having taken place in Arabic, and Cav. Jacopo Gasperini having stated that the Arabic text is exactly conformable to the Italian text, the two parties agreed, in case of doubt or of divergence of interpretation, to refer to the two texts, the Arabic text to be interpreted according to the classical language.

Sana, September 2, 1926.

Signed: Imam Yahia—Gasperini.

M. Pashitch arrived in Belgrade on October 19 after an absence of four mouths. The new session of the Skupshtina opened the following day, when the Speaker, Deputy-Speaker, and Secretaries were re-elected.

Sir Alan Cobham was entertained at luncheon by the Foreign Press Association at the Café Royal on October 23. Amongst those present were: Lady Cobham, Sir Joseph Cook (High Commissioner for Australia), Sir Sefton Brancker (Director of Civil Aviation), Mrs. J. C. Van der Veer, Sir John Brickwood, Captain de Havilland, Captain J. Bell White, Madame Rose, the Right Hon. T. P. O'Connor, M.P., and Mr. H. Wickham Steed.

THE WEEK AT HOME.

London, Tuesday Morning.

The Financiers' Manifesto.

Last week an event of very considerable significance to the future historian happened in England. An imposing manifesto, signed by many financiers in many countries, was published in English. Its purport was to demonstrate the folly of tariffs, which are commonly said to be one of the effects of exaggerated nationalism. Nothing remarkable in this, you may say, that financiers or industrialists or bankers should advocate free trade. Agreed: but the remarkable thing was that, even at the time of the meeting of the Imperial Conference, hardly a paper in Great Britain could find a word against it. One's only conclusion must be that English journalists are unable to see world affairs from any point of view but their own.

It is the easiest thing in the world, of course, to demonstrate the futility of small protected States in Europe, but at most the jealousies or suspicions of Continental countries are an annoyance. But what a danger reposes in handing the world still further over to the cosmopolitan care of the financiers! What an argument for the Bolshevists, the followers of Marx, that in the capitalist world capital should more and more be concentrated in the hands of the few!

Outside England the meaning of the manifesto was, of course, seized upon quickly. In France, for example, even so "advanced" and non-Nationalist a paper as the *Quotidien*, exposed the fact that these "experts" proposed no remedy for tariffs; and in Rome the papers made mince-meat of the manifesto. Even after making due allowance for the Romans' wrapping of truth in theatricalism and picturesque exaggeration (the manifesto was in one paper described as "the latest and boldest step towards the establishment of Hebrew plutocratic hegemony in Europe"), one was certain that the experts' expression of regret at the breaking up of great economic units after the War (e.g. the Hapsburg Empire) would irritate one of the most vital peoples in Europe to-day.

It all comes back to the War. If high finance is to dominate Europe, what becomes of the gains which the little States extracted after years of fighting? For Great Britain the matter is different: we stand largely to win by a policy of universal free trade. But to suppose that other countries, in a different geographical situation, can be made to accept our point of view, is poor psychology indeed. There are other things in the world besides

prosperity, although economists may imagine that that is the whole aim of existence.

A Chemical Trust.

As if to exemplify the beneficial effect of the abolition of internal competition and of general trustification, the great chemical firms in England have performed a grand ceremony of embracing one another. This is not an instance of a greater firm buying out a smaller, but of rivals making common cause. For the common good, you are so indelicate to ask? Alas, I have no means of answering. Those who have achieved this fusion assert that no monopoly is intended, but only greater efficiency. It is open to anyone who will to believe them. Enough here to note that the trustification of England of which I wrote last week proceeds apace. Presumably, it is the answer to those who reproach Capitalism with being a worn-out and inadequate system for the present day.

The Mines.

A few kicks in the slowly dying animal—that, apparently, is all that is left now to the miners. Mr. A. J. Cook has been among them, attempting to arrest the drift back, but even he, who for so long has represented the views of the miners, cannot stop men who see no prospect of anything but empty stomachs or cold bodies if they accept his advice. It is curious, in these circumstances, that the Home Secretary should at last have been allowed to demonstrate his powers in partly "banning" Mr. Cook. Admittedly, the miners are still fighting, thousands of them hoping against hope. But what can be the end now but an unqualified "victory" for the owners?

It is significant that a last despairing effort was made in *The Times* last week by Mr. Pugh, the Trade Unionist, for a return to the Royal Commission's Report. He saw that the appeal to what is called "physical force" had failed, and urged an immediate temporary settlement, followed by an application of the Samuel Report. But in truth the Samuel Report seems as dead as a door nail. In a curiously pathetic way things have played right into the owners' hands, with the Government making no attempt to check the course of events. As the *Manchester Guardian* (to whose Editor, Mr. C. P. Scott, by the by, a universal tribute was paid last week, from men of all shades of thought, when the Epstein bust was presented to the City of Manchester) puts it:—"Unhappily the Government is in a false position, for it has given the mine owners what they wanted badly and allowed them to refuse to take the course which, in the view of Ministers publicly expressed, it was their duty to take. The most alarming feature of this history is the proof it gives of the weakness of our democratic institutions. On the one side we have a class interest able to dominate the Government and decide its conduct; on the other a class interest that is able to keep the mines idle month after month. The nation has to suffer while those interests fight their quarrel out." Incidentally, it will have to suffer after this quarrel has ended its present phase.

The Imperial Conference.

The pessimists in Great Britain and the hostile observer outside it must have received a shock on reading the reports of the various meetings which the Imperial Conference has had since it assembled on October 19. Even South Africa, for whom General Hertzog spoke out boldly if a little obscurely, showed that the tide is by no means flowing, as had been feared, against the Mother Country. Ireland, too, exhibited what to some people must have been surprising delicacy and good-will; and the legend that Canada would in fifty years or so become one with the United States has been sharply dispelled by those whom it mostly concerned. It is too soon yet to discuss the real problems that have arisen, for the differences between the Dominions and the Mother Country and between the Dominions themselves have scarcely been published. But even now one can say that the famous saying of Talleyrand (I think) that the colonies of England would drop off like pears when they were ripe has been disproved.

Northcliffe Redivivus.

It was manifest that after the death of Lord Northcliffe the Harmsworth group of papers would be like an army without a leader. For even the profoundest admirers of Viscount Rothermere would scarcely assert that he has thrown his heart and soul into the job which Northcliffe made so peculiarly and successfully his own. The mantle of that dead journalist Lord has—although somewhat changed in the process—now fallen upon the Berry combination.

Quite recently the Berry group bought out the *Daily Sketch* (now incorporated into the *Daily Graphic*) and the *Sunday Herald*; and this move is to be followed, it seems, by the purchase of the Amalgamated Press section of the Harmsworth interest. The Amalgamated Press publish *Answers* and various other weekly journals sniffed at by the highbrows but beloved of the proletariat.

In view of the fact that Lord Rothermere's interests are known not to be in journalism, it is almost to be expected that such papers as the *Daily Mail*, *Evening News*, *Weekly Dispatch*, and *Sunday Pictorial*, will also change hands. The *Daily Mirror* is supposed to be very near to Lord Rothermere's heart, and it may be that that alone will remain of the once vast Harmsworth edifice. Whether the change of proprietorship will be beneficial to the nation is too great a question for me to answer.

Prayer Book Revision.

The Bishops are at the moment in session at Lambeth Palace, where a few difficult points, such as the Catechism, are being discussed. Apparently the main bone of contention—the attitude which Anglicans should adopt towards the Communion service—is now done with—at any rate from the Bishops' point of view. It is said that when the alternative Prayer Book is published the Anglo-Catholics will resent the refusal of their attitude towards Reservation. Nor is it expected that the compromise arrived at will satisfy the Protestant Evangelicals. The Bishops' debates on this knotty point have not been published, but it is stated that the lead given by the Bishops of London, Chester, St. Albans, and Truro in what has been called the "Romeward" direction, was not followed.

The compromise which was reached, mainly, it seems, through the agency of the Bishops of Worcester, Birmingham, Peterborough, and Ripon, involves a rubric which will provide for Reservation in order to meet the needs of the sick, but Benediction and exposition will not be permitted.

How the Church itself, and the Assembly, and, eventually, Parliament will receive this compromise, remains to be seen. There is considerable expectation in all the various camps.

ALTER EGO.

Field-Marshal Lord Plumer, High Commissioner for Palestine, in a special proclamation, has rescinded most of the restrictions introduced to combat the murrain, and thanks the public for its loyal co-operation with the Government in checking the epidemic.

Six of the Turks who were deported and interned in Malta during the Armistice have filed petitions before the Mixed Arbitral Tribunal claiming sums up to £15,000 as damages against the British Government. The claimants include the former Young Turk Ministers of Marine and the Interior and two journalists.

As a result of an earthquake which occurred on October 22 in the district of Leninakan (formerly Alexandropol), Armenia, 15 persons were killed and 80 seriously injured, while in the district round about 300 persons were killed and 300 injured. Twelve villages were badly damaged, six of them being almost completely destroyed. Fifteen mild earthquake shocks were felt in the Leninakan district on October 23.

IN UNKNOWN ARABIA.

By H. St. J. B. Philby.

"IN UNKNOWN ARABIA." By Major R. E. Cheesman, O.B.E. (London: Macmillan. 25s.)

Under the title of "In Unknown Arabia" Messrs. Macmillan and Co. have published Major Cheesman's eagerly-awaited account of an expedition which constitutes the first serious assault on what may perhaps be regarded as the most important objective of modern geographical science and its allies outside the Polar regions. The existence of so vast an area of utterly unknown territory in the midst of the civilised world is at once a reproach, which many have sought in vain to remove from the escutcheon of European exploration, and a spur to high endeavour, which will some day be crowned with success. Major Cheesman's predecessors in Arabia have nibbled away round the fringe of the Great Unknown. He himself has left the Great South Desert of Arabia—to which on somewhat scanty evidence he would deny its classic name of "Rub' al Khali"* while reviving on equally inadequate authority the old name of "Ahqaf" for a portion of it—still unconquered, but he has captured its north-eastern outpost. That is a very great achievement—a memorable land-mark in the history of the penetration of Arabia—and Major Cheesman's account of it is a notable addition to the literature of the subject.

In point of fact only 96 out of the 433 pages (excluding Sir Percy Cox's foreword and the author's introduction) of the volume are devoted to the description of new territory traversed in the course of a very remarkable expedition—15 of them being allocated to a preliminary canter in the spring of 1921 from 'Uqair to Salwa along the south-western coast of the Gulf of Bahrain. The first 30 pages of the book are taken up with preliminaries and a short discussion of what may turn out to be an archæological find of prime importance at 'Uqair. No fewer than 128 pages (including three on the singing sands of 'Uqair and 87 of technical appendices)—to say nothing of constant and full references to the subject throughout the other parts of the book—are devoted to Natural History, which is not surprising seeing that Major Cheesman is first and foremost, but by no means only, a naturalist. These pages must for the most part be left to the tender mercies of the experts, but it may be permissible to point out that so far as natural history is concerned, the work of Major Cheesman's predecessors in this and, indeed, any other part of inner Arabia has been so inadequate or so bad that he quite rightly does not think it worth while to pause in his stride to pour scorn on their futile efforts. Some of us will be grateful for his silence and will be spurred by his example and astonishing success to collect specimens even if we cannot classify them. That can be done by others, and I am conscious that more than one natural history error in "The Heart of Arabia" would have been obviated had I stuffed certain birds instead of eating them (c.f. p. 388). Cheesman's silence makes it necessary to underline the moral of his tale, and he will smile with indulgence on the jealousy of those who have consumed numerous specimens of *Lepus omanensis cheesmani* in the belief that the victim of their appetite was a mere hare.

At the same time it is something to discover in the teacher himself proof of the general human tendency to err—against the canons of the scientific method which he inculcates. On page 225 he says: "The badawin language is very different from Arabic and I had much difficulty in understanding it; in order to get an explanation of a difficult point I had to ask Mehdi to translate it into ordinary Arabic." And again on p. 254: "The Al Murra understand and speak a little Arabic, but the Awamir do not." These statements, made categorically and without discussion, are, to say the least, a little startling, and certainly deserved the support of "field" specimens, but we seek in vain for an appendix devoted to the subject, though we find in appendices devoted to other subjects good reason for the exercise of great caution in accepting Cheesman's verdict. For instance on p. 354 we are told that the hedgehog is Arabic *Qunfud* and Badawin *Daalij*. The latter is a perfectly good Arabic word found in any reasonable dictionary and meaning, among other things, "wolf," "ass," "glutton" and "aimless wandering"—I do not find "hedgehog" as an alternative meaning but an abnormal application of such a word in a local (Arabic) dialect is only to be expected and is instanced by Cheesman in his Arabic name for the Ratel. The word *Dhib'an* (given by him as *Dhriban*) means "male hyena" in classical Arabic. The "Badawin" words "Shawaila" on p. 374, "Daigin" and "Abu Zara" (p. 377), and "Warara" (? Gharara, p. 338) occasion no flutter in the heart of the Arabist and, unless Cheesman has other unpublished material in support of this thesis, one cannot but conclude that he has done no more than draw attention to a fact already well established—namely, that there are dialectical differences and variations in the Arabic spoken by the various tribes of Arabs. The only specimen of his own Arabic that occurs in the work is not a happy one, for *Anna mamnunin* (p. 273) does not "literally" mean "I am very grateful" as he translates it, but either "I are grateful" or perhaps "we are grateful," in which case the first word should rather be *Hanna*, a local form of the classical *Nahnu*. There are doubtless non-Arabic languages extant in Arabia (e.g., the "gypsy" tongue of the Suluba, which would repay careful study, and perhaps the language of the Shihuh near Ras Masandam, which I understand Mr. B. S. Thomas is now investigating) but Major Cheesman has not in this volume established the existence of any such.

To return to the classification of his volume—the 179 pages not accounted for above (two-fifths of the whole) are devoted to the best account that has ever been written of the Hasa province and life therein. After two nights at 'Uqair and one at Jisha Major Cheesman sojourned at Hufuf from November 20, 1923, to February 8, 1924, and again, after his great journey, from March 1 to 3 before leaving *via* Jisha and 'Uqair for home. From the point of view of the naturalist the title of his book is as strictly applicable to this part of his story as to the record of the geographically unknown desert south of the Hasa. Geographically he inevitably covers ground whose general lay-out has been made familiar to students of Arabia by his predecessors, though he seems to be unaccountably unaware of the work done in this direction in 1920 by Major H. R. P. Dickson, C.I.E., whose sketches and sketch-maps of the province ought to have been in the hands of one so well qualified to improve on them as Major Cheesman. As it is the latter leaves us with no more than a rough-sketch and a sense of disappointment, saying: "Had I realised that this was all entirely unmapped I should have taken the risk of making a more systematic survey." The mapwork of each supplements and corrects that of the other with a slight advantage on balance to Cheesman, in whose sketch there are however some notable omissions, e.g., Jabal Buraiqa,† Munaidhila, Ruqaiqa and one or two other minor points. Dickson apparently went astray in the identification of 'Ain Umm al Sab'a as 'Uyun, which lies at some distance to the north of it. There is yet work for the geographer in the Hasa if not for the naturalist, and perhaps Cheesman's most important sin of omission was his failure to visit 'Uyun itself.

In other directions, sometimes avoiding and sometimes traversing ground already trodden—for instance, he discusses exhaustively the coins in use in the Hasa and even

* I cannot remember having had any difficulty in making myself understood when talking of the South Desert under this name Major Cheesman seems to go too far in insisting on the familiar local use of the term "Al Rimal" (he should surely not say "the Al Rimal") which simply means "The Sands." On that analogy we ought to rechristen Riyadh and other towns of Arabia "Al Dira" on ourmaps—that being the almost invariable term used of them *in their immediate neighbourhood*. Similarly people living in the country go "to town" not "to London."

† Perhaps the same as Jabal Kilabiya.

illustrates an ordinary Turkish 20-Para piece, but never so much as mentions the existence of Shias in the province nor gives an estimate of the population of any town or village nor describes any such except some parts of Hufuf itself—he brings an original mind to bear on the ordinary and extraordinary incidents of life in the Hasa and describes it all with a restraint and quiet humour, which make the scene live for the reader who would know something of Arabia. For one in particular his account has all the charm of an oft-told tale of familiar places and persons and things, *quorum pars parva fui*. Arabia has moved on since 1917 when I saw the Hasa for the first and last time. The motor-car, unheard of in those days, has timidly invaded the land, but in early 1924 was still sufficiently novel to be pursued by young and old—aye, and by women. And "in and out of the motley rout" the old familiar spirits move as of old with all their ancient dignity—'Abdullah ibn Jiluwi, the Grand Old Man of the Hasa though yet young in years, to whom the author does full justice; and Muhammad Effendi still in the same saddle; and Doctor 'Abdullah, so recently in England as the Secretary of State for Foreign Affairs in Ibn Saoud's new kingdom of the Hijaz, to which by the way there is not the slightest reference from beginning to end of the book—a strange omission scarcely to be explained by the ban placed on politics; and young Faisal, who has fulfilled all the promise of his first visit to England in 1919 and has again visited our shores crowned with the laurels of three campaigns; and Abdullah al Qusaibi, whose memoirs of the 1919 visit to England group themselves curiously enough round the few days of a sojourn in Ireland, where it was that he saw the retrievers at work on a frozen lake and marvelled at grapes in midwinter in a Belfast greenhouse and at the girl who snipped them from the trellis for the young Amir's delectation—that "girl" was the wife of Sir James Craig, now Prime Minister of Northern Ireland! and Ibrahim al Jumaia who was allowed to sit on my book, hastily thrust under a cushion on his entry, but not to examine it—though we are now "as friends once parted grown singlehearted," secure in the knowledge that his well-deserved promotion to the office of Lord High Chamberlain obviates for ever the risk of his reappearance in the rôle of "Fidus Achates." The whole scene lives again in the manner of its telling.

And last but not least comes the great Sultan himself, who is often referred to as "Shaikh of Shaikhs"—a new term to one who regularly heard him spoken of as "Al Shuyukh—the Shaikhs." Of him, in spite of the political ban on his operations, Cheesman has a just appreciation "Descended from a long line of chieftains, the present Sultan has made and holds a vast kingdom by his own sound statesmanhip." No higher praise is possible, and the details of the picture are well filled in, though there are some minor errors of no importance on the subject of the Wahhabis. Cheesman does not seem to realise that the Ikhwan are but the kernel of a fruit whose outer wrappings in the order here given from within are Wahhabism, Hanbalism, Sunnism. Shias and non-Wahhabi Sunnis are indeed Muslimin, though in danger of the dread punishment for certain errors of their ways; and the opening chapter of the Quran separates Hindus on the one hand and Jews and Christians on the other into two distinct categories which challenge the author's lumping of them together as one. Polytheism is the great unpardonable offence, while Jews and Christians worship the same God as the Muslimin. As Ibn Saoud would say: "*Rabbuna Rabbukum Allah*—our Lord is your Lord, God." Cheesman was discussing ornithological problems and drinking coffee with Ibn Saoud when the European papers were startling the world "with an outburst of libellous obituary notes as inaccurate as the report" of his death, which, as he points out, "must have been the complete fabrication of some politician who stood to benefit, even if but temporarily, by his decease." He does not mention that the British Colonial Office was, even if but temporarily, taken in by the news.

The usual delays and difficulties, known to every traveller in Arabia, preceded the launching of the great adventure to the south, which started on February 9 *via* the wells of Dulaiqiya and Zarnuqa over some 150 miles of absolutely unknown desert country. On February 16 "a bearded and unwashed traveller was seated on a sandstone ridge. His skin had peeled from his face in large patches and what was left was burnt nearly black by the sun. In spite of all this he was a happy man. The Arabs were making coffee in a sheltered hollow, the camels were grazing in the background. The ridge overlooked a depression which lay to the south. In the middle of the picture was a broad black patch surrounded by a frame of palest gold, shimmering in the heat of a tropical winter sun. There were the palm-groves of Jabrin nestling in a world of desolation and of sand. The very isolation of the place gave it grandeur." The following days were spent in consolidating the conquest, and by March 1, having retraced his steps with little variation of route, Cheesman was back in Hufuf, having learned and unlearned many things.

MACMILLAN'S NEW BOOKS

THE MARQUESS CURZON
LEAVES FROM A VICEROY'S NOTE-BOOK and Other Papers

By the MARQUESS CURZON OF KEDLESTON, K.G., Viceroy and Governor-General of India, 1899—1904 and 1904—1905. With 32 illustrations. 28s. net.

PEOPLE OF THE VEIL

Being an account of the habits, organization, and history of the wandering Tuareg Tribes which inhabit the mountains of Air or Asben in the Central Sahara. By FRANCIS RENNELL RODD. With Illustrations and Maps. 30s. net.

IN UNKNOWN ARABIA

By MAJOR R. E. CHEESMAN, H.M. Consul in North-West Abyssinia. With a Foreword by Sir PERCY COX. With Illustrations and Maps. 25s. net.

The Sunday Times: "The illustrations are of unusual interest, and with its appendices of technical information and its maps the book must take its place amongst the most valuable of recent exploratory works."

Important New Work on China
THE VANISHED EMPIRE

By PUTMAN WEALE, author of "Why China sees Red." Illustrated. 15s. net.

RITUAL & BELIEF IN MOROCCO

By EDWARD WESTERMARCK, Ph.D. Illustrated. 2 vols. 50s. net.

The Sunday Times: "It would be impossible to summarize this encyclopædia of fascinating information. But no one interested in the foundations of belief is likely to neglet this storehouse of evidence and scholarly elucidation."

COTTON AND ITS PRODUCTION

By W. H. JOHNSON, lately Agricultural Adviser to the Australian Cotton Growing Association. With an Introduction by Sir WYNDHAM DUNSTAN, F.R.S., and a Foreword by Sir WILLIAM HIMBURY, Managing Director of the British Cotton Growing Association. With 26 Maps showing the Cotton Areas of the World. 30s. net.

International Cotton Bulletin: "The book is 'sound' and can be confidently recommended to those engaged in cotton growing, but seeing the spinners the world over are consuming more and more 'outside growth' of cotton, they ought to study this book as well, for it deals extensively with these kinds of cotton."

MACMILLAN & CO., LTD., LONDON, W.C.2

Digitized by Google

The "walking stones" of the desert are now a myth in spite of Salih's well-meant effort to sustain the illusion to the end. Jabrin itself is not the early Paradise of Marri legend. The fate of Wadi Faruq is left undiscussed and undecided, but the remnants of the "Aftan" legend are sent sky-high with another charge of scepticism. Wadi Sahba (probably rightly so spelt rather than Sahaba) has been seen for the *second* time (not the first time as Cheesman avers on p. 307) by European eyes and the course suggested for it in a Royal Geographical Society map of 1920 (*vide* J.R.G.S. Dec., 1920) substantially confirmed. The watering of Al Khin has been discovered and put in its proper place. Haradh has eluded investigation and may be non-existent. But perhaps the most important achievement of the expedition (apart from the fixing and full description of mysterious Jabrin) is the elucidation of "Jafura" which now ceases to be the conjectural name of an ancient town-site (as reported by me on native information) and becomes the designation of an arm of the Great South Desert—an eastern Dahna (? Dahana). But Major Cheesman has, to all appearance, discovered (on native information) my "Jafura" and rechristened it Magainma—a new name as he points out, but one crying aloud for the discovery of an old city, on which native rumour, however untrustworthy, is too persistent to be ignored. His attempt to correlate it with Magan of the Sumerians and the lump of granite found at Jabrin may or may not be well-founded, and a verdict must be withheld till the locality is actually visited. But it may be worth while suggesting that the name conceals an "Umm"—possibly "Umm Ghanima" or "Umm Ghunaima," a female counterpart of the Abu Ghanima of the Hasa.

Major Cheesman is far from optimistic about the capacity of camels to cross vast desert spaces without water. It has to be admitted that they do not exactly thrive on the process, but it is a far cry between that and impossibility. If there is herbage in the spring season the majority of 'Umaniya camels starting from Jabrin (especially if there is water at Magainma) will finish the course of 500 miles to the waters of the Hadhramaut and their riders will not grieve overmuch if they die of drink at the other end. The discovery of the Sumerian granite supply and the camel statued in the local basalt would be worth the risk, though it would scarcely surpass in archæological interest Major Cheesman's own discovery of the ruins of 'Uqair, which can scarcely mark other than the site of ancient Gérra, though much spadework is yet required to confirm a conjecture which the modern name of the port and Cheesman's ruins make almost a certainty.

With two exceptions Major Cheesman errs, if he errs at all, on the side of caution in all his statements and inferences. One of the two exceptions has already been referred to in connexion with the alleged non-Arabic tongue of the Murra. The other occurs in a chapter headed "Palgrave and Philby," which the survivor of the pair whose heads are knocked together by the author with unfeigned enjoyment of the process may be pardoned for having perused with special interest. Cheesman tilts at a windmill for too tempting to be resisted, but his tilting is of the most gingerly description, and he bolts for cover without attempting to develop an offensive opened in quite promising fashion. It would almost seem, indeed, that the 4½ pages devoted to this chapter represent but the remnant of an essay projected on a more ambitious plan and the upshot of it all is a verdict worthy of the learned judge in "Trial by Jury." "On sifting the evidence," says Cheesman (p. 70), "I came to the conclusion that they both [Palgrave and myself] must have been in the Hasa." More's the pity that the bulk of the evidence "sifted" is not set forth, and that Major Cheesman does not seem to realise that the mere expression of a personal opinion on such a matter is no substitute for a reasoned argument. It must be remembered that Palgrave professed to have written his account from notes taken during his travels, which he was careful to send to a safe place before his shipwreck, and subsequently recovered. Some better proof of his having been in Arabia is therefore needed than the mere excuse that he was an "Impressionist." Cheesman acquits him on two minor points entered in my far from exhaustive charge-shett, which both Cheesman himself and J. B. Mackie have supplemented with additional charges. My description of the practice of stringing camels head to tail in a caravan as "certainly not prevalent in Desert Arabia" requires some modification, as I once saw it myself in the Hijaz (where it is certainly not uncommon as I have since found) and Cheesman saw it twice in the Hasa. Palgrave may have seen it once at Buraida if he was ever there, but his mention of it was by no means the only reason for my suspicion that he never saw the place. Again Cheesman characterises Palgrave's mention of the absence of barley in the Hasa as "the only strictly accurate part" of a sentence on the subject of cereals in the province. He goes on to record his own discovery of a "patch of lucerne which had tufts of barley planted round the edge," which, though its produce "would no more than fill a bushel," would seem to belie the "*strict* accuracy" of Palgrave. And in another place (p. 95) he records that one of the two qualities of *local* wheat sold in the bazar "besides being a mixture of two wheats, ... contains about 9 per cent. of thin barley." The reader must be left to decide from these somewhat conflicting statements whether barley does or does not grow in the Hasa, but it must be admitted that it does not grow "profusely"—that was going too far on a minor point of a long indictment. Major Cheesman does not attempt to deal with any major point, though he agrees with me in condemning Palgrave's mention of buffaloes and his map of Hufuf, which "is so full of inaccuracies that I have not been able even to orient it."

Space does not permit of further examination of a volume which cannot be dispensed with by any serious student of Arabia. Its general "get-up" is well up to the high tradition of its publishers; the illustrations from photographs taken by the author are altogether admirable; and the map needs no other commendation than mention of the fact that it was prepared by the Royal Geographical Society; and finally the index is a full and carefully prepared guide to the contents of the volume. Both author and publishers are to be congratulated on their very successful co-operation in the production of a worthy record of a noteworthy achievement.

In conclusion a word must be said on the subject of the translation of Arabic words. Major Cheesman rightly adopts the system prescribed by the Permanent Committee of Geographical Names, but in practice he falters frequently. He is far too fond of the letter *e*, which does not exist in the Arabic alphabet, and in the course of a dozen lines on pp. 2 and 3 actually uses it to represent all the three short vowels of that alphabet, *a*, *i* and *u*—"Mehdi ibn Saleh" for Mahdi ibn Salih and "*yekhalif*" for *yukhalif*. He uses *u* indifferently to represent *a* and *u* as in Murra (correct) and Murri (incorrect for the singular form Marri). He omits the usual apostrophe mark for the letter *Ain* perhaps for the convenience of his publishers, but the only occasions on which he does insert it are unjustifiable—i.e., in *m'al* for *mal*, the 'Iraqi (Persian) equivalent of "of." He omits the final *h* of "Abdullah" and allows it in "Allah." "Hallowi" is surely unpardonable for "Halawi" and *Adthan* is unnecessarily complicated for *Adhan*. *Gadha* and *Hashm* should be *Ghadha* and *Khashm* respectively, while Cheesman's own nickname should have been written "*Sahib al Qans*" not "*Sahib al Ghunus*"—one of the few cases where he goes wrong with the *q*. *Muhammad Asahili* should probably appear as Muhammad al Sahli (one of the Suhal tribe), and Zakhuniya surely as Zakhnuniya.

The Yugoslav Ministerial Council has fixed October 31 as the date for the removal to Yugoslavia of the body of Field-Marshal Putnik (former Commander-in-Chief of the Serbian Army), who died in France during the war-time occupation of Serbia.

PERSONAL AND GENERAL

TO-DAY

October 28, 1926 (New Style).
October 15, 1926 (Old Style).
Rabia II., 20, 1345 A.H., of the Moslem Calendar.
Heshvan 20, 5687 of the Jewish Calendar.

The Maharaja of Baroda left London on October 23 for Paris.

Prince Stirbev arrived in London last week from Roumania, staying at the Carlton Hotel.

Lady Willoughby de Broke left London on October 21 for Egypt.

Lieutenant-General Sir John and Lady Shea left London on October 21 on their return to India.

Lord and Lady Forester have left England for Egypt and Palestine, and expect to be away for two months.

The Maharaja of Alwar left London on October 24 for Paris. He will leave Marseilles on November 4 for India.

The Marchioness of Linlithgow, who is in residence at Hopetoun House, will sail after Christmas for India.

Field-Marshal Sir William Birdwood, Commander-in-Chief in India, on October 23 left Simla on a tour of Assam and Burma.

The following promotions and transfers in the Colonial Service have been made by the Secretary of State for the Colonies:

Sir Stanley Fisher, Chief Justice, Trinidad, to Chief Justice, Ceylon.

Mr. J. C. Howard, Attorney-General, Cyprus, to Solicitor-General, Nigeria.

M. Tsamados, the Director-General of the Foreign Office in Athens, has been appointed Hellenic Minister to Angora in succession to M. Argyropoulos.

Lord Lloyd, High Commissioner for Egypt and the Sudan, and Sir John Maffey, the newly appointed Governor-General of the Sudan, left London on October 25.

The Roumanian Minister in London and Mme. Titulesco, who returned from the Continent on October 17, will reside at the Ritz Hotel pending their taking a new house for the Legation.

Sarwat Pasha, the Egyptian Foreign Minister, left London on October 20, on his return to Egypt via Paris. Mr. Selby (representing Sir Austen Chamberlain, Foreign Secretary) was present at Victoria Station.

The King has approved the appointment of Mr. Manmatha Nath Mukharji to be Puisne Judge of the High Court of Judicature at Calcutta, in succession to Sir Nalini Ranjan Chatarji, who will retire in November.

Sir George Buchanan will, this morning, begin his evidence before the Committee which is inquiring in London into the Bombay Back Bay reclamation scheme. He is to be assisted by counsel, who will not be entitled to address the Committee, though he will ask relevant questions of Sir George Buchanan.

Brevet Major E. B. Costin, D.S.O., of the West Yorkshire Regiment, is the new Assistant Military Secretary at Army Headquarters in India. He succeeds Major A. E. Williams, D.S.O., M.C., of the South Wales Borderers, for whom he has been officiating, and who has gone to the staff of the Western Command. Captain A. O. L. Davis has succeeded Major Costin as Brigade Major at Lahore.

The appointment of Major-General Sir W. E. Ironside to be a Divisional Commander *vice* Lieutenant-General Sir E. P. Strickland, is notified in the *Gazette*. General Ironside was Commander-in-Chief of the Allied forces in Archangel, 1918-1919, and later in Persia.

Sir Ronald Storrs, accompanied by Lady Storrs, left London on October 22 to take up his new appointment as Governor of Cyprus. He is visiting Palestine on the way. Representatives of the Colonial Office and the Greek Legation and a number of friends saw him off.

Viscountess Bryce will preside at 8.15 p.m. to-morrow (Friday) at the Central Hall, Westminster, at a meeting organised by the Armenian (Lord Mayor's) Fund, when Miss Karen Jeppe, will deliver an address on "The Rescue of Armenian Women and Children."

Field-Marshal Sir Arthur Arnold Barrett, G.C.B., G.C.S.I., K.C.V.O. (whose death occurred on October 20), Major-General Sir Percy Zachariah Cox, G.C.M.G., G.C.I.E., K.C.S.I., and Admiral Sir Lionel Halsey, G.C.M.G., G.C.V.O., K.C.I.E., C.B., were gazetted last week as deputy lieutenants for the county of Bedford.

Lieutenant-Colonel R. V. G. Horne, D.S.O., O.B.E., M.C., of the 2nd Battalion Royal Scots Fusiliers, who has been officiating at the Quetta Staff College, has been appointed Instructor there, in place of Bt. Lieut-Colonel L. Carr, D.S.O., O.B.E., of the Gordon Highlanders, who has vacated the appointment and is now on six months leave.

Faid Sabit Bey, First Secretary of the Egyptian Legation, and Mme. Sabit entertained among others at the Ritz Restaurant, on October 19, the following guests: Sarwat Pasha, Egyptian Minister of Foreign Affairs; Moustafa El Sadek Bey, Ahmed Abboud Bey and Mme. Abboud, Sesostris Sidarouss Bey, Abdul Rahman Fikry Bey, Ismail Sarwat Bey, and Professor Azzam.

Among the passengers by the P. and O. Bombay express which left London on October 21 to connect with the ss. Ranchi at Marseilles were: Sir Thomas and Lady Smith, Sir P. L. and Lady Buckland, Lady O'Donnell, Sir James Simpson, Sir C. C. and Lady Ghose, Sir Gordon and Lady Fraser, Sir B. C. and Lady Mitter, Sir I. Vijayaraghava Acharya, and Mr. and Mrs. Pethick Lawrence.

THE VICTORIA MEMORIAL: CALCUTTA.

THE STATUTORY COMMISSION.

Recent issues of *The Times* have contained two important articles on the future of the Reforms: one by an unnamed (European) correspondent, the other by Sir Chimanlal Setalvad. The latter is entitled "Through Indian Eyes," and the former might quite reasonably be called "Through European Eyes"; though one may hazard the opinion that the eyes belong to an official observer with considerable theoretical, but little practical, knowledge of India. The European observer expresses the opinion that the two primary features of Indian national life which dominate the situation at present, and must continue to do so for at least the next ten years, are communal jealousy and the Oriental standard of integrity: and declares that, "debating points apart, every Indian whose opinion is worth having will admit that stable self-government is impossible so long as communalism is rampant and until the general standard of integrity is raised." To the European reader, outside India, this sounds a reasonable proposition; but, in fact, one suspects that the writer's experience of the views of "every Indian whose opinion is worth having" is very much more limited than he supposes. The "cosmopolitan" Indian whose views are obtainable by the Home official is by no means a fair example of his stay-at-home countrymen: and, even in his case, the views to which he gives expression are often far removed from those which he actually holds. Practically every Indian, in spite of much talk about tolerance and unity, knows perfectly well that Hindu-Moslem antagonism is not epidemic but endemic: that it will necessarily endure so long as the two religions remain a reality to those who profess them—that is to say, indefinitely: and that the scheme of India's future governance must be fashioned with recognition of this solid fact. It is to the credit of the European observer that, though he expresses regret that no member of either community has "come boldly forward with a constructive and practical policy" for the removal of communal tension, he so far recognises the impossibility of any such action as to declare that the immediate object of the Commission of 1929 should be, in this matter, "to devise a system that will both control, and encourage the dissolution of, the existing spirit of (communal) animosity and distrust." With the word "control," one heartily agrees; for "dissolution" one would prefer "segregation"—a process that may, in time, bring about a system wherein the two great communities will work on parallel lines for the same object, without actual coalition but with the minimum of friction. The European observer holds that the other great task of the immediate future is the eradication of dishonesty; but explains how many degrees exist in India of what a European would call dishonesty, from "the absence of absolute integrity" upwards. Here again, one thinks that his clientèle has not been widely chosen: with very few exceptions, Indians will not admit that the indigenous standard of integrity is any bar to stable self-government. They will freely admit that it will mean a loss of efficiency: but efficiency is a word that no Indian likes, and embodies an idea that he considers of small importance when compared with other matters that, to him, are of much more moment. The stock example of the perfectly just judge still remains, to ninety-nine Indians out of a hundred, the true ideal of incorruptible honesty: and this is no fable, but a well-known and authenticated fact: he who, before a trial, accepted the bribe of both parties to the suit, decided it with strict justice, according to his lights and without any regard to the relative magnitudes of the bribes, and returned the bribe of the unsuccessful suitor.

The opinions of the Indian observer, Sir Chimanlal Setalvad, are entitled to much more weight than those of any European expert, however distinguished, so long as he remains anonymous; but the phrase used by the latter—"Debating points apart"—comes irresistibly to mind when reading the Indian observer's article. Early in his article, he uses an argument that has become specially distasteful to English opinion in India—that the country, "having stood by the Empire from the start and having actively helped in winning the war for liberty and freedom, was stirred, as never before, by the ambition to be a self-governing Dominion within the Empire." The authors of the scheme of Reforms knew better than that, when they spoke of disturbing the pathetic contentment of the Indian peoples; for, great as was India's assistance in the War, that assistance came from the rank and file, and from the Princes, neither of whom have ever had, nor have they now, any trace of such an ambition, which is solely confined to the professional politicians and their immediate following, who took no part whatever in the winning of the War—many of them, indeed, doing their best to hamper the efforts of those who did. Sir Chimanlal also lays great stress on "the want of public confidence in the sincerity of England." If—debating points apart—any such thing really exists in India at all—which one takes leave to doubt—its existence is confined to the class already mentioned, the professional politicians and their immediate following, and possibly honestly only among some of the latter, misled by the interested propaganda of those who know better. For the "events which caused this situation to arise" are given as the passing of the Rowlatt Act and the disclosures before the Hunter Committee of the events in the martial law régime in the Punjab. It is, of course, true that the Rowlatt Act was carried against the united opposition of the Indian members of the (pre-Reform) Legislative Council—as expressed in public; but it is none the less a fact that quite a number of the Councillors expressed their complete private approval of it, though they explained that they dared not do anything but speak and vote against it. The Rowlatt Act was passed as a precautionary measure, only to be put in force, if absolutely necessary, under the strictest limitations of time and place: and its necessity

Digitized by Google

is shown to demonstration by the introduction of the Bengal Ordinance, the provisions of which are substantially those of the Rowlatt Act—a measure almost equally unpopular with the politicians, but one that Sir Chimanlal Setalvad will probably admit to have justified itself completely. The passing of the Rowlatt Act offended the politicians, a certain section of whom at once set themselves, by deliberately malicious misrepresentation of its provisions, to inflame the people against the Government. They certainly succeeded, to some extent, in doing this; but, if their object was to induce a general feeling of lack of confidence in the sincerity of the British Government, they totally failed to do so. All that they did achieve was the creation of racial feeling in and near some of the big towns; but, even when the non-co-operation campaign was at its height, the attitude of the people in the villages and on the countryside remained perfectly friendly towards Europeans. The case of the Hunter Committee's report is very much the same. The unofficial "Congress Committee" eagerly accepted evidence perfectly well known to be false, and produced a report mainly consisting of garbled facts and misrepresentations, with the deliberate intention of fostering racial hatred. Here, also, they achieved a certain measure of success; but to say that either that report, or the report of the Hunter Committee, produced a feeling of lack of confidence in the British Government is a misuse of words. If anything, it did very nearly the opposite. It produced, in those who had not themselves been participants in the actual events—who had never been under any illusions on the subject—a feeling of confidence in the Government's ability still to put down widespread and violent disorder with a strong hand, and by methods which, however much Englishmen may deplore and disavow some few of those made use of, seemed perfectly natural and sensible to the great mass of Indians.

As regards the future, Sir Chimanlal Setalvad somewhat disingenuously asserts that the Assembly's resolution of 1922 "suggesting an early inquiry for the purpose of exploring the possibilities of a further constitutional advance was passed with the assent and concurrence of the Government of India." The Government assented to its being forwarded to the Secretary of State, because that was what the Assembly desired, and it could do no harm, though it was unlikely to do any good; but it is quite wrong to suggest that the Government concurred in the suggestions made in the resolution. The most that can be claimed is that it preserved a detached—not even benevolent—neutrality. Sir Chimanlal also says "the present (communal) tension, which I believe is temporary, is not, to my mind, any valid objection to constitutional advance." From this one may deduce that, even if Sir Chimanlal's expression of belief is not merely a debating point, he cannot have been one of the Indians whose opinion is worth having and was imparted to the European observer. Sir Chimanlal's article is a plea for the appointment of the Statutory Commission earlier than the year 1929; he says that it is the general consensus of all political parties in India that it should be appointed as early as possible, and that thus, and thus alone, can the British Government restore the lost feeling of confidence in its sincerity. If one disregards the "debating points" in his article, one disregards almost the whole of it; but the confession of faith remains—that, as things are, for better or worse, all political parties in India, with the possible, but of course negligible, exception of the Europeans, desire the immediate appointment of the Commission. So far as one can see, the position will not be altered, from what it is now, in the next three years; so that there does not seem to be any valid reason why the Commission should not get to work at once. If, as one firmly believes, the present Reforms have been wrongly laid, and need almost complete reconstruction, the sooner it is undertaken the better; so that one can agree with the Indian observer to that extent. One can also agree with the European observer in his insistence on the need for control—continued if not increased; so long as it is European control, and particularly at the centre.

CURRENT TOPICS.

The Railway Conference.

The annual Indian Railway Conference opened at Simla on October 7. In the course of the speeches made on the first day of the Conference, it was stated that the present railway mileage of India is 38,579: and that the programme of railway expansion involves the building of 6000 additional miles during the next five years. It is interesting to recall the fact that, when Lord Curzon went to India less than 30 years ago, he said that one of his chief ambitions was to see the mileage of railways in India raised to 25,000 before his time came to leave. Since Lord Curzon made this remark, the railway mileage of India has nearly doubled: and, if it had not been for the setback caused by the War, it cannot be doubted that expansion would have been still more rapid, as the last twelve years have seen but small addition to it. Other interesting figures given were that the railways of India carried, last year, over 600 million passengers and handled 80 million tons of goods: and that the average passenger rate in India is the cheapest in the world, being only a little more than one-third of a penny, compared with a halfpenny in Japan, 1⅓ pence in England and 1½d. in the United States.

The specially important points referred to in these opening speeches were—the effect on railway development of the conclusions of the Agricultural Commission, and the Indianisation of the staff. As regards the former, the President of the Conference (Colonel Walton, Agent of the North-Western Railway) said that the Commission's recommendations were expected to give an important lead regarding the development of railways, whether on existing lines or in other directions, in connexion with that of agriculture. It must not be forgotten, of course, that, in the development of agricultural areas not at present served by railways, the provision of good roads is quite as important as the opening of new railway lines, if not, indeed, even more so. The development of Indian agriculture must necessarily be a lengthy process: but one of the things that can and should be undertaken at once, in anticipation of its development, is the improvement of communications. One feels that Provincial Governments would be well advised if, at any rate to begin with, they concentrated on the provision of feeder roads, to the existing railways, rather than on extensions of the latter.

As regards the other point, Indianisation of the staff of the railways is easier to talk about than to effect. The President of the Conference remarked that, although this is the accepted policy, the efficiency of a railway depends on the human factor, railway working is becoming more scientific year by year, and the careful selection and training of Indian officers is essential. Sir Charles Innes, when he said that, while the Railway Board had accepted the ideal of cheap and efficient transport, in India other people had other ideas and would not be content until the railways were officered by Indians and subsisted on Indian industries, evidently intended to emphasise the same point as that made by the President when he declared that the great results achieved in a very short time by State management showed that this system was practically suited to India, but that it was necessary to guard not only against over-centralisation but also against political interference. The idea of the people mentioned by Sir Charles Innes is simple—dismiss all the Europeans and replace them by Indians: and, if efficiency suffers, so much the worse for efficiency.

Sir Arthur Barrett.

To one who, like the writer of these notes, only knew Sir Arthur Barrett while he was Adjutant-General in India, it comes as something of a surprise to learn that he was only 69 when he died on October 20. He took up the appointment in 1909, only two years after his promotion to Major-General, and only one year after being made K.C.B.—the latter a much more unusual distinction for so "junior" a Major-General, at any rate in India, than it has become in recent years. The conditions of the

Digitized by Google

time were not too conducive to good and effective work at Army Headquarters, and Sir Arthur Barrett was all the time something of a square peg in a round hole—a disability that he shared with other high military staff officers, notably the very distinguished officer who was Chief of the General Staff to Sir O'Moore Creagh: and both of them quitted Simla with relief, to take up more congenial appointments elsewhere. It is true that Sir Arthur Barrett never made a great name for himself: the several opportunities of doing so, that came his way, were denied to him by circumstances for which he himself was in no way responsible; but everyone who knew him recognised his sterling qualities, no less of head than of heart, for there can have been few more deservedly respected and popular officers of the Indian Army than he. His death will occasion a very real feeling of regret to all who were privileged to know him. If it is decided to continue the practice of appointing two Field-Marshals from the Indian Army (for a good many years past there had only been one, until the appointment of Sir William Birdwood brought the number up to its "statutory" complement) it may confidently be expected that the vacant baton will fall to the senior Indian General, Sir Claude Jacob, whom the Indian Army will hail as a worthy successor to the distinguished and much-beloved soldier who has just passed away.

New Western Port.

For some time past there have been paragraphs in the Indian newspapers regarding the development of a new port in Kathiawar: and it would seem that this has now been successfully accomplished. It is announced that the Hansa Steamship Company is organising a direct monthly service from Bremen, via Hamburg and Antwerp, to the port of Okha: and it is added that negotiations are understood to be in progress for a similar service, by the Ellerman line, from England. Okha is at the mouth of the Gulf of Cutch, about 225 miles south-east of Karachi and about 400 miles north-west of Bombay: and it is expected that it will serve the northern part of the important district of Gujerat in competition with and perhaps to the eventual suppression of Bombay.

Baroda is one of the most "fragmented" of all the Indian States: and the small promontery in which the new port is situated, close to the well-known holy places of Hindu pilgrimage, Dwarka, is a detached fragment of the State about 125 miles distant from the next nearest bit of Baroda territory. Its actual hinterland consists of a number of petty States—there are, in all, no less than 192 of these in Kathiawar—while there is a railway running from Dwarka to Jamnagar, the capital of "Ranji's" State of Nawanagar (which, incidentally, the Gaikwar of Baroda has recently claimed to be a tributary State to himself), whence it connects, at Rajkot, with the main railway system of Kathiawar. It is stated that a large cargo of sugar from Java recently arrived at Okha, and its disposal put a severe strain on the Dwarka-Jamnagar Railway; which was, however, successfully met by borrowing a number of waggons from the Bikanir State Railway. Arrangements are being made to provide additional rolling stock for the railway serving the new port: and it would seem that, given efficient and intelligent management of Okha Port and its communications, it may confidently be expected to develop, in the near future, into an important addition to the sea-ports of Western India.

Village Panchayats.

There is a strong body of opinion in India which maintains that the political future of the country ought to be worked out on the basis of the ancient custom of the village panchayat—a council of village elders (originally, as the name implies, five in number) who directed the local affairs of their village. In pursuance of this ideal, the Government of the Central Provinces recently appointed a Village Panchayat Committee, which has just issued its report. The most important recommendation contained in it is one for the appointment of a whole-time provincial panchayat officer. His main duties are to be (1) to act as an advisory officer to both officials and non-officials to ensure their mutual co-operation, and to do propaganda work and thus assist in the establishment of panchayats and in their guidance and instruction when established; (2) to make a special study of the difficulties which beset the introduction of panchayats, to travel from district to district giving to one the benefit of the experience gained in another, co-ordinating the system of work, stimulating local endeavour and, where local workers lack experience, himself persuading the villagers to establish panchayats and (3) to submit to the Local Government, under whose control he will work, an annual report on the progress achieved during the year.

The Local Government has accepted this recommendation, and has announced that an officer will shortly be appointed. Another important suggestion, which has also been accepted, is that, once a panchayat has been appointed administratively, judicial functions shall follow as a matter of course. It is not intended that the members of the panchayats themselves should be officials, for any such departure would certainly defeat the object in view: which is the rehabilitation, on sound lines, of an institution that has, from time immemorial, played an important part in the indigenous system of government in India, though it has, of late years, been allowed largely to fall into disuse. The experiment is one that will be watched with great interest: for its success or failure may have an important bearing on the recommendations of the Statutory Commission of 1929.

A Good Example.

Lord Irwin, it will be noted, is setting the politicians an excellent example of how to get down to the facts which matter most. The sight of a Viceroy turning up in an ordinary village without ceremony, and poking his nose into the affairs of the peasants, is certainly inspiring, and it would be a mistake to sneer at the cabled message which states that he has already struck the imagination of the Indian countryside, because experience shows that the thing can be done, and done quickly. It is true that none of the political leaders of the moment seems to have the gift of doing it, but then they are handicapped by the age-old cleavage between town and country, which

townsmen scarcely recognise, but which countrymen are so eager to maintain. When the townsman goes into the village, he finds an atmosphere of whining subservience, and he naturally does not know what the village says about him when the visit is over. The countryman, whatever his race, is fortunate in being able to find common ground with the peasants without delay, he sees them as they really are, and they usually take him for what he is. When the politicians get a little further on, they will find that the problem of coming into touch with the peasants is one that has to be solved: apparently they have not yet recognised that the problem exists.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 7.

The South African Tour.

The South African Deputation have come and gone and have been apparently much impressed by what they have seen, although there has been a certain air of caution in their public utterances. They have been lunched and dined by the Clubs, taken round the town and shown the University and the School of Tropical Medicine, visited a jute mill and made a river trip to see the miles of other mills which line its banks, received in many houses, and finally given a reception by the Maharaja Prodyat Kumar Tagore at the Viceroy's Calcutta residence which rivalled the most distinguished gatherings Belvedere has seen. On the whole it has probably been as good an epitome of the life of the City as could be crowded into three days, and, if it has left an impression that Calcutta is predominantly a European city and is not the real India at all, it will have done no harm. The Deputation was invited by the Government of India to come to see for itself what India and the Indians really are and, if appearances count, they are shrewd observers. They will have noted the almost universal welcome accorded to them by the Press, somewhat grudgingly by the Extremists and used for political purposes by the Moderates, but on the whole pleasingly in accord with the traditions of Indian hospitality. The Hon. F. W. Beyers sent a happily worded farewell telegram to the Governor on leaving "your beautiful city," and the deputation is now gathering impressions in less sophisticated surroundings. Politically minded Indians will watch for the practical results of this tour with more than usual keenness.

The Holidays and the Elections.

To judge from the Indian Press, there is considerable apprehension as to the coming *Puja* holidays. Government have declared a "state of emergency" to exist under the Goonda Act, and a large number of arrests and detentions of undesirable characters has followed; this is obviously helping to restore confidence and should minimise the possibility of religious disturbances; but it is regrettable that in certain quarters endeavours should be made to excite political feeling upon what is being called Retrictions of Puja Rights. It is presumably an inevitable accompaniment of the election campaigns and the endeavours to lose no opportunity of appealing to the popular outcry "ag'in the Government." Even the Moderate group are now driven to exploit this, and there is no question that it is the most promising plank for securing support for any party. Canvassing and the Press campaigns are in full swing, but there is nothing of interest to report, save the intensifying of the personal element and the increasing difficulty of finding any real differences between the candidates other than the broad question of government or no government, for that is what co operation or non-co-operation amount to at the roots. Coupled with this is a more or less active communal incitement, principally designed to damage the chances of the Moslem Party led by Sir Abdul Rahim, the ex-Minister. For the rest the genius for distortion of actions and motives which is usually reserved for Government and its officials, is now being directed to the rival candidates with amusing results.

The Elections and the Weather.

Not the least of the unwanted boons that the Reforms inflicted upon the country was the fixing of the date of the election for this season of the year. It is the time when everyone who can gets away for a holiday and when those who stay at home are labouring under the maximum of discomfort and irritation, jaded and worn out by the worst weather of the year. It is at this moment that the elector is called upon to exercise his judgment amid the shouting of seven Parties whose pricipal cry is "Down with the others"; it is a delirium which fits in with the weather. Why should the elections be fixed for such a time? Presumably because it was the English practice, where there were fixed election dates. The 1929 Commission should examine this point and study its relationship to the weather.

The Press.

The extremist Press these days is devoted mainly to personalities, and no one out of touch with the last twists of the political kaleidoscope can hope to follow the real reasons for new divisions and new abuse. The situation is resolving itself into the Congress versus the Rest; of the Hindu organisations, the recent seceders from the Congress claim its policy (whatever that may mean) save that they announce their intention, if elected, of taking office and using it for the advancement of Swaraj. The Moderates, Liberals and Nationalists are practically one Party, and not only is their programme apparently the same as that of the "Congress-Responsivists," but they claim the latter as practically one with themselves; they are all fighting principally on the cry that the Congress has betrayed the country by its utterly fruitless negative policy which has wasted two Council periods by mere obstruction, and so has nothing to show of constructive value to impress the 1929 Commission. The leading member of this group is being opposed nominally by S. C. Bose, the interned Chief Executive Officer of the Calcutta Corporation, a Cambridge man who passed for the Indian Civil Service but refused nomination, who was C. R. Das' right-hand man among the younger set and one of the most intellectual of the ultra-extremists; he is in a Burma political prison, and is likely to remain there. Lastly there are the Hindu Independents, who are not a party, and each man is fighting a purely personal campaign. Among the Moslem there are three Parties: first the Moslem Party with all the talents, such as they are, and all the money, which does not amount to much: then the Independent Moslem Party, which has the same programme and consists simply of the malcontents from the remnant of C. R. Das' kept Mussulman members whom he lodged, fed and pampered so long as they did what they were told. They presumably hope that the glorious days may come again, when no pleasure that they could think of was not freely at their disposal; but to-day it is more difficult, despite the "triple crown," to induce Corporation contractors to display political enthusiasm financially, and pretty things cost a pretty penny. The Congress Moslems are likely to be disappointed. If the elections are fairly fought and conducted, it will be a glorious muddle. The *Amrita Bazar Patrika*, which is displaying a flair for reality, boldly says that there is no difference between any of the Parties, and that the only sound course is to vote for the best man.

Men and Things.

The final figures of the jute forecast are now out and they indicate a considerable surplus over the manufacturing requirements; this is far from the end, however, for the middlemen, most of whom are Marwaris, have greatly increased in power in recent years and the Marwari is an inveterate gambler. Somehow or another he will make

Digitized by Google

money and the contest between him and the mills has hardly yet begun.

The Tariff Board on the Cotton Trade has been sitting in Calcutta and has heard the evidence of local piece-goods dealers. They are strongly opposed to the imposition of a general tariff, which they claim would raise the price of all cotton goods to consumers.

The editors of the *Planters' Journal and Agriculturalist* and the *Indian Railway Gazette* have been convicted and fined for publishing obscene articles; the proprietor, who is in England, escapes punishment, but it is to be hoped that the proceedings will put an end to the life of what is, fortunately, a new journalism here.

The East Indian Railway have lately instituted a series of "flying squads" to check the abuse of travelling without tickets, which was known to have reached alarming proportions, a check for six months in 1925 having shown that nearly 900,000 passengers on Indian railways had forgotten the necessary preliminary of paying a fare! In the first month of working on one section alone, the receipts have shown an increase of over £5,000 and there has been a distinct lessening of the previous overcrowding.

So Cobham is home, and our hearty congratulations. And another French mail liner has crashed; and the weekly service to Karachi is *not* to start on January 1, 1927. It is very wise not to rush things.

The Birkmyre Hostel, the gift of Sir Archy Birkmyre to the old boys of the Kalimpong Orphanage, is nearing completion on its site in Middleton Row, next the Turf Club. It will be a model hostel and club: and, both in its internal arrangements and its external appearance, it will be one of the finest buildings in the City, and a lasting monument to the generosity of its donor.

The representation of the European Association to the Governments of Assam and Bengal, in regard to the Spence case, has brought a reply from each, and it is generally admitted that while, in the case of Assam, the Association has come off badly, it has made its point against the Bengal Secretariat. The Chief Secretary's reply here is little more than an expression of regret that the Association should have seen fit to suggest that a Magistrate was unduly influenced by a certain type of "Indian opinion."

The Trivial Round.

The Monsoon Meeting was continued on Saturday under distinctly oppressive conditions, which however did not appear to affect the attendance, for it was larger than usual. The racing was excellent, close finishes being the order of the day, and on the whole backers had the best of it.

Rugger interest has shifted to Madras, whose turn it is this year to have the open tournament. The entry is a large one and it includes the soldier teams which were recently in Calcutta besides the usual Madras, Bombay, Colombo, and Calcutta teams. The latter is a hot side, and it has already found form by a 32—0 victory over the Lancashire Fusiliers. Rugger is coming into its own again.

The principal sporting events at the moment are the tournaments in the hill stations, and these are in full swing. The Durand Cup, the principal Soccer competition out of Calcutta, has been won at Simla by the Durhams who beat the Sherwoods, the holders, by 1—0 in the final. They had earlier on beaten Mohun Bagan, the premier Calcutta Indian team by 4—1. The Viceroy, by the way, was astounded to see barefoot players for the first time and complimented them on their pluck.

Swimming Sports are going strong in North Calcutta and the entries are larger than ever. For the 23 mile race on the tide in the Hooghly there were 48 starters and nearly all finished. If better coaching were avaiable, it would not be long before Bengal annexed a few world's records.

The Roman Singers at the Empire have been giving fine performances to small houses and they must be disappointed with the lack of support they have found in Calcutta. Possibly a somewhat carping notice is one newspaper is responsible in part, but probably the weather is more to blame. The amusement trade is a peculiar and difficult one in the tropics.

Markets.

The jute market closes quiet after a somewhat uneventful week. Mills have been interested in good qualities to a limited extent, but business generally has been on a smaller scale than even in the previous week. Gunnies have at first followed a similar course, but are now steadier; an opinion received from an authoritative quarter here reveals the tendency towards an advance in the future. In the piece-goods market, prices have continued downwards in the absence of the anticipated buying orders. The market has reached such a state that a number of failures amongst the dealers are expected, if there is not an immediate improvement. An additional reason for dealers restricting purchases is the fear of a fresh outbreak of trouble during the ensuing Pujas.

The tea market has continued to maintain a remarkably steady appearance both here and in London in spite of the issue of the recent outturn figures. These show that there has been an increase in the outturn for September of about 11 million pounds over that for the same month in the previous year, and that the total position up to the end of that month is that this year's crop is about 15¾ million pounds in excess of last year's up to the same date.

On the Stock Exchange, apart from further improvements in rubber and tin shares, there is little to report. Government Securities have been firm to steady; jutes have been a small market with a tendency towards better prices for the good stocks and weakness in the more speculative group; one or two tea shares show an improvement on the week but generally there has been no preponderance of buyers. A number of transactions have taken place in rubbers at increasing prices and this is likely to continue considering the maintained steadiness of the raw material, especially for the forward positions which now command a fair premium over the spot. Tin shares have been negotiated at higher rates and the recent demand in this section shows no signs of abating. The Stock Exchange closes to-morrow until October 25.

There have been very few bills showing during the week and the market has been dull until the close ,when a steadier tone developed. Money continues abnormally easy.

THE INDIAN MAIL.

Floods.

This week's mail papers are full of accounts of serious floods in many parts of India—notably in the Central Provinces, northern Punjab and Orissa. In the former, the Mandla District received 23 inches of rain in three days—figures that must surely be a record. The average annual rainfall at Cherrapunji, in Assam, which has the reputation of being the wettest spot on earth, is about 500 inches, but has been known to reach an average of two inches for every day of the year: so that, if anywhere, this three days' average of nearly eight inches a day is likely to have been surpassed there. India is a land of extremes, such as are perhaps only to be expected from its vast extent. It has often happened, in the past, that one part of the country has suffered from an almost total lack of rain, while other parts have had to endure a superabundance of it. Though it is a failure of the monsoon that is the generally accepted cause of famines, a great excess of rain, leading to floods that cause widespread destruction to crops and cattle, not infrequently produces the same result. One is apt to think that all that is needed to deal with this periodical excess of water is a large extension of irrigation works; but floods, when they do come in India, are so sudden and come in such enormous volume as to put such a remedy out of the question.

Digitized by Google

Howrah Drainage Canal.

An inconspicuous paragraph in a Calcutta newspaper announces that the Howrah Municipality has decided that work in connexion with the central drainage canal scheme, sanctioned by Government in 1913, shall be immediately taken up and completed as soon as possible. In order that effect may be given to this decision, it has also been decided that "the balance of the canal loan money" (presumably granted in 1913) "used in other directions shall be at once recouped from appropriate funds if necessary, and any deficiency of funds, that may arise in consequence of such wrong applications, shall be made good from the water rate funds, in view of the fact that the canal loan money was utilised for the water-works improvement scheme." These facts form an instructive example of the truth of Lord Lloyd's dictum that "anyone who commits the crime of action in the East commits a great crime"—a remark that seems specially applicable to Bengal in general and to its Capital in particular.

Trade Returns for August.

The returns of India's sea-borne trade for August show a decrease in the value of imports, from 2063 to 1974 lakhs and an increase in that of exports, from 2271 to 2559 lakhs, compared with the figures for the previous month. The net import of treasure amounted to 212 lakhs, against 256 in July: and the visible balance of trade in favour of India was 439 lakhs, whereas in July there had been practically no balance either way. The share of the United Kingdom in the total trade of India shows a marked increase, being 50 per cent. in imports and 24 per cent. in exports: the shares of Japan, the United States and Germany being respectively, in imports and exports, 6 and 11, 5 and 12, and 7 and 6 per cent.

Under the major heads of imports, the value, compared with that of the previous month, fell, in the case of food, drink and tobacco, from 406 to 362 lakhs, in manufactured articles from 1465 to 1435 lakhs, and in raw materials from 153 to 142 lakhs. In exports the figures were, food, drink and tobacco 715 lakhs, raw materials and produce 913 lakhs, and manufactured goods 909 lakhs. The export of raw cotton amounted to 37,000 tons, of which Japan took 24,000, China 4000, Germany 3000 and Italy 2200 tons. The export of raw jute was 30,000 tons, valued at 130 lakhs: of gunny cloth 145 million yards, valued at 272 lakhs, and of gunny bags 59 millions, valued at 340 lakhs.

Sleeping on the Line.

Last week's mail papers record an accident on the North Western railway, when an engine ran into four men sleeping on the line, killing three of them and seriously injuring the fourth. It is not easy to explain why the Indian wayfarer should be so fond of selecting a railway line as a place to sleep, but it is a fact that he often does. There is, perhaps, more excuse for the practice in the case of men told off to picket the railway line in the case of journeys undertaken by Viceroys or Governors; but it is generally believed that a long railway trip by the Viceregal train is seldom carried through without a certain number of fatalities of this kind. When a Viceroy travels by train, the line is guarded by men placed about shouting distance apart throughout its length: and, at night, these men quite commonly sleep on the line, usually placing their heads on the rails, in the confident belief that the vibration caused by the train will wake them before it gets dangerously near. In the case of a heavy train, no doubt this confidence is seldom misplaced; but Viceregal trains are always preceded by a pilot engine, and this is the usual cause of accident; as it was, indeed, in the case now reported, which was due to an engine being dispatched to take the place of another that had broken down.

An "Alligator" Story.

A correspondent writing from Karachi is responsible for the following story. "A man washing his horse in the shallow water of the Indus near Sukkur saw a huge alligator making for him. He made haste to reach the bank, but the alligator continued in pursuit. The man dashed off to the Public Works Department bungalow near by, and informed the engineer, who came out with a rifle and shot the reptile. When it was drawn up on the bank and measured, the alligator was found to be 17 feet in length."

It would be pedantic to mention that it is the crocodile, not the alligator, that is found in India; it is the size of "the reptile" that seems to invite comment. The fish-eating crocodile, the *gharial*, often attains a length of 25 feet and more; but the "man-eating" river crocodile does not exceed 14 feet at the outside, except in fiction—e.g., the 24-foot *mugger* in Kipling's "Undertakers." It is true that his near relation, the estuary crocodile, who lives in tidal waters, notably in the Sunderbans, sometimes reaches even 30 feet in length; but Sukkur is more than 300 miles up the Indus, so that it is unlikely that the "alligator" of the story was of this variety. Twice, of late years, have Viceregal tigers easily surpassed the accepted record in length: and, if it had been the Governor of Bombay, or even the Commissioner in Sind, who shot the "alligator," its size might not have seemed excessive. The main point of the story seems to be the suggestion that the alligator climbed the bank of the river in pursuit of the man; but, if so, it evidently gave up the chase and returned to the river—perhaps to make a meal off the horse: for the report says that, after being shot by the engineer, it was "drawn up on the bank." The writer once came across a crocodile in a field of corn some distance away from the bank of the Ganges, and believes that the *mugger* does sometimes follow its prey on to the land, while it is certainly in the habit of making quite long journeys across country when moving from one piece of water to another, though this, one thinks, is always done at night. It is said that the American alligator does hunt on land; but it is certainly very unusual for the Indian crocodile to do so.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
London, Tuesday Morning.

The Egyptian Cotton Position.

The fall in the price of cotton has naturally not been without an important effect on the situation in Egypt. The Egyptian Government has hitherto endeavoured to maintain the price of Sakellaridis by extensive purchases of cotton, thereby extending the practice followed with success in previous years. But this time the position is different, for the world's supplies of cotton, visible and in sight, are apparently far larger than are required to meet the existing world requirements. It was evident therefore that nothing was to be gained by acceding to the demand for renewed intervention in the market, the main result of which, so far as can be seen, would be a substantial financial loss to the country. Instead the Government proposes to utilise £4,000,000 or more in advances to cotton growers which will enable them to avoid selling their crops at the present juncture. But while this measure may be, and probably is, the soundest remedial measure that could now be taken it would be rash to see in it more than a temporary relief, for the causes which have brought about the present situation are not transient but permanent. America may reduce her crops, the present size of which, judging by reports, seems a positive embarrassment to her, but the constant tendency must be for the development of cotton growing elsewhere, and except in the event of another crisis such as that of 1914 arising there is not the slightest prospect that cotton will ever again see the famine prices that obtained in recent years. If Egypt is in a difficult situation it is simply because of her reliance on one crop, and the real solution in her case is to extend as rapidly as possible the bases of her economic position by the establishment of new industries suitable for the country and by the development of those which she has already. It is not a thing that can be done in a moment, but it is the only logical outcome, and the sooner the situation is grappled with the sooner will the country find relief.

The Anglo-Persian Report.

The announcement of a substantial increase in the dividend together with a capital bonus naturally invested the report of the Anglo-Persian Oil Company with special interest. It has now been issued, and it can truly be said that it only serves further to underline the great advance made by this company. The profits for the year ended March 31 last, after providing for depreciation, amounted to £5,766,390, which compares with £4,609,357 and £3,059,636 for the two preceding years. Of this amount the Persian Government receives in royalties £734,400 as against £493,429 the previous year, and after providing for interest charges, income tax, and directors' fees, etc., the net profit is £4,383,232, an increase of £811,265 on the previous year's total. This year extra depreciation receives the smaller amount of £228,100, but the allocations to debenture reserve and amortisation reserve are the same as before, and after placing £1,500,000 to the general reserve and paying the increased dividend the balance to be carried forward amounts to £1,955,450, or very little less than the previous year. The position of the company is certainly one on which the directors and shareholders are entitled to congratulate themselves. As regards the outlook, it is of interest to note that the news with regard to developments in the fields is most encouraging. As regards the main fields in Persia it is stated that the production continues to increase and that the policy of the company to extend the proved area is still meeting with gratifying success. In Albania oil has been found at a shallow depth in one of the areas, but unfortunately of too poor a quality to market, and further drilling is now proceeding in the expectation of securing oil of commercial value at deeper levels.

Trade Barriers.

The influentially signed appeal for the removal of obstacles to trade cannot be said to have had a universally favourable reception, nor was it to be expected that it would. As I have already indicated, it is sufficiently obvious that if there is to be a rapid trade revival on the Continent the existing handicaps to commerce which have grown up since the War must be removed or modified. A move in this direction must be universal, and here, of course, we come up against the difficulty of reconciling definite undertakings with increased trade freedom. It is scarcely necessary, I think, to elaborate this point. Then there are countries which, while viewing such a project with approval, either hold that their own barriers are the exception or wish some other step to be taken first. I find it difficult in the circumstances to believe that the appeal is likely to have important consequences in the near future at any rate.

The British Export Society.

On another page in this issue will be found the first part of an address on "Trade with Egypt" given at a recent meeting of the British Export Society. This Society, it may be worth while to point out, was established about two years ago for the purpose of promoting a better understanding of the principles and practices of export business and of stimulating mutual assistance between British export firms. It seeks to achieve this object by means of its monthly meetings, at which intercourse is fostered between responsible export representatives of member firms, including both manufacturers and merchants, thus paving the way for the personal exchange of information and views on all matters relating to export business. General discussions are also held and addresses are given periodically by experts on overseas markets or export subjects. The address on Egypt is a typical example, while addresses on such subjects as "Trade Mark Protection Abroad," "Credit Insurance," the "Financing of Export Trade," as well as on various overseas markets, have also been given this year.

BANK OF ROUMANIA LIMITED
(Founded 1866).

Head Office: **16, GRACECHURCH STREET LONDON, E.C.3.**

Branch - 11 Calea Victoriei, Bucarest.

Sudan Trade Progress.

The figures for the trade of the Sudan for the first seven months of this year give a very encouraging indication of the gradual development of that country. As compared with 1925 there is an increase of £E1,579,335, in the total volume of trade, the figures being £E7,868,693 as against £E6,49,358, while a considerable favourable trade balance compares with a slightly adverse one, for the same period last year. The value of the imports for the seven months was £E3,313,771, while that of the exports was £E4,261,197, these figures showing respective increases on the totals for 1925 of £E242,898 and £E1,232,854.

COMMENTATOR.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 26.

The comparative dulness of markets has left the City with plenty of time to discuss the principal current topic of the business world, namely, the manifesto of Europe's leading bankers and business men pleading for a removal of the excessive tariff barriers erected in Europe since the peace of Versailles. There is in responsible quarters a very full recognition of the importance of a document signed not merely by all the chief British bankers and many leading British and Continental industrialists, but also by the heads of no less than eleven of the Central Banks of European nations. No more authoritative warning as to the obstructions in the path of Europe's economic recovery could possibly have been framed. The English signatories to the manifesto were so fully representative of the City that there is in responsible circles little criticism either of the diagnosis of Europe's troubles or of the prescription of remedy; and any attempt to swell the volume of Europe's, and consequently Britain's trade, is of course of vital importance to all the manifold financial and commercial activities which go to make up what, for convenience, we are accustomed to call "the City." There is no disposition to expect any immediate and tangible results; but it is thought that the manifesto reveals a great strength behind the new movement on the Continent towards a freer economic policy, and also invests with immediate practical importance the forthcoming International Economic Conference, which otherwise might have been of little more than academic value.

The Markets.

The Stock Markets have passed another quiet week, though the general tone remains steady. Brokers are now becoming more pessimistic than of late, and suggest that no real growth in the volume of stock exchange business can be expected this year. This opinion is, of course, prompted by recent developments in the coal dispute, which means that anything like a cut and dried general settlement cannot be hoped for in the immediate future. Added to this there is the uncertainty in the monetary outlook. While the probability of any further rise in money rates in New York in the next few weeks is remote, the sterling-dollar exchange, now undergoing the usual autumnal strain, has perceptibly weakened and the efflux of gold continues. Mr. J. M. Keynes regards the present monetary situation coupled with the heavy adverse trade balance and the large volume of British capital going abroad, as sufficiently serious to warrant an immediate reimposition of the embargo on foreign loans which was in force last autumn. In some quarters such a step is regarded as contrary to the gold standard policy and it would undoubtedly meet with some opposition.

In the meantime the strongest section of the Stock Markets remain the gilt-edged department and the leading industrial issues. The rubber market remains very quiet but is satisfied with the new announcement from the Colonial Office of its restriction policy which, briefly stated, means an attempt to stabilise rubber between 1s. 9d. and 2s. per lb. which, after all, is a very profitable level for good producers. Among British industrials, Nobels, Brunner Monds and United Alkali, have been active as a result of the announcement of the great British chemical fusion.

Argentine Railways.

The full reports of the four great Argentine railway companies for the year ended June 30 have now appeared. It will be recalled that the Buenos Ayres Great Southern and the Buenos Ayres Western increased their dividends for the year by 1 per cent.—from 7 to 8 per cent. and from 6 to 7 per cent. respectively, while the Buenos Ayres and Pacific and the Central Argentine maintained the previous year's distributions of 7 and 6 per cent. respectively. Two of the companies show an expansion in net receipts, but those of the Buenos Ayres and Pacific and of the Central Argentine are lower. Losses on exchange in connexion with remittances of funds to London were much smaller than in the previous year, and all with the exception of the Buenos Ayres and Pacific can show larger balances available for distribution. A particularly good showing is made by the Buenos Ayres Great Southern, whose available balance is £760,000 higher, and the opportunity is taken to create a special reserve of £250,000 for any contingencies which may arise in connexion with the Bahia Blanca and North Western Railway, which it now controls, and to transfer £200,000 to the general reserve, which received no appropriations a year ago. The excellent results achieved by this company afford some justification for the Stock Market activity of the past few months. The outlook for the current year, moreover, is good. The crop area is slightly larger than last year and a better yield is expected. The chairman of the Buenos Ayres Great Southern expressed the view at the annual meeting that shareholders might reasonably look forward to equally satisfactory results for the current year, and so far the traffic receipts of the four lines show increases upon last year. Prices of the ordinary stocks, however, stand at high figures compared with those of recent years and it is difficult to say how far the future is being discounted. Much, of course, depends on conditions in Argentina, and so far as the immediate future is concerned, upon the success of this season's harvest.

The Shipping Outlook.

During the past week or two shipping freights have shown exceptional buoyancy. Therefore, we would remind investors of the dangers of taking a too optimistic view of the shipping outlook, for the movement, being due to the coal stoppage, is mainly of an artificial character. It is true that the rise in freight rates has been substantial, the value of coal tonnage from the United States to the United Kingdom having advanced from around 13s. 6d. in May to 37s. 6d. at present. Nor is the upward movement confined to the coal traffic between America and this country. Generally speaking, the most important charter rates are from 100 per cent. to 150 per cent. higher than during the spring.

At the same time, operating expenses show a notable increase. In particular shipowners are having to bunker largely with foreign coal, the price of which is very much higher than that of British coal before the strike. And for some years before the stoppage shipowners have been at pains to emphasise the burden of their operating expenses. Moreover, the shipowners themselves are under no illusion as to the extent to which they are likely to benefit by the stoppage. Speaking at the recent meeting of Manchester Liners, Ltd., Sir Frederick Lewis declared that the strike would not bring any permanent benefit to the industry. Though there might be a short period after the end of the strike during which activity would continue, the laws of supply and demand would soon reassert themselves. What was required, he said, was a steady all-round healthy improvement in trade.

Monthly Supplement of "The Near East and India" : No. 22.

LOCAL FINANCE IN THE S.H.S. KINGDOM.

The territory of the Kingdom of the Serbs, Croats and Slovenes comprises 248,848 square kilometres, and is divided for purposes of administration into 33 departments, 386 districts, and 6,576 municipalities, consisting of 27,306 communities, with 2,353,183 households and altogether some 13,000,000 inhabitants. The Departments, Districts, and municipalities, which are autonomous units and "legal personalities" in both public and private law, comprise the following bodies: of the Department, the Departmental Assembly and Committee; of the district the District Assembly and Committee; and for the municipality, the Municipal Committee and Court. All these bodies are elected by general, equal, direct and secret vote. The period of their electoral mandate is prescribed by law.

From the point of view of autonomy, each Department, with the Districts and municipalities under it, and each District with the municipalities within its sphere of management forms a union for the purpose of using the moral and material means of its inhabitants for the preservation and encouragement of all institutions, and for the undertaking of all work necessary for the cultural advancement and material well-being of the Department, District, or municipality.

The means to enable the duties of the autonomous bodies to be carried out are derived from the following sources:—Income from autonomous domains and farms, rates which are levied as a percentage on the direct State taxes, tolls, other rates and extraordinary receipts.

Thus, in the S.H.S. Kingdom there is no special form of direct taxation levied on behalf of the local government bodies, nor does the general State budget provide special grants for their use. The basis of the financial business of all the local government bodies is their budget, which estimates, allots and grants all incomes and expenditures for a year in advance. The supreme supervision over local government management belongs, according to the Constitution, to the Minister of Finance.

Since the financial system of the S.H.S. Kingdom is based mainly on rates, the revenue from these is the most important source of income and forms the chief fiscal burden of the nation.

The position of the local government bodies as regards dues is shown in the following table:—

	Municipal Rates. Total Dinars.	District Rates. Total Dinars.	Departmental Rates. Total Dinars.	Total.
Serbia and Montenegro	121,946,579	15,286,106	26,652,988	163,855 673
Croatia	155,705,236	3,842,104	—	159,547,340
Voivodina	156,844,648	1,602,352	27,981,688	186,428,688
Slovenia	21,114,531	7,936,136	—	29,050,667
Dalmatia	11,103,820	—	—	11,103,820
Bosnia and Herzegovina	6,862,435	—	—	6,862,435
Total	473,577,249	28,666,698	54,634,676	556,848,623

This total amount of dues levied by the local government bodies in the S.H.S. Kingdom, 556,848,623 dinars, gives an average per inhabitant of 44.80 dinars. The rates of the village municipalities form, on the average, 62,2 per cent. of the total sum, and of the town municipalities, 19.1 per cent.

The other forms of municipal receipts are shown in Table 2 (dinars):—

	Tolls.	Duties.	Loans.	Fines and extraord. receipts.	Economic receipts.
Serbia and Montenegro	43,516,429	70,624,296	23,868,905	21,976,859	41,689,170
Croatia	70,216,577	55,971,080	1,040,871	10,608,378	30,812,814
Voivodina	15,557,470	17,263,302	3,987,671	15,243,312	49,599,474
Slovenia	23,667,375	11,312,484	5,513,446	4,908,966	12 077,095
Dalmatia	5,854,988	13,603,290	2,431,256	7,321,599	9,864,875
Bosnia and Herzegovina	22,096,308	33,627,427	630,131	2,398,504	8,055,989
Total	180,919,058	172,401,879	37,472,280	62,457,618	152,109,417

This table shows that after the income from rates, the largest revenue is derived from tolls, and then from duties, economic receipts, small extraordinary receipts and loans.

While the rates of village municipalities form 62. 2 per cent. of the total revenues, the relation is the reverse in the matter of duties, which in town municipalities amount to 28.2 per cent. of the whole as against only 6 per cent. from the villages. The same is the case with tolls, which amount to only 7.3 per cent. from the village municipalities, as compared with 24.3 per cent. from the towns.

Economic receipts both in village and town municipalities are about the same amount, with a percentage of 17 per cent. The total revenues of all the autonomous bodies in the S.H.S. Kingdom amount to 1,162,209,475 dinars.

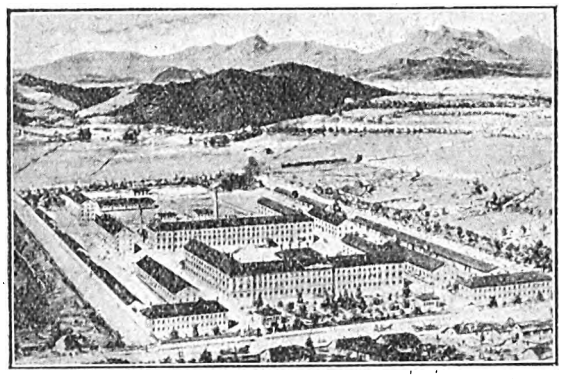
State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes



State Tobacco Factory in Liubliana.

Net Revenue of State Monopolies during 1926-1927, 2,000,000,000 dinars.

Gross Revenue of Tobacco Administration 55.2 per cent of Monoply Revenues.

33,000,000 kgs. PRODUCED — DURING 1924 —

About 10,000,000 kgs. of South Serbian (Oriental), Herzegovinian and Voivodina Tobacco of 1924 crop ready for Export.

50 Fermenting Houses. 25,000 Employees. Manipulation by Specialists.

8 Tobacco Factories for Cigarettes, Cigars, Leaf, and Plug Tobacco. 8,000 Employees.

Sales abroad: To Czechoslovak Tobacco Administration 3,335,000 kgs.
To Polish Administration 4,500,000 kgs.

GOODS OF QUALITY SELL BY THEMSELVES.

THE HEALTH CO-OPERATIVE MOVEMENT.

The most important social movement in the S.H.S. Kingdom after agrarian reform is the health movement. Both these movements were inaugurated by private initiative. The State immediately took agrarian reform into its own social programme, in order thereby to create sound economic conditions for the increase of population, for, in comparison with many of it neighbours Yugoslavia is not sufficiently populated.

The Balkan peoples are well known as the most healthy in the world. This being so, it is more likely that the sparsity of population is the result of thinning by war than of bad health conditions among the people. But it must also be remembered that wars leave behind them generations undermined in health and thus affect not only the normal increase in population but also impair the normal development of hygiene.

Actuated by these considerations the United States inaugurated a policy of Health Missions to the Balkan countries to assist the nations to recover from the setback in their health conditions after the War. The Mission to Serbia established its doctors, nurses, health stations and dispensaries in many places. When the time came for the Mission to leave Belgrade, the idea occurred to one of its officials, Dr. Gavrilo Koyitch, that the health work of the American Mission might be continued and raised to the level of a great national movement through so-called Health Co-operatives. He was moved chiefly by two important facts, the need of a health movement, and the possibility of satisfying that need.

A few figures will suffice to show that the need for health work in the S.H.S. Kingdom is great. About 50,000 people die annually in Yugoslavia of tuberculosis; 70,000 babies die in the first year of life; about 12,000 die annually of typhoid and dysentery, and almost as many of scarlet fever.

In contrast to this need, Dr. Koyitch saw the great success of the agricultural co-operative movement which had been started thirty years earlier by M. Mihailo Avramovitch.

In collaboration, therefore, with the Chief Co-operative Federation of the S.H.S. Kingdom a scheme of health co-operatives was worked out in the form of purchasing co-operatives whose medical assistance, medicines, nursing and health articles could be obtained cheaply. The very first year of work, 1922-1923, gave most successful results. There were 12 co-operatives and health stations (most of them taken over from the American Mission) and these had a total of 17,185 medical examinations. At each co-operative 1,432 patients on an average were attended. Such an examination cost on the average 32.5 dinars, when outside the co-operatives medical examination cost over 100 dinars.

The American Mission was so pleased to see the work which it had begun left in the capable hands of the Union of Health Co-operatives (which had been established as the headquarters in Belgrade) that it presented to the latter all the medical equipment which it had brought to Serbia, and for the first years assisted it by undertaking to pay the manager and to give other pecuniary help.

By 1925 the Union of Health Co-operatives had acquired such strength that it was able to continue its work on its own without this initial assistance. Its success was conspicuous. The number of co-operatives had grown to 20, while 9 more applications had been received.

Digitized by Google

At the end of 1926, however, there came a very important problem for the health movement, a problem which was the primary subject of discussion at this year's congress of the Health Co-operatives.

Statistics of the movement showed that the number of patients attending the stations had fallen off, while the cost of each examination had increased, in spite of the fact that there were more co-operatives. The statistics for the year 1925-6 were as follows:—number of health stations 20: number of medical examinations 16,223, giving 81 to each co-operative at an average cost of 50.8 dinars. These figures, compared with those cited above for 1922-23, show that the number of patients has fallen off considerably, while the cost of the examinations has increased. The reason for this state of affairs is that the Health Co-operatives have so improved the health of their members that there have been fewer illnesses and consequently fewer examinations have been required.

The cost of the maintenance of the doctors, nurses, and health stations, i.e. of the whole co-operative movement is now defrayed from the income received from medical attendance, for the sale of medicinal and other goods has not yet developed to any large extent, while baths and similar institutions which might bring in an income have not yet been started by the Co-operatives.

Health co-operation, therefore, is faced by the problem of the application of the Rochdale principle of co-operation to the health co-operatives with certain modifications and temporary additions.

This year's congress called the attention of the Co-operators to the fact that, in addition to the curing of illness, the services of doctors and nurses should be used for hygiene lectures, health visits to Co-operators' houses and health instruction, in order to prevent as far as possible the occurrence of disease and to encourage hygiene. With the growth of healthy habits will come the purchase of health articles, and then the co-operatives will be supported from the income thus received absolutely in accordance with the Rochdale co-operative principle. Until this is achieved the co-operators will have to make some contribution which will cover the expenses to such an extent that the cost of medical assistance will not have to be increased further. At present these costs are much less than that of medical assistance outside the co-operative, which in cases of serious illness amounts to 500-1,000 dinars per visit, if the doctor has to go to the patient.

The Union of Health Co-operatives supplies its Co-operatives with medicines in the form of loans, which have to be repaid as the medicines are sold. In the business year 1925-1926 loans of this kind amounted to 918,905.56 dinars, and of this sum 400,983 dinars were repaid from medicines sold. The interest rate charged is that charged by the Chief Federation of Serbian Agricultural Co-operatives at Belgrade (to which the Union of Health Co-operatives is affiliated as a sub-Union) amounting to 12 per cent. Outside the co-operatives the rate of interest is from 20 to 30 per cent.

The "Health Fund" stands at 2,062,518.76 dinars, while other funds amount to 180,000 dinars. Shares of co-operators amount to 11,893 and savings deposits to 45,705 dinars. All the health co-operatives together have a membership of 10,273.

The health movement might extend its numbers much more than at present, but the present management is anxious to develop gradually, and by careful selection to achieve as solid a basis as possible. The State allows the Health Co-operatives a yearly grant, by which they are enabled to attend poor patients gratis.

DR. LIUDEVIT PROHASKA.

YUGOSLAV EXPORTS IN AUGUST, 1926.

Exports from Yugoslavia in August, 1925 and 1926 were as follows:—

	Tons.	Gold dinars.
August, 1925 ...	371,180 ...	70,506,980
August, 1926 ...	330,340 ...	40,343,033

The chief articles exported during August 1926 were:—

Article	Units	Amount	Mill. gold dnrs.
Corn: —Wheat ...	Tons	34,486	8.9
—other	„	3,594	0.5
Wood: —for building	„	77,388	5.0
—for fuel	„	36,286	0.7
Eggs	„	2,462	4.3
Live pigs ...	Head	32,948	3.3
Live cattle ...	„	10,127	2.4
Crude copper ...	Tons	1,000	2.2
Meat: —fresh ...	„	1,278	1.8
—meat products	„	72	0.2
Wheat flour ...	„	3,396	1.5
Maize	„	9,960	1.4
Fresh fruit ...	„	6,678	1.1
Lamb and kid skins	„	263	0.8
Cement	„	25,049	0.8
Live horses ...	Head	2,845	0.8
Sheet lead ...	Tons	782	0.7
Hemp	„	1 009	0.7
Small stock, live ...	Head	52,197	0.6
Oak railway sleepers	No.	111,476	0.5
Opium	Tons	8	0.5
Tanning extracts	„	1,112	0.5
Kalkavalj cheese ...	„	210	0.5
All other ...	„	109,337	9.6
Total	Tons	330,349	49.3

The chief exports by countries of destination were as follows, with value in millions of gold dinars:—

Corn (wheat).—To Czecho-Slovakia, 1.5; down Danube and via Braila, 1.6; Austria, 1.6; *(other corn)*, to Greece, 0.3; Austria, 0.09; and Italy, 0.04.

Wood (building).—Italy, 3.9; Hungary 0.3; Austria, 0.2; *(fuel)* to Italy, 0.5; Hungary, 0.1.

Eggs.—To Switzerland, 1.6; Austria 1.3; Germany, 1.1.

Live pigs.—To Austria, 2.6; Czecho-Slovakia, 0.7.

Live cattle.—To Austria, 1.4; Greece 0.3; Italy 0.3.

Crude copper.—To Germany, 2.2.

Meat (fresh).—To Austria, 1.3; Italy, 0.4, Germany, 0.1; *(meat products)* to Austria, 0.1; Czecho-Slovakia, 0.1.

Wheat flour.—To Austria, 1.2; Czecho-Slovakia, 0.1.

Maize.—To Czecho-Slovakia, 0.5; down Danube to Braila, 0.4; Austria, 0.3.

Fresh Fruit.—To Austria, 0.8; Germany, 0.2; Czecho-slovakia, 0.03.

Exports for the first eight months of this year have increased considerably in quantity, but have fallen off in value, as compared with the returns for the period in 1925, the decrease in value being due to the fall in the prices of agricultural products since last autumn. The respective returns were as follows:—

	Tons.	Gold dinars.
1st 8 months, 1925	2,808,011	501,594,906
1st 8 months, 1926	3 294,375	449,942,159
For 1926 ...	+486 364 (17.32 p.c.)	- 151,652,747 (10.30 p.c.)

THE VISIT OF CZECHO-SLOVAK DEPUTIES.

Early in October there arrived on a visit to Belgrade a group of eminent Czecho-Slovak Parliamentarians, numbering 72 in all. At the head of the group was the President of the Czecho-Slovak Assembly, M. Jane Maliper, the President of the Senate, M. Vanusav Klofatch, the Vice-President of the Assembly, M. Josef Stivin, and the organiser of the tour, Dr. A. Uhlirz. The guests stayed only two days in Belgrade (October 4 and 5), and then visited other large towns, leaving the country finally on October 11.

This impressive visit of a delegation from the Czecho-Slovak National Assembly has not only strengthened the

Digitized by Google

links between the two brother nations by personal contact between their parliamentary Deputies, but has also laid collaboration between the Czecho-Slovak Republic and the S.H.S. Kingdom.

At the joint session of the National Assembly with the Czecho-Slovak deputies, the following resolutions were passed:—

Cultural Resolution.

Since we consider that good intellectual relations are the foundation of good political and economic understanding, we propose, for the sake of better mutual acquaintance, that our Governments assist primarily and to the full extent of their powers, all institutions which might bring the two peoples together intellectually—namely, Universities, high, technical, secondary and special schools. Secondly, we consider it necessary:—

(1) To encourage the exchange of professors, closer collaboration of the two Academies of Science for the achievement of great scientific works, and the arrangement of teachers' holiday courses; (2) mutually to assist the students at the Universities by stipends and scholarships, in such a way that the students of the one nation may not feel themselves strangers at the schools of the other (in connexion with this should go the grant of diplomas); (3) to perfect the service of information on both sides in cultural questions, and to encourage it by means of lectures and publications; (4) to exchange not only school children, but also young peasants, artisans, and workers of all kinds by means of holiday tours, educational excursions, and exchange in families, and by the exchange of apprentices and young workers for specialisation in special branches of work; (5) to organise literary translations and the exchange of publications; (6) most important, to organise the teaching of both languages, which at present suffers from lack of teachers, text books and dictionaries.

In order to achieve the above ends as soon as possible, it is necessary that the Parliaments should form two commissions, a cultural and an economic. Each shall have 20 members, i.e., 10 from each Parliament. These commissions must meet at the earliest opportunity at Prague.

Economic Resolution.

Considering as they do that it is imperative for the strengthening of the present situation, and the peace of Europe, to draw nearer the economic life of the Czecho-Slovak Republic to that of the S.H.S. Kingdom,

The Conference of the Czecho-Slovak and the Serbo-Croat-Slovene Parliamentary Deputies in Belgrade on October 4, 1926, finds:—

(1) That the economic life and structure of the Czecho-Slovak Republic and the S.H.S. Kingdom supplement one another and consequently make possible close and intensive economic co-operation and trade between the two brother nations;

(2) That the existing economic trade connexions should be further developed and that all hindrances in the way of close economic collaboration must be removed;

(3) That in the interest of a facilitated exchange of goods and of trade, efforts should be made to create by means of definitive currency reforms a uniform currency unit, and for the same purpose to simplify and unify the regulations dealing with trade and business in cheques and bills.

THE NATIONAL BANK OF THE S.H.S KINGDOM.

Under the heading "Cash" a gold dinar is reckoned as a dinar an English pound as 25 dinars, a dollar as 5 dinars, an Italian lira as one dinar, a Swiss or French franc as a dinar, a coined silver dinar as a dinar, etc.

Discount rate: 6 per cent. Loans on securities: 8 per cent.

THE MONOPOLY ADMINISTRATION.

For the four months ending July 31, 1926 the Yugoslav Monopoly Administration shows receipts amounting to 839,378,448 dinars, as compared with 797,003,044 dinars for the corresponding period in 1925, and an estimated revenue of 801,633,333 dinars. To the total the Tobacco Monopoly contributed 599,907,064 dinars; salt, 105,944,564 dinars; kerosene, 38,295,476 dinars; matches, 45,295,178 dinars; and cigarette papers, 47,870,605 dinars.

The statement of revenue and expenditure issued by the Monopoly Administration for the first four months of the financial year was as follows:—

REVENUE.	Dinars.
Monopolies (July)	220,061,952
,, (April—June)	619,316,496
Customs (July)	130,108,821
,, (April—June)	446,586,826
Stamps & Duties (July)	98,591,171
,, ,, (April—June)	276,913,802
	1,761,579,068

EXPENDITURE.	Dinars.
4½ Loan (1895)	22 990,979
Blair Loan (1922)	23,090,466
Administration Expenses	246,494,465
Current a/c (Min. of Finance)	1,450,337,557
Sundry a/cs. & Cash in Hand	18.665,601
	1,761.579,068

MOTOR POST SERVICE.

Thre are 39 motor car services in Yugoslavia, working over 2,147 kilometres of road, with 150 motor mail vans.

In Serbia there is only one such service, from Valyevo to Loznitza, 81 kms. distant. The Split district has the largest number on its 676 kms. of good motor roads. Around Zagreb there are 456 kms. of good road, while Sarayevo has services over 389 kms. Skoplye 377, and Liubliana 255 kms. There are similar services in Montenegro, but these come under the Ministry of Communications and not under the Ministry of Posts.

In 1925 these 150 motor vans conveyed 1,604,195 kgs. of baggage and 166,270 passengers over 1,320,557 kms. of road. The revenue from this service was:—

From passengers	5,074,742 dinars.
,, post	4,592,354 ,,
Altogether	9 667.096 ,,
Expenses were	8 395,231 ,,

giving a clear profit of 1,271,865 dinars.

TRADE WITH EGYPT.*

By Philip Chapman.

The staple industry of Egypt is cotton. Eliminating the War years, and a few years afterwards, when cotton rose to 180 dollars the kantar, Egypt exports £30,000,000 to £35,000,000 worth of cotton every year, irrespective of fluctuations in price, and is now coming down to approximately pre-War. Last year the export of cotton was about £36,000,000. There are a few other crops grown, for home consumption, such as rice, burseem (a kind of clover, for pasturing purposes), a few medicinal seeds, and of course the early spring exports are onions and eggs, the former come here when we cannot get onions from anywhere else, and commence in February and finish at the end of May.

Trade naturally depends on the spirit of the people from year to year. The Egyptian wears boots if he has enough money to buy them, or if not he is quite happy without, and the same applies to his clothes. It is therefore very difficult for any firm shipping to Egypt to estimate what next year's demands are likely to be, because if the cotton or the rice or the onion crop does not realise expectations the Egyptian does not make many purchases. It was during the slump of 1920-21 that the Egyptian got a reputation of being an unreliable trader, but I do not think it applies any more to Egypt than to any other part of the world. Goods that were costing the shipper in England £29 a ton, and had been sold at £30 and £31, were not saleable in Egypt at £15, so it was hardly to be expected that the Egyptian trader, whose business morality is not equal to the British, should stick to his contract. He could not sell and was overloaded with stock. He had been induced by the people on this side to order about eight times more than he wanted, in the hope that he would get one-eighth, but the time arrived when he got it all.

Egyptians are born speculators. They even gamble on the bags they pack the onions in, and on any other commodity that gives a chance. Generally speaking, the Egyptian prefers to buy from a European or any other nationality than his own, and that is why most of the agents there are English, Italian, Greek, or Syrian. The mentality of the Egyptian is Oriental and his methods of business do not always coincide with ours so the cancelling of a contract is not, to him, of serious importance. It depends entirely on your agent to prevent this and compel the client to accept and pay for the goods. Once you have convinced your customers in Egypt, over a period, that you are giving them a square deal, they will give you preference even if your price is a little higher, but naturally they distrust everyone to begin with. Some firms have been in Egypt two years and cannot get many orders, and then they suddenly come along. Therefore, in selecting your agent for Egypt, you want to give him a chance.

It is very difficult by going into a dealer's stores, which are often very small, to ascertain his financial standing as many of them have no banking account and pay with cash for all their purchases even up to £1,000, therefore, your banker's report must be taken literally to a certain extent. It is also very difficult to find out how much property a man has got, because though he may tell you he owns a certain property, he is quite likely in a syndicate with two or three others, each of whom tells you that the property is his. You cannot get a mortgage in Egypt on property, the same as you can in this country. If you take a mortgage on property, it is registered with the Courts, and then it is public information. There is no question there of depositing the deeds with a bank and raising money on them, because it is possible for a man there to go to the Court and say he has lost his deeds, and they will issue a duplicate set.

* A summary of an address on "Trade With Egypt" delivered recently by Mr. Philip Chapman to members of the British Export Society.

Methods of Business.

You cannot mix pleasure and business successfully in Egypt. The methods of business will not let you. First of all, you spend hours and hours in interviews. You call on your customer, and have coffee and cigarettes with him, and no business enters into the conversation which is mostly about England, where you come from and where you are going to. After this he returns the compliment and calls on you as soon as possible, so you have more coffee and cigarettes, and continue the more or less general talk as in the morning, and then when you are beginning to get exhausted, he casually hints you might want to quote him for something. This goes on every day. He does not always know what he wants to purchase and it is up to you to convince him. If you quote, and he does not know what other people are quoting, he promises to go into it, and then he rings up other commission agents in Alexandria or Cairo to know what they are quoting for the same goods. If anyone quotes lower than you, he then invites you back and says your competitor has quoted say 5 per cent. less than you, so you anticipate getting the order by quoting some price very slightly lower, and when he has got you down 6 per cent. he promises to make up the order for you and let you have it in the morning, and, if you do not know what this means, you go away with the conviction you have secured a very nice order; but he does the same with the man who has given him the 5 per cent. reduction, to see if he can get another reduction out of him, and this goes on all the time. They cannot appreciate values because they do not, or will not, study them, but they never think of giving you an order for anything without having compared the price in two or three places. There are certain commodities of which they know the market price every day, but it is very seldom you can walk into a dtaler's stores and book an order straight away, for what you quote him. Practically no orders are taken in Egypt by word of mouth.

Drafts and Credit.

The Egyptian interprets "cash against documents" differently from other people. Naturally, when you ship to a client "cash against documents," you think he is going to pay on the arrival of the documents, which, as regards Egypt, get there in six to seven days, while the boat takes about 21 to 25. His interpretation is that "cash against documents" means cash against the arrival of the ship, because the real document is in the captain's possession, and you cannot present it until the boat gets there. Your bills of lading are merely stamped duplicates of the original. It is such a recognised custom there now that when you discount your bills on this side you put at the bottom of your form "Please do not present until after arrival of steamer." There are a few dealers in Alexandria and Cairo who will pay on presentation of docu-

ments; in these cases the money is back in London 17 days from date of invoice.

The question of credit is very serious in Egypt, and the Continent are giving all sorts of credit. My firm refuses to give anyone longer than 90 days. Many of the clients are ready to pay one-third cash, and the balance against 30 and 60, or 45 and 75 days, and naturally we add interest to the drafts to cover this expense. You must calculate, in discounting documents from here, that it costs you a half per cent. per month for bank interest and charges. In one sense there is more risk in selling cash against documents than there is by usance draft, for the reason that the purchaser cannot get the goods until he accepts your drafts, and when he has accepted them and does not pay on due date, they can be sent to protest. If after protest he does not pay you can effect a seizure on the whole of his goods. If you ship "cash against documents" and he does not want to take them up, he simply ignores the bank when they ask for payment and takes no notice. Your goods are left on the docks (unless you ask for them to be stored in bonded warehouses) and you have to pay charges and insurance, and run the risk of demurrage and loss. The Customs have a rather peculiar way of charging if your goods are not cleared from the quay. They do not want you to leave the goods on the quay, so they start by making a charge of say 2s. per day per ton. That remains so for a few days, and then it doubles for the next few days, and so it goes on, until £100 worth of goods have charges amounting to about £30 on them in a very short time. Fortunately, if you have a good man on the other side you can get those charges reduced.

There are something like 300,000 Greeks in Egypt and the Sudan, and they control the produce trade representing tinned goods, salt fish, coffee, tea, etc. General merchandise, hardware, etc., is more in the hands of the Syrians and Italians. The two important business centres in Egypt are Alexandria and Cairo which supply the interior. In Port Said there is a big ship chandlery business and a certain trade in fancy goods is done with the people on the boats.

(To be Concluded.)

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended October 16:—

The arrivals of sultanas are estimated at 24,700 tons, since the opening of the season, and the sales to date are put at 23,200 tons. Closing prices, Smyrna, per cwt. c.i.f., London/Liverpool, type 12, 56s.; type 13, 58s.; type 14, 60s.; type 15, 62s.; type 16, 64s.; type 17, 66s.

The market continues very firm. Transactions during the week have been on a reduced scale. Prices paid show no change on last week's closing level owing to reduced supplies offering for sale. The deficiency is mainly marked in the lowest and very best qualities. Carabournou sultanas are practically exhausted and No. 18 grade is getting scarce.

The arrivals of figs are estimated at 23,800 tons and the sales to date are put at 22,715 tons. The position remains very firm with all arrivals readily absorbed by the demand. There is a marked shrinkage in the visible supplies available.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

THE IVORY MARKET.

Messrs. Hale and Son's report on the quarterly ivory sales held on October 19 and 20 states that they comprised 43½ tons (against 48½ tons same time last year, and 47 tons in July last), viz.: 14½ tons Zanzibar, Bombay, Mozambique, East African and Siam, 4 tons Abyssinian, 7¾ tons Egyptian (Alexandrian description), 15 tons West Coast African and Congo, and 2¼ tons land carriage: also 1¼ tons sea horse tusks and boars' tusks, and ¼ ton rhinocerus horns: total, 45 tons.

There was a good attendance of buvers, and an active demand throughout the sales. The qualities catalogued of all descriptions were small, the total only reaching 45 tons, and of these 16½ tons consisted of lots withdrawn at the previous auctions, there being only about 28½ tons of new import. The competition was good. America and the Continent bought freely, and the Home trade was £3 per cwt. higher. Scrivelloes were steady, ball scrivelloes firm, and smaller sizes and bagetelle dearer. Egyptian was in small supply: soft, steady to £2 to £3 per cwt. higher; hard, £3 to £8 per cwt. dearer. Scrivelloes were steady and ball scrivelloes firm to rather higher for the smaller sizes.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, November 4). (For passenger sailings and dates see advertisement).

Anchor Brocklebank Line.—S.s. Manaar for Port Said, Colombo, Madras, and Calcutta (London, October 30).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, October 27).

British India Line.—S.s. Manela for Bombay and Karachi (London, October 29); s.s. Morvada for Colombo, Madras, and Calcutta (November 6).

Cunard Line.—S.s. Tyria for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also Corfu, Gruz, and Ancona if inducement (Liverpool November 13, Swansea November 16); s.s. Pavia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow, and Swansea, November 27).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (last steamer of the season for Galatz and Braila) (Liverpool, October 30); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, November 20).

P. and O. Line.—S.s. Rajputana for Bombay (London, November 5).

Prince Line.—S.s. Sailor Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, November 10).

Ellerman and Papayanni Lines.—S.s. Lesbian for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume (Liverpool October 30, Swansea November 3); s.s. Dido for Malta, Alexandria, Jaffa*, and Haifa (Liverpool, November 6); s.s. Roumelian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool November 6); s.s. Andalusian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 23); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, November 15); s.s. Flaminian for Algiers*, Malta, Syria, Smyrna, and Constantinople (Liverpool, November 20). * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibralta; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient part; Fiume via Trieste.

Mr. Sydney F. Rogers, the London manager of the Imperial Bank of Persia, has been elected to a seat on the Board. He will retain his post as manager.

Motors and Motoring.

(From Our Own Correspondent.)

The Motor Show.

Semper aliquid novi ex Olympia might well serve as the motto for the Motor Show which opened last week at the famous rendezvous at Addison Road. Now it is one thing, now another; this time the advent of the £100 car must be hailed as the event which will give a hallmark to Olympia of 1926. It spells, of course, in the most liberal sense of the word, motoring for the million, though whether that is a thing to rejoice over or not in view of the already crowded roads in this country is a very moot point. The effect of the arrival of the cheaper car on the export trade is, however, another matter. Among the various disabilities which have hitherto prevented this country from playing the part it should in other markets the question of price has been an important consideration. With cars cheaper all round it may reasonably be assumed that the effect on exports will be appreciable. Judging by the unemployment statistics, trade in every country except our own is now steadily advancing, which indicates an increasing market for motors in the future, and if only industrial conditions here will give our manufacturers a chance the role played by the motor industry in the export trade should be immensely enhanced.

Among other features of the Show which deserve notice is the tendency to have closed bodies of the saloon type. Extra wide doors, more head room, adjustable seats and silent fittings are other interesting developments. Reduction of body weight without sacrifice of girth makes a bigger advance than might appear at first mention, since it has important bearing on the effective use of the engine's power, fuel, oil and tyre consumption and speed. Even now, cars adequately tyred and with the tyres treated fairly are averaging mileages at least double the pre-War rates, though the normal speed of present cars is all round some 50 or more per cent. higher.

Engine Features.

The overhead valve "six" with enclosed rockers and push rods seems now to be first in favour. This type lends itself to such advantages as easy access for adjustment and de-carbonising, limited overall length of cylinder and crank case, and no disturbance necessary of ignition and other fittings to get at the valves. "Eights," with cylinders in line, have a fair vogue among high-grade cars, mainly of imported makes, but the trend of interest seems mainly in the "sixes," probably, to some extent, because there is much less difficulty in installing an overhead six in a normal chassis designed for a "four" with side valves.

The plate clutch, with fabric facing and in the wet or dry forms, seems to have ousted all other types for the light and medium classes of car. The fact may be ascribed to such influences as the prevalent use of the combined and all enclosed engine and gear-unit, its quality for self cushioning under load without expensive mechanical "trimmings," the long life of fabric facings, and the minimum of attention required. The side position of the gear lever has become again fashionable, at least, for British cars, but without the somewhat elaborate and costly interlocking control.

Little change is in evidence as regards steering lay-outs. The complete wheel and worm gear form is being fitted by many more makers, probably as another instance of the provision for cheap adjustment looked for by owner-drivers. The cam and roller form of steering gear has been favoured for balloon tyred cars.

Front hub-brakes have become indispensable because of such factors as the now normal pace of cars, the danger from skidding at speeds, relying on rear brakes; and the lessened wear of shoes by the more equal distribution of the braking load and strains. The problem is to decide the form of control, viz., by rod and crank mechanism only: or by a combination of this mechanism with hydraulic, pneumatic or suction (vacuum).

Coachwork.

From the spectacular point of view the coachwork display forms the chief attraction. It only seems yesterday that the majority of motorists had to be content with an exceedingly open type of coachwork, and cast envious eyes upon the enclosed type. To-day, the word "open" has to be modified; in fact, it should read "convertible," the change being rendered necessary by the fact that motoring has entered our daily life. Hence the great skill and ingenuity which have been effected by the coach-builder in furnishing motorists who like a full volume of fresh air in the summer with a car which gives these advantages, with a vehicle which can be instantaneously transformed into a weather-defying car. An examination of the torpedo type of coachwork with the latest all-weather equipment will reveal what remarkable strides have been effected in this direction. Many new two-seaters take on most graceful lines, their smartness heightened by the colour scheme in which the broad waist line is introduced. The manner in which the dickey seats are built in this type of coachwork is a masterpiece of ingenuity.

Round the Stands.

As usual the stand of the Austin Motor Company is one of the chief features of attraction. The cars exhibited include examples of the Austin Seven, the Austin Twelve, and the Austin Twenty. In the Seven it is noteworthy that the diameter of the brake drums has been increased with a gain in brake power and also in durability. The equipment of this car now includes an automatic wind-screen wiper. An addition to the range of the Austin Twenty is a six-cylinder 23.5 h.p. model.

The exhibits of Morris Motors, Ltd., have a special interest for readers of THE NEAR EAST AND INDIA, for this firm has for some time past been making a special and

most praiseworthy effort to obtain a substantial footing in the markets of the Near and Middle East. One might almost indeed describe the firm as the spearhead of the British motor industry in those markets. Three important improvements are to be noted in the Morris-Oxford and the Morris-Cowley cars. A new flat-fronted radiator has been adopted, altering the appearance of the cars and giving the straight line so popular with motorists. Then the design of the frame has been changed, and finally an all-steel dash is now fitted on the models. The cars shown include examples of the 11.9 h.p. Morris-Cowley and the 14-28 h.p. Morris-Oxford. The frame of the cars is of improved design, being upswept over the rear axle, and the new radiator has a cooling surface more than 60 per cent. larger than the old type.

Cotton and Cotton Goods.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended October 20:—

Egyptian Futures.—Sakel Contract.—During the week this market has given evidence of the increasing pressure of the crop movement, with the off-take limited to a great extent to short covering on the down scale and a moderate amount of trade support; fresh offerings throughout have induced a decidedly easy tone, with the result that prices have consistently fallen away, to-night's close showing losses of 37 to 57 points for near and 58 to 67 points for more distant positions. The recent reactionary tendency of the American markets has also contributed in some degree to the weakness displayed, but, with our contract showing the greater decline, the straddle difference has fallen in, the January options in the respective markets standing at 620 points at to-night's close. At the ruling level, and under present conditions, our premium appears excessive and may be materially reduced as the season becomes more advanced. Trade reports continue to show a gradual improvement and spinners are beginning to operate with greater freedom. Latterly, a good business in Sudan Sakel has been in evidence and this should curtail in some measure the demand for early new crop Sakel shipments, the stock of the first-named cotton still held here amounts to about 50,000 bales. Probably, buoyed up by hopes of Government intervention on a large scale the Alexandria market showed considerable resistance before breaking through 27.00 dollars. To-day's reports showed the lowest level of the week, and cables just to hand attribute the weakness to general disappointment with the following official declaration: "Government Commissioner reports Government will advance four million pounds growers of five to two hundred kantars twenty-two half dollars Sakel fifteen Ashmouni." A later report from the other side states that their market was discouraged by the above decision, also that the heavy receipts and poor trade demand contributed to the weakness. We still consider that lower prices will be witnessed as the weight of the crop comes on the market, but, at the same time, admit that prices have now worked down to a level that compels a certain amount of caution on the "Bear" side.

Egyptian Spot.—Affected by the weakness of the various futures markets, the price of actual cotton has continued to decline steadily, and a considerable amount of buying, chiefly of Sudan cotton, has been induced during the past week. There can be little doubt that confidence is gradually returning, and, once the handicap of the protracted coal dispute is removed, the prospect for the ensuing season will be unusually bright. The local stocks of pure Egyptian cotton are, of course, at an extremely low ebb at the moment, and although a little new crop cotton is finding its way here, the bulk of it is Upper Egyptian, and spinners have been compelled to turn to the excellent selection of Sudan Sakellaridis which is to be found here to tide them over until their early shipments of new crop Sakel have time to arrive. Although for "pocket" orders the basis of this Sudan cotton has remained very firm, where the placing of a "line" is in question, buyers are generally met with reductions. Almost every day now this cotton is introduced into fresh mills, and up to date not a single complaint has been received, a fact which speaks for itself.

The inquiry for Sakellaridis has been chiefly concerned with the "off" and the "inferior" qualities, very little business having been reported in cotton over Good Fair in quality. Pilion at from 12d. downwards has been in comparatively good request, and a fair business has been done. Uppers at from 11¼d. downwards have continued in good request, but the market has been well combed of this class of cotton and new arrivals will be eagerly welcomed. White Sudan at from 75 to 200 on has been in fairly good request, but not so much so as has recently been the case. C.i.f. business, on the whole, has been quiet, but spinners are gradually commencing to take more interest in cotton to arrive. Forwarding to spinners for the week ending 15th inst. were returned as 5,854 bales Egyptian and 2,829 bales Sudan. Estimated sales 1,300 bales Egyptian and 6,350 bales Sudan. Quotations of Sakellaridis have been reduced 25 to 65 points and those of Upper and Brown 40 points. F.G.F. Sakel to-day, 14.90d.; F.G.F. Upper to-day, 10.95d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended October 14, state:—

Since our last report the futures market has been very active and fluctuations have been wide, although on the week prices show very little change. The week's summary of price movements is as follows: Sakellaridis, November, 28.35 dollars, 0.03 dollars up; January, 27.80 dollars, 0.10 dollars up; March, 27.65 dollars, 0.05 dollars up; May, 27.55 dollars, 0.05 dollars up. Ashmouni: October, 18.07 dollars, 0.10 dollars down; December, 18.30 dollars, 0.05 dollars down; February, 18.50 dollars, 0.05 dollars down.

Sakellaridis.—We have had a series of excited markets but the attempt of the bull element to sustain prices has not met with much success. Each day at the opening of the market, the rumour of early Government intervention has been current, and on these rumours the small local speculators have been buyers, only to liquidate later on in the morning when it was evident that the anticipated intervention was not going to materialise that day. On this question of Government intervention nothing official has been published to date; the Government is discussing the subject but it seems that not all the Ministers are in favour of intervention; in the meantime the big growers and other interested parties are doing their utmost to induce the Government to enter the market again. The demand from abroad, although showing a slight improvement on last week, is not by any means good; most of the orders received are for prompt shipment, which may be taken as an indication that spinners have little confidence in the present level of prices. The latest crop news is favourable and prospects are for a yield appreciably larger than was anticipated on the basis of conditions ruling a month ago. The Government has just announced that they will put up for auction on 20th instant 743 bales cotton of the 1925 crop of the State Domains; this seems to be a wise decision on their part.

Uppers.—At the second October tender, 1,250 kantars dockets were issued, making a total of 2,750 kantars for the first two October tenders. Our opinion on the market, as regards both Sakel and Uppers, has not changed. We still think prices are too high; we base our opinion on the fact that supplies are in excess of spinners' requirements and, under these circumstances, it is reasonable to look for some further decline under the weight of the increasing arrivals. The week's receipts amount to 245,338 kantars, against exports 52,607 kantars; the stock in Alexandria is 1,588,891 kantars.

Spot.—During the past week we have had active

Digitized by Google

markets at Minet el Bassal with an improving demand. Sales for the five business days amount to about 20,400 bales, of which we estimate 5,900 bales Sakellaridis, 12,300 bales Uppers, 1,300 bales Zagora, 700 bales Pilion, 200 bales White and a few bales of Brown. The crop movement continues freely and the weight of cotton arriving from the Delta is increasing daily, and the selection of Sakel offerings should improve from now on. The State Domains are offering at auction on the 20th of this month a portion of their 1925 crop.

Sakellaridis: has met with a fair demand for all qualities except the very low grades. Spot differences are without much change with the exception of Fully Good and better which, owing to a moderate but sustained demand, are a little dearer.

Ashmouni and Zagora: have once again attracted the greater part of the demand, and a good business has been done in all styles, with medium and lower grades in specially good request. Spot differences are generally a little stiffer and there is at present sufficient demand to maintain existing parities.

Pilion: A good business has been done, chiefly in the better qualities.

Brown: A few bales were done early in the week but this growth is not in favour and, in any case, only exists in very small quantities.

White: has been in rather more demand without much change from last week's differences.

Crop 1926:—Crop news this week has been favourable, and everywhere the crop has benefitted from the better weather conditions of the past couple of weeks, so that results are expected to show a considerable improvement on what was anticipated. Basing ourselves on present information, at the same time, however, laying stress on the fact that a crop estimate this year is more difficult than ever by reason of the great variations in yield from field to field, and also because of the uncertain figures of acreage planted under cotton, we estimate the total crop at about 7,100,000 kantars, of which Sakellaridis 3,100,000 kantars, Ashmouni and Zagora 3,350,000 kantars, Pilion 500,000 kantars and "Various" 150,000 kantars. This estimate is a preliminary one and subject to modification later.

A recent development of interest to travellers to the Near East and India is the expansion of the American Express Company's organisation. Offices which issue travel tickets by rail and sea, arrange inclusive tours, handle travellers' baggage and provide complete banking facilities have been opened at Colombo and Singapore. With offices already established at Calcutta and Bombay as well as at Cairo and Jerusalem, the American Express is able to offer at its London office most reliable advice and guidance on travel to Eastern countries.

British Consular Reports

III.—EGYPT.

(Continued from page 470.)

British cars of medium power have not, as yet, made much headway, but in competition with foreign light cars British penetration is quite noticeable. Car imports from Germany increased during 1925, but it would seem that a fairly large proportion of them are still in stock. Imports from Belgium fell away during the year under review. The handsome high-powered British cars imported during 1925 were almost all purchased in the United Kingdom by visitors from Egypt, and the same applies to the most expensive Continental makes purchased in France and Italy by local residents during their annual holidays.

Although a modest increase has taken place in the import of British cars and lorries, it is none the less rather unsatisfactory that foreign makes of cars, which are by no mean superior in quality and efficiency to their British rivals, should sell with apparently little effort to buyers of all nationalities, whereas the majority of British cars are purchased by the British community. However patriotic this community may be, they constitute, both numerically and financially, a limited market, and it is therefore the opening afforded by the other communities that requires to be developed by the United Kingdom manufacturer. To accomplish this he must revise his selling organizations, service depots, etc., and fall into line with his successful foreign competitors. Showrooms require to be opened in prominent thoroughfares, (on the lines of the local establishments maintained or subsidised by American and Continental manufacturers), and, at least, a good proportion of the capital expenditure involved by the adaption and equipment of suitable premises for this purpose should be borne by the British manufacturer, instead of leaving it all to the local agent. As a rule no fault is to be found with most of the British agents in Egypt; but they cannot be expected to compete successfully with strongly established and well supported foreign interests unless they are given some material assistance by their principals. In spite of some dissatisfaction at the low prices of cotton during 1925-26 season, there is plenty of money in circulation, and, given sufficient enterprise, intensive advertising, and adequate support of their agents, etc., British manufacturers should be able to obtain a larger share of this trade than they at present enjoy.

Up to the present time the taxi-cab organizations in Cairo and Alexandria have used mostly Italian, and to a lesser extent, French cars; there are, a few privately owned large British touring cars which are used for tourist services, but these are all old models. The majority of motor omnibuses used in Cairo and Alexandria are considered by most Europeans to be a disgrace to such large cities. They mostly consist of unwieldy bodies on Ford chassis, which, although quite useful on the rough provincial roads, are hardly suitable for city work; and a few of them are converted cars formerly used for military purposes. Some of the recent additions are more up-to-date, but they are much inferior to the large English models specially designed for this particular class of traffic.

Total imports of motor cycles from all countries amounted to 265 valued at £E12,814, as compared with 262 worth £E15,483 in 1924; the British share being 159 valued at £E8,042 as aginst 179 worth £E11,263 in 1924. A number of French and German light-weight machines appeared on the market during the year, but sales appear to have been limited.

Imports of bicycles decreased from 3,697 valued at £E17,761 in 1924, to 2,061 worth £E9,294 in 1925. France has wrested the premier position from the United Kingdom, although her imports decreased from 992 to 981, while British imports fell from 1,245 to 711. German imports, however, declined on a much larger scale, viz., from 1008 in 1924 to only 120 in 1925. Italian trade remained constant, 217 machines being imported during the year valued at £E1,373, as compared with 216 in 1924 worth £E1,429.

Textiles.

Generally speaking the falling off of purchases of cotton piece-goods may be attributed to the depression in cotton prices, which invariably results in increased sales of cheaper Continental goods at the expense of better quality articles of United Kingdom manufacture. The cotton piece-goods trade for the year under review was far from satisfactory. In cases where profits have been made at all, results by no means justify the large amount of capital required to carry on this trade. The year opened on a quiet market, which was hampered during the first few months by heavy rains in the interior. Up to the month of March, 1925, or the period just preceding Ramadan, demand, though regular, was of small volume, and buying was limited to the supply of immediate requirements only. The summer months produced little activity and encashments as is usual at that season, were poor. In the meantime, on account of satisfactory reports as to the state of the local cotton crop, importers had booked large orders in anticipation of a good season. In September manufacturers began to reduce quotations slightly owing to the lower tendency of American cotton and the reports that were then beginning to be received of a record crop in the U.S.A., and fairly large orders were booked. Encashments, however, continued throughout the past financial year to be extremely difficult.

In spite of home quotations, importers endeavoured to maintain their prices, but with another considerable drop in the price of American cotton during October, substantial cuts were made in the home market, with the result that local importers had no choice but to follow suit. In some cases goods were sold below cost of production in Manchester. This state of affairs continued, further reductions being made, until the end of the year, with the result that importers found themselves at the beginning of 1926 with heavy stocks in hand, and after taking their goods into stock on about a 25 per cent. lower basis than their purchase price, merchants able to close their books on the right side were not numerous.

During the latter part of the year goods continued to arrive in increasing quantities which, instead of being consumed, went to swell the already heavy stocks in bond and private stores. There were actually 18,561 cases in bonded stores at the close of the year, as against only 6,828 at the opening of 1925. Recent hostilities in Syria may also have been responsible for a considerable share of the accumulated stocks, but the main factor which crippled the market was, undoubtedly, the sudden decline in the value of raw cotton.

Competition from Italy and other Continental sources was keen, and seemed to establish itself even more firmly

JOHNSTON LINE

Digitized by Google

during the year, but in November and December competition weakened and, in spite of bad conditions of trade, merchants are now looking more to Manchester than they have done for some considerable time, mostly owing to the low prices ruling for grey cloth. One reason for the weakening of foreign competition was that Continental firms were fairly well booked up with orders and did not reduce prices to the level of Manchester, with the natural result that merchants turned thither for the original Manchester styles. Foreign competition, however, has not been inactive, as Continental firms have recently returned to the market with goods for next winter season, especially raised-back qualities and flannelettes · but these do not appear to have found their customary ready sale, owing to the fact that a number of importers have again purchased these styles in Manchester. The Italian "Scotch" (woven) which sold so widely during the last three years, is, it is said, declining somewhat in quality, but Italian manufacturers are bringing out new styles of woven goods, frequently mixed with a certain amount of artificial silk, which are fairly cheap and attractive. It is feared that when Manchester prices begin to rise again, the tide may turn in favour of Continental rivals.

Artificial Silk Goods.

The market for silk and artificial silk goods remained practically constant. France dominated the market in practically all lines of silk goods with the exception of shawls and handkerchiefs, of which Italy and Japan were the most important suppliers, while China was a keen competitor in the silk cloth trade. Considerable quantities of artificial silk goods of Italian manufacture, and also, to a lesser extent, French and Czecho-Slovakian, appeared on the market, but so far these goods have not found the wide sale which was originally expected for them owing to the rather high prices asked. The fact that many local merchants of standing have ordered wide ranges of samples appear, however, to foreshadow increased activity in that direction.

There has been a decided increase in the import of mixed textiles, known as silk, the total trade amounting to £E182,691, or an increase of £E46,888 over that of 1924.

Although to a certain extent the factors responsible for the unsatisfactory condition of the cotton piece-goods market were also applicable to the woollen trade during 1925, the later suffers from the added disadvantage that, while the principal importing houses of cotton piece-goods possess their own buying offices in Manchester and their own distributing centres in Egypt, the manufacturer of woollens is compelled to sell through agents, practically all of whom hold foreign competing agencies. Up to October the United Kingdom's share in the trade in woollen piece-goods was comparatively satisfactory, but from that month up to the time of writing, conditions have become much more difficult. A not unimportant factor in this state of affairs is the fact that French and Belgian firms have taken to quoting in shillings, with the result that owing to the fall in their currency, they are often able to underquote their British rivals.

In such lines as 16/17 oz. serges, fancy suitings, wool venetians, and brilliantines, United Kingdom firms still hold the market, and it should be observed that, owing to their superior quality, practically all lines of United Kingdom woollens are preferred provided the price is within about 10 per cent. of foreign offers, but in the cheaper lines the Continental quotations are usually so much lower than those of United Kingdom firms, that Italy, France and Belgium secure the largest shares of this trade.

Italian competition was the most severe in most lines of woollens. French supplies did not increase to any extent, but Italy continued her forward movement, and another serious competitor, namely Belgium, has now appeared on the scene. Czecho-Slovakian and German competition weakened during the year. French and Italian competition was largely in Botany coatings up to 16 oz., fancy coatings, and "Imperial" cloth.

Mining Industry.

The industry as a whole was fairly active, and it can now be confirmed that the worst effects of post-War depression have been overcome.

The quarrying industry was increasingly active owing to activity in the building trade and also the demand for new roads. Stone for buildings and road material, sand and gravel for concrete work, gypsum for manufacturing plaster, and clay and other materials for brick-making, were all in great demand and realised good prices. Petroleum and manganese were steady; phosphate showed improvement, and prospects for 1926 are brighter; better prices having been maintained.

More interest is being shown in prospecting than for several years past and this is expected to continue; but although no new sources of petroleum, manganese or phosphate were brought into production during 1925, there is reason to expect increases in output of these minerals in 1926.

Railways.

The conversion of the Luxor-Shellal section of the Egyptian State Railways from narrow to broad gauge is making such good progress that it is hoped to have the whole 230 kilometres open for traffic by November 1, 1926. The effect of this change will be to shorten the duration of the journey from Cairo to Assuan, as it will no longer be necessary to change at Luxor, and eventually to speed up the journey from Cairo and Khartoum.

Steaua Romana (British), Limited, are advised that Steaua Romana Well No. 38, on lands at South Moreni, recently acquired from the Roumanian Government, came into production on October 12 and has since been producing about 1,000 tons daily. This well is in close proximity to Steaua Romana well No. 39, which came into production a month ago, and is now flowing steadily 240 tons daily.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

An Asian League.

The visit to Angora of Dr. Alfred Sze, Chinese Ambassador to Washington, who has been spending a few weeks in Turkey, is held to confirm the belief, encouraged by recent conversations in Moscow between the Chinese Ambassador to the Soviet Government and the Turkish Ambassador to Persia, that Turkey and China are contemplating some formal agreement. There have been many indications that Soviet Russia is anxious to cover up the failure of her intrigues in Europe with something in the nature of an Asian League of Nations, and it is clear that, if the Moscow Government urges the point very strongly, few States in Asia will have the courage to refuse to have anything to do with the scheme. It is certainly not in the interests of either China or Turkey at the present moment to incur Soviet hostility. Consequently they may be expected to go as far as they conveniently can in the direction in which Moscow is pushing them. What practical advantages they hope to gain from a paper agreement is not so apparent; but other countries outside Asia are displaying a sudden zeal for colourless treaties, and it is not a matter for surprise, if Asiatic countries imitate them. Both China and Persia are members of the League of Nations, but that fact does not prevent them from lending themselves to the introduction of the Locarno principle into Asia. If the former, as Dr. Sze expressed it in Constantinople, is still struggling under a foreign yoke, she has herself largely to blame. The Chinese Republic has been in existence for fifteen years; for half that period the country could have counted upon strong support from without in any practical proposals for emancipating itself from the "foreign yoke," but the Chinese have preferred to live in a condition of almost uninterrupted chaos all the time. What Dr. Sze probably did not impress upon his audience was that, had it not been for the foreign, more particularly British, control of the Chinese Customs and Salt Gabelle, China would not have the pretensions that she can claim to-day to being regarded as a unit in the comity of nations. There would be no authority in the country to-day able to defray the expenses of Chinese Embassies abroad. The anomaly of the position in China in relation to foreign countries remains, it is true, but the fault, as Dr. Sze himself knows very well, rests largely with his own countrymen. It will be an ill day for Turkey, if out of pique against Europe she lends herself to the infiltration of doctrines and methods that have brought China to her present sorry pass.

Elections in Greece.

Whatever the ultimate verdict on General Kondylis's intervention in Greek politics may be, he will have to his credit that the general election next Sunday, during his régime, will have been conducted under better auspices than could have prevailed at any time since 1922. At the elections of December, 1923, the Royalists abstained from the poll, as much from the conviction that the electors would be subjected to undue influences as in protest against the events of the previous year. This time they are not only able to count on free elections, but they are also taking full advantage of the freedom of speech allowed them to state their views with candour to the electorate. Greece has advanced so far from the stage at which it was thought advisable to make any public reference to the relative merits of Republic and Monarchy a penal offence, as to realise that the best hope for the republican system lies in open discussion of the subject. All parties have come round to the view that no good can be expected of a system of government based on a catch vote. The Republic was established in the first instance

Digitized by Google

at the arbitrary insistence of the Revolutionary Committee and was endorsed by the electorate under similar pressure. The Royalists, however, have wisely decided that, even though, in their opinion, the country remains royalist at heart, a sudden reversion to-day to a Monarchy would not make for political stability. Accordingly, M. Tsaldaris, leader of the Royalist Popular Party, has declared that his party does not propose to make, directly or indirectly, the restoration of the Monarchy a question at the General Election. In spite of such declarations, however, the republicans are evidently aware that the foundations of the present system are far from strong, for they are anxious lest a Royalist Government should submit the question to the free vote of the people. General Kondylis, in spite of his claim to be above party, is leaving nothing to chance. When magistrates reversed his decision not to allow anyone associated with General Pangalos's Administrations to stand as a candidate at the coming elections, he dismissed the magistrates, cancelled their decisions and then, to prove the strength of his devotion to constitutionalism, reinstated the dismissed magistrates. A week before the general election, although above party, he issues a manifesto in order to weight the scales as much as he can against the Monarchists.

France and Syria.

For the second time the French authorities would seem to have peace with the Druses and a general pacification of Syria within reach. The last occasion was shortly after the arrival of M. de Jouvenel, who sacrificed his chances of a settlement by refusing to include the insurgent chiefs in an amnesty. His successor, M. Ponsot, has now received a visit from a prominent member of the Atrash family, who is believed to have come not only to make his own submission, but also to explore the ground for the negotiation of a general surrender. This time, it may be expected, the French Government will be prepared to offer more generous terms. Although the Druses may be still able to continue the struggle they must realise by now that the French are masters of the situation. To this extent, therefore, French military prestige has been re-established, and France can afford to offer to a stubborn foe terms that can be accepted without loss of honour. The change that is gradually coming over public opinion in France in regard to Syria is indicated by the fact that so little resentment is felt over the open canvassing of a possible deal with Italy regarding the Syrian mandate. Even if the stage of serious negotiations on the subject should ever be reached, the difficulty of adjusting the claims of both parties might prove unexpectedly great. France, it would be imagined, would be in a stronger position, if she had Syria not only pacified, but also already launched on the path of stable government. Whether this is to be attained by the spirit of *Divide et Impera* which has been the French policy so far is another matter.

Abyssinia and the League.

In the current issue of the *Fortnightly Review* the writer of the interesting articles on Abyssinia's connexion with the Holy Places at Jerusalem that are appearing in THE NEAR EAST AND INDIA links up the Abyssinians' claim for the restitution of the Church and monastery at Jerusalem that formerly belonged to them with the question of Lake Tana. He expresses the hope that, as the League of Nations has been made cognisant of the Anglo-Italian agreement of last December and the Abyssinian protest against it, it will take advantage of the dispute to establish the principle in international law that a member of the League cannot justly refuse a purely economic concession in favour of a neighbouring State when vital interests are dependent on that concession. At the same time Mr. Devine would gild the pill for Abyssinia—he recognises that Ras Taffari's protest was dictated merely by reasons of domestic policy—by the simultaneous settlement of the Abyssinians' claim to the portion of the Holy Places at Jerusalem that formerly belonged to them. It is commonly supposed that one effect of the Anglo-Italian Agreemene has been to destroy, or to postpone for an indefinite period, what slender chances, if any, there may have been before of securing Abyssinia's acquiescence in the building of a dam at Lake Tana. To bring that work into the region of practical politics, therefore, it will be necessary to reopen the question "in the light of new evidence." The final settlement of the ownership of the different portions of the area comprised within the term the Holy Places at Jerusalem would, undoubtedly, provide the requisite "new evidence." In this matter, however, it would seem as if the British Government could, of its own accord, make the necessary move, if it wished to do so.

Italy and the Yemen.

The published version of the Treaty concluded on September 2 between Italy and the Imam Yahia of the Yemen is an indication of the thoroughness with which Italy is at present seeking for outlets for her trade and emigrants. She has long been active on both sides of the Red Sea, and the potentialities of the Yemen have been familiar to her representatives in that part of the world. It is perhaps, not without significance that she should, only now, have concluded a treaty with the Yemen, a few months after the failure of Great Britain to regularise her relations with the Imam Yahia by written agreement. While Italy has been content with a colourless document, which does little more than provide for the continuation of what has been taking place for many years without treaty sanction, the British Government sought to make a general treaty of friendship an occasion for settling an acute boundary dispute. A few years ago tribal exigencies prompted the Imam to occupy some of the territory in the hinterland of Aden which is nominally under British protectorate. He was invited to withdraw, but the necessary steps to enforce the demand were not taken. There is no reason to suppose that relations between the Yemen and Great Britain are affected in any way by this *impasse*. The Imam was prepared to sign a general treaty of friendship and co-operation, but on the point of evacuating territory that he had seized he was adamant. As if to bring home to Great Britain that other Powers are anxious to be his friends, he has lost no time in rewarding the Italians, then waiting on the palace steps at Sanaa. Sooner or later the British Government will have to decide whether it will give away with a good grace what it does not hold and is not prepared to retake or will allow its rightful place in Arabia to be usurped by others. If the obvious step is taken before long, it will be found that the Italian treaty interposes no difficulties in the way.

THURSDAY, NOVEMBER 4, 1926.

PERSIA'S NEW REGIME.

Nearly a year has passed since the change of dynasty in Persia took place. The period in ordinary circumstances would not be long enough to allow judgment to be formed of the achievements or capacity of the new régime; but the Shah had not to wait until he mounted the throne, in order to show what his exercise of supreme power (under whatever guises it might be wielded in the course of six or more years) could accomplish for the country. Stock-taking in Persia to-day, therefore, inevitably tends to compare the course of events during the last eleven months with the Sovereign's own record before he assumed the royal title. The most noticeable feature of the current year has been the frequent challenge to Shah Pahlavi's authority—a feature almost wholly lacking during the latter period of his Prime Ministership. Not only has a blow been struck for the Qajar dynasty by Salar ed Dowleh, but a mutiny in north-eastern Persia also called for the personal intervention of the Shah, and more recently the discovery of a plot against his life suggests that his enemies are at work nearer the centre of things. No less significant is the recalcitrancy of the Majliss, which seems less amenable to the personal influence of Riza Pahlavi now that it has to be exerted from the exalted distance of a throne. Under the old régime the difficulties in the way of harmonious co-operation between the Court, subservient to an absentee monarch, the Government, under a masterful Prime Minister, and Parliament, bent more upon asserting its rights than rising to its responsibilities, were obvious. When, however, Court and Government were merged, for all practical purposes, in one person, and Parliament virtually owed its existence to the same man, it was reasonable to expect that the three Estates of the realm would be able to work together. Yet this desirable consummation is far from having been reached. The Majliss made no attempt to disguise its hostility to the Shah's advisers; only under threat of dissolution did it finally accept Mustofi el Mamalek's Cabinet, and it has shown little inclination to help him towards the realization of the very ambitious programme that he announced on taking office. All these unfortunate symptoms may be nothing more than the growing pains of new Persia. In their cumulative effect, however, they must be embarrassing for the Shah, who has not the same variety of weapons of defence as he had as a Persian subject, however highly placed. A Prime Minister can retire into private life on his own estates, until an ungrateful country learns that it cannot do without him; if opposition to the Shah becomes too strong for his peace of mind, he may find no refuge for his outraged dignity nearer than Switzerland.

In no country is the hope entertained more sincerely than in Great Britain that Shah Pahlavi may yet succeed in bringing to fruition the very remarkable developments that have taken place under his aegis in Persia. The handicaps under which the country suffered when, as Riza Khan, he first came into prominence might have daunted a man of less courage, ability and energy. If the American Administrator-General of the Finances of Persia is the hard-headed business man and dispassionate observer that he is credited with being, his judgment on present conditions as a result of the few years' control introduced by Persia's strong man is a wonderful tribute to the Shah's services to the country. "From an economic and financial viewpoint," Dr. Millspaugh wrote early in this year, "the situation is most encouraging. Constitutionalism seems firmly established. The Parliament is pre-eminently interested in the economic development and social welfare of the country and has already approved a body of sound and beneficial legislation. The Government shows convincing evidences of stability. National unity is increasing. Order and security exist throughout the country. The American financial mission receives in the course of its work a satisfactory measure of governmental and popular support. Funds have now been provided for fundamental economic projects. Revenues are increasing; government expenses are paid regularly under proper control; the public debt is decreasing, the export trade shows a healthy growth. In the absence of international complications, which seem improbable, it can be confidently anticipated that there will be no halt in the remarkable progress under way in Persia." Whether Dr. Millspaugh will be able to report in a few months' time that the events of the intervening year have endorsed his striking eulogy remains to be seen. That Persia has still a long way to go before either she or the Shah can afford to rest on their laurels is indicated by the fact that the cost of the Army and the maintenance of internal order amounts to nearly half the total of the Budget—a solecism to which Dr. Millspaugh does not call attention. His efforts to create and collect the revenue of the country have been crowned with success; but the ultimate test of national prosperity must be the prosperity of the peasantry, and it is not yet apparent that the individual peasant, except in regard to general conditions in the country, is conspicuously better off than he used to be.

For some years now circumstances have compelled Great Britain to be a somewhat distant, though interested, spectator of Persia's development. Under the effete Qajar dynasty it was inevitable that British sympathies should be with constitutionalism as against autocracy; but the rôle that Great Britain played in the country was complicated by the necessity of an understanding with Russia in the interests of the world's peace. Nationalism proved too strong a stimulant for Persia to enable her to distinguish between the underlying principles of British and of Russian policy, and Great Britain withdrew when she found that her motives were neither understood nor appreciated. Under the new régime associated with Riza Khan and Riza Shah Pahlavi a clearer understanding of the British attitude towards Persia has been obtained; but apart from the personal sympathy with the ruler engendered by a common desire to see the country attain settled conditions and an era of material and cultural development, there has been no definite renewing of links between Great Britain and Persia. Yet it should not be difficult to bring home to the Persians that British policy is not to be identified with any one man or group of men, but seeks only to be of assistance in promoting the well-being of Persia as a whole by whatever agencies that may be attained. The difficulty is to discover by what means the Persians are likely to work out their own salvation. That it will not be by the old official class is certain. Whether the younger men can make good must depend largely on their attitude towards Russia and towards Great Britain. Persia is a poor country and cannot make up the ground that she has lost in past centuries without help from outside. If she favours a Russian orientation, she cannot expect British help; if she shows a predilection for British methods, she must cut herself adrift from all coquetting with Soviet doctrines. The sooner her young men make up their minds on the point the better.

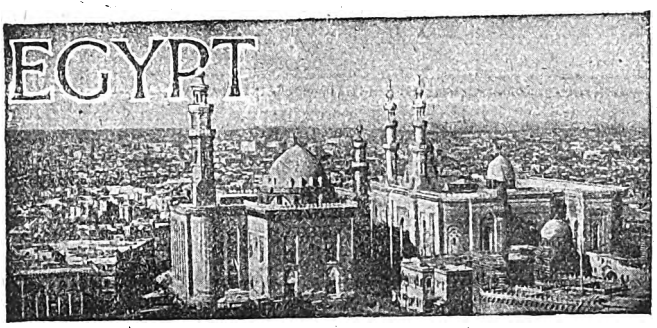
The Near and Middle East*

From Our Own Correspondents.



Cairo, October 23.

The British Fleet and King Fuad.

The British communities in Port Said and Alexandria, especially the latter, have had a full fortnight as the result of the visit of H.M.S. Warspite, Royal Oak, and Resolution. Not a day has passed without entertainments either on land or on board ship, and if the officers and the crews enjoyed themselves only half as much as did the many hundred guests whom they entertained their visit must have been a most pleasurable one. On the day before the ships left on their return to Malta, Admiral Sir Roger Keyes and his staff entertained King Fuad at luncheon on board the Warspite, the other guests included the Acting High Commissioner, Mr. Neville Henderson, and the Prime Minister, Adly Pasha. His Majesty was taken on board in a special pinnace. He was greeted with a salute of 21 guns and a Grand March Past of the crew was held in his honour. During his stay on board the Egyptian flag was flown and on his departure the crew manned ship and gave him three cheers. It was altogether a brilliant affair, and King Fuad expressed himself delighted.

The Cotton Crisis.

As the cables will have informed you the Egyptian Government has at last come to a decision in regard to the local crisis created by the slump in cotton prices. It has declined to accede to the insistent request—one might almost say order—of the Agricultural Syndicate, which consists of some of the largest landowners, to intervene once again as a purchaser on the local market, but has placed £E4,000,000 at the disposal of the banks for use as advances against cotton to the growers on very easy terms and without the conditions which the banks usually impose.

There is little doubt that the Government has acted correctly in not buying cotton. Last year, acceding to a similar demand from the same Syndicate, the Government purchased 500,000 kantars, and not only did this purchase not have the desired effect of raising and maintaining prices, but also the cotton is still in the hands of the Government, weighing heavily on the local market as part of the visible supply, and the Government is already faced with a loss of £E1,000,000 on its outlay.

People in this country have always been so accustomed to look to the Government for assistance whenever the slightest trouble has arisen in any branch of economic or financial activity that they are quite unable to grasp the fact that, whatever justification there may have been for Government purchase in previous years, the causes of the present crisis are so world-wide that no arbitrary action such as the holding up of part, or even the whole, of the Egyptian crop would assist in even alleviating the situation. Egyptians have also come to believe that the Egyptian crop is unique, and that the spinners cannot get on without it. Had they maintained the quality at the level at which it was even a decade ago, Egyptian cotton might still hold its own. But annually the proportion, which could be used for the special lines for which big prices are paid, has been decreasing, and to-day, on the one hand, a large proportion of the Egyptian crop has to compete directly with crops grown in other parts of the world and, on the other hand, many users of special Egyptian cotton have been compelled to convert their machines to other varieties and qualities. In consequence of this and of the fact that prices the world over are reaching a more reasonable level, Egypt must make up her mind that her crop can no longer, generally speaking, command the high prices which have been obtained in past years and that from now onwards she must content herself with a proportionately lower return.

All this means a drastic readjustment of the standard of living in the country. Everyone, landlord, owner-cultivator and tenant-farmer has based his rate of expenditure on high cotton prices. Luxury has spread in every direction. Motor-cars are to be seen in the most remote parts of the country. There has been a steady drifting into the towns where buildings have been erected, and are still being erected, at great cost to accommodate the increasing urban population. The reduction in the value of the cotton crop must necessarily entail a general tightening of purse strings. Agricultural rents must certainly come down from the almost fabulous heights to which extravagant landlords and over-optimistic tenants have allowed them to be pushed. And in the process of readjustment to the new conditions, which have come to to stay, we must expect for some little time something in the form of a financial and commercial crisis, though it would be wrong to be pessimistic about the outcome.

A Coptic Persecution.

We have heard during the past three or four months a great deal of the persecution of Coptic officials and of those known to have been on friendly terms with their British colleagues. That there is something in these statements would appear to be indicated by the affair of the head of the Stores of the Ministry of Agriculture, a

young Copt, for whom all the Englishmen who have served in that Ministry have always had the most friendly feelings. The charges alleged against him are not only ridiculous, but such as no impartial body of men could listen to, let alone discuss. Yet he has been found guilty and degraded. The account of the hearing of this case and of the attitude of the Council of Discipline towards the admission of evidence for the defence, which has become available, constitutes an amazing revelation of the lengths to which religious persecution and political animosity can be pushed in this country.

IRAQ.

Baghdad, October 21.

A Frontier Commission at Zakho.

The recent Turko-Iraq Treaty, fixing the frontier in accordance with the recommendations of the League, provides for the setting up of two Commissions. The first, which by its nature is to meet once only and for a single duty, will demark the frontier definitely and finally. The second is to be a standing body, which will meet—alternately on Iraq and Turkish soil—at six-monthly intervals for two years. Its object is to secure, by inquiry into frontier incidents and by removal possible causes of misunderstanding and friction, the *bon voisinage* so readily undertaken and glibly praised even by the States whose actual record as neighbours is not unblotted.

The first meeting of the second Commission was fixed for September 18, by which time the Iraq delegation—consisting of the Mutasarrif and the (British) Administrative Inspector of Mosul—had prepared a long agenda, sheafs of documents, and the last refinements in maps. The Turks, however, without explanation, secured an adjournment by merely failing to appear, and have kept the Mosul authorities in hourly expectation of their arrival for the last month. Two days ago—at a moment, as it chanced, when your Correspondent was in Zakho upon his lawful occasions—a telephone message arrived from the Iraq frontier post of Darnakh that the Turkish delegation had been sighted.

It turned out to consist of the Wali of Julamerk, the General commanding the 2nd Division, two or three frontier Qaimmaqams, a Secretariat, and a somewhat embarrassing number of armed men. The success of this first session should on the one hand be certain, as no serious frontier incidents have recently occurred and their occurrence can indeed be kept within reasonable limits providing that the *bon voisinage* is the real aim of the Governments concerned; on the other hand, such meetings are at the mercy of personalities, and a Turkish outstation Wali may be one of various types. The next meeting, six months hence, will be on Turkish soil, probably at Julamerk.

Over the Border.

On the present occasion the Turks, although they will penetrate no more than a few miles into Iraq, may see things significant of conditions in Iraq profoundly changed since it was last Turkish: the suspension bridge over the Khabur, a battalion of the Iraq Army, smart and well-equipped Police, a well-tailored Qaimmaqam, and no mean feat of road-engineering in the highway which connects Mosul with Zakho across the Pass.

Condition of Christians.

Not the least significant of the differences to be noted by His Excellency of Julamerk will be the treatment of Christian Minorities. The settlement in the Mosul Liwa of the thousands of Assyrian, Nestorian and other genera and species of hill-Christians has been and still is a delicate problem for the Iraq Government. Very large sums of money have been expended, ever since the first rescue of these unfortunates from massacre and starvation in 1917; successive attempts have been made, with partial success, to find them homes in areas not too dissimilar from those from which they were driven by Ottoman brutality. There are now considerable communities settled in the Qadhas of Mosul, Dahuk, Sheikhan, Amadiyah and Zakho. Although all have not equally taken root, some at least appear content and settled and are likely to be the nuclei for larger communities racially (it can hardly be doubted) akin to their Kurdish neighbours, though religiously distinct and as communities highly self-conscious. Economically, there are the general risks from locusts and from drought which permanently threaten the agriculture of this whole tract; and in the settling of these refugees there are the further special difficulties of providing seed, plough animals, housing materials, and the like. For all these, funds are necessary, the provision of which can hardly be expected to move a penurious (and Islamic) Iraq Government to enthusiasm, while charitable funds subscribed in England are not inexhaustible. Add to these some traces of refugee-psychology—habituation to a life of begging or charity, loss of self-respect—in the persons to be settled, and it will be seen that the task, towards which much has been done and more is daily in hand, is full of embarrassments. It may be safely claimed that the hard work, sympathy and expense devoted to these small refugee-minorities in Iraq might be sought in vain—indeed, who would be so naive as to seek?—in the neighbouring country to whose misrule their presence in Iraq is due. Such reflections are, however, especially untimely at the moment of the Commission's session in Zakho.

Liubliana, October 27.

The Hungarian Zone in Split.

Yugoslavia's relations with Hungary have during the course of the last few months undergone a change for the better. The first outward sign of this improvement occurred during the summer in connexion with the four-hundredth anniversary of the battle of Mohacs. On that occasion the Regent, Admiral Horthy, referred in very cordial words to the historic friendship and alliance between Magyars and Serbs, and expressed the hope that this friendship would be revived in the present day.

This speech attracted much attention and was very favourably commented upon in the Press, both Hungarian and Yugoslav. It started discussions of a new *rapprochement* between the two States, relations between whom had been anything but friendly ever since 1918. From the statement of Dr. Nintchitch, Yugoslav Foreign Minister, one can gather that for some months past negotiations have been in progress, their object being the settlement of mutual relations between Hungary and Yugoslavia, and the conclusion of an arbitration treaty. This would be the first step towards bringing the Locarno

spirit into dealings between State and State in Danubian Central Europe, where the chances for it have hitherto been very slight. From Czecho-Slovakia and Austria come statements that both countries are well informed of these negotiations and that their course is being watched with favourable interest.

The *rapprochement* between Yugoslavia and Hungary has, among other aims, one eminently practical object, viz., the establishment of an economic outlet for Hungary on the Adriatic.

By her new frontiers, Hungary is left absolutely without access to the sea. The old Hungary had stood in direct communication, through Croatia, with the Gulf of Quarnero; Fiume was the port assigned to her, and there she constructed large and modern harbour works. Now, a wide belt of Yugoslav territory separates Hungary from the sea, and it was natural, therefore, that, sooner or later, there would follow negotiations between Belgrade and Budapest for the purpose of finding ways and means to provide Hungary with facilities for organising her sea-going trade at one of Yugoslavia's Adriatic ports.

The choice has fallen on Split, which is so far the best appointed of the Yugoslav harbours and is also comparatively well served in railroad communication with the interior, especially in the direction of Hungary. Besides this, there is at present a great scheme under consideration, according to which a new line is to be constructed from Split via Sarayevo to Valevo and Belgrade, and continued along the Drina down to the Batchka, whereby South and Central Hungary as well would have readier access to the port of Split. In Split, Hungary would have a special zone allotted to her, and on the railway enjoy special tariff facilities for the transport of her goods.

These projects have provoked adverse feeling in Italy, who would naturally like to see the old port of Fiume play the same part nowadays as it did before the War—in other words, to be the most important harbour on the Adriatic, and Hungary's only seaport as well. When it was made public that negotiations regarding a Hungarian zone in Split were in progress, Italy made an official offer to Hungary, proposing to concede the same facilities at Fiume as Yugoslavia was prepared to grant in Split. Hungary would appear, therefore, to be in the pleasant position of being able to choose between the Yugoslav and Italian offers. As a matter of fact, the choice is not entirely free, as her way to Fiume lies through Yugoslav territory, and Yugoslavia with her railway tariffs holds the key to the situation. If she were to find that she had to increase her concessions in the port, she could always indemnify herself by her tariff policy.

The question of the *rapprochement* between Yugoslavia and Hungary has so far certainly not got beyond this initial stage, but even this is all to the good for the permanent pacification of Central Europe.

The Women's Congress at Bled.

At Bled, the pretty Slovene mountain resort and royal summer residence, the Yugoslav National Women's Union has just concluded its second Congress (October 24 to 27). The Congress was attended by 250 delegates from all over the kingdom, and presided over by Mme. Leposava Petkovitch, President of the Union, who was assisted by Mme. F. Tavtsar, Vice-President—and incidentally one of the most interesting personalities, men or women, in the Slovene national movement—Mlle. Atanackotchitch, Secretary of the Union, and the ladies of the Liubliana section, upon whom devolved the making of all arrangements. The Congress had a distinguished visitor in the Marchioness of Aberdeen and Temair, President of the International Women's Union, who came to Bled accompanied by Mrs. van Eeghen, Secretary of the International Women's Union. Lady Aberdeen, as veteran champion of the women's movement, was given a heartfelt and enthusiastic welcome at Bled. From Bled, Lady Aberdeen was invited to Liubliana, Zagreb, and Belgrade, and everywhere was given the opportunity of seeing what share women have borne so far in the development of the nation and its ideals. The questions dealt with at the Congress were more of general social importance than specifically feminist. They concerned the position of women and their due protection, the work of the Junior Red Cross, the World's Peace, the fight against prostitution, and kindred matters. Remembering the difficulties with which the women's movement has been beset elsewhere during the time of its inception, one could not but be struck by the friendly attitude of the Press and public, which was just as marked as it had been at the Women's Meeting at Liubliana in 1922.

The Yugoslav Women's National Union was established in 1919, when the Serbian Women's Union, founded in 1906, was extended over the whole of the new Kingdom and so merged in the wider Association. The Union has now 40,000 members, and works seriously, though unostentatiously, for the advancement of women in Yugoslavia and their co-operation with their sisters in other countries. The Union has a general meeting once a year and a Congress every five years. The first Congress was in Zagreb in 1921.

On her way through Liubliana, Lady Aberdeen found time to visit the English Library of the Yugoslav Society for the Study of English in Liubliana.

Sofia, October 26.

Another Frontier Incident.

At the time of the visit of the Balkan States Foreign Ministers to Geneva, talk was indulged of a *rapprochement* between these States as a result of the decision made by the Council of the League of Nations to authorise and to recommend the conclusion of an international loan for the setting up of Bulgarian refugees. The French Government at the time endeavoured to further this *rapprochement*, especially between Bulgaria and Yugoslavia, in view of the formation of a Slav *bloc* in the Balkans. And, to go still further, prediction was made of a Balkan Locarno, a project most cherished both by Greece and by Roumania, possibly as a set-back to the appearance of the Slav *bloc* in question.

This notion was, however, rather chimerical. Not that an inter-Balkan *rapprochement* was not possible; it had, in fact, begun to materialise; but the Collective Note of August 11 last (behind which well-informed circles in Sofia saw a concerted plan for the occupation of Bulgaria by her neighbours under pretext of suppressing the activities of the revolutionary organisations) stopped its progress. And as the danger of forceful measures was greatest from Yugoslavia, it was with Yugoslavia that relations became most unpleasant, resulting in Yugoslav-Bulgarian tension, and excluding all possibility of a *rapprochement* between Sofia and Belgrade, at least for some time.

This circumstance did not discourage France; on the contrary, it moved her to increase her efforts to bring about a reconciliation between Bulgaria and Yugoslavia in the interest of French policy in the Balkans. At first Bulgarians and Yugoslavs were influenced by France through their Ministers, MM. Bouroff and Nintchitch, who were interviewed at Geneva. In explaining the respective position of their Governments and countries, they declared that they had many points of contact and several common interests, but that a Bulgaro-Yugoslav

Digitized by Google

entente was impossible of realisation in the present state of things. The incident of August 11, brought about by the presentation of the Collective Note to Sofia, was closed, but its consequences remained.

Hopes of a *rapprochement* are thus once again annulled. They are remote because on both sides a contradictory condition has been imposed: the Yugoslavs want to be friendly with the Bulgarians and facilitate the conclusion of a Balkan security pact, but demand that Bulgaria desists finally from interesting herself in the Bulgarian population of Macedonia, which they represent as a purely Serbian country; and the Bulgarians, equally ready for an entente, insist that the problem of Bulgarian minorities shall first be settled—in the Dobruja, and in Yugoslavia and Greek Macedonia—and that ecclesiastical and educational freedom shall be accorded to these minorities. This is a fundamental point of difference.

While this difference endures, there can be only the pretence of *rapprochement* between Yugoslavia and Bulgaria. This fact is deducible from recent incidents on the Yugoslav-Bulgarian frontier, where, since the severe measures taken by the Sofia Government, no bands of the Revolutionary Macedonian Organisation have been at work, but bands of Agrarian Communists, organised on Yugoslav territory, have passed over to Bulgaria to help the subversive struggle against the central authority or to attack the chiefs of the Revolutionary Organisation—as in the matter of two bands of Macedonian Federalists who penetrated a few days ago from the region of Stroumitza, in Yugoslavia, into the region of Petritch, in Bulgaria, and who attacked the frontier posts (supported by peasants of the surrounding villages) and were killed in the fight.

These attacks, coming after the suppression of the revolutionary elements, are considered here as a dangerous provocation which will excite the Macedonians and will render vain the repressive action of the Liaptcheff Cabinet.

ROUMANIA.

Bucharest, October 22.

Political Movements.

Parliament, which should have re-opened in the middle of October, has been prorogued until the beginning of November. So far, no indication has been given of the measures which are to come up for consideration next session, with the exception, of course, of the Budget for 1927. The Opposition Parties of M. Maniu (Nationalists) and M. Mihalache (Tsaranists) are still struggling to effect their fusion on a sound basis, but find themselves confronted with almost insuperable difficulties, owing to the divergence of the views held by the two parties, especially on the expropriation of the land question.

The Queen of Roumania.

Great satisfaction is expressed by the Liberal Press at the reception which is being accorded to the Queen in America. Unfortunately Her Majesty is reported to have taken influenza, and it is expected that she will be obliged to shorten her programme and curtail her visit.

NEWS FROM ALBANIA.

A correspondent writes from Albania, under the date October 14:—

Dr. Hacket, Director of the Rockefeller Institute at Rome, arrived in Tirana on October 12. He is making a five days' extensive tour of the central plains of Albania, known as the Musekia, in which malaria is very prevalent. He has an Analchis car with two spare tyres.

At Bari (Italy) much alarm was felt among Albanians five days ago, when the order was given to arrest all Albanian-speaking persons. Many officials who were spending a few days' holiday in this town were extremely indignant. They were released, however, after three or four hours' detention.

A SERBIAN ARTIST.

At the galleries of the Fine Art Society, New Bond Street, is now being held an exhibition of the sculptures, paintings, and caricatures of A. B. Sava, the young Yugoslav artist who is already well known to lovers of caricature in this country. Anastas Botzaritch Sava was born in Belgrade in 1896, his mother being an Italian and his father, the Cavaliere Anastas Botzaritch, Court-painter to the late King Peter. Mr. Sava was entered for the diplomatic service, but he preferred the career of Art. During the War his remarkable linguistic abilities were utilised by the Serbian, Italian, French and British Armies. He was at Salonika, and, after the Armistice, at Constantinople. Later he was with the British in the Caucasus, at Batoum, Tiflis, and Baku.

Alike in caricature and in sculpture he is well abreast of the thought and feeling of his time. (His oil paintings—and, to a certain extent, his caricatures as well—he uses as practice for his greatest love: sculpture). For the most part, in his sculptures, he goes to Art, as represented, for instance, by Sir John Lavery, Sir Johnston-Forbes Robertson, Miss Edith Sitwell, and Sir Landon Ronald. His modelling is excellent, and his aim of expressing rather the essence, the personality latent or manifest, of the subject, than its literal representation is generally achieved with striking success. Particularly one notes the silver head of Miss Edith Sitwell, which when it is toned down by time will be most beautiful. For non-acceptance of her admirers' estimate of her verse matters nothing when the Venetian beauty of this head is portrayed.

Of Mr. Sava's caricatures this is hardly the place to speak. Mostly they are of politicians and of litterateurs. They are very good, illuminating without being cruel, swift (as all such things must be) but quite sure. If one has to choose, then mention may be made of those of Arnold Bennett, Lloyd George, J. H. Thomas, Ramsay MacDonald, Austen Chamberlain, and Earl Birkenhead. In truth this is a stimulating show.

"THE MOSLEM WORLD."

The quarterly review, the *Moslem World*, has many articles of interest in its October issue. The Rev. Arthur Jeffery, in writing on "The Quest of the Historical Muhammad," is tentative in expressing conclusions, but he notes that "the scholars who are most familiar with Arabic sources and have got closest to an understanding of the life of the period, scholars such as Margoliouth, Hurgronje, Lammens, Caetani, are the most decisive against the prophetic claims of Muhammad." The Rev. Jens Christensen, describing the new Afghanistan, puts the question: "Will the nationalism of Afghanistan, like that of Turkey, make the country a more or less difficult missionary field?" Other articles are on, "Roman Catholic Literature in Arabic on Islam," "A Muhammadan View of Islam and Christianity," "What the Shiahs Teach their Children," and "Who is Dhu'l-Kifl?" The usual book reviews and the survey of periodicals are done with all the efficiency we have learned to expect from the *Moslem World*.

OLD INDIAN TALES.

"THE OCEAN OF STORY." Vols. I-IV. Edited by N. M. Penzer Translated by R. H. Tawney. (London: C. S. Sawyer. Ltd. 42s.)

"VIKRONA'S ADVENTURES." By Professor Franklin Edgerton. Two vols. (Harvard University Press, Cambridge, Mass., and London Humphrey Milford, 45s.)

India was a very early adept in the art of telling stories. Her speciality has always been the tale containing other tales. She early began to spread her achievements in this line over the world, and many of her collections still form the foundation of much of the people's stock of story and anecdote in unexpected quarters. As they have come to us in writing, they differ very greatly in the qualities which appeal to us moderns. All are, from our point of view, more or less disfigured by being dragged into illustrating moral and religious principles or priestly injunctions. But some of the authors or compilers of these collections were clearly men to whom literary beauty, the pleasure of telling a story and delight in incident appealed strongly, so that they gave us works where the intruding moral and religious element does little more than supply the correct background.

This is eminently the case in the great work of the Kashmiri Brahman, Somadeva, which Mr. Penzer gives us in English with the title of "The Ocean of Story." Somadeva was at his work almost exactly at the same time as William Norman was conquering England. We fear that there is little in the contemporary literature of England which could give the ordinary cultured Englishman of the 20th century one-tenth of the pleasure which this old book from the Kashmir Valley produces. And certainly nothing English from that date has survived till now with anything the least resembling the life which still exists in this remarkable book.

Mr. Penzer has treated it as it deserves. Taking the late Mr. Tawney's admirable translation, he has carefully revised it, adding what his predecessor had omitted and generally bringing the translation up to date. He has annotated it with a wealth of valuable notes dealing mainly with religion, folklore and history. Many of these notes are really complete and authoritative monographs on their special subjects. He has enlisted the help of the best scholars to write "Forewords" to each volume. Thus we have Sir Richard Temple on the Aryan and Non-Aryan origins of these tales; Sir George Grierson on some of the specially interesting points in them; Dr. Gaster on the difficult problem of how more or less similar tales of this kind are found all over the world; while Dr. F. W. Thomas discusses the origins of the book and the curious supernatural beings, the Vidyadharas or "knowledge-holders," so frequently brought into the stories. Doubtless these will be followed by others in future volumes. Finally, the book has been given a dress worthy of its excellence. Paper, printing and binding are alike beautiful. So far only the first four volumes have reached us, but Rome was not built in a day and even Mr. Penzer's marvellous industry cannot hope to finish the set of ten volumes or so for some little time. This will be no disadvantage to purchasers, for, though the price is wonderfully low for such a production, it will be more convenient to pay for it at intervals, one volume at a time.

We make no apology for bringing this book once more to the notice of the readers of THE NEAR EAST AND INDIA. As new volumes appear, a conscientious recipient feels himself impelled to do what he can to invite others to partake of the feast with him.

While Somadeva was a born story-teller and artist, and, though doubtless a religious man who hoped to inculcate good doctrine by means of his literary gifts, too much of an artist to allow this task to spoil his work, the unknown author of "Vikrama's Adventures" was "all out" to point his moral. As Professor Edgerton himself admits, the book "is an extreme instance of the lengths to which the didactic principle of story-writing can be carried. The original, which is lost, was probably composed not later than the thirteenth century. What we have now are various versions derived from that original. Of these Professor Edgerton has selected four types, of each of which he gives the text and a scholarly translation, and endeavours from these to reconstruct the original composition as far as is now possible. It was right that this work should be done, for these tales are among the most popular in India. It has been done exceedingly well and the valuable introduction is a model of what work of this kind should be. The translation, too, combines accuracy with good English narrative prose. He almost succeeds in interesting us in the duties of kings towards Brahmans which the author harps on till one shudders to think of the kind of monarch whom the literal execution of these precepts would produce. But we yawn over the frequency of attempted self-immolation by the King and the tiresomely monotonous way in which he is saved by a voice saying "Oh King, I am satisfied with you. Choose a wish."

Professor Edgerton has done a more important piece of work than this, on the Panchatantra. We hope that he may give us more yet. But, when he does, we earnestly hope that he or his editor will curb his very annoying habit of selecting certain English words for torture. We can assure him that no lover of the English language can feel "rejoist" in finding "thruout" the book words so abominably mis-spelt by a writer whose general practice shows that he knows better. This book forms Vol. 26 and 27 of Professor Lanman's "Harvard Oriental Series," and is published in England by Messrs. Humphrey Milford, for the Oxford University Press. C. S.-W.

PERSONAL AND GENERAL

TO-DAY

November 4, 1926 (New Style).
October 22, 1926 (Old Style).
Rabia II., 27, 1345 A.H., of the Muslim Calendar.
Heshvan 27, 5687 of the Jewish Calendar.

The Bulgarian Minister has returned to London from Sofia.

Sir Denys de Saumarez Bray, of the Foreign and Political Department, Simla, has arrived in England.

Lord Willingdon, Governor-General of Canada, met the Queen of Roumania on her arrival in Ottawa on October 28.

The Hon. Margaret Forbes-Sempill and Brigadier-General and Miss de Winton sailed last week in the California for Calcutta.

The Hon. Irwin Laughlin, American Minister to Greece, and Mrs. Laughlin left Southampton on October 30 in the Mauretania for New York.

The Hon. Percy and Mrs. Thellusson, who arrived in Paris from London, at the end of last week, will leave to-morrow (Friday) for India.

M. Paul Daeschner, the new French Ambassador to Turkey, has presented his letters of credence to the Ghazi Mustapha Kemal Pasha.

Alice Lady Stuart, widow of Sir Harold Stuart, G.C.M.G., K.C.S.I., K.C.V.O., died suddenly at her residence, 10, Cleveland Gardens, on October 28.

The Turkish Ambassador on October 29 held a reception at the Embassy to celebrate the anniversary of the proclamation of the Turkish Republic. Many members of the Turkish colony in London attended.

Sir George Clerk, British Minister to Czecho-Slovakia, who has been appointed Ambassador at Constantinople, left Prague on October 31 for London, accompanied by Lady Clerk.

M. Briand, French Minister for Foreign Affairs, on October 29 received Lord Lloyd (British High Commissioner in Egypt) and Sarwat Pasha (Egyptian Foreign Minister).

Sir Arthur Salter, Director of the Economic and Finance Section of the League of Nations, accompanied by Major Abraham, a member of the Secretariat of the League, arrived last week in Sofia to study on the spot plans for the settlement of the Bulgarian refugees.

The King has approved the appointment of Mr. Herbert Philip Duval to be Puisne Judge, Calcutta, in succession to Sir Hugh Walmsley, who will retire in November. Mr. Duval entered the Indian Civil Service in 1896, and was called to the Bar at Lincoln's Inn in 1905.

Sir John Hewett and the Hon. Edith Littleton were among the passengers in the Rajputana, which left London for Bombay on October 29. The Hon. Edith Littleton is proceeding to Madras to attend the wedding of her nephew, Mr. Melville Portal, and the Hon. Cicely Goschen.

Lady Bennett gave an at-home at the new rooms of the British Indian Union, 10, Grosvenor Gardens, on October 27, when the guests included the Nawab of Dhera, Mr. and Mrs. Wardlaw Milne, Lieutenant-General Sir Herbert and Lady Uniacke, the Dowager Lady Boyle, Colonel Sir Hormusjee Banatvala, Mr. S. N. Mallik, Lady Hartog, and Mr. N. C. Sen.

The Maharaja of Alwar leaves Marseilles to-day for India.

Prince Bibesco, last week, arrived at the Ritz Hotel from Paris.

Tzena Beg, Albanian Minister to Belgrade, has been recalled to Tirana, where it is expected that he will be appointed Minister of the Interior.

Mr. Richard Howard Hitchcock, C.I.E., M.B.E., of Fordwich Rectory, near Canterbury, and of Madras, India, Indian Police, eldest son of the Rev. R. Hitchcock (net personalty £2,304), left £2,486.

Major-General Thomas Ross Church, C.I.E., late Madras Staff Corps, died on October 30 at Eastbourne, at the age of 95.

The death is announced of Lieutenant-General Sir Alfred Robert Martin, Colonel of the 5th Royal Gurkha Rifles.

As already announced in THE NEAR EAST AND INDIA, Brigadier-General F. D. Hammond, C.M.G., D.S.O., has been appointed to investigate and report on the conditions, management, and prospects of the Iraq railways. He is expected to arrive at Baghdad about November 6. After completing his inspection of the Iraq railways, and before returning to this country, Brigadier-General Hammond will proceed to Nyasaland, where Major E. O. O. Newcombe, D.S.O., formerly traffic manager of the Sudan Railways, will collaborate with him in making a report on the railway communications of that territory.

THE CENTRAL ASIAN SOCIETY.

On November 10, at 5 p.m., Mr. Roy Chapman Andrews' (Leader of the Central Asiatic Expedition of the American Museum of Natural History) will lecture to the Central Asian Society upon "On the Trail of Ancient Man in Central Asia." This lecture, which will be provided with kinematograph and lantern illustrations, will be given at the Royal Society of Arts, John Street, Adelphi.

The following week, on November 17, at 5 p.m., Jaafar Pasha el Askeri, C.M.G., will lecture to the Society on "Five Years Progress in Iraq." This lecture, which is to be illustrated with lantern slides, will be given at the Royal United Service Institution.

THE SULTANATE OF MUSCAT AND OMAN.

Captain G. J. Eccles, I.A., who is in command of the 300 Levies in Muscat, lectured to the Central Asian Society on October 27 on "The Sultanate of Muscat and Oman," Sir Michael O'Dwyer being in the Chair.

The lecturer began by examining the geographical aspect of Oman, which, unlike Northern, Western and Central Arabia, had received practically no attention of late. At various times Oman had been nominally subject to Persia, Baghdad, Portugal, and the Wahhabis. Geographically it included the Trucial Coast to the N.W. and the independent oasis of Biraimi, as well as Dhafar (the Sultan's summer resort) in the South. But the lecturer confined himself to the territory over which the Muscat Government claimed suzerainty, although the greater part of it was independent. The backbone of Oman was a range of mountains which began at Ras Musandam, continued in a curve parallel to the coast to Ras Al-Hadd, the S.E. point of Arabia. At a point some twenty miles along the coast west of Muscat the mountains receded, the coastal plain thus formed being called the Batinah. Here dwelt Baluchi and Negro fishermen as well as Arab pastoralists. On the opposite side lay the Dharirah. West and South-West of Muscat was Oman proper; then came Sharqiyah, and finally Jaalan. Of Muscat town the lecturer showed some excellent views, particularly of the East and West Forts. In the hills surrounding it it resembled Aden; its mosque contained no minarets; and the Arabs were very tolerant of other religions. In connexion with Muscat, Captain Eccles quoted with approval Palgrave's description of the bed of the Wadi Kabir in which are the gardens of the town. This description, he said, was sufficiently accurate to make him disagree with Mr. Philby's expressions of Palgrave's veracity. Captain Eccles then described al Matrah (containing many followers of the Agha Khan), Sahar, and Sur (the most flourishing port in Oman).

In an exposition of the political situation the lecturer said that the earliest Arab settlers were of Qahtani or Yemeni stock. After them came the Ishmaelites or Adnani Arabs. These two stocks, the Qahtani and the Adnani, had always been at feud with one another. In the eighteenth century began the faction, which survives to this day, between the Hinawi (of Yemeni descent and Ibadhi persuasion) and the Ghafiri (of Ishmaelite descent and Sunni or Wahhabi persuasion). The predominant sect in Oman was the Ibadhiyah. At the present moment the Sultan's writ was confined to Muscat and a stretch of coast to the N. and S.; and the nominal controller of the interior, the Iman, was a puppet in the hands of Shaikh Isa, whose ideal was unity in Oman. If the Wahhabis were to make a serious attempt upon Oman, the question arose: what attitude should Great Britain take up? British support of the Sultan destroyed the hope of a united country, and if the Wahhabis were to enter Oman, Great Britain might have either to defend the whole strip of the Batinah plain and of the coast to the south of Muscat, or to retain only Muscat and Matrah.

Captain Eccles then turned to the exploration of Oman. He quoted Badger's famous dictum that Oman beyond the coast was (in 1871) less known than the lake districts of Central Africa. The pioneer and most extensive traveller was Wellstead, the naval lieutenant, who was there, with Whitelock, in 1835-1837. Then came Colonel S. B. Miles, who first went into Muscat in 1876. Afterwards, in 1901, the Rev. S. M. Zwemer travelled from Shariah to Shinas by the Wadi Hatta, and also from Abu Dhabi on the Trucial Coast to Biraimi. And then, in 1903, came Sir Percy Cox (whose paper on his travels here was read last year to the Royal Geographical Society). He explored the country between Ras al-Khaimah and Dhank; and the fixed the position of the Biraimi Oasis. He was the last of those who might justifiably be called explorers of the country.

Captain Eccles' chance of exploring the interior came last year when in company with two geologists, Messrs. G. M. Lees and K. W. Gray, Mr. Joseph Fernandez (Bombay Natural History Society) and Mr. A. F. Williamson (al Hag Abdullah), he was enabled to go to the main hills of the watershed, which, but for main routes such as the Wadi Jizzi, the Wadi Hawasinah, and the Wali Samail, were still unexplored territory. To Williamson's knowledge of Bedouin life and customs the lecturer, who remarked that the life of the English convert to Islam ought to be written, paid a striking tribute. Williamson and the lecturer travelled in Arab dress—which had a very beneficial effect. On November 3 all the transport was collected at Bait al-Falaj, two miles inland from Matrah. The expedition passed through Bashar, entered the Batinah plain at Sib, and followed the coast to Khaburah. Thence, leaving on the right the deserted village of Qasaf, they reached Ghaidhain. Passing through Suddan, they approached the junction of the Wadi Hawasinah and the Wadi Dhillah. The latter was uninhabited but for some Bedouin squatters. They reached the zigzag path known as Najd al-Khablain (2,970 feet). From the neighbourhood of this the great scarp of Jabal Akhdhar was visible, as were the villages of Qanat, Dariz, and Ibri. On November 29 the return was made to the Batinah by the Wadi Bani Umr. Coming through the village of Suwaidah to Lislat, they encountered the roughest part of the journey, by a pass called Najd Bani Umr. Re-entering the Wadi Bani Umr at Furfar they marched to Falaj al-Hirth in the Batinah. Here they received an invitation to visit Yanqul, where they received a tremendous welcome. Thence they returned to the Batinah and entered Sahar on December 7. Here they were invited to that district in the Dhahirah which extends from Jabal Raudhah to the Wadi Jizzi. Working up the Wadi Hatta they passed through the villages of Ajib, and Mashabbah. Here they were close to Sir Percy Cox's route. They followed the route to Sharm and Mahadhah. (Hereabout Lees climbed Jabal Mahadhah and reconnitred the Birami Oasis and Jabal Hafit (which, as Sir Percy Cox had failed to point out, towered above the surrounding hills.) Thence they followed the Wadi Jizzi, turned aside to visit the Persian ruins at Hurah Barghah, and reached Sahar on December 23.

In conclusion, the lecturer specially thanked Sir Arnold Wilson for permission to accompany the expedition, and his colleagues for the use of some of the excellent photographs which he used. In particularly he mentioned Mr. Thomas and Mr. Bower ("the Prime Minister of Muscat").

In the subsequent discussion Sir Percy Cox referred to the difficulties of exploring in Oman. If one travelled as an official, the Government was not pleased; and if one travelled as a traveller *per se*, the difficulties presented by the tribes were considerable. He had been in Oman for five years, and travelled wherever he could. He was happy in that the lecturer was able to attest to the accuracy of the map which he had drawn for his lecture last year to the Royal Geographical Society—for most travellers in Arabia underwent, at the hands of the traveller following them, the charge of lying! In this connexion he was glad, too, to hear Captain Eccles' partial defence of Palgrave. Turning to the detail of the Oman country, Sir Percy said that he was surprised at the lecturer's description of Jabal Hafit as 5,000 ft. high, or 4,000 ft. above the surrounding country. He had twice trekked round the base of it, and would not have put it as higher than 2,000 ft. at the most. On the question of travelling in Arab dress, Sir Percy said that it might be preferable in winter, but for a European to wear the Arab headdress in summer was another matter. Referring to "Hajji

Williamson," he said that this initiativeless Englishman undoubtedly could write a book of the greatest interest to the West, but certainly would not do so—somebody might do it for him. Williamson had roamed about town (e.g., Baghdad and Basrah) and country in Arabia, had married an Arab woman, and without question had a vast store of interesting knowledge. On the politics of Oman, Sir Percy said that the position, in the event of the Wahhabis' attacking it, was uncertain. Before the War and during it, his "very good friend," Sultan Ibn Saoud, had been in treaty relations with Great Britain to keep the peace with all Britain's friends in Arabia, and to this end he was paid a subsidy. When, however, this subsidy came to an end a year or two ago, Ibn Saoud felt himself relieved of the obligation. Hence the overrunning of the Hijaz. But up to the present time Ibn Saoud's conduct had been absolutely correct: not once could the British Government "catch him out." It was by no means improbable, however, that eventually Ibn Saoud would wish to incorporate Oman, and on what would be the British attitude should such a contingency arise he would not express an opinion.

Admiral Richmond briefly described a short visit that he had paid to Muscat. He emphasised the fact that the Navy had recently come to rely more upon a more northern port in Oman, but that, whatever might be the political developments within Arabia, Muscat must always continue to be of considerable interest to the Navy.

In conclusion, Sir Michael O'Dwyer threw out the suggestion that part of Muscat's former prosperity may have been derived from the illicit arms traffic with countries such as Afghanistan, but Sir Percy Cox pointed out that the arms traffic came after the time when Muscat could boast of a considerable Navy as well as other signs of wealth.

BAHA'I PERSECUTION IN PERSIA.

Last April, during Ramadan, there occurred in Persia an event which has been but little published in the West, although it is of considerable significance for the future of the Persians: a fresh persecution of Baha'is by Shiahs. From all over the world, in Asia, in Europe, America, and Australia protests were sent out to the Teheran Government against this bitter feeling and action, and the assistance of the official representatives in Persia of various countries was claimed.

The facts, as we have received them, are as follows:—In the town of Jahrom, near Shiraz, on April 7, eight Baha'is were murdered by fanatics, many were wounded, and about twenty homes were looted. Survivors of this and other outbreaks are denied by the civil authorities the rights of the law of the land and the protection of local and provincial courts (the ulema pronouncing association with the Baha'is to be a violation of the principles of Islam). They are prevented from making purchases in the shops and from using public baths. Such was affirmed to be the state of affairs but a few months ago in Maraghih, Azerbaijan. Events like these, coming upon the outbreaks in 1925 in places like Gamsar and Farahan and in the provinces of Fars, Yazd, and Khurasan, are not calculated to encourage belief in Persian progress.

The National Spiritual Assembly in Teheran took up the matter very strongly. Letters and telegrams were addressed to the Shah from all the provinces, asking for punishment and redress. So far as is known, however, no punishment has been meted out. Nor is the persecution over, for reports recently came in from Yazd, Anar, Malayir, Burujan, and Maraghih, stating that Baha'is had "undergone acute trial." In some of the provinces, however, the Government authorities intervened to stop the oppression of the Baha'is.

From the reports (naturally meagre and belated) that have come from Persia of this last persecution of the Baha'is, it would appear that this Jahrom outbreak, as well as the less fatal oppression in other parts of Persia, was instigated mainly by religious hostility. For Persia, despite the recent revival of hopes, still suffers from personal rivalries, unscrupulous intrigue, political animosities and religious dissensions. And no good can come to Persia by refusing to face the facts.

THE WEEK AT HOME.

London, Tuesday Morning.

The Imperial Conference.

Little of the really controversial part of the Imperial Conference has been allowed to escape to the public, which for the time has had to content itself either with bald summaries or with unexceptionable statements—such as Sir Samuel Hoare's excellent speech last week upon Imperial Communications. The discussions upon foreign policy and Imperial defence appear to have been completed, but beyond a general indication that all the Dominions have accepted the Locarno Treaty, not very much is known of what the various countries had to say upon Great Britain's recent Continental and world policy. We can only guess, for example, what was said upon the very important question of Egypt from the Imperial point of view.

Apparently the larger questions are now all settled, and the Conference has latterly turned its attention to details, Committees having been set up to inquire into such things as migration, nationality, forestry, research and so on. It is increasingly obvious that organisation between the Mother Country and the various Dominions can be infinitely improved, with beneficial influence not only on the Empire, but also on the world of which it forms so important a part. If there can in fact be achieved an economic League of Nations out of the British Empire, the croakers who seem to like to ponder on Rome and Greece and Spain and the other perished Empires will be profoundly disappointed. The decline of the British Empire is an illusory notion.

A Free Trade Controversy.

One of the rare sidelights upon the Imperial Conference and its problems was thrown by a controversy last week between the eminent advocate of Free Trade, Mr. Walter Runciman, and the enthusiastic advocate of Imperial Preference, Mr. Bruce, the Australian Premier. Mr. Runciman suggested, in his support of general Free Trade, that Australia had never put on a tariff except to benefit Australian producers and to give them a better position as against English producers. That, of course,

Digitized by Google

is one of the stock-in-trade arguments of the out-and-out Free Trader (of which variety a surprisingly large number still exists in these islands). But Mr. Bruce has explained, very promptly, that at the present moment £26,000,000 of British goods a year are going into Australia absolutely free while the foreigner is paying an average duty of 12½ per cent. And he refused to entertain the imputation that Australia was doing anything to protect Australian industries as against British manufacturers. Other Australians have remarked that if trade is merely, as the Free Traders appear to suggest, a matter of individual exchange, how is it that 6,000,000 Australians are buying as great a quantity of British goods as 74,000,000 Frenchmen, Belgians, Spaniards, and Portuguese?

This is precisely the kind of dispute which Englishmen like to see. There is in it something to get hold of, some facts to go upon. In the ordinary man's view, it is a pity that more of such differences which are thought to have been discussed in the Imperial Conference, are not given more publicity. On this particular issue, there seems to be a tendency to award Australia the honours.

Sugar-Refining.

Another side of the fiscal medal, however, is to be seen in the matter of the British sugar-refining industry. Owing, it is claimed, to the subsidised beet sugar industry in this country, and to the "dumping" of foreign sugar, Messrs. Tate and Lyle, the largest establishment of the kind in England, have temporarily to close down some of their factories. This firm attributes its misfortunes picturesquely to the Government support of the beet-sugar industry, and the problem has been exhaustively used as a sermon for the final wisdom of Free Trade. "Subsidies, like protective duties, are by their nature uneconomic" is the truth applied to this sugar case; and here the ordinary man appears to support the Free Traders. In other words, he supports the Free Traders when it is proved that the Free Trader is right, but deserts him when it is proved that he is wrong! There is little of the slavish adherence to either of the rival fiscal theories which characterised former generations.

Whether public opinion confirms this firm's view that raw sugar and not white sugar should be subsidised and that the dumping of foreign sugar should be prohibited is another problem. The fact seems to be that where Protection or subsidy is introduced in this country somebody is bound to squeal.

The Government and the Mines.

There is no need to suppose that a desire for popularity and an utter disregard of it are the respective mainsprings of Mr. Churchill's very generous speech last week upon the mines problem and the Prime Minister's letter (published last Sunday) on the same subject. It is a fact, however, that they represent—that is, if words mean anything at all—two different policies. Mr. Churchill stated categorically that the Government would not allow any recalcitrance on the owners' part to hold up a reasonable offer on the part of the miner. But the Prime Minister says: "We should only be paving the way for further misunderstanding were we to pretend that we had it in our power either to compel a settlement or, in the present temper of the industry, to secure an agreement. We have done all we could, and no wise Government could have done more."

Which version is the public, longing for a settlement, to choose?

It is possible that this week the Government will have definitely to choose, for it is stated that the General Council of the T.U.C. is resolved to tell the Miners' Federation that the miners must agree to a resumption of work on the basis of district agreements and longer hours. Whether this statement is correct or not I do not know, but we shall know when the Federation has met this week. Certainly there are some grounds for believing that the General Council regard a further continuation of the strife as unlikely to bring any further advantage to the miners, for practically every day there is an increase in the number of men at work. And the coal ration is about to be increased.

In the meantime, other industries anxiously await the end of the struggle. It is confidently thought that there will be a considerable boom in many places once this lock-out is over. Whether that will signify general prosperity, or merely individual gain, is, however, another matter.

The Wage System.

Ever since the publication of Sombart's famous book the view has been widely held that the Jews are pre-eminently responsible for the introduction of the capitalist system into Christian Europe. That belief was, of course, held before the birth of Sombart, but to nothing like the same extent as it is now. It was, however, but a theory, which has been profoundly modified by later economists. Nevertheless, it was interesting to find last week a discussion upon "Religion and the Wage System," undertaken by a conference of Christians and Jews in the Liberal Jewish Synagogue at St. John's Wood. Points made by speakers were that capitalism postulated a temporary, not a permanent relationship with the wage-earners, that high prices and short hours in mass production were too high a price to pay for sacrifice of personality; and that the wage system was an expedient of men in captivity. In these points there was, of course, nothing new, for they were popularised by the Guild Socialists before the War: the surprising thing is that they should have been re-expressed in a synagogue.

The End of the "Progressives."

One more indication of the passing of Liberalism lies in the recent recommendations of the London Liberal Association that candidates to the London County Council should henceforth be called, not "Progressive," but "Liberal." This is, of course, being done to counteract the previous actions of the Conservative and Labour Parties, who, jettisoning the old (but very sound) idea that local politics should be quite separate from national and Imperial politics, have not scrupled to put their whole weight behind the "Municipal Reform" and the "Labour" candidates. Now in the old days, a "Progressive" drew a considerable number of votes from quarters outside the Liberal camp—which in my view at any rate was, from a local point of view, wholly desirable. The odds, however, upon a man who is not supported by a vast organisation are now remote indeed.

And thus the Liberals have come into line with the other two parties. So pass an historic label, "Progressive," and with it, probably, the better kind of local politics. Outside London things are not so bad, but even in the country the tendency now is for party organisations to support urban or even rural candidates. Thus we approach the Continental model, in which, I believe, municipal elections are a real index to the political feeling of the nation.

Communication with Mars.

It is, one supposes, one of the results of popular education that last week people should have been found seriously discussing the question of communication with Mars, which was said then to be nearer the earth than it usually is. Perhaps it was our insularity, or our profound and ignorant respect for Science, that made us certain that if the Martians did really exist and could speak, they would kindly communicate with us in English. Old ladies asked anxiously in the evening of the day when communication was to have been established whether there was any news from Mars.

And yet we pride ourselves on our mental progress, our freedom from superstition, and so on!

October's Countryside.

England, for those who have eyes, is now at its loveliest. In the countryside the trees and hedges are once more about their immemorial conversion from green to brown and yellow and red. The change has been late this year, but out of the ground is now coming the full, unforgettable smell of rotting leaves. Each tree—hornbeam, beech,

Digitized by Google

larch, ash now shows its peculiar beauty. Even the holly this year joins in the riot of colour with berries of peculiar abundance. October above all is the month for the woods, wherein the rotting leaves gives out perhaps the most vital of scents for the roamer of the countryside.

ALTER EGO.

AIR ROUTE TO INDIA.

Imperial Airways announce that the first two passenger aeroplanes intended for use on the 2,500 miles airway between Cairo and Karachi will leave England between December 15 and December 20. These machines are the first of a flight of five De Havilland Hercules aeroplanes, driven by three Bristol Jupiter air-cooled engines, totalling over 1,200 horse power, which are being built specially for the new Empire air route.

The Director of Civil Aviation, Air Vice-Marshal Sir W. Sefton Brancker, and party will travel on one of these machines to Basra. The other machines will proceed only as far as Cairo. Accommodation will be available for passengers on both machines. The fare from London to Cairo will be £50, and from London to Basra £101. The actual date of departure will be announced later. The route to be followed will be: Croydon, Dijon, Marseilles, Pisa, Naples, Malta, Khoms, Benghazi, Sollum, Aboukir, Cairo, Gaza, Baghdad, and Basra.

Sir Samuel Hoare, Secretary for Air, and Lady Maude Hoare and party will leave on a third machine on December 27, and after proceeding along the same route to Basra will continue their flight via the Persian Gulf and Karachi to Delhi. This 6,550 miles flight will constitute the official opening of the new Egypt to India air service.

The Bhaonagar medal for Indian Civil Service probationers is awarded to Mr. M. C. Desai, B.A.

The lecture on "The Royal Air Force Flight from Cairo to the Cape," by Wing-Commander C. W. H. Pulford, which was to have been given on October 27 at the Royal United Service Institution, has been postponed to December 8, at 3 p.m.

It is reported that during building operations in Ignatius Street, in Salonika, opposite the old Turkish bath, an archæological discovery was made which M. Pelekides, Director of Antiquities in Macedonia, believes to be a Roman portico formerly known by the Jews as Incantada, and described in the third volume of Leake's Travels in Northern Greece.

The death has occurred in Paris of Princess Emineh, sister of the late Turkish Grand Vizier, Prince Said Halim Pasha (who was assassinated in Rome in 1921), daughter of Prince Mohamed Abdel Halim Pasha (son of the Viceroy Mehemet Ali, founder of the present Egyptian dynasty), and wife of Lieutenant-General Mohamed Sherif Pasha, formerly Ottoman Minister in Stockholm.

In celebration of the birthday of the Prophet Muhammad, a large company assembled last Friday evening on the invitation of the British Muslim Society at Stewart's, Old Bond Street. The guests were received by Lord Headley, President of the Society. The meeting opened with the reciting by Mr. Abdul Hallim of verses from the Quran in Arabic, which were afterwards translated into English.

According to a message from Teheran the Seyyid Hassan Modarres, a prominent member of the Majlis, belonging to the Clerical Party, was attacked while leaving his house on October 30 by three men, who fired five revolver shots, shattering the deputy's left arm and wounding his right hand. A policeman who attempted to arrest the men was killed, and two other persons were wounded. Two of the assailants were captured.

NEWS IN BRIEF.

The Society for the Propagation of the Gospel has received a gift of £1,000 for its work amongst Muslims.

Sir Ernest Dowson, late Financial Adviser to the Egyptian Government, has been appointed Commissioner of Lands in Palestine.

The *Pioneer* of Allahabad now appears with five columns to the page, the size of which remains unchanged. The alteration is due entirely to technical reasons.

A Royal Decree for the enforcement of compulsory military service in Persia has been promulgated. Recruiting will take effect as from November 7.

The Government of India has decided to give £250 to the funds of the Ross Institute and Hospital for Tropical Diseases, Putney Heath, London, S.W.15.

Colonel Frederick Fawcett, retired Inspector-General of Indian Police, died suddenly from a heart attack in a restaurant in Vienna on October 28. Colonel Fawcett, who was 73, joined the Madras Police in 1878.

The Amir Faisal, Viceroy of Mecca, accompanied by his father's Minister for Foreign Affairs, left Marseilles on October 29 in the Macedonia for Alexandria, on his way back to the Hijaz by way of Cairo

The Iraq Cabinet (with Abdul Muhsin Beg es Saadun as Prime Minister) resigned on November 1 owing to the defeat of its nominee, Hikmat Beg Sulaiman, for the Presidency of the Chamber of Deputies. Rashid Ali Beg al Gilani was elected President.

The Mass according to the Byzantine-Slavonic rite was celebrated in Westminster Cathedral on October 30, and was attended by a large congregation, including several Anglican clergymen and Russians of the Orthodox Church.

Nearly a thousand troops, detachments of various regiments such as the Lincolns, Cheshires, Gordon Highlanders, Scots Greys, and R.G.A., left Liverpool on October 26 for Bombay by the Anchor liner California. Brevet Lieutenant-Colonel G. Fleming was in command.

Owing to the great demand for tickets, the League of Nations Union has been compelled to transfer the dinner to the Dominion Prime Ministers on November 2 from the Hyde Park Hotel to the Hotel Cecil. Among the acceptances are the Prime Minister of Newfoundland and the Maharaja of Burdwan. Sir Alan Cobham has promised to speak.

Lady Tata has promised to send a number of carved oak chairs, marble top sideboards, and a dining table for the new municipal offices to be opened at York House, Twickenham, by the Duchess of York on November 16. York House was for many years the home of the Tata family.

Ten thousand rupees were presented to the Indian Players on October 29 by Sir Eric Geddes, Chairman of the Dunlop Rubber Company, and Major-General Sir Reginald Ford, Managing Director of the new Indian Dunlop Company, in appreciation of the work done by the Players in showing the real life of India and Britain to the two peoples through the presentation of plays.

The third anniversary of the proclamation of the Turkish Republic was observed as a national holiday in Constantinople on October 29, and the Ghazi Pasha gave a ball at Angora, which was attended by many foreign diplomatists. There was a firework display and a military procession, and a continuous round of festivities was arranged until November 1, when the Grand National Assembly met after five months' recess.

ABYSSINIA AND THE HOLY PLACES.

VI.

BY ALEX DEVINE.

(Continued from page 457.)

Russia.

Among the many causes of the Crimean War was the attempt made by Russia, a country which owned nothing in the Holy Places, to obtain from Greece "certain points of the Star in the Temple of Bethlehem." The Treaty of Paris, which put an end to this indecisive conflict, re-established the *status quo ante* in regard to all property rights in the Holy Places until an International Commission should be summoned to decide the rights of ownership of the different nationalities. But unfortunately such a Commission has never been established.

Taffari Makonnen and the League.

Now, however, that Abyssinia has joined the League of Nations from which body Great Britain holds a Mandate for Palestine, it ought not to be difficult to arrive at a settlement of Abyssinian claims to the Holy Places which, never abandoned, have been recently revived by the following letter sent to the Secretary-General of the League by Ras Taffari Makonnen, Heir to the Throne of Ethiopia:—

> The Heir to the Throne of Ethiopia, Ras Taffari, to the Secretary-General of the League of Nations, Geneva. Peace be with you! For many years the question of the Holy Places of Jerusalem has keenly interested Ethiopia. On several occasions she has taken steps to establish her rights of ownership over these Places, and has sent missions with a view to setting forth her claims and entering into possession of these places. So far she has not been able to make her cause prevail and she has continued to vindicate—and still vindicates—(that is, maintains)—her claims. Having learnt that it is the Tribunal of the League of Nations which is to decide these disputes, the Ethiopian Government now addresses itself to the League and would most urgently ask the latter that, when the question comes up for decision, the Ethiopian Government may be duly informed so as to be able to send a representative who will set forth its point of view and will vindicate its rights.
>
> Addis-Ababa, the 25th Magabit, in the Year of Grace 1915 (April 23, 1923).
>
> (Signed) Ras Taffari Makonnen. (Sealed.)
> Ras Taffari M. Heir to the Throne of Ethiopia.

The Mixed Arbitral Tribunal.

Under Section 304 of the Treaty of Versailles and under corresponding sections of the other Peace Treaties there were constituted Mixed Arbitral Tribunals to deal with all claims from private individuals against some of the former belligerent Governments. The decision of the Tribunal carries with it the full weight of a Court of Justice without an appeal. The functions of these Tribunals are strictly defined by the Treaty; but, if any *Government* should agree to refer a dispute to one of the Tribunals, there is no reason why the Tribunal's decision in the matter should not be accepted as a settlement. It has been suggested then that the question of the Abyssinian claims should be submitted to such a tribunal. Inasmuch, however, as Abyssinia is appealing to the League of Nations as a Government and as a member of the League and not as an individual, it may be as well to quote at this point a passage from "The League of Nations and Mandates," a pamphlet published by the Information Section of the League of Nations Secretariat. The passage in question runs as follows:—

> "The control of the Holy Places and religious buildings or sites in Palestine has in the past given rise to considerable difficulties and conflicts. The Mandate confers all responsibility in connexion with this important question on the Mandatory, which is responsible solely to the League of Nations. According to Article 14 of the Mandate, a special Commission is to be appointed by the Mandatory to study, to define, and to determine the rights and claims in connexion with the Holy Places and the different religious communities in Palestine. The method of nomination, the composition and the functions of this Commission have so far been left open; but they must be submitted to the Council of the League for its approval. The British Government has drafted several proposals regarding the establishment of the Commission; but these plans have as yet not met the views of all the Powers represented on the Council. The British Government has expressed the hope that the Powers which have been unable to accept its suggestions would themselves endeavour to formulate a generally acceptable scheme for the Council's consideration."

It would seem, then, that the British Government is prevented from setting up a Commission to investigate the Abyssinian and other claims because, paradoxically and discreditably enough, the Council of the League of Nations, which should act as a united international body, splits up into national groups on this question. If and when, however, such a Commission is set up it will have submitted to it in support of the Ethiopian case the following new evidence, evidence not easily reconcilable with our previous assumption that the only Holy Places remaining in the possession of the Abyssinians after 1853 were their Church, which they shared jointly with the Copts, and their Convent. We take this new evidence, or rather this new statement of claims, from "A Memorandum on the Rights of the Abyssinians in the Holy Places, more particularly near the tomb of Jesus Christ." The statement runs as follows:—

> "Notwithstanding that the Treaty of Paris re-established the *status quo ante* the Abyssinians continued to lose various plots of land. In 1864 and 1865 the Copts seized the two Convents of Doir Es Melak and of Doir Es Sultan. In 1893 they appropriated the two Churches of Saint Angel and of The Forty Martyrs, along with a room in the Church of Our Lord's Tomb situated next to the room occupied by the Mussulman guardian of the Temple. The Negus Menelik tried by all means to re-establish the rights of his country, but with no success."

Russia and the Claims of Abyssinia.

Subsequently, so we gather from the same memorandum, Imperial Russia and Imperial Abyssinia pooled their resources, the Tsar being anxious, like his predecessor, to obtain a footing in the Holy City, and the Negus being ready, in requital of Russian assistance, to surrender to Russia part of his expected gains. It was two years after the appropriation of the Churches of Saint Angel and of The Forty Martyrs that negotiations between the two Governments began. An agreement was eventually reached by which the Abyssinians undertook to concede to Russia two out of the twelve plots of ground that would be returned to Ethiopia through Russia's kind office. It was only after the sending of a diplomatic mission and efficacious medical supplies to Abyssinia that she was able to conclude an understanding on the subject of the Holy Places and thus demonstrated her great interest in this matter, which was to cost her later still greater expense. The task of re-establishing (that is, of recovering and reassembling) the documents proving the Abyssinian rights was assigned to certain unofficial Russian agents, the better to avoid undesirable conflicts with other Governments. The chief agent was the celebrated Russian explorer of Abyssinia, Leontiev, who, however, after making the most thorough researches could find no documents in Abyssinian hands. In 1902, with a view to the further cementing of the Russo-Ethiopian Entente, the Ethiopian Abuna Matheos visited St. Petersburg, where he was well received.

The Archives.

In these circumstances, of being able to discover nothing in the hands of Abyssinian subjects residing in

Digitized by Google

Constantinople, it only remained to search for Firman and other evidence in the Turkish archives. The war which Italy made on Turkey for the possession of Tripoli in 1909 and 1910 gave the Russian agents an opportunity for securing the good offices of the Turkish Government. Having obtained the necessary funds from the Tsar, the Russian Holy Synod, and more particularly the late Grand Duchess Elizabeth (sister of the Marchioness of Carisbrooke), who contributed more than £200,000 to the scheme, they chartered a ship, loaded it with arms and ammunition, and dispatched the cargo to Tripoli to the aid of the Turkish forces fighting there. This delivery, needless to say, made a very favourable impression not only on the Turkish authorities but also on that great spiritual authority the Shaikh ul Islam, with the result that the Russian agents were given full authority to search the Turkish archives. Their search seems to have been very successful; for in 1914, the Abyssinian Government was informed that Russia was ready to hand over documents establishing the justice of the Abyssinian claims on condition that, out of the twelve plots of land thus vindicated, two should be ceded to the Tsar's Government. Russia was ready to accept any two plots which the Abyssinian Government was prepared to hand over, quite realising that the Convent of Doir-es-Sultan could not be one of these. Moreover, she expressed her desire to purchase other plots from Abyssinia, and offered to pay for them. The document in which this offer is made is still preserved in Abyssinia.

Abyssinian Mission to Russia.

In May, 1914, a preliminary understanding was arrived at in Abyssinia between the representatives of the Russian and Ethiopian Governments; while in the following month an Abyssinian Mission carrying letters of credit from the Negus Lidy Iasso, was dispatched from Abyssinia to conclude a definitive agreement with the Russian authorities. A semi-official Russian agent was to wait for this Mission at Jerusalem and to accompany it to Livadia in the Crimea, where the Tsar had ordered that the treaty should be signed. The Mission left Addis-Ababa, the Negus's capital, in July, 1914, and had already arrived at Deredac, between Addis-Ababa and Jibouti, when the Great War broke out.

The Great War.

Nothing then remained for it to do save to return. The War lasted longer than was at first expected and ultimately brought down the Russian Imperial régime. The Tsar abdicated, became a prisoner and was murdered, along with the Tsaritsa and their whole family. The Russian Armies, broken and overwhelmed after the July offensive, melted away in mass-desertions. The peasants and the returning soldiers divided among themselves the landlord's land. And the success of the October Revolution of 1917 left Lenin and Trotsky free to inaugurate the great Communist experiment. Faced by this catastrophe the Abyssinians might well have thought that their claims to the Holy Places were never destined to be presented. Fortunately, owing to the advice and aid of the Grand Duke Alexander, the papers that had been collected in Constantinople were recovered and presented to His Highness as the representative of the Imperial family which had contributed so materially to their original discovery.

Investigations of Baron Nolde.

The Grand Duke then handed them over to Baron B. Nolde, formerly Professor of Jurisprudence at the University of Petrograd and late Member of the Permanent Court of Arbitration at The Hague, who, having made a thorough investigation of them, delivered a reasoned and considered opinion on them, and pronounced in favour of the claims which they supported.

The evidence submitted to him comprised early Firmans issued by Caliphs and Sultans in which the rights of the Abyssinians at Jerusalem are guaranteed, early books of travel in which that people is spoken of as owning important Holy Places, later books of travel published in the 19th and 20th centuries testifying to the same fact, and a series of opinions on the Abyssinian claims collected by the Negus Menelik II. in 1905 from such important authorities as the Greek Patriarch of Jerusalem, the Maronite Vicar, the Catholic Armenian Patriarchal Vicar, and the Vicar Administrator of the Latin Patriarchate.

The source of the various religious claims in Palestine appears to be the Firman of the Caliph Omar issued A.D. 636, which runs as follows:—

> "Let peace reign among them (the Christians) as regards their churches and convents, as well as all the other places of prayer belonging to them in Jerusalem and outside, that is to say the Camama or the Temple of (the) Resurrection and the Great Church of Bethlehem where Jesus Christ was born, the sepulchral vault having three doors, on the South, North, and West sides. And in order that the Iberian and Abyssinian communities depending on the Greek Nation be well established, let all other Nations that go there on pilgrimage (Latin, Copts, Syrians, Armenians, and others), submit to the Patriarch Sophronius of Jerusalem, who must be their guide because such was the command of the honoured and well-beloved Prophet."

What Firmans were issued in favour of the Abyssinians between A.D. 636 and the reign of Sultan Selimi (1512-1520) does not appear in this judgment; but the Baron shows that Sultan Selimi, speaking in one of his Firmans of the jurisdiction of the Patriarch of Jerusalem, enumerates among other churches and convents "the churches which are in the possession of the Georgians, Abyssinians, and Serbians," and grants them some exemption from taxation. This Firman was renewed by Sultan Suleiman I. (1520-1566) and Sultan Ahmet (1603-1617). Baron Nolde next quotes the testimony of 16th and 17th century travellers. In the account of "Le voyage de la Terre Sainte" began by Maitre Henis Posset and finished by Charles Phillipe, squire of Champery and Grandchamp in 1532, the following passage occurs:—

> "From there he went to the place where Abraham did his duty in sacrificing his son Isaac, and where the Chapel is kept by black people called Abussinians. There is still an olive tree as beautiful as it was then."

In a book published in 1650 the celebrated Italian writer, Pietro della Valle, declares:—

> "Near the Chapel of Mount Calvary I saw another one where Gottifredo and Baldivino, Kings of Jerusalem, are buried. Then another underground, where St. Hilda found hidden the Cross of Christ. Near another kept by the Abyssinians is the COLUMN OF THE INSULT, so called because on it sat Jesus Christ when the crowd mocked him and crowned him with thorns. I found that the various nations had eight Holy Places, two of which belong to the Abyssinians besides the above-mentioned COLUMN OF THE INSULT."

By "Gottifredo and Baldivino" are presumably meant Godfrey de Bouillon and his younger brother Baldwin, who joined the first Crusade and became successively first and second King of Jerusalem. (See Chapter 58 of Gibbon's "Decline and Fall.")

(To be continued.)

The Air Ministry announces that as the result of an accident on October 18 at Moascar, Ismailia, Egypt, to a Bristol Fighter of No. 208 Squadron (Moascar), Flying Officer Vincent Bingham Bingham-Hall, M.C., the pilot of the aircraft, and P.O. 15,909, Marine William Higgins, Royal Marines, were killed.

The two French airmen, MM. Coste and Rignot, who set out from Le Bourget on October 28 on a non-stop long-distance flight, arrived the following day at Jask, in Persia, having covered a distance of some 6,600 kilometres (about 3,440 miles). The previous record was 6,170 kilometres.

EMPIRE AIR ROUTES.

The discussion on Imperial air communications, held by the Imperial Conference on October 28 and 29, contained many points of special interest to India. Sir Samuel Hoare started his speech by enunciating two broad propositions: first, that the Empire is in urgent need of better communications: secondly, that, if they are to be improved, a sustained and united effort will be required. He pressed upon his audience the claim of air transport as "one of the most effective instruments for stopping the waste of time that is now weakening the vitality and retarding the development of Empire intercourse." As regards the progress already made, he mentioned the record of five million miles flown by British services for four fatal accidents, and the million miles flown in Australia for a single accident: and claimed, as the best possible proof of the safety and regularity of the British air services, that freight insurance premiums per £100 to-day are, by air, less than half those charged for land or sea transport. He went on to say that, in the present state of aerial science, there is no technical reason why the journey to India from England should not be reduced to five days; though its translation into fact depended largely, as he admitted, on "the forging of the link" between London and Egypt—a comparatively trifling gap in the filling of which many difficulties had arisen, and with the elimination of which he said that "we in England should be interesting ourselves." When he asked whether it would be possible for the Government of India to consider the question of extending the Cairo-Karachi service to Bombay, Calcutta and Rangoon, it may be supposed that he did not overlook the existence of this initial gap nearer home: if the authorities in England were to pass from the conditional to the active, and interest themselves in it without delay, this would, at any rate, be an object lesson to those in India that ought to produce salutary results. For, as Sir Samuel Hoare rightly pointed out, the essential importance of the Cairo-Karachi route is not the saving of time in reaching India, but the fact that it is a section of a great Empire air route to Australia and the Far East.

The Air Minister then went on to speak of developments of the more distant, rather than the immediate, future—the inauguration of the airship service, to which he looks for the long-distance transport system, of both passengers and freight, while the aeroplane deals with short stage traffic. He said that the two great airships, now under construction at Cardington, should be ready in a year's time: that it was then proposed, after carrying out adequate home trials, to fly at least one of the ships regularly to and from India, for a full period of trial in tropical conditions: after which, it was hoped to undertake demonstration flights to the Dominions, if the latter were, by then, ready to receive them. For this purpose, he urged the immediate commencement of the provision of mooring masts and the collection of meteorological data. He also spoke of the special efforts made to minimise the danger of fire, in a structure composed of such inflammable materials as an airship. It is permissible to believe that this is one of the most vital questions that has to be faced in the development of civil aviation—not only in the case of the airship, but of the aeroplane as well. Sir Samuel Hoare said that one of the airships under construction will be equipped not with petrol but with heavy oil engines: and it is to be hoped that, as time goes on, non-inflammable gas, such as helium, will become commercially possible for general use. But, so far as can be foreseen, the aeroplane will have to continue to use petrol, and the non-inflammable tank has not yet been discovered. The attitude of the authorities towards airship development was described, by a Cambridge scientist, as one of "healthy cold feet": so long as the risk of incineration is the principal risk in air-travel, however small the total risk may be, the attitude of the timid traveller, towards any form of it, remains one of very unhealthy cold feet.

It is understood that the provision of a mooring mast at Karachi is already under way: Sir Samuel Hoare said that the erection of one was reckoned to take about two years, so that it seems likely that India will be ready for the airship as soon as the airship is ready for India. But, so far as is known, the arrangements for the aeroplane service are very backward, in particular the provision of aerodromes and good landing grounds at places other than Karachi. And it must be insisted that Karachi is entirely unsuitable as the Indian civil aviation terminus: nor are Bombay and Calcutta, the two other places specially mentioned by Sir Samuel Hoare, much more suitable. The last mail brings the report of a resolution passed by the Karachi Chamber of Commerce, in favour of the immediate construction of a direct broad gauge railway to connect Karachi with Delhi and the United Provinces. The resolution urges the self-evident fact that "the anomaly of a break of gauge only 100 miles from the sea-board is highly detrimental to the development of trade": and that it will become even more so "in view of the impending inauguration of a direct aeroplane mail and passenger service from London to Karachi, to be followed in the near future by an airship service of much larger capacity for passengers and merchandise of high intrinsic value." This is unquestionable, so far as it goes; but it does not go nearly far enough. What is also wanted, and even more urgently, is arrangements for the extension of the air service to a central point in India, which can be used as the real Indian "terminus"—more properly, as the Indian stage on "the great Empire air route to Australia and the Far East." Beyond any possibility of question, this stage ought to be located at Delhi: which is not only fairly central, so far as India is concerned, but is served by a number of main railways by which travellers can proceed to any destination in India with the minimum of trouble. Moreover, the selection of Delhi as the Indian air stage will go far to make it the real Capital of India of the future—a living centre, instead of a collection of bricks and mortar set down "among the tombs."

CURRENT TOPICS.

The Course of Politics.

The elections are now fairly started, and, at this distance from the scene, all that is possible is to take note of the unwonted unanimity of the prophets on the spot for informing us that nobody really has the least idea what is going to happen. One item of news, as distinct from prophecy, deserves, however, a word of welcome, and that is that the two redoubtable Pundits of Allahabad are not going to fight their differences in the open, but are both coming back to the Assembly unopposed. The truth is that the Assembly needs them both, and also that they are likely to be much more use to India inside it than out. Like nearly everybody else in the Indian political world, they have in the past made mistakes through ignorance of the new game they tried to play, but, more than most of their competitors, they seem to have the gift of learning by their own mistakes, and they will do excellent work in their different ways when they have finally succeeded in getting rid of some of the absurd pledges to which they committed themselves in their days of inexperience. To tell the truth, inexperience is still the outstanding feature of Indian politics, and in these days, when India is talking of test-matches, and "Jacker" (good luck to him!) is Governor-Designate of Bengal, it may be appropriate to give the views of a sound cricketer who has watched the Assembly at its work. "It's like a match between teams chosen from the unreserved seats at the Oval," was his comment. "They know how the game should be played, but they don't know how to play it: what most of them need is a season at the nets against plain bowling, with a really good coach." That criticism gets pretty near the root of the matter. Given time, and natural ability, you can learn the game by playing it, but a bit of coaching at the start makes matters very much easier, and Indian politicians have so far had very little coaching.

A Leading Liberal.

The simile we have just given was recalled to us forcibly by Sir Chimanlal Setalvad's recent articles in *The Times*. He is, of course, an adept in stating a case and selecting the facts on which to base it, but, if he knows what practical politics means, he has succeeded in keeping the knowledge out of what he offers the public. To gloss over the real cleavages on which stable parties must eventually be based, to dream that everybody who matters has the same views, to hope that another Royal Commission will close the breaches if only it is appointed this year instead of next, that is not the way to get forward. The true sign of progress is that the country is, however slowly, attaining to a clearer view of the facts which really count. Even the miserable communal discussions of the last year or two may fairly be taken as evidence of an approximation to reality, because the feelings on which they rest are deeply rooted in Indian nature, and, even if the party-grouping of the immediate future should follow religious lines, it is better in the long run that the differences should be fought out with words in the Councils than with brickbats in the streets. For a long time the self-chosen leaders were able to shut their eyes to this unpleasant, but vital, group of facts, and the result has been that mobs have found leaders of their own. The responsibility for the acuteness of the present trouble lies primarily on the men who failed to give an effective lead in the direction of forbearance, and this is one of the early mistakes which has to be lived down by the bulk of the prominent men, whether they choose to label themselves Liberals, or Responsivists, or Independents, or anything else. Sir Chimanlal's articles, interesting as they are would have been much more enlightening if they had shown any consciousness of such facts as these.

The Agricultural Commission.

The Marquess of Linlithgow has given evidence of a nice sense of values in his statement that he regards the chairmanship of the Royal Commission on Agriculture as far more important than the chairmanship of the Conservative Party, and it is satisfactory to read that he has no intention of abandoning the work now in his hands, which will carry him, at any rate, into 1928. The personality of a chairman is always important, but in the present case it may fairly be described as an essential. The possibilities of the Royal Commission are very great, but the selection of its members has been widely criticised, the general impression seems to be that, if any real good is to be done, the chaiman must do nearly all of it himself. Whether his labours can be completed by 1928 is a question on which we are not inclined to speculate. The area to be covered is enormous, and so is the mass of relevant detail, the minor interests affected are vocal and ardent, and it will need economy as well as concentration of effort to get through the essential inquiries in two cold weathers.

Sir John Maffey.

The announcement of Sir John Maffey's appointment as Governor-General of the Sudan will come as a surprise to most people; not so much because the selection has gone outside the Sudan service, as because people—at any rate, those who know him—will be inclined to wonder how the authorities came to think of making so excellent a choice. Sir John Maffey was marked out for the highest preferment in India, but elected to resign the Indian Civil Service rather than wait for it, and to put his great abilities at the disposal of the City. Others much less gifted than he may, perhaps, deduce, from his acceptance of the post to which he has now been appointed, that he was not as enamoured of commercial life as he expected to be: and may find, in this deduction, some consolation for their own experience in somewhat similar circumstances. It is true, of course, that Sir John Maffey has no practical knowledge of the Sudan and that, to that extent, his appointment is an unusual experiment, but not necessarily the less sound for that. All who have any acquaintance with Sir John Maffey's work in India know him to be a man of outstanding ability: and firmly believe that one who was so strikingly successful in handling the wild tribesmen of the North-West Frontier of India, and in gaining their confidence, friendship and respect, will achieve at least equal success in the somewhat similar environment of the Sudan.

HAVE you been along the Nile to Luxor or Assuan? It is a wonderful voyage by one of the Anglo-American Nile Tourist steamers. The American Express are General Agents and can reserve cabins in advance for any of the weekly sailings from Cairo.

Services for Travellers to India

SERVICES that smooth the path and take the trouble out of travel. Your steamship passages booked at no extra cost. A uniformed man to meet you at Bombay or Calcutta. An office nearby to take care of your baggage, issue tickets and arrange tours to any point inland. It pays to summon American Express service to your assistance before you leave Europe.

AMERICAN EXPRESS

I.C.S. Acceptances.

The "acceptances" of the candidates for the Indian Civil Service have now been published: and, as was the case last year, they provide less encouraging reading than did the list of probable starters. Out of the 35 names appearing in the original list, 26 are still there—21 Europeans and 5 Indian: of whom 14 sat for the Indian service only, ten also for the Colonial, and two also for the Home. The two gentlemen who have elected for the Indian in preference to the Home service passed thirteenth and sixteenth in the original list of nineteen for the latter: and one gentleman, who originally appeared in the Indian list only, has now dropped out of it—obviously because, as suggested in the previous note on the subject, he had also sat for the Home service but had not passed high enough to figure among the candidates originally declared successful. The preference for India, of two men who passed above him, has given him his chance: so that the I.C.S. shows a net gain of one from the Home list, out of a possible seven—the number of successful Home candidates who also sat for India and, incidentally, for the Colonies as well. Disregarding these seven from the original Colonial list, the latter contained 19 names, 13 of which also appeared in the Indian list. Of these thirteen, six elected for India and seven did not; but, of the last five successful candidates in the Colonial list, who had evidently not passed high enough to figure in the original Indian list, four now appear among the Indian acceptances; so that India shows a gain of ten out of a possible eighteen, and the preference still remains H.I.C., though by an uncomfortably narrow margin. Of the fourteen new names now appearing in the final Indian list, four come below that of the last name in the original Colonial list: seven immediately above it: and one each next above the last but two, the last but three, and the last but four, in that list. The list of starters totalled 35, made up of 30 Europeans and five Indians: the list of acceptances has been extended to 40, consisting of 29 Europeans and eleven Indians. Of the 29 Europeans, eleven hail from well-known public schools—two from Cheltenham, and one each from Rugby, Westminster, Wellington, Haileybury, Uppingham, Dulwich, Glenalmond, Rossall and Bradfield. Fifteen of the successful candidates came from Cambridge University and fourteen from Oxford: five from London, three from Manchester, two from Edinburgh and one from Dublin.

INDIAN LETTER.

On Tour, Peora, U.P. October 13, 1926.

The Elections.

The date for the scrutiny of nominations of candidates for the elections has passed, but at this distance from Calcutta, the details are not available. Of the 140 seats, 26 are filled by nominated or official members, so that 114 have to be elected. There are 16 European vacancies and there are only 16 names put forward, so that there will be no contests here. It must be admitted that it is becoming increasingly difficult to find men of standing who have the time and money to waste in the futilities of Council proceedings, especially when the people they are supposed to benefit have so openly indicated their indifference to them. For practically all the remainder of the seats there will be contests and it is seldom that there are less than three candidates for each seat. The Anglo-Indian community appears to be taking more interest in the elections, for there are four candidates for their two seats, although one of their sitting members has retired. The Swaraj Party are contesting almost every Indian seat, even when the candidate they support is not nominally a member of their organisation. In one case, in order to keep out a *bête noir*, they are actively assisting his opponent who has never concealed his opposition to them; but they obviously consider him less dangerous than his rival. Lastly, there are several instances of two or more Swarajists' opposing each other for the same seat!

State Railway Workshops.

The *Statesman* this week publishes a long letter from an obviously well-informed writer keenly criticising the recommendations of the Committee which recently investigated the finance and working of the workshops attached to the State Railways. The Committee was of opinion that, while most of the workshops were modern, well-laid out and excellently equipped, they are not being administered either economically or expeditiously, and, whilst maintaining the rolling stock in safe running condition, they are singularly deficient in such matters as the scheduling of repairs, planning and progress of work, inspection and gauging. In spite of these damaging criticisms in regard to the main functions of the workshops, the Committee recommended extensions of their manufacturing side, and, although apparently ignoring the question of the capital invested in the shops and therefore being without the necessary data to enable an estimate of capital charges to be made, they commit themselves to percentage figures of the savings in costs by the Railways making parts for themselves. The correspondent protests strongly against the proposed extensions and expresses the opinion that the workshops have for years been carrying out their main function, repairs, in a manner which would have landed commercial concerns in the Bankruptcy Court. In the present condition of the world's steel trade, and particularly of the Home and indigenous concerns which are struggling "to keep their ends up" in times of almost unprecedented depression, it seems anomalous to suggest the sinking of further capital in the industry, especially when, as in the case of the State workshops, there is no spur of competition or the hard necessity of paying your way to ensure economy and efficiency in working. The matter calls for the closest attention of all who are interested as competitors, as well as those who have in the end to foot the bill in the case of losses, i.e., the freight-payers. The magnitude of the question is indicated by the correspondent's estimate of the amount already invested in the existing workshops, which he suggests in the case of the State Railways alone is probably forty crores of rupees, or say thirty millions sterling.

Heard by the Way.

Your correspondent, having escaped for a few weeks from what is reported to be a worse "end of the rains" than has been known for some years—the Calcutta hospitals are full of cases of fever and beri-beri, the latter having attained the dimensions of an epidemic—has made some interesting contacts in his journeyings. A first stay was made in Naini Tal, one of the most beautiful of hill stations, reminiscent in its charm of an unspoilt Italian lake village. The annual "week" was in progress with its sailing and rowing regattas, and its polo, cricket and tennis tournaments, and the Eastern Command has custody of the majority of the "pots" for the next year. A long railway journey alone in a carriage with an example of the new-politically-minded Indian, a petty official travelling in comfort on his pass, while his wife and family travelled in a crowded lower class carriage, was interesting in showing a change of manners; the exchange of the old courtesy for a sort of surly suspicion is a poor compensation for political progress. A Burma official on holiday told of a great increasing understanding of political power amongst the Burmese and a settling down to a sane determination to use it for what they consider the country's good; he prophesies the abolition of betting within a year and total prohibition within the next decade. Marching and camping from railhead through the Indian Lake District, to Naini Tal, brought meetings with a number of Indians of all grades from hill coolies to a Rajah; a most refreshing change from Bengal. Politically things are said to be much quieter even in the Plains towns, but communal tension is real, if subdued; away from the centres there is no sign of either.

Digitized by Google

We have read the reports that Col. the Hon. F. S. Jackson is to succeed Lord Lytton as Governor of Bengal with more than usual interest Personality counts here more than anything and the best captain that England ever had would have a fine chance to make history in Bengal, if he could pull the unruly Swarajists into line and teach the touchy babu to play the game in politics and life.

Traffic problems are becoming daily more acute in Calcutta. The motor-bus, which was hardly known here eighteen months ago, now runs in hundreds along all the principal thoroughfares and the Punjabi drivers are showing themselves superior to the most dramatic French chauffeurs in the matter of élan when it comes to cutting in or dashing for stopping places. Add to this the increasing number of high buildings, with cars and office jams two and three deep outside, and crossing the street becomes a real nightmare.

The Trivial Round.

A mid-week race meeting was held on the Wednesday holiday and attracted a fair attendance in spite of bad weather conditions. Small fields ruled but the racing was good and on the whole backers did not do so badly. It was good to see that Mr. Galstaun managed to get on the board two or three times as a change in his recent luck.

A new form of sport has been found in the Calcutta docks. A steamer working from East Africa was being unloaded when a twelve-foot python was seen amongst the boxes, causing a panic amongst the coolies. It was finally left to the police to organise a hunt, and after some hours it was found behind a case and shot. It appears to have escaped from a consignment of reptiles which was transhipped at Colombo.

The Cameron Highlanders, who were recently stationed in Calcutta, have won the Soccer Championship in Rangoon, beating the Customs, who were the holders, by 2—1 in the final.

The Calcutta Swimming Championships have concluded at College Square and considering that the course is 110 yards of open dead water, the performances were excellent. D. D. Mooljee, for the third successive time won the four longer events and his times are interesting: furlong, 2 min. 38 3-5 secs.; quarter-mile 5 min. 53 secs.; half-mile, 12 min. 32 2-5 secs; and mile, 26 minutes 17 3-5 sec. Mooljee is also a brilliant water-polo player and he would go far with first-class training.

The golf tournament between the Jute Mills has concluded and Kanknarrah have won with a good margin from Argus, Titaghur being third. This tournament, like the other inter-mill competitions, grows in popularity and the extension of athletic and games events of this kind is a good sign of the desire of the younger assistants for the open-air beyond the walls of the mill compound.

INDIAN MAIL.

Bombay Newspapers.

Bombay is showing great activity just now in the matter of newspapers. Mr. Horniman's new paper, the *Indian National Herald*, was announced to appear on October 16; and Sir Victor Sassoon's journalistic venture, the *Morning Post of India*, is also in the offing, though its immediate appearance seems to be unlikely. It is said that the probable delay is considered to be due to the depressed trade prospects of Bombay, the restriction on the buying power of the Indian consumer owing to the high rate of exchange, and "the disadvantages from which the trade in Bombay is suffering as a result of the high rates for land charged by the Port Trust and the Bombay Municipality." Some point is given to the second of these reasons by the announcement of the establishment in Bombay of an "Indian Currency League," with Sir Victor Sassoon as Chairman: whose object is temperately described in the local Press as "to fight the exchange octopus that eats into the vitals of 300 million producers of India by burdening them to the extent of 12½ per cent. and ruining the Indian industries by favouring their foreign rivals at the expense of the poor ryots": and to fight, at the same time, "the financial authorities of India, who are out to ruin the Indian people in order to support the foreign manufacturers who are loudly clamouring in order to capture the Indian market." The *Bombay Chronicle* has also changed hands, having been sold by auction under instructions from the trustees of the mortgage debenture holders; though it is announced that, owing to legal and other formalities, it will take some time before the management and control of the paper are assumed by its new owners. Subscribers and readers are assured that the alteration in management "will not involve any change in the nationalist policy of ventilating the grievances and championing the rights of the Indian people, which the *Bombay Chronicle* has consistently followed since its foundation." It is interesting to observe that Mr. Horniman, at any rate, has not been deterred from starting his new venture by the objections that have presented themselves to Sir Victor Sassoon; from which one is able to draw conclusions that are so obvious as to make it unnecessary to state them.

An Hijaz Conference.

The return of the Indian deputation to the Hijaz has been made the occasion for a number of meetings, a quantity of talk, and a great deal of abuse of Ibn Saoud. The Ali brothers, who went to Mecca as his fervent partisans, have returned with altered views: the change being apparently due to Ibn Saoud's refusal to accept the dictation of the "Central Khilafat Committee." At an Indian Moslem Hijaz Conference held in Bombay in mail-week, a large part of the proceedings was devoted to denunciation of Ibn Saoud and the Wahhabis: and it was resolved, *inter alia*, that "the domination of the Nejdis over the Hijaz cannot be tolerated in any way." An explanatory statement says that this resolution is due to the "knowledge and convictions, from the past history of 118 years, of the Wahhabis' character and habits, history and traditions, bigotry and intolerance, ignorance and utter want of culture and of knowledge of the principles of Government"—a sufficiently sweeping indictment. From this, says the Conference, "it will be realised how right it is to resolve not to tolerate their domination over the Hijaz in any way."

An expressed refusal to "tolerate" something that they do not approve of is a favourite phrase of Indian politicians: who seem to find a difficulty in applying to themselves the homely English phrase "if you don't like it, you can lump it." One may confidently expect that Ibn Saoud will pursue the even tenour of his way quite undisturbed by the refusal of the Conference to tolerate him: and that, if the matter interests him at all, it will merely

LONDON CITY MISSION.

AYAHS AND AMAHS' HOME.

The Institution—the only one of its kind in the great Metropolis—is conducted on lines approved and supported by the India Office.

The Society is prepared to receive Ayahs and Amahs of approved character for long or short periods, and to introduce them (if disengaged) to families about to travel to the East.

For Terms and Conditions apply to the

do so to the extent of mildly wondering what it intends to do about it. A recent British Consul at Jeddah used to write very entertaining, but decidedly unparliamentary, reports about Hijaz affairs in the days of King Hussein, and was particularly fond of parallels from Dickens. If he had been still at his post, he might now have found an apposite one in Nicholas Nickleby, on the occasion when Mr. Lenville announced his intention of pulling Nicholas' nose. "Object of my scorn and hatred," said Mr. Lenville, "I hold ye in contempt"—at which Nicholas laughed in unexpected enjoyment.

Destruction of Injured Animals.

The objection to the destruction of injured animals, felt by many Indians—principally, of course, the higher castes of Hindus—was mentioned some time ago in these notes, with reference to a proposal, brought forward in the Bombay Legislative Council, to arm the police with more extensive powers in this respect. There exists, in Bombay, a "Humanitarian League," one of the chief objects of which is the rescue of infirm, diseased and injured animals, which are looked after and cared for in a "Pinjrapole" erected for the purpose. This very laudable object seems, to Western ideas, sometimes to be rather overdone; and an example of this is to be found in a case reported in the Bombay newspapers, where a horse suffering from "a complete fracture of the lower bone on one of its forelegs" was "saved from the shots of the police." The correspondent relates how he happened to pass the place where the accident (a collision between a hack victoria and a motor car) had taken place, and "found the animal standing there on all fours surrounded by a big crowd of kind men." Two coolies had been "placed to watch the animal, by the driver and owner of the horse," while the police were being fetched to shoot it; but the rescuer "being shocked to learn this, and being hardly able to imagine the consequence of such an act in a locality where Hindu religious temples were prominently situated, told the coolies and those present to watch the animal on his behalf, and not to allow the police to shoot it, as he would arrange for its removal to the pinjrapole. These instructions greatly pleased the crowd." Eventually an ambulance car was obtained, and the horse "was very safely led over it by means of a sloping platform. It was indeed very relieving to see the injured animal thus getting over the car and entering the matted chamber of it without the least trouble either to itself or to us." The account ends with the statement that the horse is now in the pinjrapole "and is improving": though it does not say in what respect—not, at any rate, one must suppose, in respect of its broken leg.

The Simla Lucky Bag.

A considerable amount of feeling seems to have been aroused over a "Monster Lucky Bag," held at Simla at the end of September, in aid of local charities. The thing had been well advertised, particularly the remarkable assortment of prizes, which included a camel, two ponies, a hog-deer and some guinea-pigs, also "many useful and ornamental gifts and a number of cash awards": and a big business was done in rupee tickets. The Anglo-Indian newspapers content themselves with stating that the bag had to be closed down, and the conclusion of the drawing reserved for the next day, as it was impossible to complete it by nightfall; but some of the Indian newspapers say a good deal more than this. A correspondent of a leading Anglo-vernacular paper pays a compliment to the heart, but not to the head, of those who organised the entertainment: "good feeling," he says, "is different from good management, especially in respect of a mass movement." It appears that it had been decided that there should be no blanks—everyone was to get a prize of some sort; and, as there were 25,000 subscribers present, the difficulty of distribution was great, and became greater as the afternoon wore on. The correspondent declares that the police had to be called in to "keep in check those who had collected to gain admission, because others who had gone in earlier were still crying hoarse and were not being attended to. Standing under the scorching heat, they got restless and pressed. A number of them got so disappointed and disgusted that they threw their tickets and returned home. Those who were lucky to get in received a match box or a cigarette box, etc., in return. On this score it is true one can have no complaint, but it becomes painful when you get a match box worth a pice (a farthing) after waiting for three hours. Even select people who were issued workers' tickets which entitled them to go to any place were not so admitted thanks to the illiterate police and overbearing officials in charge of the show. A number of Sikhs drew cigarette boxes and, as this offended their religious susceptibilities, they did not touch their prizes and went away surprised at the callousness shown about their sentiment. People were crying as to why they had been asked to buy tickets if in return they were to receive the police baton. Simla public lost a good day, wasted their time and energy in backing a movement very laudable in its objects but very recklessly handled."

It looks as if there was something more in this than the familiar attempt to disparage the "illiterate police and overbearing officials"—among whom were apparently included the whole of the Punjab Government including the Governor himself, who is recorded to have "done the policeman's duty pacing up and down telling the people to keep quiet" and to have "actually pushed them back frequently." One remembers a similar entertainment held at Simla some years ago, that was eminently successful, though there was only a limited number of prizes. The attempt to go one better, this time, in the interests of the greatest happiness of the greatest number, seems to have gone some way towards producing the opposite effect: and, if nothing else, will at least be an object lesson for the future. Incidentally, we have not been told who was the lucky participant who drew the camel.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
London, Tuesday Morning.

A Gold Shortage.

We have heard so much in the last year of the surplus supplies of commodities that it is quite a change to be warned, as we are by Professor Cassel. that there is a danger of a shortage of one of the most important instruments of our economic life—gold. At a time when an effort is being made again to base currencies on a gold standard it is obviously very important that the facts with regard to the supply of gold should be adequately appreciated, for the price of gold and that of commodities are correlated, and if gold rises commodities fall, a development which obviously would be fraught with serious consequences in a country like Great Britain, where the difficulties in bringing the level of wages into alignment with price levels is so immense. Professor Cassel it must be admitted makes out a strong case for his thesis, but, as he admits, there is always the possibility of new gold discoveries, while developments may be such that the present output of the metal will be adequate for requirements. Clearly, however, in view of the consequences involved, there can be no allowance for these factors, and if there is a prospect of a shortage then the use of gold as a currency medium will have to be restricted, which means, for instance, that there can never be any prospect of a return to gold as a medium of circulation.

The Egyptian Cotton Crisis.

The action of the Egyptian Government in restricting the cotton acreage for a period of three years is clearly justified by the situation arising from the existing surplus of cotton. It will not be denied that there is no point in continuing to produce large cotton crops if the cotton cannot be sold at prices that give an adequate return, and it has to be remembered that a return on the crop which would be sufficient in other lands will not suffice there. That is, indeed, one of the main factors in the position which has developed. How far the situation is likely to improve as a result of the measure is, however, a moot point for the development of cotton production is going on apace elsewhere, and in default of a vast extension of the demand for cotton it is difficult to envisage any marked rise in the price of cotton in the near future. As I have already indicated, Egypt has now to face a future in which cotton will not henceforward be of necessity one of her two great stand-bys. That being the case, it is a matter of urgency that she should lose no time in investigating the possibilites of finding new and more permanent outlets for her economic activities both industrially and agriculturally.

Trade with Egypt.

On another page in this issue will be found the concluding instalment of the very interesting and informative lecture given by Mr. Chapman before the British Export Society on "Trade with Egypt." This particular market is one in which until recently this country has been losing ground, but while the trade statistics for the past year seem to show that the tide has turned, it would be idle to deny that the position at the present time is unsatisfactory. Of course the market is not an easy one in which to establish a firm footing, but there is no market where trade is to be had for the asking, and success must depend on determination and knowledge of the market. Mr. Chapman deals in detail with the special condtions governing trade with Egypt, and what he has to sav on such matters as methods of business, credit, and methods of quoting should be invaluable for merchants who are thinking of entering the market. It is necessary to utter a word of warning, however, as to the immediate commercial prospects in this outlet. The cotton crop promises again to be extremely good, it is true, but the sharp fall in the price of the commodity means that the benefit the Egyptian community should derive from it will be restricted, and there is likely therefore to be a certain slackening in the demand for staple commodities.

Lake Copais Company.

In his speech at the meeting of the Lake Copais Company, the Chairman, Mr. Sandford Poole, explained that the reasons for the considerable reduction in the profits of the company for 1925 were the unfavourable weather conditions, political uncertainty, and a heavy fall in the exchange value of the drachma. Crops were sown on 31,539 acres as against 31,107 acres in 1924, but the weather destroyed the crops on 11½ per cent. of the area, and the approximate production of cereals was 14,500 tons as against 16,000 tons and an acreage for 1914-23 of 18,300. The Chairman explained, however, that too much importance should not be attached to these figures owing to the increasing production of cotton. This has actually come to be the most important crop grown in the Copais, and it is anticipated that there will be 7,500 acres under cotton this year. This fact is a further indication of the gradual extension of cotton cultivation in every country where it can be successfully grown.

Assam Railways and Trading Company.

The past year was a record one for the Assam Railways and Trading Company, and at the general meeting (a report of which will be found in another column) Sir Walter Lawrence, who presided, delivered a speech on behalf of the absent Chairman, in which a very satisfactory survey was given of the company's operations during the past twelve months. The company has widespread activities, but it appears that it was the railway side of the undertakng which was responsible for the improvement in the profits. There was a considerable expansion in the traffic receipts, while there was a marked reduction in the working expenses, the ratio falling to 53.5 as compared with 64.33 for 1924. It may be noted that it is the view of the general manager in India that for some time a steady expansion of revenue may be anticipated.

THE AGRICULTURAL SITUATION IN ROUMANIA.

(From Our Own Correspondent.)

Bucharesi, October 22.

The total area of Roumania was increased after the War from 137,903 sq. km. (or 13,790,300 hectares) to 300,000 sq. km. (or 29,489,200 hectares). Of the total area of Greater Roumania, 46.8 per cent. is represented by Old Roumania, 34.6 per cent. by Transylvania, 15.1 per cent. by Bessarabia, and 3.5 per cent. by Bukovina; 11.6 per cent. of the total area is arable land (as against 45.3 per cent. in the Old Kingdom), 14.6 per cent. is natural pasturage (8.7 per cent. in the Old Kingdom), 1.8 per cent. orchards, etc. (1.7 per cent. in the Old Kingdom), 24.6 per cent. forest (21.3 in Old Roumania), and 17.4 per cent. is occupied by roads, buildings, etc., and is therefore unproductive. Thus, by the annexation of the new provinces, including the extensive mountain tracks of Transylvania, the percentage of arable land has decreased by 4.3 per cent., and that of natural pasturage and of forests has increased considerably. The largest proportion of arable land is to be found in the Old Kingdom, viz., 6,241,678 hectares (or 50.9 per cent. of the area of Old Roumania), while the largest proportion of forest land is in Transylvania, i.e., 3,528,296 hectares, or 50.1 per cent. of the area of the province.

The following table (published in the *Argus* and based upon the figures of the Ministry of Agriculture) shows the division of the arable land in 1925 both in Old Roumania and in the whole country:—

	OLD ROUMANIA.			GREATER ROUMANIA.		
	Area Hectares	% of Arable Land	% of Total Area	Area Hectares	% of Arable Land	% of Total Area
Cereals	5,566 947	89.18	40 35	10,471 680	85.27	35.49
Edible & Industrial Plants	295,053	4.72	2.14	834,043	6.80	2.82
Hay & Fodder	275,306	4.40	2 00	571,461	4.65	1 93
Fallow Land	104,369	1.70	0.76	291 228	3.28	1.32
Total ...	3,211,678	100.00	45.25	12,269,362	100.00	41.56

Of the cereals the largest acreage is devoted to the cultivation of maize, especially since the agrarian reform law gave the majority of the arable land into the hands of the peasant cultivators, whose methods are still primitive and whose means are small. But the most important crop from the commercial point of view is wheat, and although the acreage devoted to this crop has increased yearly since 1921 it is still almost half a million hectares short of pre-War figures, for in 1912 and 1914 the wheat sowings covered an area of over 2 million hectares. This is attrbutable both to the inexperience of peasant cultivators and to restrictive government measures affecting prices and exports. The measures were intended to prevent an inordinate rise in the price of bread on the home market, but unfortunately they also had a discouraging effect on the production of wheat. It is worthy of notice also that the diminution in the wheat sowings is recorded chiefly in the Old Kingdom and only to a lesser degree in the other provinces. The harvest of 1926 was very promising in the early part of the year, but the final results were not so satisfactory as had been hoped, though the crops were considerably heavier than in the previous year.

At the present time complaints are heard on all hands that there is no market for the wheat, at prices which show any appreciable profit. The exportation is also rendered more difficult by the shortage of tonnage and the consequent high freights (caused partly by the coal strike in England) and also by the recent fluctuations in the value of the leu, which has improved from 1,100 and 1,200 to the £1 to 890 or 900 to the £1.

THE ATTRACTIONS OF EGYPT.

With the approach of winter here with its fogs, its snow, and its icy winds those who are in a position to do so begin to contemplate a visit to a warmer clime either as an interlude in the long-drawn-out winter or for the whole period until the winds of March have prepared the way for the traditional English spring. It is almost needless to say that Egypt is the land that has first claim on the would-be traveller's attentions. One may have been there before or one may not. It is immaterial which, for the charm of Egypt never tires. A land of eternal mystery, its fascination, subtle, seductive, is everlasting, and a visit there is an almost certain assurance that one will go again. Those who wish to glean a very perfect idea of what Egypt has to offer the tourist should peruse a brochure which has just been issued by Messrs. Thos. Cook and Son, Ltd., giving details of their Nile services and Palestine tours for the 1926-27 season. The daily itinerary is given of the twenty days' voyage from Cairo to Assuan and back, of the shorter journey from Assiout to Assuan and back, and of the seven days' extension of these journeys from Assuan to Halfa and back, and anyone who after reading it is not seized with the desire to visit the land of the Pharaohs must be sadly lacking in imagination. Details are also given of a twenty-eight day tour which includes five days in Cairo, and of an escorted tour to Cairo and Luxor occupying twenty-five days, leaving London in February and March. The railway from Kantara has brought Palestine into close connexion with Egypt, and so it is now an easy matter for visitors to Egypt to see also something of the lands "beyond the Jordan," and the brochure contains particulars of various tours arranged by Messrs. Thos. Cook. The illustrations are a feature of the publication. They show life on the Nile steamers, the sights which are seen by the tourist, and some characteristic views of Palestine and Syria.

COTTON PROSPECTS IN THE SUDAN.

The followng particulars are taken from the current issue of the monthly report of the Central Economic Board of the Sudan Government:—

Kassala Province.—The natives compare this year's Gash flood with those of 1916 and 1920. 30,000 to 35,000 feddans have been watered in the Delta, and of this, 25,000 feddans is estimated to be the effective cotton area.

Red Sea Province.—Tokar Flood.—A preliminary estimate is 25,000 feddans or over.

Dongola Province.—Very small areas have been sown on sagias this year owing to the lack of fodder and increased price of dura. Gureir.—Estimated area under cotton 450 feddans. The seed has germinated well. Nuri.—An area of 710 feddans of cotton was watered. Sowing is all finished. Ghaba.—An estimated area of 550 feddans of cotton is looking well.

TRADE WITH EGYPT.*

BY PHILIP CHAPMAN.

(Continued from page 500.)

The selection of an agent requires much consideration. You must bear in mind that a man who tells you he is covering Alexandria, Port Said, Cairo, and the Sudan can only visit them about three times a year, owing to the time taken in travelling. A certain amount of business is done direct with the merchants there. In fact, many of the big buyers prefer it so that their competitors do not know what they are doing, but there is no question in Egypt of buying for a man on a commission basis. If you made 2½ per cent. and he only made 2 per cent., he would think you were making too much, so you have to quote him c.i.f. Alexandria or Port Said, including your profit and your charges, insurance and all your expenses; then he can compare it with what the other people are quoting. In Africa and other places you render a man the original invoice plus freight and charges, plus insurance and petties, plus 5 per cent. buying commission, or whatever arrangement you have made; in Egypt that does not apply. The Egyptian's wants are few; he can live on very little and does not drink beer or spirits, always coffee or tea or Nile water.

Crop Prospects.

The cotton crop this year will be a fairly good one, from the point of view that it will be a short crop, and the prices will be higher; for that reason there is every indication of quite good business in Egypt for at least the next 12 months. Before I came away, the Sennar Dam was in operation in the Sudan, and owing to the various dams which regulate the water supply it is possible to tell many months in advance what land is allowed to be cultivated and from that what will be the approximate yield of the crops. Just before I left they allowed an unlimited area for rice cultivation, which means that the fellaheen can make money this year, which will eventually filter through to the bigger merchants at the ports.

Politics in Egypt do not interfere much with business. The Egyptians are doing a tremendous amount of building. Speaking generally, however, business this year has been very depressed owing to fluctuations in the rate of exchange, the elections, and slack trade generally from the interior and the very high land rents. The result has, of course, been difficulty in collecting money, and it was like a snowball: the man in the interior could not pay his sixpence, and it rolled on and on, until it came to the merchant who was offering you £30 instead of £100, and asking for extensions.

Foreign Competition.

Continental and Japanese manufacturers are doing quite a lot of business in Egypt, Czecho-Slovakia being one of the biggest competitors. The latter have formed a kind of syndicate to operate in Egypt, called the Center Commission. It is financed by the Czecho-Slovakian banks, has quite nice offices over there, and deals in all classes of material and produce, both manufactured and unmanufactured goods. The Italians also are fairly competitive because their rate of exchange helps them, but the British manufacturer can get business if he wants it.

My firm's principal business is exporting building materials, gas-tubes, pipes, hardware, and cement, etc. We had submitted to us a sample of a brass bib-cock, i.e., an ordinary plain brass tap, manufactured in Austria, and sold in Egypt to the merchant at 12s. 9d. per dozen, c.i.f. including the agent's commission, etc. This seemed to the English manufacturer incredible. We obtained taps from Germany, France, Italy, and Czecho-Slovakia, and every other country that made taps, and submitted these to friends in Birmingham, who went into the matter, and produced a far better article that we could sell in Egypt at 13s. 3d. per dozen c.i.f. and make a profit, so you see that with a certain amount of energy on this side you can compete even though the freight from England is more than twice what it is from the Continent.

Size and appearance of goods are important in Egypt. If you show a man a big article and a smaller one, and the price is the same, he will buy the big one instinctively. This applies generally. It is rather amusing when you say to a man, "This thing will wear out in a week, but if you buy mine it will not wear out in six months," he will say, "That is a disadvantage, as if the article wears longer I will not get so much business." Moreover, the Egyptian dealer does not want good stuff. He prefers an article which will wear out quickly, more especially as he is always ready with a long string of excuses for his customers as to why the article did not last long. There is a limited trade for high-class goods, but price generally wins.

There is even a business in broken goods. For instance, cracked stoneware pipes considered worthless here are bought and the cracks filled up with cement, and they are able to get a decent price for them.

Freights.

If you are dealing with Egypt you must quote a c.i.f. price. British boats go from Middlesbrough to Antwerp, back to London, and from London to Alexandria and Port Said, and the freight from Antwerp is 12s. 6d. as compared with 30s. from Middlesbrough or London. It is difficult to explain that to an Oriental. The freight is 30s. from this country, and a boat will pick up goods from Antwerp at 12s. 6d. per ton, then come back to England and pick up goods from England and the freight is 30s. a ton. That is why some English firms send their goods to Hamburg and Bremen for transhipment, thereby saving 5s. or 6s. a ton on the freight. Many times the buyer insists on this to reduce his cost. I took this up two or three years ago with the Ministry of Shipping, and the shipping company's reply was that if they doubled the

cargo and halved the freight they would be worse off, because they would want more coal to drive the boat, would require more staff, and be longer in the docks, but it does not explain why they charge 30s. as against 12s. 6d. per ton. In fact, it is merely the freight, in many cases, that diverts orders abroad.

Insurance.

With regard to insurance, my firm has a floating policy with Lloyds which costs us 3s. 9d. per cent. and has many advantages over the ordinary F.P.A. policy. It covers all our shipments from England and the Continent to any port in Egypt. We are covered against pilferage, loss of goods in loading and unloading, and a whole lot of things that an ordinary F.P.A. policy does not cover. In shipments to the East or Egypt you would be well advised to have a floating policy and include Egypt in it, because if you want to insure specially for breakage and additional cover, you can do so on the basis of the original rate for your floating policy.

With regard to introducing goods into Egypt, you can either circularise direct, which is very expensive, or you can employ a local agent over there, or a firm in England who already have their organisation, but it is necessary that you should either advertise locally, or give your agent, to start with at any rate, a special commission. It is very hard work to introduce goods over there, because they always make comparisons with other goods of established reputation.

EMPIRE COTTON GROWING CORPORATION.

In submitting the quarterly report of the executive committee of the Corporation at the recent meeting of the Administrative Council in London, Lord Derby, the President, referred to the fact that Empire cotton growing was going through what was possibly a critical phase. The large American crop of the present season had reduced prices to a level which could not have been foreseen a few years ago. Though this fact might cause a set-back in the acreage under cotton in the Empire, he thought that nevertheless where cotton was grown by natives on small plantations this set-back might not be prolonged. The need for a money-producing crop was becoming increasing felt by African natives, and they might learn from the drop in price that only improved methods of cultivation could ensure to them a sufficiently high yield per acre to bring them a good return for their labours. He emphasised the advantages which Lancashire might expect to derive from their continued support and encouragement of the cotton-growing industry within the Empire.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Mild Steel Regulating Gates.—The Egyptian Ministry of Public Works invites tenders for the supply of 113 mild steel regulating gates required for the Assiut Barrage, in accordance with drawing C.T.A. No. 3480. December 1. (D.O.T.)

Fire Pumps.—The State Domains Administration invites tenders for the supply of four hand fire pumps. Local representation is essential. December 1. (D.O.T.)

Reservoir.—The Minister of the Interior Municipalities and Local Commission Sections, Savoy House, Cairo, invites tenders for the supply and erection on site at the town of Minia El Khamh of a steel reservoir having a capacity of 200 cubic metres on a steel framework tower. The contract includes the necessary piping and fittings as well as the water level indicator. Alternative prices are also required for a reservoir of 300 cubic metre capacity as well as for the foundation in re-inforced concrete instead of concrete. December 9. (D.O.T.)

Electric Motors.—The Ministry of the Interior invites tenders for electric motors and accessories. December 5. (D.O.T.)

Bridges.—Tenders are invited for the supply, construction and delivery to the Ministry of Public Works of seven opening and six fixed bridges together with supplies of protective fender piling, etc. December 1. (D.O.T.)

Centrifugal Pumps and Filters.—Tenders are invited by the Ministry of the Interior for the supply and erection of four centrifugal pumps, mechanical filters, electric motors and accessories for the waterworks at the town of Sembellawein. December 1. (D.O.T.)

TURKEY.

Galvanised Corrugated Sheets.—Tenders are invited by the Anatolian Railway Administration for the supply, covering delivery c.i.f. Haidar Pacha of galvanised corrugated sheets; bolts with washers and nuts, and rubber washers. November 15. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, November 5). (For passenger sailings and dates see advertisement).

Anchor Brocklebank Line.— S.s. Masirah for Port Said, Colombo, Madras, and Calcutta (London, November 13).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, November 18).

British India Line.—S.s. Morvada for Colombo, Madras, and Calcutta (November 6); s.s. Hatkhola for Bombay and Karachi (London, November 20).

Cunard Line.—S.s. Tyria for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also Corfu, Gruz, and Ancona if inducement (Liverpool November 13, Swansea November 16); s.s. Pavia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow, and Swansea, December 11).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 1).

P. and O. Line.—S.s. Rajputana for Bombay (London, November 5).

Prince Line.—S.s. Sailor Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Mersina, and Alexandretta (London, November 10).

Ellerman and Papayanni Lines.—S.s. Dido for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 6); s.s. Roumelian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool November 6, Swansea November 6); s.s. Andalusian for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, November 13); A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, November 15); s.s. Flaminian for Algiers*, Malta, Syra, Smyrna, Constantinople (Liverpool, November 20); s.s. Grodno for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gruz, Ancona*, Venice, Trieste, and Fiume (Liverpool November 27, Swansea December 1). * Subject to sufficient inducement. Transhipments.—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus, via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, November 2.

The outstanding event in the City has been the flotation of the Belgian currency stabilisation loan for £7¼ millions. The attractive terms offered to the investor made its success a foregone conclusion and no surprise was occasioned by the announcement that the loan had been subscribed many times over. So attractive were the terms, indeed (7 per cent. at 94), that some critics describe them as unduly onerous to the borrower and unduly generous to the investor. But there is a twofold explanation. Firstly, the Belgian Government could not possibly afford to run the slightest risk of failure, and secondly, as a large portion of the loan was raised in New York the quotation in Wall Street for the bonds of a recent Belgian issue had perforce to be taken as a basis for the terms of the loan issued this week. Belgium's stabilisation plan, under which a new currency (the unit of which is the Belga, equal to 5 paper francs), is created, marks a further important step in the long series of international measures aimed at the economic restoration of Europe, and conjecture is now busy with the prospect of Italy and France following suit with similar operations to stabilise the lira and the French franc. When these two important steps have been taken the end of the unhappy currency depreciation, which has so sadly hampered the economic restoration of Europe, will at last be in sight.

The Markets.

A distinctly more cheerful tone has characterised the Stock markets during the past week. Interest in the Belgian loan no doubt stimulated interest in more than one direction, but there was also evidence of a much more optimistic feeling concerning the coal dispute, although, as is so often the case in Stock Exchange matters, it was based on somewhat slender foundations. Nevertheless, there was a pronounced advance in prices in the Home Railway market, which can certainly not be attributed entirely to the slightly less unsatisfactory nature of the traffic returns. The gilt-edged market, also, has been better than of late, under the lead of War Loan, marked ex-dividend on Tuesday, and this in spite of the firmness of money rates and of the further drain of gold. Although the Belgian loan has monopolised attention there have been several important offers of new capital, though mostly for home purposes. The iron and steel group has come in for some inquiry while in the speculative markets activity has chiefly centred in the oil section, as a result largely of the excellent showing made by the Anglo-Persian Oil report.

The New Rubber Regulations.

The eagerly awaited announcement from the Colonial Office with regard to rubber export quotas for the quarter which began on Monday, was made at the beginning of the week. It has had little effect on the rubber share market, which remains dull owing apparently to the disappointment felt that the statement made no reference whatever to any proposals for dealing with the surplus of export coupons. The effect of the new regulations should be to stabilise the price of rubber between 1s. 9d. and 2s. per lb., and as the Colonial Office states that it is not contemplated that any change shall be made in the new regulations for at least twelve months it looks as though the industry may rely upon a period of comfortable stability, which will be in marked contrast to the violent fluctuations experienced in 1925. Moreover, the consumers of rubber appear to have little cause for complaint since, unless they choose to manipulate the market, they are assured of supplies at a reasonable price. Holders of rubber shares may regard the outlook with equanimity, and while there is no probability of anything in the nature of a boom in share prices, the prospects for profit figures and satisfactory dividends are good; for with rubber selling at over 1s. 9d. per lb. producers can make very satisfactory profits; for costs of production, although higher than they were eighteen months ago, are still considerably less than 1s. per lb. on the average.

A High-Yielding Bank Share.

To some investors English bank shares may not appear very attractive, for in the main the yields largely discount developments in the immediate future, while in a number of cases there is an uncalled liability on the shares. It is true that overseas bank shares give a more generous return; but earnings are not always so stable as those of the English banks. The Hong-Kong and Shanghai Banking Corporation has, however, an excellent profits record, especially in adverse circumstances. Thus net profits for the past three half years have been as follows: June 1925, Yen 9,150,675; December 1925, Yen 9,237,362; and June 1926, Yen 9,156,177 while the dividend has been maintained at the rate of 12 per cent. per annum. For 1926 the reserve fund again receives Yen 3,000,000, and now figures at Yen 86,500,000, the capital being Yen 100,000,000. The carry-forward shows an increase as compared with the previous half year.

Yet this record has been achieved in the face of great difficulties. At the last annual meeting the chairman declared that "Trade has been hampered in every direction, civil wars, strikes and boycotts being the order of the day." But, turning to the future he was not unhopeful, especially so far as South China is concerned. "Our Chinese friends and neighbours," he said, "are rational people, and sooner or later more reasonable counsels must surely prevail." At the present price the shares—in denominations of 125 dollars each, fully paid—give a return of £6 10s. per cent. and offer attractions, particularly to those who share the chairman's view regarding China's future.

INDIAN AFRICAN SERVICE

Regular Passenger and Freight Service from

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date October 30:—

Currants.—Considering how severely our national industries are being hit by the continuance of the coal strike, which is causing great injury to the country in general, it is surprising that the market has kept so steady. This serves to confirm the underlying strength of the position, which is assisted in great measure by the firmness of the Greek market. It seems useless to expect any development of an encouraging nature until this labour trouble is settled, but once this menace is out of the way any expansion in the demand would certainly cause prices to advance.

Arrivals were Phrygia, Cypria, Andalusian, Roumelian, and Karnak, bringing a good selection of all qualities, with the exception of provincial growths, which are scarce. The early arrivals of the new crop Vostizza by first two of these steamers met with a good reception, especially any parcels of outstanding merit, which realised 55s. to 60s. Some showy lots of shade dried Gulf also sold readily at 42s., a couple of exceptional quality reaching 46s. and 50s. Medium grades have met a dragging trade, and progress has been difficult. This also refers to small Vostizza. S.s. Tyria is due with further supplies. Quotations:—Pyrgos, 32s. to 32s. 6d.; Amalias, 33s.; Patras, 34s. to 35s.; Gulf, 36s. to 42s.; Zante, 34s. to 35s.; Vostizza, 45s. to 60s.

Sultanas continued to advance in Smyrna,, owing to the big crop rumour having been exploded. Latest estimates give the stock remaining there as below 11,000 tons. This development was reflected on our market by active trading, and all stocks were quickly disposed of, buyers having to turn their attention to parcels afloat in order to protect their potential requirements. Forward business for prompt shipment also received some attention on a c.i.f. basis, 51s. to 56s. Spot prices forged ahead, and latest sales show an advance of 5s. to 10s. per cwt. Quotations.—Ordinary, 63s. to 65s.; fair to good, 68s. to 72s.; fine up to 90s. Cretans, 66s. to 88s. The first arrivals of Greeks per Phrygia and Cypria were well competed for at 69s. to 75s., up to 85s. being made for coloury.

Figs.—Skeleton cases have been in good demand, and met a ready sale at fully sustained prices, large boxes being particularly active, values ranging from 58s. to 75s., while small boxes have sold more slowly at 70s. to 80s. Locums slow, 90s. to 102s. 6d. Pulled, 42s. 6d. to 47s. 6d. Bags.—Owing to heavy arrivals against forward purchases business has dragged; good average at 28s. to 31s., Genuine 33s. to 35s.

GOOD DEMAND FOR FURS.

The report of the London Fur Trades Association (Inc.) on the October raw fur skin sales, states that despite the unfortunate continuance of the coal strike which has restricted business in the home trade, the sales experienced good competition and values for the most part were well maintained. Business on the Continent has been rather better of late, and the financial situation, particularly in Germany, is decidedly easier; in France business during the summer has been good; in America the fur trade continues to participate in the general prosperity; consequently the foreign demand at these sales was strong. As a whole the offerings were both moderate in quantity and good in quality, and declines in price were therefore few. Having regard to the firm tone of the foreign markets, values should remain steady for some time to come, and with the advent of seasonable weather a satisfactory fur season is anticipated.

A motor car census made at Olympia showed that there were 1,835, or 61 per cent. Dunlop tyres fitted to British and foreign cars, and 1,412, or 93.02 per cent. fitted to British cars.

At the 86th ordinary general meeting of the Peninsular and Oriental Steam Navigation Company, to be held on December 8, the directors, after providing for the usual dividend at the rate of 5 per cent. per annum on the preferred stock, less income tax, will recommend a dividend on the deferred stock of 5 per cent. for the six months, free of income tax, making, with the interim dividend of 5 per cent. paid in May, a total distribution on the deferred stock of 10 per cent. for the year.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK

Company Meetings

LAKE COPAIS COMPANY.

Development of Cotton Growing.

The ordinary general meeting of Lake Copais Company, Limited, was held on October 20 at Winchester House, Old Broad Street. Mr. W. Sandford Poole (chairman of the company) presided.

The Secretary (Mr. R. D. Prichard) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said:—In submitting the accounts for the year 1925 it is with much regret that I have to report a considerable reduction in our profits as compared with the past few years. The reasons for the falling off are shortly: (1) Unsuitable weather conditions; (2) political uncertainty, involving the whole economic life of the State in which the company's business is carried on; (3) a heavy fall in the exchange value of the drachma.

Since the people of Greece, early in the year 1924, declared in favour of a Republican form of Government, there have been no fewer than five changes in the Government of Greece. It is hoped that for the sake of that country, with which we in this country have much sympathy and many ties, the elections which take place on the 7th of next month will result in the establishment of a stable Government. No company which changed its board of control every six months could hope to succeed. The same axiom applies with equal force to the government of countries.

I referred at our annual meeting last year to the official award of the arbitrators, who, while settling many of the outstanding questions between the State and the company, referred certain matters to commissions to be appointed jointly by the State and the company. One of these matters was the delimitation of the boundaries of the company's freehold lands. Another was the details of the hydro-electric concession granted to the company. The Commissioners were able to come to an agreement, with the result that our freehold of upwards of 7,000 acres is now clearly and absolutely defined.

The Commission appointed to settle the terms of our hydro-electric concession met in Athens in May last and, after much discussion, adjourned their sittings until this month. They met again in Paris on the 11th of this month and their deliberations are still proceeding. It is expected that the Commissioners will be able, in the course of the next week or so, to settle finally the terms of our hydro-electric concession on such lines as will permit of that concession being financed and the work proceeded with.

Cultivation of Crops.

The weather conditions during the year 1925 were far from favourable. The area of crop sown was 31,539 acres, compared with 31,107 in the previous year, and 26,683 in the year 1923. The area from which the crops were harvested was, however, only 28,003 acres, the crops on 11½ per cent. of the area sown having been destroyed by bad weather. Consequently there was a reduction in the total production of the estate, the approximate number of tons of cereals, etc., produced during the year 1925 being 14,500, compared with 16,000 tons during the year 1924. The average for the ten years 1914 to 1923 was 18,300 tons. However, too much importance should not be placed on these figures, as we now grow a much larger proportion of cotton than in former years.

The reclamation and development of low-lying lands continue. In the year 1925 the net area of land brought back to cultivation or prevented from going out of cultivation as the result of this work was 5,633 acres, while in the present year it is estimated that the area will be approximately 9,500 acres.

Cotton has become of increasing importance to us. During the year 1925, 6,041 acres were cultivated, against 4,503 in the year 1924. In the year 1921 we had only 283 acres, the area having fallen from 3,550 acres in the year 1916. Mr. Bailey, our general manager in Greece, reports that this crop is now quite the most important grown in the Copais, the area harvested in 1925 constituting a record and forming 20 per cent. of the total area harvested. He says that, had it not been for the unfavourable weather conditions, the area cultivated and harvested would have been much larger, and he anticipates that there will be 7,500 acres of cotton during the current year.

Rate of Exchange.

One of our greatest difficulties, and one over which we have no control, is the depreciation in the exchange value of the drachma. During the year 1925 the drachma fluctuated between 247 and 391 to the £, and our accounts are made up on the basis of the exchange at December 31, 1925, being 375, as compared with 250 and 262 the year before. The adjustment of currency balances to the new low level involved serious loss, and remittances for produce sold were, when converted into sterling, adversely affected in no small degree.

The net profit in Greece converted into sterling amounted only to £7,810 11s. 11d., and, after including the profit realised on sale of investments, we have been obliged to draw upon reserves to make up the amount required for interest on the "A" debenture stock in respect of the year. The interest on the "A" debenture stock will be distributed at the full rate of 5 per cent., less income tax, on October 30, in scrip for 5 per cent. "A" debenture stock of the company, in accordance with the terms of the scheme approved by the stockholders on July 28, 1922.

Sir Herbert W. Wilberforce, K.B.E., C.B., C.M.G., seconded the resolution, which was unanimously adopted.

ASSAM RAILWAYS AND TRADING.

A Satisfactory Year.

The forty-sixth ordinary general meeting of the Assam Railway and Trading Company, Limited, was held on October 27 at Winchester House, Old Broad Street, E.C.

Sir Walter R. Lawrence, Bt., G.C.I.E., G.C.V.O., C.B., presided, in the absence, through indisposition, of Mr. George Turner, M.E. (the chairman of the company), and read the speech which had been prepared by that gentleman, in the course of which he said that the board had again the pleasant duty of congratulating the shareholders on a very satisfactory account. It showed a profit even larger than last year's, which was a record year, and in this result all the departments of the company had borne their share. The railway profit was considerably greater than any they had published before. The expenditure of £91,134 actually compared with an expenditure of £96,958 last year, showing a substantial reduction. Operating expenses had come down to 53.50 per cent. of the receipts, as against 64.33 per cent. in the previous year and 74.49 per cent. in 1923-24. But an even more encouraging feature of the railway accounts was that not only had they been able to make a real reduction in the expenditure, but they had made it while they had been catering for an increased traffic and giving facilities in the way of extra trains, which they hoped would in future increase it still further. It was a source of considerable satisfaction to find that the general traffics had responded so vigorously to the steps taken to expand them. For the first half of the current year they had gone up by another lakh of rupees, and the management in India were of opinion that they could look forward to a steady increase in the earnings for some time.

The company's collieries had not had such a good year as the railway. The new collieries were ready to produce coal and were only waiting for the approach lines, which should be completed and joined up during the coming cold weather. There seemed every prospect that the Namdang Tea Company, in which they held a five-sevenths interest, would do well this season.

The net revenue account showed that after bringing in the balance carried forward last year, paying all the debenture interest and preference dividends, and providing for fire insurance, and a sum for renewals and replacements, they had £101,661 to deal with, as compared with £90,603 last year. The dividends on the "A" stock absorbed £50,400 of this, and the board recommended that another £10,000 should be written off the discount on debentures. They had already paid an interim dividend of 4 per cent. on the "B" stock, and recommended a final dividend of 6 per cent., making 10 per cent. in all, as compared with 9 per cent. last year.

The report and accounts were adopted, and the dividends recommended were approved.

A branch of the National Bank of India, Ltd., has been opened at Eldoret, Kenya Colony, East Africa.

The exports of gum from Port Sudan in the first seven months of this year totalled 16,284 tons of the value of £E627,026.

Senna to the amount of 310 tons was exported from the Sudan during the first eight months of this year as compared with 592½ tons during the same period in 1925.

The Italo-Egyptian Treaty was signed in Cairo on October 28 by the Marquis Paterno and the Acting Foreign Minister Zaki Abul Saoud. The Treaty includes a clause declaring that the question of Senussi nationality is relegated to ordinary diplomatic negotiations, also that a definite Customs settlement is postponed until 1930, when the general question of tariffs as between Egypt and Italy will come up for revision upon the expiration of the existing treaty. The most important clauses of the treaty concern the three approaches to the Ramleh wells from Sollum, which are ceded by Italy to Egypt, and the agreement of both parties to recognise and enforce the judgments of the frontier district courts except for death sentences, concerning which the right of further examination is reserved.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company, in their report for the week ended October 21, state:—

Since our last report the futures market has been very active, but prices have continued their downward course. The week's summary of price movements is as follows: Sakellaridis: November, 26.10 dollars, 2.25 dollars down; January, 25.80 dollars, 2.00 dollars down, March, 25.90 dollars, 1.75 dollars down; May, 25.90 dollars, 0.84 dollars down. Ashmouni: October, 17.23 dollars, 0.84 dollars down; December, 17.28 doliars, 1.02 dollars down; February, 17.43 dollars, 1.07 dollars down; April, 17.58 dollars, 1.07 dollars down.

Sakel.—The decision of the Government to abstain—at least for the time being—from active intervention either on the spot or futures markets has been a sad blow to the bulls, who had been hoping for the advent of Government purchases to help them to recoup some of their losses. The publication of the Government's decision to limit their intervention to the financing of the small growers induced a good deal of liquidation.

The demand from abroad has been only moderate and perhaps even slightly less than last week; on the other hand, the arrivals are increasing daily and in the face of the relatively small demand, this piling up of the stock weighs rather heavily on the market. Reports from the interior show that the second pickings are, in general, satisfactory; in some districts even a third picking will be taken. To-day's drop has carried prices down to a level which we think will induce some increase in the demand from spinners.

The decision of the Government not to intervene actively in the market is, we think, a decision dictated by the present world cotton position. The scheme to make advances to needy growers is to be commended as it will tend to protect these small growers against the hardships resultant from the throwing of their cotton on the market for sale at any price.

Uppers.—Futures business in this variety has been less than in Sakel, and the drop in values has not been so pronounced; the December Ashmouni discount under November Sakel is now only 882 points against 1005 points a week ago, and the tendency is for a further narrowing. The demand for this variety is fairly good and Zagora has monopolised the bulk of the business on the spot market.

The week's receipts amount to 324,170 krs. against exports 200,468 krs., the stock in Alexandria stands at 1,712,593 krs.

Spot:—During the past week Minet el Bassal has continued moderately active, but the actual demand from abroad has not been so good. Sales amount to about 24,200 bales, of which we estimate 7,500 bales Sakellaridis, 14,200 bales Uppers, 1,400 bales Zagora, 800 bales Pilion, 50 bales Brown and 250 bales White. The crop movement is now free and the selection of Sakel offering is improving. The State Domains sold at auction during the week 743 bales of their 1925 crop. This cotton was readily bought at high prices by export houses with Continental connections.

Sakellaridis:—A moderate business has been done in all grades and last week's demand for the top qualities has once more been in evidence. Spot differences are without much change for Fully Good Fair up to Good, but rather dearer for low grades and for the qualities over Good.

Ashmouni and Zagora: have once more absorbed the major portion of the demand and a good business has been done in all styles. Spot differences are generally a shade easier with the exception of Fully Good, which is firm and without change.

Pilion:—A good business has been done, mainly in the good qualities. With the exception of Fully Good, which is unchanged, spot differences are inclined to ease.

Brown:—A retail business has been done with a tendency for spot differences to weaken.

White:—A fair business has been done at about last week's differences.

Crop 1926:—Lower Egypt.—The first picking is practically completed everywhere and, in many districts, the second picking has also been taken. Weather conditions remain favourable, in spite of the fact that we are nearing the end of October, and this will all help to increase the total production. The ginning outturn of Sakel is about equal, or slightly superior, to that of last year. Upper Egypt.—Picking has practically been completed. The movement of the crop to the ginning centres is heavy and all the factories are working full time. The ginning outturn is about equal to that of last year. The folowing is a resumé of the Government communiqué referred to above: "The Government, through the banks, is prepared to make advances to growers up to a total of £E4,000,000 against cotton; rate of interest 4 per cent. per annum. Such advances will be limited to growers of from 5 to 200 kantars, and the period of the loan will be four months, with a possible extension for a further four months: advances will be made on the following basis (per kantar):

Sakel.—F.G.F. and above, 22½ dollars, Good Fair, 20 dollars. Ashmouni.—F.G.F. and above, 15 dollars, Good Fair, 13¾ dollars. Other varieties.—F.G.F. and above, 17½ dollars; Good Fair, 16¼ dollars.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended October 27:—
